In 1776, he was commissioned a captain in the Continental Navy by the Congress of the United States. I do not propose to take time to narrate all of the outstanding battles and acts of bravery exhibited by Commodore Barry in his naval career in our fight for independence. It is only sufficient to say that his great contribution and recognition by General George Washington and the United States Congress bestowed upon him the justly deserved title of the "Father of the American Navy."

Many naval officers who greatly distinguished themselves later received their training under Commodore Barry. This list included Richard Dale, Charles Stewart, Stephen Decatur, Richard Somers, and others. It was Commodore Barry and these naval officers who pioneered the fighting naval tradition of which our Government has taken pride down to this day.

In March 1783, Commodore Barry fired the last shot of the sea campaign of the Revolutionary War. This was not the end of sea fighting for this intrepid Irishman; just before the turn of the century when the sovereignty of the newly independent Nation was first challenged and the first ships of the United States Navy under the Constitution were authorized, Commodore Barry was named the senior officer in the Navy, a position he held until his death 9 years later. His commission in the United States Navy, signed by President Washington, was commission No. 1.

There is a little story about Barry that I particularly like. Just after the close of the American Revolution, Barry received Commodore Sweeney of the Royal Navy on board his ship for an official call. Feelings of animosity still ran high. As the Royal Navy commodore was departing, he clasped Barry's hand and said, "Adieu, my countryman."

"Not exactly so," replied Barry, "you, Commodore, are a Briton; I am an American."

"I am an Irishman," Sweeney responded, "and so are you. You have too many of the strong features of a genuine Irishman for me to be mistaken. Your attachment to the country for which you have fought and bled is both natural and highly to your honor; but, sir, you are too good a fellow not to be an Irishman."

Needless to say, they parted good friends.

There were times when it was mainly Commodore Barry's personal prestige which kept the American Navy alive. His great vision nurtured its healthy development. Above all, he was a man of courage, of devotion to duty, and of the highest order of personal integrity.

John Barry was too good a man—too good an Irishman—to be consigned merely to the pages of history. In these days, when the freedom of man is threatened, the whole world needs the force of his inspiration, just as it has always been felt in the United States Navy.

Commodore Barry, of course, was not the only Irishman who left the beloved sod of his mother counutry to fight for American independence. He was the pioneer Irish patriot who inspired hundreds of thousands who followed later. He foreshadowed the others that were to distinguish the Irish, who, driven from their homeland by oppression and foreign domination sought new homes in the United States. Above all, they were loyal to their adopted land but they always were proud of their Irish origin. These Irish patriots dedicated themselves to America and worked at building what they had been denied at home—free schools of their own choice, a Christian education, an opportunity to expand and follow chosen professions, and to forget about the British system of class and privilege. Those were the days when the infant free United States became a beacon to people of all nationalities, who for generations have come to our shores to enjoy the freedom which our great Republic is so proud and privileged to offer.

The statue of Commodore Barry in Wexford harbor will forever be a symbol of deep friendship and fellowship between Ireland and the United States of America.

No two nations exist on the globe where peoples hearts are more closely entwined than Ireland and America. As we today, here on this March 17th ceremony, memoralize the gallantry of John Barry, we can pay tribute to the Irish-American friendship and understanding which have long lasted and we hope God will preserve this friendship so that it will continue to endure ever closer and ever deeper for all time to come.

Too many Americans of Irish descent during these times neglect to find time to read and acquaint themselves with facts of Irish history and the great part Ireland played in winning our independence during the Revolutionary War. It might be well to mention just a couple of the numerous unpublished historical incidents a great number which can be found in our Congressional Library and National Archives, revealing facts that are of great interest to all true Irishmen.

Unfortunately, certain writers of history neglected or omitted to give just credit for the great contribution made by Irish patriots in our early fight for freedom. Great reverses were experienced by the Revolutionary Army during the early days of the war for independence. During the hard winter of 1777, Washington's troops were deprived of adequate clothing, food, and other essentials so necessary to win a great war. History reveals that soldiers were poorly clad, some compelled to use gunny sacks for shoes by reason of the embargo placed on shipments to our shores by the enemy. A great number of soldiers deserted and others were incapacitated for physical reasons during this difficult period. It was the spirit of the Irish patriots as well as soldiers from other oppressed European governments that endured these hardships and continued through until America won her independence. France, through Lafayette; Germany, through Generals Steuben and DeKalb; Poland, through Generals Kosciusko and Pulaski; all with their fellow countrymen, contributed greatly to the strength of Washington's Army. The infant American Navy was able to make its great contribution to victory only by reason of the leadership of Commodore Barry.

The continued success of the British Army throughout the year 1776 disheartened the colonies and caused leading men in public affairs at that time to waiver in their steadfastness to continue the war for independence. It is interesting to note that Joseph Galloway, a prominent American Tory, a native of Maryland and of English descent, testified before a committee of Parliament where he had been called to give his views on the progress of the war. On November 13, 1779, the Royal Gazette, a New York newspaper of British origin, printed Mr. Galloway's testimony verbatim. In this testimony, he specifically stated that about one-half of George Washington's army who fought after the hard winter of 1777 were Irish. It is also noteworthy that the hearing of this committee of Parliament revealed documents of the official report of Ambrose Serle, private secretary of Lord Dartmouth, the English Secretary of State, requesting his government to exercise her authority by prohibiting the departure of any more Irishmen to America where they would "do Great Britain much injury by adding strength to the force of America against her." Another interesting document reproduced at the hearing was a portion of a long letter from General Sir Henry Clinton to Lord George Germain, Secretary of War, dated New York, October 23, 1778. This letter related to the difficulty of carrying out "His Lordship's instructions to draw off from the American Army the number of Europeans which constituted its principal force"; and on this point Clinton remarked significantly: "The emigrants from Ireland were in general to be looked upon as our most serious antagonists. They had fled from the real or fancied oppression of the landlords."

The United States from small beginnings and through many trials and tribulations has now become the greatest nation in the world, charged with the heaviest responsibilities ever to be placed on any nation. It is our pride that Irishmen, forced by adversity to leave their motherland, have made for themselves a position of influence, leadership, and high esteem as American citizens.

Although the United States was especially enriched by the extraordinary flow of immigration from the Emerald Isle, nevertheless, Canada, Australia, South America, and other nations benefited greatly from the large Irish immigration who settled within their borders.

Considering that we are today commemorating the Father of the American Navy, it might be well to incorporate with my remarks an Associated Press dispatch from Buenos Aires of 1 week ago. It is headlined:

"BUENOS AIRES, March 11.—Argentina is planning elaborate ceremonies to honor Adm. William Brown, Father of the Argentine Navy, on his centennial next weekend. A special delegation is coming from Ireland to participate. Brown was an Irishman."

For 700 years the people of Ireland have fought against oppression and for freedom. This century has brought partial victory to the land whose people refused to submit to tyranny. You may search the pages of history and you will not find a land or people matching Irishmen in courage and in devotion to the land that gave them birth. Liberty and freedom will win in any nation whose people worship at the shrine of men who were executed as traitors by their oppressors. Where in all history is there a story as pathetic, heroic, and enduring in interest, and as inspiring in its theme, as the story of Robert Emmett. His life and heroic deeds can be recorded in duplication again and again in different degrees of heroism over the centuries struggle for Irish freedom and self-government.

The Irish patriot whom our Government honored last September at Wexford, Ireland, and whom the Irish War Veterans of Washington are honoring today was one of the most illustrious, Commodore John Barry.

Ireland won a great victory 30 years ago when it established an independent Irish Government. The fight for Irish independence will never be completely closed until the northern six counties are united with the rest of free Ireland. That day will eventually arrive.

The last 20 years has seen world colonialism shrink and collapse over most of the globe. Colonialism will be driven from northern Ireland in due time. Then a united Ireland will take its rightful place as a free and independent nation of the world.

Inspiring Concept of Americanism

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. AUCHINCLOSS. Mr. Speaker, under leave to extend my remarks in the RECORD I am very pleased to include an editorial appearing on Monday, March

11, 1957, in the Daily Home News, of New Brunswick, N. J. entitled "Inspiring Concept of Americanism." This editorial was prompted by remarks made by a prominent resident of New Jersey, Samuel D. Hoffman, when he received the 1957 Americanism award of the Jewish War Veterans Post No. 133. The editorial follows:

INSPIRING CONCEPT OF AMERICANISM

Accepting the 1957 Americanism Award of the Jewish War Veterans, Post No. 133, Saturday night, Samuel D. Hoffman summed up his concept of Americanism in what he described as "Ten Commandments for Americans."

This summing up is so direct, so eloquent, so inspirational, that we repeat it here in its entirety:

"Love of God and a deep abiding conviction that He is the Father of all humankind without regard to our origin, our religion, creed or color.

"Respect for our fellowmen of every religion, creed and color, respect for their rights, their hopes and aspirations.

"Belief that America can remain strong only so long as its humblest citizen receives the same benefits and protection of its laws as its strongest and most powerful.

"Recognition of the fact that life, liberty and the pursuit of happiness is not a meaningless platitude but includes the right of every citizen to speak his opinion freely, the right to the opportunity of employment, the right to educate his children, the right to worship God according to the dictates of his conscience, the right to live in peace and harmony with his fellow citizens in full dignity as a man and as a creature of God.

"Compassion for the poor, the sick, the underprivileged, the physically and mentally handicapped toward all of whom each one of us might well say, 'There, but for the grace of God, go I.'

"Courage to speak out against injustice, inequity, and abuses of power.

"Obedience to law, not only laws which define and fix the penalties for crime, but the local rules and ordinances and regulations which touch our daily lives.

"Continued interest in the city or town which we call our home, willingness to make constructive criticism, unwillingness to be content with conditions which may be improved.

"Willingness to join one of our two great political parties, to work within its framework, to obtain the best available candidates for public office, willingness to serve for some time in some capacity on an administrative agency, board or commission to continue to improve the quality of government at every level.

"A quiet determination that regardless of whether our life span be long or short, no matter at what level we may work or the measure of importance placed upon our activities, to make America a better place when we leave than it was when we arrived."

A Day We Celebrate

EXTENSION OF REMARKS

OF

HON. GEORGE H. FALLON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

THE DAY WE CELEBRATE

(Address by Robert S. Meighen, assistant vice president, tinplate sales, Weirton Steel Co. (division, National Steel Corp.), Weirton, W. Va., to the 154th anniversary dinner of the Hibernian Society of Baltimore, Saturday, March 16, 1957, in Hotel Emerson, Baltimore, Md.)

Mr. Toastmaster, Mr. President, Reverend Clergy, Your Excellency Governor McKeldin, Your Honor Mayor D'Alessandro, guests, and gentlemen of the Hibernian Society of Baltimore:

This is not going to be a hot speech.

I can assure you that I haven't the slightest idea of what the new Congress is going to do either to us or for us. Nor do I have any idea on whether or not the new budget is going to be cut or maintained.

And after all the oratorical efforts of the wonderful speakers that have preceded me, I ask myself why, after the many verbal bouquets that have been given by such excellent men of high and honorable rank, why after all this well of words you gentlemen would want to listen to another talk either hot or cold.

I realize this is leading with my chin and before you can say in a loud chorus "We don't know why either," I'll quickly duck by reminding you that you not only asked for it but that since this program has been standard for the last 154 years "the day we celebrate" is still on the hit parade of the anniversary banquet program of the Hibernian Society of Baltimore, and I have been asked to sing it, for which opportunity I am extremely proud and grateful.

Just one more observation if I may to prove a point. The day we celebrate was number one in the hit parade of toasts on March 17, 1804, and it has moved to last place on this program, but it took 150 years to get it there.

However, the day we celebrate has to my way of thinking given this organization the opportunity of hearing from great clergymen who have related to you their philosophies and understanding of St. Patrick in his work and devotion to the people of Ireland whom he served so faithfully and tirelessly.

The day we celebrate has also given you the opportunities of hearing from men who have held and are holding public office, both State and Nationl, who have always delivered in great oratorical style their ideas of the great part the Irish have played in making our country the greatest single influence in the field of world politics.

And now, The Day We Celebrate, is going to provide you with the opportunity of listening to just a businessman. I would like to be able to dress that term "businessman" up by substituting the word "industrialist," but that would be highly improper. I am just a businessman like you men sitting out there.

This society—according to the records—was formed in 1803 for the relief of emigrants from Ireland. And according to an advertisement which appeared in a local newspaper of that day, The American Patriot and Fells Point Advertiser which stated "Emigrants are daily arriving from Ireland: Many of them are in a friendless and forlorn condition, deprived of health and asylum. They have a claim upon those who have preceded them to whom industry has proved propitious. There are many, very many of our inhabitants who feel all the influence of compassion and who impatiently wait to be informed how they may make themselves useful to unprotected adventurers. A meeting of all those who are so disposed whether foreigners or natives is requested tomorrow evening at 5 o'clock at Mr. Bryden's Tavern, Light Street, in order to devise a plan by which their benevolent designs may be carried into execution."

That was the advertisement of August 16, 1803.

Now, honestly, doesn't that sound like the appeals being carried daily in March 1957, for relief of Hungarian refugees arriving at Camp Kilmer, N. J., just 154 years later and approximately 150 miles north of Baltimore?

It took three attempts in 1803 to have interested people of sufficient number to put the Hibernian Society together, but on October 8, 1803, a plan of constitution was agreed to and officers were elected.

As is the case today so it was then—the busy people, the influential people, those people who have the greatest demands on their time were the ones who found time to launch this society.

For example let's look at some of the original officers. Dr. John Campbell White—credited with being the founder—was elected president. Dr. White's father was a Presbyterian minister, well enough off financially to educate his son in medicine at the University of Edinburgh and at Middlesex Hospital in London.

Dr. White practiced medicine in Belfast until 1798. He was active in the Society of United Irishmen which in 1798 attempted to overthrow British rule. This rebellion failed. Many of its members who became known as the Men of '98 either escaped Ireland or were deported. Dr. White and his wife fled to America and settled in Baltimore.

A busy man or a businessman? Yes.

The other officers of the first or charter group were also prominent men, one operated a soap and candle factory, one was the first president of the Bank of Baltimore, another was to become one of the great professors of the University of Maryland Medical School, and others were merchants, shippers, and so it goes.

All men just like you and me today, busy, yes, but with a desire and a will to help those less fortunate, for whatever cause, than ourselves.

The original need for which this society was founded no longer exists. But the basic concept of helping and doing for others as well as perpetuating the memory of St. Patrick will in my opinion keep the Hibernian Society of Baltimore a going institution for many years to come.

As I said earlier, it was with sincerest appreciation of the honor conferred upon me that I received the invitation to respond to a toast before this venerable society in honor of St. Patrick and answer to the principal toast "The Day We Celebrate."

Akin to this sense of appreciation is another feeling to which I confess tonight and that is a feeling of personal pride that, through the graciousness of one of your former presidents—Mr. William B. Hysan—I have been a guest of his at this Hibernian Society of Baltimore annual banquet for more than a decade, so in a sense gentlemen, I stand here with a feeling in my own heart of being a full-fledged member of the Hibernian Society of Baltimore, even without dues.

Full-fledged did I say? Well—hardly that but nonetheless a fledgling in the nest.

My forebears transmitted to their children along with the Irish blood—the Irish spirit and the Irish heart. Fortunately, one of the chief characteristics of the Irish race is its national spirit and traditions, its racial virtues, aspirations, and loves and I might add its hatreds, have been transmitted in all their vitality and ardor from generation to generation, no matter how distant from the motherland the lot of her childrtn has been cast.

Their lot as we know has been to be scattered to the farthest parts of the globe.

Hence, in reference to "The Day We Celebrate," a distinguished Irish orator has said, and I quote:

"Excepting the birth of the Master, the festal day of no other is hailed with such universal reverence, for not alone in the island which he Christianized, but far be-

yond its shores, to the uttermost confines of the earth, men and women meet to pay St. Patrick reverent homage."

This universal, undying, ever warm, and enthusiastic reverential love for St. Patrick, manifested throughout the centuries by a scattered people, is a marvel of the ages.

To account for this marvel would transcend the limits of an after-dinner address.

Still, a few points may be touched upon as throwing rays of light, however slender, upon the subject and those points may be expressed in a few words, namely the affinity between the strong yet gentle personality of St. Patrick and the race which under Divine Providence he Christianized and raised from a comparatively high state of civilization to the highest standard of culture. An affinity which drew Patrick to the Irish by "the cords of Adam" before the spiritual ties of Christianity made perfect their union.

I don't know whether you realize it or not but in my particular position with my company I am what is known as a salesman—from the general office—if that means anything to you.

I have always liked to think of St. Patrick as a great salesman or maybe even a vice president in charge of sales—if you will—since he was working under the leadership and direction of the Pope.

Historians disagree about the birthplace of St. Patrick.

Ireland, Italy, Wales, Scotland, and France have been listed as possible places of his birth.

It is agreed, however, that he was captured by pirates and brought to Ireland as a lad of 16.

There he was sold as a slave to a pagan priest and he grew to love the land and its people.

Later Patrick ran away and worked as a sailor, eventually making his way to Rome.

There again, the historians differ, some saying he was again captured and brought to a slave market where his handsome appearance attracted the attention of the Pope.

At any rate, he was trained for the priesthood in Rome, and was assigned as a priest (at his own request it is said) to convert the Irish people from Druidism to Christianity.

It is an error, not uncommon among many to suppose that Patrick found the inhabitants of Ireland a crude, primitive, savage, and uncivilized people, whereas, on the contrary history amply shows that he found Ireland ruled under the famous Brehon Laws, the nearest approach to a real democracy the world had hitherto seen.

For the Brehon Laws, a marvelously just and comprehensive code, compelling the admiration of the world's most eminent jurists, were not the result of legislative enactments but where the direct expression of public opinion and were administered accordingly.

So just, so complete, and so merciful withal were these laws safeguarding as they did the interests of the poor, the sick and the aged that St. Patrick found little in them to change to Christian standards.

Under them the land was owned, not by the kings or chieftans but by the clan itself, and serfdom which existed at the time throughout all the rest of Europe was unknown in ancient Ireland.

St. Patrick came back to Ireland, a land that was ruled by scores of kings, and made his first convert at Tara, the palace of the high king who exacted tribute from all of the other rulers.

To what more natural place would the salesman go than to call on the president of the company who was in this case the high king of Ireland.

In the history of Christianity, it is said that no other man made so many converts in a single lifetime as did St. Patrick. He was named the first Bishop of Ireland.

In religion, the ancient Irish people before St. Patrick, though ignorant of the true God, aspired to Him through their poetic worship of His handiwork: the sun, the moon, the stars, and the elements—a purer religion than was the gross mythology of ancient Greece and Rome.

In a word, Ireland's own spirit had appealed to Patrick in his early impressionable years and had taken possession of his soul and now that spirit glorified in him by Christian graces appealed in turn to Ireland's people, captivating their love and allegiance which centuries have not been able to weaken or diminish in Irish hearts.

Patrick's message to the Irish people was "you shall know the truth and the truth shall make you free."

It did make them free and inspired them with the indomitable fortitude under cruel persecution, and sustained their tenacious hope during the long dark night of their struggle for freedom, till now the dawn has broken with the promise of a perfect day.

It is interesting to note that St. Patrick was the first man of note to come to the priestly vocation late in life and his name is still honored by the St. Patrick Society—a group of priests and brothers who come to their careers in the church at an advanced age.

Thus it is that the name and influence of St. Patrick are so closely associated with every phase of Ireland's history as a Christian nation, than an Irishman would have to forget and cease loving both the country and Christianity before forgetting and ceasing to love the memory of St. Patrick.

Because as we know and as history records it, the priests and brothers who became identified with St. Patrick and ultimately left Ireland, traveling to the far corners of the earth to carry the Gospel of Christianity permanently and forcefully to those areas were no more and no less than salesmen of their product—Christianity.

Therefore we again liken St. Patrick to a salesman.

It has been said that salesmen should have the missionary as their patron saint. If this is true, salesmen could have no more perfect model than St. Patrick.

St. Patrick came to Ireland late in a life that had already included its full share of adventure.

When he came to the Emerald Isle, he was the only Christian there. Before his death he saw his 30 years of work among the Irish people result in bringing a majority of the people there to Christianity.

St. Patrick's feast day is agreed upon by all as March 17. As is customary in the observance of Feast Days of the Saints, this is the day of his death—the day of his entrance into heaven.

Following his death the work of his successors and his own converts was so great that to this day Ireland still has the largest percentage of churchgoers of any Christian nation on earth.

It is thought that St. Patrick came to Ireland on his missionary trip between 440 and 460 A. D.

Today 1,500 years later his name is still honored and revered and the people he converted are still loyal to the faith he taught.

Let us, therefore, as Hibernians, lovers of the old Dart, renew tonight our high resolve to keep our hearts true to the traditions, the virtues, the best traits of our Irish forefathers in order to love, cherish and honor as they did the memory of the great saint, the greatest of Celts, one of the world's greatest men, Erin's beloved patron, St. Patrick whose memory we lovingly and reverently salute and whose day we celebrate.

In conclusion then I propose this ancient and beautiful "Irish Blessing":

"May the blessings of Light be on you.
Light from without and light from within.
May the blessings of sunshine warm your heart till it glows like a great peat fire, so that the stranger may come and warm himself at it and also a friend.
And also may the lights shine out of the two eyes of you like a candle set in two windows of a house, bidding the wanderer to come in out of the storm.
May the blessings of the rain be on you.
The soft sweet rain.
May it fall upon your spirit so that all the little flowers may spring up and shed their sweetness on the air.
And may the blessings of the Great Rains be upon you—
May they beat upon your spirit and wash it fair and clean, and have it shine like a shining pool where the blue of heaven shines reflected, and sometimes a star.
May the blessings of the Earth be on you.
The great and round Earth.
May you ever have a kindly greeting for them you pass as your going along the roads.
May the Earth be soft under you when you lay out upon it, tired at the end of the day, and
May it rest easy over you, when at last you lay under it,
May it rest so lightly over you that your soul may be quickly up and through it, and up, and off, and on its way to God."

Response by Gov. Theodore R. McKeldin to the Toast to Maryland, Hibernian Dinner, Emerson Hotel, Baltimore, March 16, 1957

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. FALLON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

RESPONSE BY GOV. THEODORE R. MCKELDIN TO THE TOAST TO MARYLAND HIBERNIAN DINNER, EMERSON HOTEL, BALTIMORE, MARCH 16, 1957

It is proud that I am, on the eve of St. Patrick's, to respond to your toast to our Maryland.

For Maryland is proud, sir, of its Irish heritage and its Irish traditions and of the love our people have maintained through the years for Irish things and Irish places, and the Irish heart and spirit.

We take pride in the reverence in which, over the centuries, we have held the name of St. Patrick.

Many times a day I look across the waters of the beautiful Severn River which flows by the city of my present abode, but never without thinking of the Great Bishop of Ireland whom we honor here tonight, for it was near the banks of another lovely Severn that he first saw the light of day; and it was there, I feel sure, that God placed His hands of grace upon the infant head and dedicated his life to the causes of human enlightenment and the salvation of souls.

This grand metropolis of ours bears the good and lilting name of a lovely town in Ireland—Baltimore. Close by is the thriving

community of Dundalk, named for a town in the Emerald Isle.

Here in the city are a Shannon Drive and a Shamrock Avenue—and out in the county a road called Rocksham—where someone slipped the shamrock in backwards—crosses Donegal Drive in a peaceful community with the fighting Irish name of Donnybrook.

From here to Dublin, there is no rocky road, but you can go southeast, if you choose, or northeast if you'd rather, for a Dublin you'll find in Somerset and a Dublin again in Harford.

There's a place in Allegany with the name of McCoole, which is about as Irish as a name can get, and in Montgomery we have a Travilah, which, from the musical sound of it, ought to be Irish even if it isn't.

Yes, there is a lot of Ireland about Maryland and the people of Maryland—and the bonds of old have grown stronger with the years.

Our love for St. Patrick, the patron saint of Ireland, is as real as though he walked among us, for surely the spirit of so great a saint—and surely the teachings which he expounded so well—continue to give us light and show us the way to all that is good now and in the years and the centuries to come.

St. Patrick belongs to the ages—past, present and future.

May the age that is appreciate him in full measure.

May the ages for which we build seek to follow, ever more diligently, the wonderful example of his life and the precepts of his teaching.

Aid to the Polish People

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very thoughtful and expressive letter which I have received from one of my constituents, Mr. X. A. Tomaszewski, on the subject of extending assistance to the needy people of Poland.

Mr. Tomaszewski's letter is typical of many that I am receiving from people all over the country who earnestly support the extension of United States aid to Poland and who are firmly convinced that by so doing we will help the Polish people in their efforts to achieve an increasing measure of freedom and national autonomy.

I commend Mr. Tomaszewski's letter to the membership of the House for reading:

CHICAGO, ILL., *March 14, 1957.*
Hon. THOMAS S. GORDON,
United States Congressman, Illinois,
Chairman, House Foreign Affairs,
Washington, D. C.

HONORABLE CHAIRMAN: I have just read in our Chicago newspapers where there is great controversy in connection with aid to the Polish people. I wish to mention that I advocate your stand in regard to this important issue, and sincerely hope that with your influence and support the people of Poland will not be left by the wayside, so that the Russian bear will engulf the entire Polish nation with its satanical desires.

The people of Poland are not Communists and never will be anti-American. We must not and will not deprive them of their pursuit of all the freedoms which all men are endowed to enjoy, through the grace of God. We can help them by granting them this aid and in due time I wish to predict that the Polish people will be the first to bear arms against our common enemy, the Communist. Let's be frank and face the naked facts. The Russians are out to dominate the world and someday hope to subjugate even our great country. Let's use some foresight rather than to say later on, "I told you so."

Shortly after the war I was sent to Poland as a director of relief operations, for the American Relief for Poland organization. I am well aware of the facts that are predominant in Poland. The Poles want freedom—the kind they enjoyed before World War II. Let's not enhance the stark reality that Russia will take over all of Poland should they be refused aid by our Government. We need Poland just as much as she needs us. I am sure she will never forget our generosity in case of any conflict we may become involved. Remember, Poland was the first to fight against Hitler.

I do hope that you realize that Poland is at its crossroads and we will witness a spectacle that may have earth-shaking consequences. Should Poland get this aid and of a significant figure, we will see a new Poland surge ahead since we have given her that confidence that she needs to free itself from the Russian economic structure. I dare not mention what will happen in Poland if the Polish commission will return emptyhanded. God save Poland.

Fortunately, our President, Dwight Eisenhower, is very much in favor of granting a loan to Poland since he is extremely aware of the significance of this entire undertaking. I believe, that half of the battle is over because of the desires of our President. Please do your utmost in the House of Congress, and you may rest assured that all the Poles all over the world will be grateful.

In closing, please accept my most sincere wishes and may the good Lord watch over you.

Respectfully yours,
X. A. TOMASZEWSKI.

Alaska Is Owned by All the People of the United States

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. PELLY. Mr. Speaker, there is an important issue that should be cleared up in connection with Alaska statehood. Many Alaskans have the idea that territorial rights are vested solely in those who live there, whereas Alaska and its natural resources belong to all the people of this country. Therefore, in granting statehood and transferring ownership of millions of acres of land and their resources, we should protect nonresidents from discrimination and incorporate adequate guaranties in any enabling act. In line with these views I am today asking the chairman of the House Interior and Insular Affairs Committee to assure that adequate safeguards have been provided to prevent any such discrimination in the granting of statehood to the Territory of Alaska.

This point of discrimination is ably and clearly set forth in the following letter to the Washington State congressional delegation from the Alaska Fishermen's Union:

MARCH 12, 1957.
Re discriminatory bills before the Territorial Legislature of Alaska.
WASHINGTON STATE CONGRESSIONAL DELEGATION,
Washington, D. C.

DEAR CONGRESSMEN: The Territory of Alaska, acting through its Territorial legislature, is seeking by every means at hand, whether lawful or unlawful, to discriminate against members of organized labor who work for the salmon canneries in Alaska during summer months as employee fishermen and then return to their homes in Washington, Oregon, and California for the remainder of the year when no fishing employment is available in Alaska.

The ultimate objective is clearly to prohibit and restrict residents of the continental United States from participating in Alaska salmon fishing; this, notwithstanding the fact that residents of the Pacific coast have gone to Alaska from continental United States in pursuit of their chosen employment for over 50 years. Thousands of residents of Washington, Oregon, and northern California have gone annually to Alaska all of their adult lives. Many are the second generation which has been so engaged. These men are members of the Alaska Fishermen's Union, the oldest fishing union on the Pacific coast, which has negotiated annual collective-bargaining agreements with the Alaska salmon canneries since 1902. Action of the Alaska Legislature directed against these men is directed against the Alaska Fishermen's Union, and can and should be classed as antiunion and antilabor.

Ample proof of the above statement is apparent when the acts of the Territorial legislature—some previously enacted and some now under consideration—are viewed in the light of the fact, and it is a fact, that the great majority of the fishermen who go to Alaska from the States work as employee-fishermen, and not as independent producers engaged in private enterprise.

In contrast, a great majority of the resident fishermen—practically all of them—fish as independent producers owning their own nets and boats, and thus engaging in private enterprise.

The difference in the methods of fishing is a natural development of the differences in the conditions which surround the two groups. Those who live in the continental United States and travel to Alaska and return, cannot, as a practical matter in many instances, own their own nets and boats and transport them to and from Alaska nor can they leave them for the winter months in Alaska without costly storage and adequate provisions for care.

On the other hand, the resident fisherman lives within the area, generally maintains his home nearby and is able to store his net and boat during the winter months.

It follows then that laws which impose a heavy tax burden or other restrictions on employee-fishermen or on the hiring of them or on the net, boat, or catch of an employee-fisherman without a corresponding tax or restriction on an independent producer or on the nets, boats, or catches of independent producers, are in fact thinly disguised discrimination against nonresident fishermen and in favor of resident fishermen. There are presently some laws of a discriminate nature now in effect and several more are under active consideration by the Territorial Legislature in session in Juneau. Some of these acts or proposed acts are as follows:

House bill 48 is the graduated catch tax. The exemption and graduation are such to exempt all independent fishermen completely from the tax and to leave the burden entirely upon company fishermen, who are, in

fact, nonresidents. This bill would place a 6 percent tax on fish caught by company fishermen. While it has been general knowledge that the Territorial Legislature has for many years tried to tax the fish traps out of existence, or at least that has been their contention in the past, it now develops that the taxing of the fish traps did not entirely fulfill all of the demands made on the legislature in this respect, so they included company gillnet fishermen in the same bill, in order to make sure that residents of the continental United States would be excluded from the Alaska fisheries, for all practical purposes.

Notwithstanding this bill, another one was introduced in the Legislature of Alaska, House bill N162, which does not mention any traps but concentrates its fire completely on company fishermen and, in effect, provides a $1,000 license on each boat used by company fishermen, and as such, would make it an almost economic impossibility for the salmon operators to hire company fishermen in the future. This bill would have very serious effect in the Bristol Bay area of Alaska. It would also affect a large percentage of the fishing done in the Cook Inlet area, and to a lesser extent it would affect fishing in the Chignik district and part of the Westward district, which includes all of the south side of the Alaska Peninsula.

We are enclosing copies of the two bills mentioned so far, for your information and consideration.

House bill 124 would prohibit the use of fish traps, if and when the Territoory obtains control of the fisheries. Fish traps are maintained and operated almost entirely by company fishermen who are nonresidents, and the effect of the act is to destroy their employment.

One of the laws now in effect is the provision of the Employment Security Act which subjects the earnings of employee-fishermen to a one-half percent tax, and contains enough restrictive qualification formulas which, for the most part, prevent nonresident employes from receiving the full benefit of the act.

You will recall that we had a nonresident fish-license fee in effect some years ago which became so prohibitive that in order to be able to fish in Alaska, we had to go to court. The Supreme Court of the United States at that time ruled in our favor. The present act now provides, in effect, for higher fees for nonresidents than those paid by resident fishermen, and although this act has not as yet become prohibitive in its application, nevertheless, it does provide for some of the proceeds to be applied for the benefit of sick resident fishermen, but sick nonresident fishermen cannot qualify for any benefits. It appears to us that:

1. The Territorial legislature is trying to regulate the fisheries by taxation;

2. Each bill written so far carefully excludes resident fishermen from such taxation;

3. If control of the fisheries were transferred to the Territory of Alaska, all nonresident fishermen would soon either be taxed out of existence or, if this wasn't possible, discriminated against by fishery regulations to a point where they would have to quit.

On the basis of the statements made herein which supplemented bills from the Territorial legislature, plus keeping in mind that bills previously introduced in Congress would also have had the same discriminatory effect on employment of nonresident fishermen, it is becoming necessary for Congress to provide for legal language which in the future would make it impossible for Alaska to discriminate United States citizens out of their living and out of their employment which they have followed for over half a century.

If any consideration is given to statehood for Alaska, Congress must write language which will render unnecessary lengthy legal battles to obtain our rights as citizens. We cannot too forcefully stress this matter to you, which is of utmost importance to all nonresident employees working in Alaska.

Respectfully submitted.

ALASKA FISHERMEN'S UNION,
LIU 1821, AFL-CIO,
GEORGE JOHANSEN,
Secretary-Treasurer.

Address by Hon. John F. Kennedy, of Massachusetts, Before Society of the Friendly Sons of St. Patrick, Baltimore, Md., March 16, 1957

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. FALLON. Mr. Speaker, on Saturday, March 16, Senator JOHN F. KENNEDY, of Massachusetts, delivered a very fine address before the Society of the Friendly Sons of St. Patrick, in Baltimore, Md. His address eloquently compares Ireland's fight for freedom with the recent revolt in Hungary, and was warmly received by close to 800 Irishmen who gathered at the Southern Hotel to hear it.

Under unanimous consent, I am inserting Mr. KENNEDY's address in full in the Appendix of the RECORD:

REMARKS OF SENATOR JOHN F. KENNEDY, DEMOCRAT, OF MASSACHUSETTS, ST. PATRICK'S DAY DINNER, 1957

It is fitting that we remember at this time three requests granted St. Patrick by the angel of the Lord, in order to bring happiness and hope to the Irish: First, that the weather should always be fair on his special day, to allow the faithful to attend the services of the church; second, that every Thursday and every Saturday 12 souls of the Irish people should be freed from the pains of hell; and third, that no outlander should ever rule over Ireland.

I have not heard a weather report from the Emerald Isle tonight, but I am certain that no rain fell—officially. Who pays any heed to a little Irish mist? And I have no doubt that 12 Irishmen have been freed from the nether regions this very Saturday. (In fact, the toastmaster tells me he thinks he saw several of them here tonight.) But certainly we need no report to tell us that tonight no outlander rules over Eire; and the Irish people are celebrating this day in peace and in liberty.

But is it not a bitter and tragic irony that the Irish should now enjoy their freedom at a time when personal liberty and national independence have become the most crucial issues of our time? No problem weighs heavier on the conscience of the free world than the fate of billions held in an iron captivity in areas stretching in a great half-circle from the plains beyond the captive city of Warsaw in the west to the Red River Delta beyond the trampled city of Hanoi in the east. And no problem plagues western leadership more incessantly than the struggle of millions in Africa and Asia to cast off the yoke of colonialism and achieve the dream of national self-determination.

I know of few men in our land, and none in this room, who would ignore these denials of freedom as far-off troubles of no concern at home. For Irishmen have always been concerned with imperialism and repression in other lands. Ireland's chief export has been neither potatoes nor linen, but human freedom. Throughout its history, its exiles and emigrants have fought notably with sword and pen, for freedom in other parts of the globe. Particularly noted were the "wild geese," the officers and soldiers forced to flee their native Ireland after the Battle of the Boyne. Fighting for the French, they broke the ranks of the English at Fontenoy. Fighting for the spanish, they turned the tide of battle against the Germans at Melazzo. And fighting for the American Union Army, they bore the brunt of the slaughter at Fredericksburg.

"War-battered dogs are we (they said),
Gnawing a naked bone;
Fighters in every land and clime—
(For) every cause but our own."

I do not maintain that the Irish were the only race to display extraordinary devotion to liberty, or the only people to struggle unceasingly for their national independence. History proves otherwise. But the special contribution of the Irish, I believe—the emerald thread that runs throughout the tapestry of their past—has been the constancy, the endurance, the faith that they displayed through endless centuries of foreign oppression, centuries in which even their mass destruction by poverty, disease, and starvation was ignored by their conquerors.

(For example, on February 19, 1847, it was announced in the House of Commons that 15,000 persons were dying of starvation in Ireland every day; and Queen Victoria was so moved by this pitiful news that to the society for Irish relief she contributed 5 pounds. Perhaps we should not be too quick to condemn the good Queen, however—for in those days the English pound was no doubt worth more than it is today.)

All this is now past. Yet the heroic annals of Ireland's fight for freedom should be recalled today. We are frequently urged to accept as permanent the enslaved status of the so-called satellite countries; and we are under heavy pressure to accept for an indefinite period those policies of our allies that have already postponed too long the granting of native rights and self-determination in the colonized areas of Africa and Asia.

But if anyone thinks such restrictions on freedom can withstand the irresistable force of human liberty, even if backed by superior military and political force, then let him recall the Ireland of 300 years ago, the similar techniques of oppression, the alternating hope and despair of the Irish, and the unquenchable thirst for human liberty that lingered on despite all defeats and disappointments.

I think it is important that we make that comparison today—not to revise the unhappy memories and national animosities of an age gone by—but to remind us all that along with the need to worship God, there has been implanted in every man's soul the desire to be free.

Perhaps the chapter of Irish history most sharply brought to mind—particularly these days when the tragic Hungarian uprising of October 1956 is still fresh in our memories—is the story of the Irish Rebellion of 1642, and its hero, Owen Roe O'Neill. The story actually begins with the famous Flight of the Earls in 1607 when the Earl of Tyrone, Hugh O'Neill, sailed sadly into exile on the continent accompanied by his young nephew,

Owen, other members of his family, and Rory, the Earl of Tyrconnell.

"O, sad in green Tyrone when you left us, Hugh O'Neill,
In our grief and bitter need, to the spoiler's cruel steel,
Will you come again, O Hugh, in all your olden power,
In all the strength and skill we knew, with Rory, in that hour
When the sword leaps from its scabbard, and the night hath passed away.
And Banba's battle cry rings loud at dawning of the day?"

Hugh O'Neill would not come again. He died in 1616 still dreaming of returning to free his native land. And in Ireland, hope gave way to despair. For now the Irish people were hard put to keep alive the memory of their lost freedom. The education of their children and the preservation of their native language and customs were controlled by a foreign dictator—priests were imprisoned, tortured and murdered, and the Catholic religion all but totally surpressed—lands and property were confiscated, basic legal rights denied, meetings banned, and their very existence regarded with contempt—and with fear.

When, in 1644, one Captain Swanley seized a ship, picked out from amongst its passengers 70 whom he considered to be Irish—and threw them overboard—the Journal of the House of Commons records that "Captain Swanley was called into the House, and thanks given to him for his good service, along with a chain of gold of 200 pounds in value." "To kill an Irishman," it was commonly said at that time, "was no more than to kill a dog."

But, just as the Hungarian people rose to cast off their chains when the Russians were troubled in Poland, so the Irish rose during the struggle between Throne and Parliament in 1641. Their initial successes, however, could not be maintained. Lacking arms, lacking experienced military leadership and sorely divided by factional disputes, their revolt was brutally crushed. On February 25, 1642, anticipating the slaughter of Budapest by more than 300 years, the English High Command gave the following order to its generals in Ireland: "Wound, kill, slay and destroy, by all the ways and means you may, all rebels and adherents and relievers; and burn, spoil, waste, consume and demolish all places, towns and houses, where the said rebels are, or have been, relieved and harbored, and all hay and corn there; and kill and destroy all the men inhabitants therein who are able to bear arms."

Overwhelmed with despair, outnumbered and outclassed, the Irish revolutionaries—led by a dedicated but untrained lawyer name Phelim O'Neill—were prepared to surrender all that remained. Then, suddenly, from the Boyne to the sea, from county to county, from mouth to mouth, the joyous word was passed: "Owen Roe has come."

"Glad news, glad news for aching hearts comes from the northern shore,
Ho, Phelim, rouse your sorrowing soul, and raise your head once more.
Magennis and Maguire, come from out your 'leagured tower,
And spit upon their Saxon laws—defy their Saxon power.
For eyes are fired that erst shone mee, and tongues loosed that were dumb—
Up Gaels. Up Gaels. Revenge. Revenge. Owen Roe, Owen Roe is come."

On July 6, 1642, having successfully evaded the British fleet, Owen Roe O'Neill stepped ashore in the north of Donegal. Nephew of the famous Earl of Tyrone, already famous in his own right for his brilliant battle for Spain at Arras, the greatest Irish general of his time was home at last—and he rallied around him a once ragged army and a once despondent citizenry. Owen Roe the liberator, he was called—the worthiest warrior of them all, and ignoring the jealousies and the petty divisions that hampered his efforts, he went steadily forward to his appointed task of building an army and driving the enemy from his native shores.

Finally, in June of 1646, with a greatly outnumbered army and with no artillery whatsoever, he fought and won his greatest battle, the famous victory of Benburb. Launching a whirlwind attack with the cry of Sancta Maria, he wiped out the enemy's army in one brief hour, captured enough equipment to outfit his entire force, and left 3,300 of the enemy dead on the battlefield. Fatalities in his own ranks numbered exactly 70.

It was a great day for the Irish—just as October 23, 1956, was a great day for the Hungarians—and these are the days that live in the minds of men long after all else has been crushed. For rival factions sued for an unworthy peace, dissident parties and jealous leaders fought among themselves and against Owen Roe; and thus a divided Irish nation was dismally unprepared for the invasion of Oliver Cromwell. And when at last they instinctively turned to the great liberator whom they had shamed and abused, Owen Roe fell ill before he could rejoin his army—and died the victim, it was said, of a poisoned nail placed in his shoe by an agent of Cromwell.

The entire Irish nation was overwhelmed with grief.

"Did they are, did they dare, to slay Owen Roe O'Neill?
Yes, they slew with poison him they had feared to meet with steel,
Had he lived—had he lived—our dear country had been free,
But he's dead—but he's dead—and 'tis slaves we'll ever be.

"Sagest in the council was he, kindest in the Hall;
Sure we never won a battle—'twas Owen won them all,
Soft as woman's was your voice, O'Neill; bright was your eye,
Oh, why did you leave us, Owen? Why did you die?

"Your troubles are all over, you're at rest with God on high,
But we're slaves, and we're orphans, Owen—why did you die?
We're sheep without a shepherd, when the snow shuts out the sky—
Oh, why did you leave us, Owen? Why did you die?"

So ends the story of the Irish rising of 1641. O'Neill's wife fled into exile, his son was captured in battle and beheaded; and, their armies overwhelmed, the Irish people were brutally slaughtered and enslaved by a ruthless and relentless Cromwell. In still another parallel to last fall's tragic events in Hungary, the entire population of Ireland within a few years after O'Neill's death had declined by more than 50 percent—the result of human slaughter, mass deportation, and a great exodus of exiles and emigrants.

"They are going, going, going, and we cannot bid them stay,
For their fields are now the stranger's, where the stranger's cattle stray.
But no foreign skies hold beauty like the rainy skies they knew,
Nor any night-wind cool the brow as did the foggy dew."

To those hapless exiles from the Emerald Isle, as to those fleeing Budapest today, and those struggling against overwhelming odds in other parts of the world, the prospects for the liberation of their homeland seemed very remote, indeed. And yet, as Sir Roger Casement told the British jury that sentenced him to hang for high treason in 1914: "Ireland has outlived the failure of all her hopes—and yet she still hopes."

"Ireland has seen her sons—aye, and her daughters, too—suffer from generation to generation always for the same cause, meeting always the same fate, and always at the hands of the same power; and yet always a fresh generation has passed on to withstand the same oppression. The cause that begets this indomitable persistency, preserving through centuries of misery the remembrance of lost liberty, this surely is the noblest cause men ever strove for, ever lived for, ever died for."

May this spirit, and this story of 1642, and all the stories of Irish martydom like it, be recalled in this year of 1957, in the minds of the oppressors, in the hearts of the oppressed, and in our own Nation's Capital.

It is a shocking fact that too many of the brave but discouraged men and women behind the Iron Curtain feel that the United States has abandoned them to permanent captivity. It is equally shocking that millions of Africans and Asians look with suspicion upon the United States as a sympathizer with colonialism and continued western domination. This Nation, after all, had to battle for its own independence from foreign control with the help of friends from other lands. We gave self-determination to our own dependencies; and we were for more than a century unafraid to speak up in opposition to the exploitation of any peoples by any outside power.

I would not equate the rapidly diminishing colonialism of the West with the brutal colonial policies of the Soviet Union. But I am confident that both are eventually as doomed to failure as was the subjugation of the Irish people.

I do not wish to oversimplify endlessly complex problems, to deny the measures taken by ourselves and our allies to clarify this issue of independence, or to ignore the dangers of moving too fast either in the Soviet satellites or the Western colonies. But the fact remains that in both areas human beings who were born free and equal are inevitably going to demand their full freedom and equality; and one by one, sooner or later, regardless of what is done to encourage or discourage them, they will obtain that freedom. And the only question then will be whether they will thereupon regard us as a friend who offered hope and encouragement in their darkest hour, or as a stranger—who left them to be "sheep without a shepherd when the snow shuts out the sky."

Therefore, let us here resolve that our Nation will forever hold out its hands to those who struggle for freedom today, as Ireland struggled for a thousand years. Let us recognize what the events of the past year in Hungary and Poland and Ghana and Algeria have firmly demonstrated—as the struggles in Ireland and elsewhere demonstrated in centuries gone by—what must of necessity be the cornerstone of our foreign policy, and every nation's foreign policy, for all time to come—that there may be satellite governments, but there are never satellite peoples—that nations may be colonized, but never men—and that whether a man be Hungarian or Irish, Catholic or Moslem, white or black, there forever burns within his breast the unquenchable desire to be free.

Memorial Passed by Arizona State Senate

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include a memorial passed

by the Senate of the State of Arizona on February 26 directed to the Congress requesting that the Congress of the United States take favorable action on legislation restricting the movement of unmarried juveniles across international boundaries. The resolution is as follows:

To the Congress of the United States:

Your memorialist respectfully represents:

The Legislature of the State of Arizona is aware of Senate bill 959 introduced in the 84th Congress, 1st session, by Senator ESTES KEFAUVER and others, which provided that unmarried juveniles, unaccompanied by a parent or guardian, were not to be permitted to leave the United States without a permit issued by the Attorney General of the United States or the facilities of the United States Department of Justice for such purpose. The State of Arizona being a border State and therefore cognizant of the many problems created by this situation is favorably impressed with the necessity for similar legislation and the need for its immediate passage.

Wherefore your memorialist, the Senate of the State of Arizona, prays: That the Congress of the United States give serious consideration to and take favorable action on a bill similar to Senate bill 956 which would prohibit unmarried juveniles, unaccompanied by parent or guardian, from leaving the United States without first having obtained a permit.

Continuing Foreign Aid

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial entitled "Continuing Foreign Aid" from the New York Times, New York, N. Y., on Wednesday, March 13, 1957:

CONTINUING FOREIGN AID

As Congress and the administration busily pass the buck to each other in efforts to cut the $72-billion budget for the coming year, a real danger is arising that indiscriminate economies may be made in precisely the areas that this Nation can least afford to make them.

Along with President Eisenhower, Secretary Humphrey and a great many Democrats and Republicans in both House and Senate, we too would like to see some curtailment of this, the largest peacetime budget in American history. We have little doubt that material reductions can be made.

But the place where the gathering forces of budget cutting are most likely to focus their fire is the place where they would lose the fewest votes in doing so; and yet it is the place where heavy slashes would do serious damage to the long-term interests and even to the security of our country. That place is in the general area of foreign aid. The program of American military and economic assistance to our friends and allies abroad is a cornerstone of our foreign policy; yet it is relatively easy, from a political and emotional standpoint, to make that program the primary target in any campaign of budget cutting.

This is not to say that the present foreign-aid program of some $4 billions must be maintained at its present rate or in its present form, with almost exclusive emphasis on military assistance. Like all other programs, foreign aid deserves close and careful inspection. But it would be an act of the most incredible folly if the desire for economy should result in any large-scale, undiscriminating, across-the-board slash irrespective of the consequences. Practically every reasoned study of the subject that has been made in the last few months endorses the general principle of continued foreign aid on a large scale as essential to the welfare of the United States.

The Fairless report states that the programs "are proving their worth and we should hold to them." Other studies make a most impressive case for expanding the program to provide for basic long-range investments in underdeveloped countries as a means of raising their standard of living, and thereby opening the way for the growth of democratic institutions, prosperity and peace.

The incontrovertible success of the Marshall plan has shown us what can be accomplished. If there had been no such plan, our defense expenditures would be astronomically higher than they now are. The truth is that we cannot afford not to have a foreign-aid program of vigor, imagination and vitality for a long time to come.

Safety First Club of Maryland

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. FRIEDEL. Mr. Speaker, during the month of February it was my pleasure to report in the CONGRESSIONAL RECORD about the excellent work being accomplished by the Safety First Club of Maryland, a nonprofit organization dedicated to traffic safety. This group is located in Baltimore and the officers include J. O. Shuger, president; Harry Waller, vice president; Maurice R. Shochatt, executive secretary; and Samuel T. Abrams, treasurer.

The organization sponsored a highly successful Wheelmaster Banquet on Thursday evening, March 14, 1957, at the Sheraton-Belvedere Hotel in Baltimore. The Honorable KENNETH A. ROBERTS, chairman of the Special Subcommittee on Traffic Safety, was the guest speaker.

The Baltimore Sun carried the following story on the banquet on March 15:

AUTO SAFETY AWARDS GIVEN—ROBERTS ASKS UNIFORM LAWS, PUBLIC EDUCATION

The chairman of a congressional subcommittee on highway safety last night cited the need for uniform traffic laws and public education as being most urgent in the battle against road deaths.

Representative KENNETH A. ROBERTS, Democrat, of Alabama, delivered his remarks before the first annual awards dinner of Maryland's Safety First Club which paid homage to two Baltimoreans for their roles in combating the national disease.

As prizes, Henry A. Barnes, the city's traffic director, and Charles Adler, Jr., a Baltimore inventor of safety devices, both won gold-plated Wheelmaster plaques.

Opening his address, Representative ROBERTS praised his Capitol Hill colleague, Congressman SAMUEL N. FRIEDEL, Democrat, of Maryland, for his part in introducing a measure in Congress which lead to the eventual creation of his safety subcommittee.

FIVE GUIDEPOSTS

Established in January 1956 the seven-member group now functions as part of the House Committee on Interstate and Foreign Commerce.

At the outset, he said, his group outlined five guideposts to help determine their overall aims: the human factor in traffic deaths; legislation; law enforcement; vehicle design, and highway construction.

In the Sheraton-Belvedere dinner audience last night, the Safety First Club counted among its members—Maryland Congressmen, Baltimore city councilmen, officials of the magistrates courts, traffic court workers, State and Baltimore police executives, a member of the city's supreme bench and representatives from industry.

Taking a cue from the congressional safety group, J. O. Shuger, president of the Maryland organization, said the local unit was established early last year.

The Spirit of St. Patrick

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. FEIGHAN. Mr. Speaker, under leave granted, I insert in the RECORD an address I prepared for delivery at the 90th annual banquet of the Ancient Order of Hibernians, in Cleveland, and over KYW–TV and WJW and WERE radio stations, Cleveland, on the Spirit of St. Patrick:

St. Patrick's day here in the United States has long been a special occasion for festivities, parades, banquets, and above all else, serious thinking and reflection on the heritage of the Irish people.

It is the American tradition that St. Patrick's Day is the occasion to recall the many wonderful contributions made by the sons and daughters of Ireland toward making this a better world for everyone. There is scarcely a field of human endeavor in which this tradition cannot be applied with merit and currency in understanding the problems of our days.

I have chosen as my subject, Eamon de Valera, again elected Prime Minister of Ireland, his participation in the old League of Nations, and the wise prophecies of that Irish statesman on the subject of peace or war.

The question of war or peace is an all important one to the people of the United States. We know from hard experience that wars can only be prevented by positive leadership, courage, and vigilance.

After World War I the League of Nations was established to prevent future war. The League of Nations sought to bring about negotiated settlement of disagreements between nations which in past generations, have been the outstanding cause of war, to effect a general disarmament, and to advance understanding among nations and people. In 1935 the League of Nations was presented with a real test when Mussolini invaded Ethiopia. The issue was whether a great power could invade and occupy a smaller power without suffering penalties imposed by the other member states of the League of Nations. Eamon de Valera at that time warned that this was the crucial test of the League of Nations. He warned that if aggression against the small and defenseless countries went unpunished, the days of the League of Nations were numbered.

The League of Nations took no action to stop Mussolini, Ethiopia was coldly written off by the League.

Thereafter a series of events were set in motion which led inevitably to the outbreak of World War II. It is now clear that had the league taken swift and positive action against the aggressor nation, the major events leading to war which followed could have been prevented. The failure of the league to take action increased the boldness of the dictators of that era. Soon those same dictators engaged in aggressive actions to show their contempt for the weakness and inaction of the League of Nations.

Prime Minister De Valera made another prophetic statement concerning war when the Dictators Hitler, Stalin, Mussolini, and the war lords of Japan were launching their campaigns to carve up the world into spheres of despotism. Speaking before the League of nations in September 1938 he said:

"The psychology of people facing the possibility of war is amazing. * * * Nothing has impressed me so much as the sudden and complete abandon which can seize responsible men when they are for a long time confronted with what they regard as unreasonable selfishness, or obstinacy, or disregard of consequences on the part of those whom they have been endeavoring to convince.

"In that, I believe, lies a very grave danger for the present. At a certain stage, men's patience becomes exhausted; a proper sense of values is lost; discretion is thrown to the winds. * * * A policy of drift is accepted and events are allowed to take command and determine the result."

Shortly thereafter the policy of drift in the League of Nations opened the way for dictators to instigate World War II. After a period of cold war threats and promises the dictators Hitler and Stalin signed a treaty which set off the war.

The dictators were convinced that the League of Nations was helpless, that democracy had lost its dynamic driving force and that the future belonged only to those who were aggressive, prepared, and ready to fight.

The trumpets of the dictators heralded the coming of a new order—preceded by war against the small and weaker nations.

Recent events offer disturbing evidence that a policy of drift is taking command over the affairs of freemen, that events controlled by the enemies of peace and human freedom are beginning to cast their ominous shadows upon the future.

The United Nations has demonstrated that as presently constituted it is incapable of preventing aggression or defending the rights of small nations, or even protecting the basic human rights which it was established to guarantee.

In the case of heroic Hungary, the United Nations stood paralyzed while the godless Russian Communists slaughtered the Hungarian patriots who sought nothing more than the basic freedoms which the United Nations and all its member nations are supposed to support and defend.

Finally, when world condemnation of Russian brutality had reached a fever pitch, the United Nations General Assembly adopted a resolution condemning Russian aggression against Hungary and calling for the withdrawal of the Red army from that ravaged land.

But the United Nations has not taken one single step to date to enforce that resolution. Words—meaningless words are all that the United Nations has offered to stop a new wave of aggression which carries all the earmarks of a prelude to World War III.

In the Middle East crisis, where another dictator was attempting to cut off the lifeline of Europe, aided and abetted by the Russian aggressors, the United Nations curiously attempted to punish the small nation of Israel because it had the courage to fight for its national survival. With an air of frustration, if not despair, the United Nations struck out at Israel because someone had to be punished for the ineptness, the inaction and the general confusion in the United Nations.

Thus, the United Nations has fallen into the quicksand of weakness which suffocated the League of Nations.

We have reached the point where the determination of our leaders to stand up for what is right has been seriously impaired.

The great American sense of values of our leaders has been numbed in the cold war struggle with the masters of the Kremlin. We once supported, without reservation, the right of all people to freedom, self-determination and national independence. That was the time when we would have no understandings whatever, open or secret, with tyrants or dictators who deprive the people of their right to self-government and individual liberty.

We believed that men could not be half free and half slave. That all men, of right, ought to be completely free. Today some of our leaders shamelessly express their support for so-called national communism which violates everything we have stood for and fought for since the birth of our Nation.

Discretion has been thrown to the winds in our relations with the governments of other nations.

By recognizing tyrannical regimes we cloak them with respectability which they are using in a conspiracy to destroy all that is good in this world.

A policy of drift has taken hold here in the United States because events are allowed to take command and determine the results.

An example of this drift is presented by the stand taken by the American delegation to the United Nations when only last week it announced that the United States would not press the United Nations resolution on Hungary any further, because some other nations of the free world took a cool attitude toward that resolution.

The Russians, as the whole world knows, refuse to obey that U. N. resolution. The Russians have thus won another victory by default of our leaders.

Our present foreign policy is motivated by a desire to win some dubious popularity contest.

In no way is it related to firm support for those immutable moral and political principles which alone can preserve the dignity of man and bring a just and lasting peace to all the world. Our leaders have entered upon a policy of drift, in which events, caused by those who live by aggression and war, are allowed to take command and determine our destiny.

We must see to it that the mistakes of the League of Nations are not repeated in the United Nations. This we must do if we are to prevent world war III and create the basis for a just and lasting peace.

It is not too late to stop the policy of drift which very well could cause us to stumble into world war III.

What the world needs most today is the spirit of good St. Patrick. St. Patrick taught the Irish race love of their fellow man, respect for the rights of others, the great virtues of charity, patience, forbearance, and humility. St. Patrick gave the Irish people their indomitable belief in the dignity of man and the inevitability of the triumph of right over might.

St. Patrick taught the Irish people love of God and love of country.

That is the spirit of St. Patrick.

That is the spirit the world so badly needs today.

Nasser as Conqueror

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. MERROW. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein an editorial entitled "Nasser as Conqueror," from the New York Times, New York, N. Y., on Saturday, March 16, 1957:

NASSER AS CONQUEROR

With the decisiveness and dispatch for which dictatorial regimes usually surprise and frustrate the more timorous and divided forces attempting to halt them, President Nasser is now nailing down the political victory he snatched from his military debacle and Egyptian propaganda is hailing him as a conqueror. It is still not clear just who he conquered and whether his conquests will prevail. But he is well on the way to liquidating the assumptions of the United Nations, the United States, and most Western Powers—assumptions based on his own assurances, which led to the British, French, and Israeli withdrawals. Negotiations with him are beginning to evoke uncomfortable memories of Munich and Yalta.

Thus, without consulting the United Nations and in disregard of previous understandings and all pleas for a go-slow policy, the Egyptian dictator has ousted the United Nations administration of the Gaza strip and installed his own administration under one of his generals. The new Egyptian governor pledges cooperation with the United Nations troops, but only as a border patrol, and announces that everything will go back to normal as before the Israeli invasion, when Gaza was the main base for Egyptian guerrilla raids against Israel.

At the same time, far from dropping his claim to belligerent rights under his unilaterally proclaimed state of war with Israel, Nasser's spokesmen continue to insist on Egypt's determination to resume the blockade against Israeli shipping in both the Aqaba Gulf and the Suez Canal in defiance of United Nations decisions. Finally, disdaining thus far to give an official reply to the American, British, French and Norwegian interim plan for the Suez Canal, he has rejected this plan through his spokesmen and now asserts his unrestricted control of the canal, in violation of the Suez convention, by collecting full tolls from the small vessels passing through it. He is thus establishing a precedent for application to all shipping when the canal is fully opened. Meantime, he continues to delay final clearance.

In assuming this conqueror's pose the Egyptian dictator relies on the immunities granted him by the United Nations, which ruled out the use of force against him, acknowledged his right to control Gaza and made even the presence of United Nations forces on Egyptian-controlled territory subject to his wishes. In these circumstances the immediate means of checking him are limited—unless and until he again steps beyond bounds and resorts to new belligerent actions in violation of international law and United Nations resolutions. Such a situation would invite both United Nations sanctions and the right of individual and collective self-defense.

It must be hoped that until this happens Israel will maintain its self-restraint and

will not permit itself to fall for provocations aimed at its destruction. Indeed, it would greatly improve Israel's international position if it should admit United Nations patrols on its side of the border in line with United Nations resolutions. In this case it can be assured of a quick resumption of American aid.

But this does not absolve either the United Nations or the United States from doing their utmost to live up to the responsibilities they have assumed to prevent a return to the conditions which precipitated the recent hostilities and to assure progress toward peace. This means, first of all, mobilizing all moral forces against Nasser's defiant and provocative actions. Such a mobilization would be greatly aided by the publication of a White Book by Secretary General Hammarskjold, and another by the United States, detailing their negotiations with Nasser and the basis on which their assumptions and assurances were made. This would also greatly aid whatever further action the United Nations can take to clarify the ambiguities of its previous resolutions, which Nasser now exploits. But such action must also mean continued and increasing political and economic pressure on Nasser by the United States and by all other peace-loving nations. This pressure should be given far more forceful expression than it has received heretofore, lest absence of it encourage Nasser to greater recklessness that would raise new dangers in the Middle East.

Moral Commitment for Alaska Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BARTLETT. Mr. Speaker, under leave to extend my remarks I should like to place before my colleagues an editorial which appeared in the March 14, 1957, issue of the New York Times on some of the basic reasons why Alaska should be granted statehood:

STATEHOOD FOR ALASKA

The latest hearings on the admission of Alaska to the Union got off to a good start this week with an unequivocal declaration that "the administration's position is that all of the Territory of Alaska should become the State of Alaska."

Sole reservation is that special powers be granted the President for defense purposes to cover a large part of northern and western Alaska, over which—if the President chooses—"the Federal Government may exercise exclusive jurisdiction." Even if and when such "withdrawals" were made, residents of the area would continue to have the right to vote, and such local government as exists would continue to exercise its functions.

There is no reason why the administration's proposal for special defense powers should affect statehood adversely; and even such an ardent proponent of statehood as Ernest Gruening, former Governor of the Territory and now "Senator-elect," says that the Federal Government would have the authority to make such withdrawals anyway, without amendments proposed.

The real question involving Alaskan statehood does not stem from its special defense problems arising from proximity to the Soviet Union. The real question is quite different: it concerns the moral commitment of the people of the United States to put an end to our own peculiar kind of colonialism that has so long afflicted this Territory. The people of Alaska overwhelmingly want statehood; they are ready to accept its responsibilities and obligations; they have demonstrated their determination to get it; and they ought to have it. Alaska cannot begin to reach its potential so long as it is held in Territorial status.

Former Governor Gruening and many others have repeatedly pointed to the discrimination under which Alaska suffers in respect to two of its vital interests: transportation and the salmon fisheries. Achievement of statehood would end the special-interest exploitation that keeps shipping costs unduly high and that deprives the Territory of control over its dwindling salmon catch. Even more important, it would give to a vigorous body of Americans—over 160,000 of them—the right to that full participation in our democracy that has been denied them far too long.

United States Hauls Red Rubbish

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. FEIGHAN. Mr. Speaker, I wish to bring to the attention of Members of Congress, particularly the members of the Committee on Post Office and Civil Service, the editorial which appeared in the outstanding daily, the Cleveland News, issue of March 14:

UNITED STATES HAULS RED RUBBISH

Approximately 7 million pieces of Communist propaganda—from Russia and the Red satellite countries—were imported into the United States last year. This did not include additional Soviet rubbish in first-class mail or in diplomatic pouches.

This Red propaganda was unsolicited and much of it was addressed to colleges and student groups throughout the United States. Only a small percentage of it was confiscated as in violation of the Foreign Agents Registration Act—that is, political propaganda not sent to a registered agent.

Foreign postage pays for bringing such Russian propaganda into this country, but the cost of the delivery, mind you, is borne by the United States Post Office Department.

In other words, Uncle Sam obligingly pays part of the postal charges on tons of Soviet propaganda which yearly deluge this country from abroad.

This is all brought out by a congressional investigating committee in New York City. As much as 90 percent of the tons of Soviet propaganda coming into this country annually is in foreign languages.

Under the Foreign Agents Registration Act, the stuff is supposed to be labeled "political propaganda" material, but none of it is because, assertedly the law is unenforceable.

Legislation should be adopted by Congress to require a "political propaganda" label to be attached at the foreign source of this Russian mailing. That's the least which should be done. It's bad enough having this flood of Red propaganda distributed in this country without our Post Office Department picking up the delivery tab. Little wonder we have a $500-million postal deficit.

President Eisenhower yesterday again urged Congress to eliminate the huge postal deficit by providing greater mail revenue.

Well, a lot can be saved in the Post Office Department by not having it bear the cost of delivering improperly labeled Red propaganda.

No other country in the world permits foreign propaganda to be imported in such devious fashion and then actually pays for its distribution.

Greek Independence Day

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
Thursday, March 7, 1957

Mr. ANFUSO. Mr. Speaker, March 25 of this year marks the 136th anniversary of Greek Independence Day, which goes back to the year 1821. Because of the present international situation and Greece's role as a military bastion of NATO, this anniversary takes on added significance.

After some 400 years of Turkish rule and following 21 fruitless attempts to gain their independence, the people of Greece made yet another attempt in 1821 when they revolted against their Turkish oppressors. It was a bitter struggle which lasted for 3 whole years from 1821 to 1824. Despite the fact that the Turks were then at the height of their power, the revolt of the Hellenes for freedom proved successful. Several great European powers of the time, notably, Great Britain, France, and Russia, aided the Greek people in their struggle for national freedom.

The American people, too, have always supported the independence of Greece. In turn, Greece has traditionally and consistently been one of our staunchest allies.

The people of Greek origin, who inhabit the island of Cyprus, today seek to gain their freedom from British colonialism. They desire to have the right to decide their own political future, which Great Britain has repeatedly denied to them. This desire on the part of the Greek Cypriots, a highly civilized and mature people, is nothing new or recent. It is a struggle which has been going on for nearly eight decades, since the British landed on the shores of Cyprus in 1878.

When the British first arrived there, the people of Cyprus welcomed them with open arms as saviors after centuries of domination by the Ottoman Empire. The English were told by the Archbishop of Cyprus that he hoped they would follow up their great work of deliverance of the Cypriotes from the Turks by bringing about the one thing which the people of Cyprus desired most, that is, union with their motherland Greece. Thus, from the very beginning, Britain was aware of the political aspirations of the people of Cyprus. Those aspirations still remain to be fulfilled. Britain still controls Cyprus, and the Cypriotes are still striving for freedom.

It is sometimes asked: Why should Cyprus join Greece? It is a known fact that 82 percent, or 400,000 Cypriotes living on the island, are Greek in ethnic background, Greek in culture, and of the Greek Orthodox faith; they are also

Greek in heart, Greek in nature, and Greek by birth.

It was only after all efforts of the people of Cyprus had failed to persuade the British to grant them the opportunity to choose their own form of government that the Greek Government intervened in their behalf. Greece has merely asked that the people of Cyprus be given the right to decide for themselves as to who should govern them. There would be no real validity to a Greek claim for sovereignty unless the Cypriotes voted for union with Greece, commonly referred to as Enosis. Greece has never claimed Cyprus, but merely asks for self-determination by its people. The Cypriotes think of freedom and independence in terms of self-determination and unity with the rest of the free Hellenic nation.

During World World I, Great Britain offered Cyprus to Greece on the condition that Greece join in the war against Germany. At the moment the offer was made Greece was in no position to enter the war, but it did so later and fought on the side of the Allies. The British subsequently claimed that their offer concerning Cyprus had lapsed.

During World War II, Italy had asked Greece in 1940 for the right of passage in order to occupy certain strategic ports, but Greece refused to do so. When the Germans joined forces with the Italians against the Greeks, the latter failed in their efforts to hold them off for very long, although they had succeeded in doing so for about 2 months. Nazi General Keitel later admitted at the Nuremberg trials that if the Germans had not been forced to send so many of their men against Greece the result of World War II would have been in favor of the German Army.

Since 1878, when Cyprus came under domination of the British, the people of Cyprus have never been able to organize their own political parties, and they have had little or no opportunity to participate in the government. Only on the very lowest levels of municipal government have the Cypriots been permitted to participate in formulating any decisions.

Great Britain claims that she needs Cyprus, in view of the loss of her military base in the Suez Canal zone. Greece does not dispute the need for a base. In fact, Greece has offered to Britain not only the retention of its bases on Cyprus, but has also offered bases in Greece itself, provided Cyprus is given her freedom.

Meanwhile, the fighting in Cyprus continues. There is needless bloodshed. But the people of Cyprus, in their desire for a government tf their own choosing, say:

Better 1 hour of freedom than 40 years of slavery and imprisonment.

On the occasion of Greek Independence Day it is worthwhile remembering these words.

Mr. Speaker, I understand also that in connection with this year's celebration of Greek independence an American Queen of Greek extraction is going to be chosen on March 29, 1957, at Manhattan Center in New York City. I have the honor to be one of the judges of this contest. It is my sincere wish that the selected Queen should make a tour of the NATO nations espousing the cause of Cyprus independence.

Disability Benefits Under Social Security

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. DINGELL. Mr. Speaker, for the first time in the history of social-security legislation, the last Congress added a program of disability benefits so that people who have been retired from the labor force by a crippling illness or injury are now entitled to social-security payments provided they are age 50 or over. The bill as it passed the House of Representatives would have provided such benefits regardless of age. But, as you will recall, the compromise measure, which became law during the last days of the 84th Congress, used a much less liberal approach which limited the right to benefits to eligible men and women aged 50 or over.

In the months which have passed since August 1956, when the law was passed, I have talked with the people of my district and studied the subject. I have become more and more convinced that age should not be a factor in determining whether a man is entitled to disability benefits. I am concerned because, under present law, a man aged 45 who can no longer work because he is completely incapacitated, is not entitled to benefits, whereas his neighbor, aged 50, can receive benefits. Certainly the man 45 is just as effectively retired and as badly in need of benefits as is the man aged 50.

This discrimination because of age creates a vicious inequity in our social security system.

The disability plan requires a substantial work record under the social security plan. To qualify, a worker must show both a substantial and recent work history. Thus as to work record and contributions, two workers may meet the requirements on an equal basis—but the younger man cannot qualify because of his age.

Fortunately no such age distinction is made in connection with the disability freeze provision of our social security law which, in effect, preserves the insurance and benefit status of workers who have been determined to be permanently and totally disabled. We are today, therefore, making disability determinations regardless of age in our social security system. We are determining that younger men and women, as well as those in the 50 and over age group, are severely disabled. But we then illogically say that only those who are 50 or over are entitled to benefits.

Because I am convinced that the young people of this country and their families who undergo the misfortune of having a crippling illness or injury to the wage earner are equally entitled to disability benefits, I am today introducing a bill which would remove the age requirement in our disability benefits plan. In the words of the recent report of the committee on economic needs of older people of the Twentieth Century Fund, published last year:

In effect (total and permanent) disability frequently represents premature superannuation. When it occurs relatively early in life, it may have more serious effects for the family and for society than forced retirement in old age, for the worker is likely to have responsibility for the support of children, and the family commonly faces heavy medical expenses as well as loss of earnings. The effect of total disability on the need for socially provided income is evident in all studies of the composition of relief rolls, even in periods of high employment.

A real protective disability benefits program for all workers is provided by my bill at slight cost to the disability trust fund. According to the best estimates, it would add costs of around one-eighth of 1 percent of payroll for the worker and an equal amount for the employer. I believe that it may be possible to finance disability benefits for all workers without increasing the tax. The reason for this is that the disability trust fund was overfinanced in the sense that the amount added to social security tax to finance the plan exceeded cost estimates. But, even if it were necessary to increase the tax in the piddling amount of one-eighth of 1 percent each for worker and employer, I am convinced that the people of this country would gladly support a measure to provide the same protection against loss of earnings because of permanent disablement for our country's young people and their families as are provided for those aged 50 and over.

Youth's Stake in Soil Conservation

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. THORNBERRY. Mr. Speaker, on February 15, 1957, there appeared in the weekly newspaper of San Marcos, Tex., the San Marcos Record, four of the winners in a statewide essay contest, the subject of which was Youth's Stake in Soil Conservation. The contest, sponsored by the Fort Worth Press, was promoted locally by the Soil Conservation Service and other civic clubs.

First place in the senior division was won by Miss Karen O'Banion; while second place was awarded to Miss Janice Little, both of San Marcos, Tex. In the junior division, the winners were Miss Leanice Harp and Wesley Odell, of Wimberly, Tex.

Because of the timely nature of the essays, I know that Members of Congress will be interested to read the comments

of the winner of the junior division, Miss Leanice Harp:

YOUTH'S STAKE IN SOIL CONSERVATION

When our ancestors came to America, this country was a vast land. It abounded in wildlife, forests, rivers, lakes, streams, and rich mineral deposits. On the prairies, the tall grass bent in the wind, millions of animals lived in abundance.

Then came the pioneers plowing land, killing wildlife, destroying the forests, and wasting land. Nature could do nothing except try to replenish that which the pioneers had destroyed. On the prairies where proud bison had roamed, dust storms blow; where had been meadows with tall grasses were gullies. What happened to our land? Where did most of our vast resources go? They have vanished, only to be replenished by man.

Our country's stake in the future is depending on the youth of today: The youth, many of whom are now probably sitting in a classroom listening to a teacher. The youth, citizens of tomorrow, will have many responsibilities upon their shoulders. One, of many, is soil conservation. What is conservation?

Conservation is the saving of water, soil, minerals, forests, wildlife, education, and human resources without which a powerful nation would decline and fall.

In regions where water is scarce the youth of today, with FFA and 4-H, are bringing the land to life again by conserving water.

If man who cleared the forests and ripped up the grass cover of the prairies, does nothing to protect the land, it will be blown or washed away, and as it goes, man goes.

The youth are being trained to conserve all resources. Will they take advantage of this training?

How long will America continue to be called the land of plenty? The answer to this question lies with the youth of today. Yes, our heritage was one of abundance. Will we pass this on to those who follow?

Miss LEANICE HARP.

WIMBERLEY, TEX.

How "Big" Is the Budget?

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. VANIK. Mr. Speaker, during the past several weeks we have heard extensive discussion, both in and out of Congress, concerning the size of the Eisenhower budget. While Federal expenditures can be very considerably reduced, it is highly important that budget reductions be handled with sound discretion.

I commend the following editorial which appeared in the Washington Post on Friday, March 15, as representing a very sound and rational approach to the current budget problem:

HOW "BIG" THE BUDGET?

In the past 10 years, Federal nondefense spending has doubled in dollar value. This, and the fact that more than two-thirds of the increase has occurred since 1954, apparently worried the administration into its half-hearted budget presentation which, in turn, invited the unprecedented request by the House that the President trim his own spending proposals.

This, of course, he cannot do without seriously compromising executive responsibility for budget-making and, indeed, abetting a breakdown of congressional authority in this field, too. The President must somehow retrace the unfortunate steps he took in seeming to approve Secretary Humphrey's attack on the budget; he must seek to reestablish firm administration backing for fiscal 1958 spending requests.

The precarious balance of the budget does justify some concern, for a peacetime deficit would be dangerous during a period of continuing inflationary pressures from other sources. Moreover, a greater surplus than that budgeted might be a useful anti-inflationary weapon, if the temptation to cut taxes which this would induce could be resisted. Beyond such considerations, related to the present somewhat strained state of the economy, however, "big budget" fears need evaluation in longer-range terms. And in this broader context, the President can, if he will, find ample refuge.

For example, while projected 1958 nondefense spending is twice that of 1948, the country's gross national product has increased by nearly comparable proportions. According to some unofficial calculations, nondefense spending in 1948 accounted for some 7.3 percent of gross product, whereas the figure for next year under the Eisenhower budget would be only slightly higher, about 8.4 percent using a conservative forecast of economic growth. Measured in these terms, the rise in Federal outlays for other than national security and foreign aid purposes is hardly alarming, especially considering that in 1948 domestic spending had not yet increased to take full account of serious backlogs in school, highway, and other programs deferred during the war.

But what accounts for the still somewhat disturbing gain dollar-wise? Largely three factors: price inflation, population increases, and the both broadened and increased social-security coverage for a rapidly maturing population. The first two factors have made all but mandatory a fairly steady increase in most appropriations merely to maintain the level of Federal services and activities. They have, of course, figured largely in the increases for social security, too. In the past decade, the population has risen from 146 million to more than 170 million, or about one-sixth. There is no good measure of inflation for this purpose, but prices of most things the Government buys and Federal wages are substantially higher than a decade ago.

All of this is hardly a picture of "New Republicanism" running wild, as some conservatives of both parties have chosen to view it. It is, rather, a picture of a rapidly growing Nation that has not yet learned to stabilize its currency but that has been more or less responsive to the rising volume of demand for various Government services. These demands will continue to increase in amount and variety as the Nation grows in population, in economic output, and in complexity of social and economic organization.

Spending for national security, including foreign aid, is of course another story. Since Korea, outlays in this realm have far exceeded the nondefense items and probably will for some years to come. The demands here, however, are as irresistible as those at home, although, as the drastic cutbacks 3 years ago demonstrated, there is sometimes more room for flexibility in meeting military requirements. It is in this field, with all of its built-in opportunities (and sometimes necessities) for inefficiency and costly experimentation, that the opportunities for significant budget-trimming lie, if they lie anywhere.

In point of fact, however, until the immensely expensive nuclear and missile weapons race has been cooled off through arms control agreements, there is little room for safe retrenchment. And to help achieve the kind of security that will permit an ultimate end to the waste of armaments, there ought to be some increase in this country's long-range economic assistance to the underdeveloped nations of the world which, without aid, will find it more difficult to achieve stable, peaceful and constructive roles.

The House has had its fun. Let it now get down to business, eschew arbitrary, foolish penny-pinching, take due account of this country's great strength and equally great challenges and plan how best to meet these challenges in the year ahead with the resources at hand.

A Layman Looks at Natural Resources

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. METCALF. Mr. Speaker, I was among those who were pleased to learn last year that the League of Women Voters of the United States had put "Conservation: Study of Water Resources" on the national program.

I was pleased because I thought it was high time the league—with its reputation for bridging the gap between the experts, the special interest groups, and the voters—turned its attention to the most precious of our natural resources.

Last week, I sat in on sessions of the North American Wildlife Conference here. Among the outstanding papers presented was the following by Mrs. John G. Lee, league president:

A LAYMAN LOOKS AT NATURAL RESORCES

(Address by Mrs. John G. Lee, president, League of Women Voters of the United States, to the 22d North American Wildlife Conference, Statler Hotel, Washington, D. C., March 5, 1957)

Unfamiliar words, like hydrologic cycle, acre-foot, design flood, watershed and multiple-purpose project are slipping into the vocabulary of the League of Women Voters. Legislation such as the amended Water Pollution Control Act, Watershed Protection the Flood Prevention Act, as amended, Small Reclamation Projects Act, and Federal Flood Insurance Act, while perhaps not exactly household words, are a part of the vocabulary also of the league member.

The reason for this new vocabulary is that at its 1956 convention the members decided to put on the national program "Conservation: Study of Water Resources." We recognize, of course, the tremendous importance of all renewable and nonrenewable resources. Although it is true that you should never underestimate the power of a woman, you must also realize that we are rational beings and, as such, felt that it was not within the realm of reasonableness to try to tackle all the national resources at once. It made more sense to concentrate on water, which sounded somewhat limiting. This turned out to be a fallacy, since water is a vastly complex subject on which all living things depend. Furthermore, government, in dealing with water, has succeeded in developing complexities which only a Univac can untangle.

However, perhaps one reason the members of the League of Women Voters were so anxious to make a study of water resources is because they have an aversion to polygamy. Bernard Frank who might be here in the audience this afternoon, has written that

even marriage might influenced by the difficulties of obtaining water. The inhabitants of one rural community in southeastern Asia must walk 9 miles to the nearest sources of drinking—a group of wells. Local custom decrees that wives must fetch the water. One wife can make only one trip a day with her bucket—not enough for the family's needs—and so a man finds it desirable to have several wives. It is a thought worthy of some consideration.

In leagues of many of our western States the members have been anxious for a long time that we tackle the problem of water. Fort Worth was wondering whether it would be out of water in 5 years. I happen to be from Connecticut, and the grievous damage done by floods there in 1955 made me realize that higher food prices, depleted meat supplies, higher tax bills and less steel for school construction actually can be connected with raging waters and, as a citizen, I have a vital interest in the Nation's powerful rivers and the way in which they are controlled.

I am not going to tell you about water. That would be bringing coals to Newcastle indeed and I have been in that position myself. As president of the League of Women Voters presumably I am aware of the importance of voting but some years ago I posed for a publicity picture with an orchestra leader who had just recorded a stirring number called Voters on Parade. After posing for several pictures this man turned to me and with the air of one making a most profound discovery he said very sincerely: "Mrs. Lee, I think voting is terribly important. I think everyone should vote." He looked as if he expected me to challenge this novel and startling sentiment but all I could do was to agree as if I'd never run across the idea before.

So, I am not going to tell you about water. But is is possible that you have been so aware of America's water problems for such a long time that you have forgotten the impressions you first had when you entered the field. I'd like to give you a few of mine along with some of the questions that have come to mind as a result of a first look into this vast problem. Then I'd like to go from there and suggest a few of the ways in which a lay organization such as the League of Women Voters may be able to contribute to solutions.

The first impression many of us get when we embark on a study of this country's water resources is the tremendous number of governmental agencies concerned in one way or another with water. I am told that there are 25 principal agencies in the Federal Government with a major concern in water resources and power and that 18 others are concerned to a lesser degree. All of this looks pretty confusing to a layman like me. So the first thing we have done in our league study is to assemble all this information on chart form. On it you can see at a glance, for example, that the Corps of Engineers is concerned with flood control, irrigation, water supply, pollution control, and recreation, while the Public Health Service is involved in only three functions to do with water—supply, pollution, and recreation.

As soon as the national chart was issued, many of our State leagues started work on similar charts showing State agencies involved in water resource development and management and the way in which Federal agencies concerned with water resources are working in their area. They are trying to find out how the Federal activities are coordinated with State and local efforts or if they overlap and conflict with them.

The second thing we have observed is that there are not only many agencies involved but they seem to have different standards; they proceed in different ways and their experts do not always agree. I was also interested to learn that while some people who benefit from the Government's water policies are expected to pay for them, others get benefits for nothing. Sometimes, I understand the same water to different users will vary in cost—the agricultural user one price, the domestic user another. This may be very clear to you but it is confusing to the layman. It makes us wonder whether it is possible to come to agreement even on basic scientific data—much less on a national water policy. But long years of dealing exclusively in public affairs has developed in us a sort of hardy optimism.

The third thing we have learned is that our water problem is likely to cost us quite a lot of money. Those of us whose only previous contact with paying for water is when we make out checks for our semiannual water bills have been startled, to say the least, to learn that about $50 billion has been mentioned as the capital investment of the United States for use and control of water already and that up to $421 billion has been suggested as the total of our water development financing. As taxpayers we may have a lot of questions to ask about that—maybe one for each billion.

The fourth observation I should like to make as a newcomer to this field is that all of the uses of a particular water source seem to be interrelated. You can start out, for example, thinking you are going to study irrigation and end up learning about flood control, or you try to find out what constitues a good water supply and find out that it cannot be separated from the sewage-disposal problem. Trying to separate the uses of water is harder than trying to allocate water itself.

The fifth thing we have noticed is the tremendous number of different groups that use water and the number that have ideas and opinions on the way water should be used. We notice, too, that all of these groups seem to have an angle. Now that is not necessarily bad; it is quite natural that each group of water users tries to identify its use as being in the public interest so that rules and regulations will favor them. What makes it confusing to the layman—and possibly to you too—is when water uses that seem equally legitimate come into conflict. Usually we think of water as a pleasant cooling agent; we know, of course, that it is the source of steam; but we have been astonished to find it generating deep and hot emotional conflicts.

This brings me to one of the most important functions that can be performed by a disinterested citizen group. Laymen with no ax to grind can listen to the conflicting views of the pressure groups who want Government agencies to come up with the right answer and then they can help to balance the special demands. They can do this, of course, only after they have learned the facts.

Paul Sears has said "public issues should not be clouded and confused by failure to get the basic scientific facts." I agree and I do not wish to imply that the League of Women Voters or any other lay group can get the basic scientific facts that is up to the hydrologist, economist, geologist, engineer, or water law expert. But the league can—and so can any other interested group—use facts that have been available but about which no one has done much; it can assemble facts from various sources and put them together to make a more complete picture and it can prod the experts into making more facts available.

I'd like to outline for you, if I may, just how our group goes about getting the facts. As many of you know, New Jersey has had a water problem for years. In 1955, the New Jersey League started its study of water. Members were possibly stirred to action by the eloquent plea of the convention delegate who declared: "When the point comes that we have to ask 'Is this bath necessary?' it is time for New Jersey to take steps." They tackled the problem on a statewide basis. This is a copy of their kit. It goes into the history of the development of water supplies in New Jersey, and analysis of the supply problems in relation to population growth, fluctuation of use, agricultural, household and industrial needs, changes in climate and an analysis and comparison of the particular problems of the main geographic areas.

You would think perhaps that in a State like New Jersey where I understand they have been wrestling with the water problem for 40 years, all of this information would be close at hand. Not at all. The most telling part of this kit, to my mind, is a not at the end. It says:

"It is almost impossible to give a bibliography of the source material used to compile the information in this kit. Speeches of experts in the water supply field, study commission reports of the past, material available from existing water supply agents and interviews with persons responsible for providing public potable water supplies are some of the sources used. The committee, however, has been very careful to have the enclosed information checked by responsible persons, particularly so since much of the printed source material was out of date or no longer of value."

Now, 2 years later the New Jersey leagues have not only made use of this kit but the 83 local leagues in the State have studied the problem from a local point of view; they have taken innumerable field trips to innumerable local waterworks; they have considered the pros and cons of five possible types of development. The problem is clear; the solutions controversial.

Among the roadblocks to progress were strong local opposition to suggested reservoir sites, conflicting engineering analyses of proposed water supplies, opposition of muncipal and private water companies to the State's further entrance into the water picture, division of opinion as to who should pay for the new water supplies and south Jersey's feeling its needs should also be considered. The league also discovered that water problems don't confine themselves neatly to the boundaries of a State. New Jersey has started to eye the Delaware River as a source of water supply because they say "The Delaware River looks nice and big and doesn't run through anyone's town or farm—except on occasions."

However, they find that there are other eyes on the Delaware River. New York, Pennsylvania, Delaware, as well as New Jersey have interests in the Delaware River; New Jersey must receive permission from the United States Supreme Court before it can take additional water from the river, to mention a few of the difficulties standing in the way.

The league in New Jersey is now in the difficult process of making up its collective mind as to what next steps are the wise ones. It is evident that there are no easy solutions right around the corner. But eventually with enough people working on it and thinking about it and the development of better public understanding of what is involved and needed solutions will be found, I am sure.

This brings me to a second role which a lay group can play in this complicated field, and that is the role of education—informing the public so wise judgments can be made. I'd like to give you a rather homespun example:

Two or three years ago Chester, Vt., population 1,981, had a problem of contaminated drinking water. Dr. Wayne Griffith, the town health officer, had recommended that the water supply be chlorinated. Similar recommendations came from the State health department but the suggestion was defeated in a village vote. The league in Chester got interested in this matter. They found that samples of the Chester water supply

should be sent to the State board of health twice a month but this was not always done especially during the winter. So the league sent samples during January, February, and March. Of the eight samples sent, four came back marked "water unsafe for drinking."

The league also wrote other Vermont communities to find out how they had purified their water supply, to inquire about costs, how the money was raised and what people thought about chlorination. The replies to these letters were made part of an exhibition which also featured a "taste test exhibit." Various bottles of water, chlorinated and unchlorinated, were on display. Anyone who could successfully tell which bottles were which was awarded a prize. Two public meetings were held and then a petition was circulated to include the chlorination issue in the warning for the village meeting. Usually a dozen or so people came to the meeting. But for the chlorination meeting there were 180 villagers present and they voted 91 to 67 for chlorination.

As the local league president wrote, "Chlorination might seem like a simple necessity but it has been argued here for years."

In these two examples, I have tried to demonstrate two of the ways citizen groups can function in the complicated field of water problems. In New Jersey the scientists got the facts but the league assembled them from various sources and put them in a form where they were more easily understood. In Chester, the league took the facts to the public—small though that public was.

There is still another way in which a lay group can function and that is in the role of sparkplug. I am sure you are all familiar with the Brandywine valley project. It is constantly being pointed out to us as the example of citizen action in improving a watershed. I have been told, however, that for years things in that valley were at a standstill. "Dead on their feet" is the way one expert expressed it—until the indomitable Mr. Hoff came along. He was the sparkplug. Providing the spark, it seems to me, is where interested laymen really shine. It is where citizen groups like the League of Women Voters shine, for certain.

Let me tell you about Salt Lake City, for example.

In 1938, the United States Public Health Service first warned of the potential hazards in the Salt Lake City drinking water. Ten years later, the same group declared the water definitely substandard and placed it on a provisional rating. This meant that unless the city immediately came up with a concrete plan for bringing the water up to standards, the use of the city's water by interstate carriers would be banned. There was no State or local law making it mandatory that the water supply meet safety standards and legislation setting standards of this kind had consistently been defeated.

In order to maintain the provisional rating the city government hired an engineering firm to survey the situation. Though the findings of that survey had been announced and reported in the local press, and though the State Medical Association had gone on record approving the recommendations, as had the State engineering council, there seemed to be little chance of raising the money necessary to improve the situation.

This was the situation in 1952 when the newly formed League of Women Voters decided that its first local program would be the "support of a soundly planned and financed water purification and sewage-disposal system for Salt Lake City." Careful study was made of the findings and recommendations of the official survey. In addition, the league interviewed city officials, members of the medical association, heads of the city and State health departments. The information gained was reviewed and discussed by league members and agreement was reached on what would constitute an adequate program of water purification for Salt Lake City. It was now time for action in the community. It is good league strategy to get as many people as possible involved with the team before the starting whistle blows. Members of the staffs of both newspapers and of the State and city health departments attended meetings in unofficial capacities and a full-scale campaign to inform the public of the true facts about the city's drinking water was launched. The league's weekly radio program was devoted solely to discussions on water. Doctors explained the potential dangers of a substandard drinking supply; engineers described the various systems of water purification; health officials reported on the present supply; financial experts pointed out various methods of financing the expensive undertaking; city officials were interviewed as to their intentions. A town meeting was held at which the mayor came out for the first time with a pay-as-you-go proposal for financing the program.

The league now puts its speakers bureau into action, and league members spoke and showed movies to all the groups that would receive them, several of whom joined the campaign.

In the meantime, the opposition became vocal. One powerful local group made a strong statement to the newspapers criticizing the hysteria and frantic fear concerning the water supply. This particular group felt that to publicize and dramatize the condition of the water was bad business for the city. It would scare off tourists and conventions. The spokesman for this group called the league chairman and told her in effect that the league just didn't understand these things, that they were heading the city into fabulous debt unnecessarily, and they would be better off if they would just forget the whole business. Actually there were many members of this opposing group who disagreed with the official stand; they formed a committee to study the reports and surveys and eventually went along with the league's position.

More difficult to cope with at the time was the opposition from another source, the Deer Creek Water Association. In a widely distributed leaflet, gotten out by the league in cooperation with the doctors and engineers, it was mentioned that Deer Creek water might need full filtration treatment eventually. This was received by the manager of the association as a terrible threat and he made the need for filtration a personal issue to which he was violently opposed. The irony of the situation is that after all his bitter battling when the proposed program was being formulated for the approval by the State health board, his association soon announced plans for installing a complete treatment plant for Deer Creek water, not for health but for taste and appearance reasons.

The results were: The mayor got a bill presented and passed in the State legislature which permits cities to levy a 4-mill tax for water and sewage purposes. The State legislature passed the antipollution bill and also approved a revision of the State health code so that at long last the State health department was able to set and enforce standards. The city government then began to draw up a 10-year program which, after some debate and compromise, was approved by State health agencies and the United States Public Health Service. Since then one water purification plant has been completed, 2 reservoirs have been covered and a second purification plant has been started.

Now, my point is this: The scientific facts were known—certainly the way to solve the problem was known; and eventually the public went along. What was needed was someone to bridge the gap between the experts, the special interest group and the voters.

I once read a very high-minded definition of politics which has stuck in my mind. "Politics is the point at which knowledge meets life and becomes socially effective." The politics of water run deep and full of currents and crosscurrents; there is extensive knowledge available to us; to make this knowledge socially effective requires a mastery of the politics involved and an ability to effect compromise.

This may be the special function of citizens groups—those that have no ax to grind—that wish to see the problem whole. It is a safe generalization that most Americans recognize that all natural resources including water should be developed so as to assure their best use and their maximum contribution to the national economy, growth, strength, and general welfare.

How to do this is, of course, the big question. Undoubtedly to find the answer it will take your brains, and resources and scientific research. It will also take citizen groups—many of them—to translate the scientific truths into action.

We should, as I mentioned before, try to see the problem whole but we can, I believe, approach it in terms of its parts. As Charles Frankel has said of society as a whole, "It does not have to be understood or remade all of a piece and all at once * * * social progress proceeds by deliberately instituted legislative, judicial and administrative techniques and by the piecemeal reconstruction of human institutions."

"Morality and Security: The Forgotten Equation," Thomas E. Murray

---

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks, I herewith include in the RECORD an article entitled, "Morality and Security: The Forgotten Equation," written by the Honorable Thomas E. Murray. Mr. Murray, member of the United States Atomic Energy Commission, made this statement on November 10, 1956, in an address before the Catholic Association for International Peace. The article which appeared in the December 1, 1956, issue of America follows:

The Christian effort at peacemaking from its origin undertook the task of civilizing warfare. It set itself against pacificism—the notion that war is always immoral. But it set itself even more strongly against barbarism—the notion that the use of armed force is not subject to any moral restraints. Against these two extremes the tradition asserts that war can be a moral action, but only if it is limited in its purposes and methods by the norms of justice.

The fact today is that the Christian tradition of civilized warfare has been ruptured. The chief cause of the rupture has been the doctrine of total war fought to total victory—the kind of victory that looks to the total ruin of the enemy nation. This doctrine of totalization of war represents a regression toward barbarism. It is contrary to the central assertion of the civilized tradition, that the aims of war are limited, and that the use of force in war is likewise limited, not merely by political and military counsels of expedi-

ency, but primarily by the moral principle of justice.

THE DRIFT INTO BARBARISM

I need not trace the history of the rupture of this civilized tradition; many of you doubtless know it better than I. The patriotism of the French Revolution gave birth to the concept of the nation in arms, which led to the idea of universal military conscription. Our own Civil War foreshadowed the fatal notion that victory in war means unconditional surrender. A further step toward the concept of total war to total victory was the rejection by the belligerent governments and peoples of Pope Benedict XV's proposals, made on August 1, 1917, for a negotiated peace.

The historically decisive stride in the same direction was taken in World War II by the inception of obliteration bombing. One purpose of this new kind of air attack was to terrorize the enemy civil population, in particular the industrial worker. The developing logic of total war showed itself in the disastrous announcement at Casablanca in 1943 that unconditional surrender was the war aim of the Allied Powers. The immoral decision that the civilian population has no claim to immunity from destruction in war was ratified, with most fearful effectiveness, by the unfortunate American decision to drop atomic bombs on Hiroshima and Nagasaki.

Since World War II the technical possibilities for obliteration bombing have now become unlimited. The United States discovered the secret of the hydrogen bomb; later the Soviet Union came upon the same secret. The significance of this technological achievement cannot be exaggerated. Weapons of war have moved up into a new order of magnitude. Now the barbaric doctrine that everybody may be killed in war is assured of success. Now, everybody can be killed in war—easily, quickly, cheaply.

Throughout the course of this whole historical development, no one has ever made the argument that war ought to be made total as a matter of reason and right. War simply became more and more total as a matter of fact and possibility. The immoral impulses of exaggerated nationalism began the development. The material achievements of modern technology completed it. Technological progress has finally removed all the limitations formerly imposed on warfare by pure circumstances—by restricted financial resources, by difficulties in transport and communications and, most important, by inferior weaponry.

This is the historic juncture at which we now stand. If limitations are to be imposed on warfare today, they can be imposed only by the free decisions of men. No other source of limitation presently exists. This is why we stand at a parting of the ways. Two paths are open. In his encyclical of November 2, 1956, Pope Pius XII called one the road of justice, and the other the steep slope of violence.

MAN AT A MORAL CROSSROADS

Man can choose to let the mad logic of total war dictate his decisions with regard to military policies and weapons programs. This steep slope of violence, followed far enough, leads toward the totality of ruin implicit in the today's technologically certain fact: "Everybody can now be killed in war."

Or man can choose to shake off the hold which this mad logic has fastened upon his mind. He can elect to return to the road of justice—to the civilized tradition of limited warfare. He can recognize that the enterprise of war is inherently subject to certain limitations in its purposes and methods; that these limitations find their original source and their final authority in the moral order; that this order is sanctioned by God; that its precepts are therefore absolute in their command over all human action, including the action of war.

Only along this path of moral choice, as I shall say, will men find their way to security. In the last analysis, only the principle of justice can draw the line between civilized warfare and sheer massacre, between legitimate defense of the basic order of human life and the barbaric destruction of all order in human life. Unless this line is drawn, with absolute firmness, there can be no solid foundation for human security.

I do not say that it will be easy to draw the line at which the civilian claim to immunity from violence in war asserts itself in the face of the counsels of military expediency. But I do say that this civilian claim is made in the inviolable name of justice and that all military operations, defensive or retaliatory, must respect it. All expediencies cede in the face of right.

Similarly, I do not maintain that it will be easy to reverse the trend of a century-old regression into the immoral concept of war as total, and to reaffirm the trend of the Christian tradition toward the concept of war as limited. But I do maintain that this task is not impossible. It is always within the power of man to abandon false ideas and to dismantle the institutions built upon them. He can therefore do away with the idea and institution of total war, if only he decides firmly enough that he wants to do so, and that in the nuclear age he must do so.

He has already been powerfully helped to this decision by the facts themselves. On the practical level, the bankruptcy of any policy of total war is today amply evident. A total nuclear war, fought to a total victory, could only mean total woe. It would mean "woe to the vanquished," in a sense far beyond the savage meaning of that barbarian cry. And it would mean woe to the victor too, when he found himself in a world of ruins, amid a humanity which would bear death in its very bones. Here is an argument that must give pause even to the most cynical exponents of violence.

For us, however, the rejection of total war must be more solidly based. Our appeal must be to the high principles of justice that lie at the heart of the Western tradition of civilized warfare. Human reason has never refuted these high principles; the will of man has simply abandoned them. The tradition did not succumb to argument, but only to fact—to the fact of man's passions, as they are aroused by the violence of war and proceed to arm themselves with the products of technology.

Here perhaps I should note that the reason and moral conscience of America too have been obscured by the dark fires of wartime passion. Upon us, as upon other nations, there rests a responsibility for the rupture of the tradition of civilized warfare. For this reason, no less than for any other, there rests upon us a responsibility for repairing the breach.

The principles of the traditions are still with us, in all their undiminished vitality. The problem is to translate them into practical conclusions in two areas of urgent concern—first, in our military policy in general, and second, in a weapons program that will support our military policies. Here is the way I see the structure of the problem.

OUR PRESENT DEFENSE PROBLEM

The present goal of all the policies of the United States is to force the conflict with communism out of the field of armed violence into the areas of diplomacy, politics and economics. These areas are highly competitive indeed; but competition in them does not mean bloodshed. They are the chosen areas in which we undertake to urge the cause of justice for all men. Moreover, we must be continually mindful that the conflict with communism is basically spiritual; therefore, our victory will not be won without recourse to the sword of the spirit, which is the word of God.

The primary military contribution toward this general American goal must be the maintenance of the capacity to deter all unjust aggression, even of a limited kind. The primacy of this function of force is reinforced today, because our principal enemy will be restrained from the use of force only if we convince him that it will prove too costly to him.

This policy of deterrence may fail. Military aggression of one kind or another may occur. Peaceful methods of rectifying the injustice thus committed may likewise fail. We shall then be forced into war. This contingency must be faced now. The problem is to determine, in advance of this contingency, the military policies that will be consistent with the tradition of civilized warfare.

At one extreme, justice requires that we reject the concept of total nuclear warfare. The bald fact that large nuclear bombs can wipe out whole civilian populations does not put an end to the claim of the civilian to immunity from the violence of war.

At the other extreme, our tradition of civilized warfare does not require that we succumb to the deception involved in the Soviet proposal that all use of nuclear weapons be outlawed. This propaganda aims to make the world believe that any use of nuclear weapons inevitably means the totalization of the conflict. This is not true. A nuclear war can still be a limited war. To believe otherwise is to deny that man is a rational being capable of controlling his own actions. It is likewise to assert that American military men are capable of making intelligently moral use of their new weapon.

Furthermore, in the present situation of international lawlessness, a total renunciation of nuclear armaments by the United States would mean the betrayal of our moral tradition, which requires that we should not abandon the cause of justice or leave ourselves unprepared to defend it effectively.

Both of these extremes contain the moral fallacy of totalization. Between them we must find a middle course, the road of justice. It leads to a firmly defined but flexible military policy that will recognize two principles as controlling in the use of nuclear arms—first, the military principle of necessity or usefulness, and second, the higher moral principle of justice in the use of force.

This brings me to the next question. It is the practical question of developing a nuclear-weapons program which will be consistent with the foregoing general military policies.

Here I want to lay all possible emphasis on the initial principle that our military policies must control our weapons program. The fatal error we are presently in danger of making is that of allowing weapons to dictate policy. The danger is really twofold: first, lest we allow weapons technology to control the weapons program; and, second, lest we allow the stockpiled results of the weapons program to control military policies with regard to the use of the stockpile. To succumb to these related dangers would be to turn the whole of United States policy upside down.

RATIONAL NUCLEAR ARMAMENT

Early this year I outlined a nuclear-weapons program that would avert these dangers and give to moral principles and military policies their proper primacy over weapons. To the program I gave the title, "Rational Nuclear Armament." There were three proposals.

The first concerned the size of thermonuclear bombs. Three considerations led me to my position. I stated the first in a speech given on November 17, 1955, when I said that the advent of the H-bomb "taught us not only that we had a new weapon but that we had a different kind of weapon. * * * The

thermonuclear bomb crosses the threshold into a separate category of power" (America, December 3, 1955, p. 269).

The second consideration, closely related to the first, is the fact that it is technologically possible to enlarge indefinitely the qualitatively new dimension of destructiveness created by the hydrogen bomb. I adverted to this fact in a statement before the Senate Subcommittee on Disarmament on April 12, 1956, in these words: "We know that there is no upper limit to the size of bombs that can be made" (America, April 28, 1956, p. 100).

The third consideration is likewise something that we know. As I put it in the November 1955 speech cited above, "there is a limit to the number of large thermonuclear explosions that the human race can withstand without harmful bodily effects," consequent on radioactive products.

From these three considerations a conclusion follows. We ourselves must make a responsible decision with regard to the size of H-bombs that we undertake to manufacture. This decision is not only technological and military, but also moral. It must be controlled by the moral principle of justice as well as by the military principle of usefulness. My proposal was that we make this imperative decision, setting an upper limit to the size of H-bombs to be placed in stockpile. I have already given it as my conviction that the weapons we have in hand are large enough. Indeed, they may prove to be too large. Once we make this decision regarding size, we can be free to give attention to the problem of improving the deliverability and consequently the military usefulness of weapons in the range up to this limit. In addition, we should set a limit to the number, as well as to the size, of the large weapons that we accumulate. The reason is the presumption that there are only a limited number of uses, militarily and morally justifiable, to which they might be put.

My second proposal was that we concentrate increasingly on the development of nuclear weapons in the lower order of destructiveness and that we equip ourselves with a wide range of weapons in this order. The purpose of this policy is to strengthen our capabilities for waging all the kinds of limited warfare into which we may possibly be forced.

Third, I came to the question of tests. Recently there has been much debate concerning the hazards to health involved in past and continued testing of large nuclear weapons. This is an area in which at the present time a great deal of uncertainty exists. The greatest possible study ought to be given to the entire problem of the dangers to health involved in the testing and use of nuclear weapons. However, my proposals have grounds of their own, even apart from the problem of these hazards. They follow from the two major policy decisions I have recommended. My proposals are, first, that no tests should be held of weapons whose magnitude would exceed the upper limit which we must set to the size of our nuclear weapons. Second, that we should accelerate the testing of a wide range of weapons in the lower order of nuclear force. The reason is that our objective should be a balanced stockpile, suited to every strategic and tactical need, but confined within the bounds set by justice to the use of force.

The weapons program I proposed is rational in two senses. It is consistent with the moral principles of the civilized tradition, and it is adapted to the military necessities of the nuclear age.

One further comment needs to be made. My proposals for a rational weapons program have to be considered as a structured unit, consistent in themselves and with their premises. This is particularly true of the proposal with regard to tests. This proposal cannot be called substantially similar to any of the proposals that were made during the recent election campaign.

The program that I propose is designed to carry us through the critical era of uncertain duration which confronts us. The crisis concerns, at bottom, the nature of man. But by the same token, it concerns the nature of war, as a human action. The danger in the crisis is lest we commit ourselves to the steep slope of violence that ends in the abyss. But let us not overlook the opportunity which the crisis likewise presents—the greatly historic opportunity to choose the road of justice and to undertake the restoration of the tradition of civilized warfare.

It is with a view to grasping this opportunity that I put forward my program for rational nuclear armament. Its several proposals are counsels of strength, not of weakness. But the strength they counsel is both military and moral. Therefore they constitute a program for security in the present crisis. They recognize that the security of America does not reside solely in its military power but more basically in its moral strength—the kind of strength that ultimately controls the use of power and makes it serve the ends of justice.

MORALITY AND SECURITY

Our national and international security has been undermined today largely by the rupture of the tradition of civilized warfare. This, and not the discovery of atomic energy, lies at the root of the terror experienced by the world at the thought of war. There will be no security as long as the rupture of the tradition endures. We shall have no security as long as we are prisoners of the moral fallacy of totalization—that is, as long as we consent to the immoral notion of total war, as long as we dream of the impossible notion of total victory, and as long as we cherish the empty illusion that our national security is totally reposed in massive military might. These fallacies furnish the impulse toward the steep slope of violence.

A program of rational nuclear armament would go far toward rescuing us from these disastrous fallacies. In setting us on the road of justice it would likewise set us on the road to security.

A balanced stockpile, resting on a broad base of small atomic weapons, would not indeed be the most destructive stockpile that we are capable of producing. It would not contain the increasingly immense weapons that the United States could manufacture, if we wanted, but that we could not use without carrying the enterprise of warfare over that fixed line, drawn by the principles of justice, which divides civilized warfare from barbarism. Moreover, the kind of stockpile I propose would not be the cheapest that could be assembled; it would not equip us to deal out the greatest number of deaths for the least number of dollars.

But for my part, I reject the reckless line of thought which would identify our national security with the accumulation of the most destructive possible nuclear arsenal and the cheapest possible nuclear arsenal. This kind of armament, heavily overweighted on the side of megaton bombs, would make neither military nor moral sense. It would not strengthen our military position in the face of threats from the Soviet Union or from other sources. Still less would it buttress our moral standing in the eyes of the international community. On the contrary, it would endanger both. And it would, in consequence, undermine our security.

This brings me to what I call the forgotten equation. I mean the equation between morality and security. This equation is inherent in the Western tradition. The first security that a civilized nation must protect is the security of its own moral life. The nation is secure in proportion to its fidelity to the moral norms that form the spiritual substance of the national life. Concretely, if the United States is obliged to have recourse to armed force in its own defense, it must understand that it is committed to a moral use of force, on penalty of self-destruction—I mean the destruction of its moral self.

The security which America seeks cannot be simply physical. It must also mean the protection of the spiritual identity of America as a member of the family of civilized nations. If America were to lose its own soul by sins of unjust violence, it matters little what else it might gain.

The tragedy is that in our day this equation between security and morality has been forgotten. We have come to believe that security means only one thing—massive power. And we have forgotten that the methods of power, when used in violation of the canons of justice, will undermine the basic moral security of the whole edifice of civilization which they should undertake to protect.

The equation between morality and security is, I say, part of our tradition. The nuclear age has confronted us with another equation whose ultimate terms are terrible indeed. I mean the equation between the immoral use of nuclear force and the destruction of all human security, even the fundamental security of human life itself. Surely this new equation should serve to jog our memories and bring to mind the old equation that we have forgotten. The reforging of the broken link between morality and security is itself an important element in the restoration of the tradition of civilized warfare.

To this task of restoration we are summoned today by the stringent demand of a moral obligation. It is a duty that we owe to ourselves as a civilized nation. It is further a duty that we owe to Almighty God, whose precepts presided over the formation of our constitutional commonwealth.

COMMISSIONER MURRAY SUMS IT UP

The Christian tradition of civilized warfare has been ruptured by the doctrine of total war fought in pursuit of total victory. The rupture must be repaired.

Total war in the nuclear age must be rejected on the practical level as a policy of bankruptcy. For us, however, rejection of this extreme must be based on higher moral principles.

We cannot accept the other extreme—banning all use of nuclear weapons. Our choice must be the middle course of a flexible military policy based on a rational and moral use of these weapons—in a limited way to achieve limited objectives.

The program of "rational nuclear armament" which I have previously proposed would furnish the weapons which this middle course requires.

This weapons program is one of strength, not weakness. The strength it counsels is both military and moral.

There can be no solid foundation for security unless the principle of justice draws the line between civilized warfare and sheer massacre.

The tragedy is that the "equation between morality and security" has been forgotten. The reforging of this link is an important element in restoring the tradition of civilized warfare.

Alaska Constitutional Convention

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BARTLETT. Mr. Speaker, I take especial pleasure in calling to the attention of my colleagues an article concern-

ing Alaska statehood which appeared in the GRA Reporter and which was written by Mr. John E. Bebout, assistant director of the National Municipal League. The article follows:

ALASKA'S BID FOR STATEHOOD

(By John E. Bebout)

As this is being written in the middle of December, a historic party is motoring down the Alcan Highway en route to the Nation's Capital. Although far removed from it in time and space, this party is following a political trail first blazed by a similar delegation from the Tennessee Territory in 1796.

The three principal members of this party are Ernest Gruening of Juneau, William Egan of Valdez and Ralph Rivers of Fairbanks. Elected in October under an ordinance adopted by the Alaska Constitutional Convention of 1955–56, these men are on the way to claim seats in the 85th Congress in behalf of the as yet unrecognized State of Alaska, the first two as Senators, the last as a member of the House of Representatives. Thus the Congress faces, for the seventh time in its history, the question of whether or not to bypass the usual procedure of a prior enabling act to admit a new State and accept a Congressional delegation elected prior to admission. If Congress follows its own precedents in the cases of Michigan, California, Oregon, Tennessee, Kansas and Iowa, Alaska will, by taking this initiative, have hastened its admission to the Union.

What the Alaskans call the Alaska Tennessee plan is only one of a number of aspects of Alaska's bid for statehood that are of unusual interest for persons professionally interested in government. Alaska's campaign for admission to the Union breaks down into something like a three-act drama. The first act began with the establishment of the official statehood committee in 1949 under the chairmanship of Robert B. Atwood, editor and publisher of the Anchorage Daily Times. The second act covered the election, meeting and ratification of the work of the Alaska Constitutional Convention. The third will cover the recently held election and the as yet undetermined fate of the Alaska Tennessee-plan delegation. Respect for the principle of dramatic unity requires postponement of a definitive review until the curtain has fallen on the last act. In the meantime it is worth while to get on the record participant and eyewitness accounts of parts of the drama that have already been enacted.

LABORATORY FOR RESEARCH

As a consultant to the constitutional convention for nearly 5 weeks, it was my privilege to observe an important segment of the second act from the inside vantage point of a performer occupying somewhat the role of an extra. As I reflect on the experience and compare notes with others who shared it, I am strengthened in the conviction that the Alaska convention constituted an exceptional laboratory for students and practitioners of the arts of politics, administration and governmental research.[1]

Perhaps the most challenging and most baffling fact about the job of governmental research for a constitutional convention is the fact that it has no readily ascertainable limits either in breadth or in depth. Most governmental research assignments have reasonably sharp focus and fairly definite limits determined by limits inherent in the subject matter and objective. Not so with research for a comprehensive job of constitution writing or revision. Here we are dealing with the basic structure and underlying assumptions of our governmental system which means that every serious proposal, every important decision needs to be considered in the light both of first principles and of its possible beating on a host of future acts across almost the whole gamut of governmental and political functions and operations. The fact that we are dealing with the constitution of a State, not of the Nation, is of little significance since State government occupies the strategic middle sector of our system and plays a crucial role with respect to almost all of the major problems and issues of Government except those that are strictly confined to foreign affairs. The more extensive the revision contemplated the broader will be the responsibility of research. The responsibility is, perhaps, widest where, as in Alaska, the first constitution for a new State is being drawn.

Imagine, for example, the problem of developing a system of representation in a State legislature for an area more than wice as big as Texas, almost four times as big as California, extending a distance as great as that across continental United States and in terms of climate and terrain from the mild, rainy mountain forests of southeast Alaska to the Arctic tundra of the northern slope. Reflect that on this vast land there are approximately 200,000 people, about 30,000 of whom are Indians, Eskimos, and Aleuts, the rest a rapidly growing body of persons who have migrated from the older States with a few who have come direct from Canada and other countries.

PROBLEM OF URBAN DOMINATION

While the map of Alaska is dotted sparingly with small villages, an increasingly large majority of the people live in a few cities with by far the greatest concentrations in the burgeoning metropolises of Anchorage and Fairbanks. The present system of representation in the territorial legislature calling for election of members of both houses at large from each of four great judicial and electoral divisions, results not in the rural domination complained of in so many State legislatures but in urban domination. The convention recognized that most people will continue to live in cities but was determined to guarantee an effective voice to people living in the villages in all parts of Alaska. To this end it worked out an elaborate system of lower house districts based on natural boundaries and combinations of them to form senate districts. Provision was made for automatic reapportionment every 10 years by a process independent of the legislature. In developing this plan, geography, demography, economics, mathematics, history, and comparative government were all brought into play both on the research side and in debate, in committee, and on the floor of the convention. One delegate, a hotel owner from Juneau, delivered a learned blackboard lecture to the whole convention on the mathematics of the method of equal proportions.

One result of this system of representation will be that campaigning will be considerably eased for a majority of the members of the State legislature. All candidates for the Territorial legislature must campaign over very wide areas; in the case of those in the central and northwestern districts over areas considerably larger than the State of California. Under the proposed constitution the only legislative candidates who would have to cover such distances would be those running for two senatorships at large from each of the four major districts corresponding substantially to the existing judicial divisions.

Campaigning in Alaska is no casual matter. It is taken very seriously and election contests can get very hot. Energetic candidates will travel hundreds of miles to interview a dozen voters. The whistle stop is, of course, an airplane landing because the only practical way to reach most of the villages is by plane. The day I left Fairbanks in February a delegate to the convention from Nome set out by himself in his own small plane to campaign for his party's nomination to the Territorial legislature among the villages in a vast district extending from the Arctic Ocean, east of the Colville River, southwest almost to the Kuskokwim River. The airplane, both private and commercial, is the key to modern Alaska's development and the secret of its rapidly increasing sense of corporate unity and competence. Alaska uses airplanes much the same as the rest of the country uses automobiles. Most of Alaska has virtually skipped both the railroad and the automobile eras and moved from the dog-sled age right into mid-20th century on the wings of the airplane.

LIMIT LOCAL JURISDICTIONS

Another major subject dealt with in the Constitution which forced thinking out of traditional stateside molds was local government. Weldon Cooper of the University of Virginia and I successfully served as consultants to the committee on local government. We learned some very interesting things. First we discovered that the Alaskans had studied the history of the multiplication and pyramiding of local jurisdictions in the older States to the point where they were literally horrified at what they found. They had also heard so much about weaknesses of county government that the word "county" was almost a bad name with them. In writing the local government article, therefore, they provided that there should be no more than 2 layers of local government and to avoid the implication that 1 layer might take on the characteristics of stateside counties they called the larger local jurisdictions boroughs. They sought to insure cooperation between the borough and any city or cities that might lie within it by providing that borough councils or assemblies should include some members of the city councils. In order to avoid the freezing of local boundaries a boundary commission is to be established in the executive branch of the State government which may make changes in local boundary lines subject to veto by the legislature. Since it is clear that much of Alaska will continue for a long time in need of little or no genuine local government, it is assumed that much of the Territory may not be organized into boroughs for some time.

HOW MUCH HOME RULE?

The Alaskans set a high store by the principles of local home rule and participation, at the same time recognizing the need for State guidance and assistance to local communities trying to develop the tradition and the skills of self-government. How much home rule, how much of the burdens of corporate municipal existence is it reasonable to extend to an Eskimo or mixed village which, without formal legal status, has developed traditional ways of maintaining order and essential community activities? It seemed obvious that this was not a question that could properly be determined in advance by detailed prescriptions in the State constitution; yet the members of the convention were anxious to lay down some principles which might help the future State avoid obvious pitfalls.

These illustrations, sketchy as they are, will give some impression of the setting in which a number of stateside research consultants were called on to ply their profession in aid of the Alaska convention.[2] Most of us had never been to Alaska before and some were able to stay only 2 weeks. It may be of interest to tell something about the way in which we were beamed in on the local wavelength.

Of prime importance was the physical setting. With great astuteness the people who planned the convention provided that it should meet at the University of Alaska several miles west of the city of Fairbanks, the northernmost city on the continent, situated on the Chena River about 100 miles south of the Arctic circle. While Fairbanks can be reached at any time of the year by plane, automobile or the Alaska Railroad from Seward and Anchorage, it is far enough away from the homes of most of the dele-

Footnotes at end of speech.

Footnotes at end of speech.

gates that they not only worked but lived together as few such bodies ever have. They were insulated against many of the distractions from home and normal occupation that would ordinarily impinge upon members of such a body.

Virtually all the delegates lived in one of a number of hotels and apartment houses within 2 or 3 blocks of each other: the Nordale Hotel, The Alaskan Inn, the Northward and Polaris Apartments. They went by bus each morning to the convention hall on the campus of the university, where they stayed through lunch and often through dinner and on toward midnight for regular convention sessions and committee meetings. While Fairbanks and its environs are plentifully supplied with bars and night clubs, the campus is dry, which meant that the business of the convention was not distracted by occasional trips to the bar or quick consultations with lobbyists lurking around the corner. On the other hand, the delegates knew how to relax when curfew sounded, whether at six in the evening or at midnight, and they generally relaxed together.

Into this community the consultants as they came were introduced, accepted, and assimilated with remarkable facility and felicity. They made up for their lack of Alaskan background partly by reading but mostly by endless questioning of the delegates from different parts of the Territory. Seldom has the conversational method been more assiduously employed in applied governmental research. While I am sure all the consultants felt they learned much more than they imparted, the method was distinctly a two way street. It was evident again and again that in talking about their communities and the problems of government for which the constitution was to provide a new setting the delegates developed a fresh and more penetrating understanding of what they had to do. Thus an important function of the consultants was to serve as conversational and mental foils for the delegates as they thought through their problems. Consultants wrote memos, tentative drafts and reports but there was probably less of this than would ordinarily be called for in a state constitutional convention. To a remarkable degree the delegates themselves did their own writing and many of them did a good deal of genuine research both before and during the convention. One of them, for example, had prepared himself on the subject of local government with something like the thoroughness with which James Madison had prepared himself on the history of federalism prior to the Philadelphia Convention of 1787.

Although it was sometimes frustrating to be thousands of miles from the nearest comprehensive library, Public Administration Service, which had been engaged by the statehood committee for preconvention preparation, had assembled an excellent, small working library for the convention and supplied the delegates with well-written background papers.[3] These papers were tailored rather more satisfactorily to the needs of the delegates than most of the preparatory material prepared for other conventions. Partly for this reason but partly no doubt because of the setting of the convention and the earnestness of the delegates, these papers were so thoroughly studied that consultants working with committees were able to assume a substantial fund of common information. The principal frustration, felt at least by one consultant, was the result of his consciousness of the great gaps not only in his own personal knowledge but also in the whole body of literature on State constitutions and government.[4]

I am sure that all the consultants have given a good deal of thought to what their experience in Alaska contributed to their understanding of the proper role of the consultant to any constitutional convention or similar body. In the paper prepared for the meeting of the Southern Political Science Association referred to earlier, Emil Sady and I set down a number of our own conclusions, expressing the hope that they might help to develop some consensus by provoking dissent and discussion.

Here they are:

"1. Consultants should be selected as much for their flexibility, ability to get along with people, and willingness to submerge themselves and their prejudices in the service of the convention as for their technical knowledge. Some of the consultants should be chosen largely because of their qualifications as constitutional generalists rather than their knowledge of particular specialties.

"2. There should be a clear understanding regarding the lines of responsibility and channels of communication between convention officers, committees, and delegates on the one hand and consultants on the other.

"3. Consultants should be free to speak in committee meetings or with individual delegates but should avoid taking sides publicly on controversial issues and should never appear before the convention as a whole or at public hearings except on request or specific authorization of the convention.

"4. Delegates should not use the names of consultants as weapons in debate. Consultants should be quoted, if at all, on the convention floor, only to indicate technical backing of items in the committee reports.

"5. Consultants should recognize at all times that it is the convention, not they, writing the constitution and should so behave that there never can arise any criticism on this score.

"6. Consultants have an obligation however, to maintain complete integrity and should not refrain from calling attention through recognized channels to information or errors which may be germane to the work of a convention. A consultant has an obligation to see that the technical reasons for his disagreement with a committee or convention action are made known and considered first by the responsible committee and then by the president or steering body of the convention. He should, however, scrupulously avoid lobbying for any point.

"7. While a consultant may be engaged to advise on a particular segment of the Constitution, he has an obligation to recognize the relationship between his work and that of others serving the convention. He should in his work advance the sense of common responsibility for the whole constitution which is necessary to a properly functioning convention.

"8. It would also be desirable to have more of the consultants serving from beginning to end than was possible in the case of Alaska. On the other hand there is certainly need in every convention for the occasional or part-time consultant and it is also desirable for a committee not to get all its technical assistance from or through a single person.

"9. At least 1 or 2 specialists in style and drafting should be included among the consultants. The Alaska constitution reflects in part the superior skill of the late Kimbrough Owen who served as consultant to the hard working and able style and drafting committee."

ELIMINATE THE NEGATIVE

In many ways the Alaska Convention was the realization of the consultant's dream. Here are a few of the characteristics of the convention and of the way in which it went about its task that made me particularly happy to be associated with it:

1. Its members displayed a firm belief in the future of their land and exceptional industry, devotion and integrity in discharging what they conceived to be their responsibility toward it.

2. It showed a great readiness to look at pertinent experience anywhere, especially in the United States and Canada, and to select and adapt what seemed the best to its purpose.

3. It paid a good deal of attention to Federal-State relations and the future place of the state of Alaska in the Nation. This emphasis was doubtless largely the result of territorial consciousness of Federal relationships, but is worthy of emulation in the older States.

4. It placed great emphasis on providing the state of Alaska with effective government—in the words of its report to the people, "government that is energetic in fostering the growth and development of the whole state and the welfare of all the people."

5. As has already been indicated, it took a new and imaginative approach to local government and state-local relationships.

6. Because it had faith in the future it showed a readiness to trust future generations to handle their own affairs and to adjust the constitution and government to changing conditions. In its own words, therefore, it determined that the constitution "should be short and flexible, to allow for the great changes that the future will bring to Alaska." Noting with disapproval the recent trend toward limited constitutional conventions, it specified that any future constitutional convention in Alaska should have "plenary power to amend or revise the constitution, subject only to ratification by the people."

It will be recognized at once that a number of these characteristics or attitudes are in marked contrast to some of those that have influenced the direction of constitutional evolution in many of the older States where the emphasis has often been negative and essentially distrustful of future generations of politicians and citizens.

Obviously the climate in which the last frontier wrote its first constitution cannot be recaptured in States of the earlier frontiers. Surely, however, the older States can benefit by taking a few breaths of the clear Alaska air. In a sense our whole Federal system with its peculiar and vital system of interlevel relationships is at a new frontier in time. Explosive population growth, spectacular developments in technology and productivity and shifting and expanding demands on Government call for pioneering solutions of no less significance than those demanded of the founders of a new commonwealth.

RESEARCH WILL GROW

Like modern pioneering in the physical realm this constitutional and political pioneering must rely more and more heavily on research. There is every reason to believe that the second half century of the governmental research movement should be infinitely more exciting and productive than the first, and this is said without any disparagement of the achievements of the masters and journeymen who started it and have carried it on.

The first era of governmental research has, quite properly, been largely preoccupied with tidying and tightening up the organization and methods for conducting the public business. While the emphasis has sometimes been regrettably negative, almost nostalgic in harking back to a day when Government really was little business, it has performed invaluable service in readying Government for the expanding tasks of the present age. Governmental research must continue to perform its historic function of policing and rationalizing the way in which Government is conducted and alerting the people to the need for constant questioning and examining of the propriety of governmental undertakings old and new.

STATESMANSHIP'S PARTNER

As I see it, however, the great mission of governmental research is to serve as partner to democratic statesmanship in the creative role of developing new ways to meet new problems. Without such a partnership, I see no hope of any real solutions of metro-

Footnotes at end of speech.

politan difficulties; of any rationally directed evolution of federalism and intergovernmental relations so as to provide the benefits of effective, positive Government on a national scale without losing the values of local and regional initiative, variety, and experimentation; of finding workable ways to preserve the sovereignty of the individual citizen in a world of mass transportation, mass communication (whatever that is), and potential mass destruction.

What Price Education?

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. PELLY. Mr. Speaker, in order to call to the attention of all House Members the suggestion incorporated in the following editorial, I ask unanimous consent to include it in the Appendix of the RECORD. This comes from the March 1 issue of the Aero Mechanic, a bimonthly publication of the Aeronautical International Association of Machinists, Industrial District Lodge 751:

WHAT PRICE EDUCATION?

There's an income tax problem affecting many Aero Mechanic parents—and other parents thruout the Nation—that deserves a careful scrutiny.

It's this: Parents with children of college age are making every effort to send young Johnny or Mary to a school of higher learning, in many cases at a great sacrifice to the family budget. Yet there is nothing in the income tax laws that allows a parent to make a tax deduction on this necessary expense.

Perhaps in bygone years a university education was regarded as a luxury. This certainly isn't the case today, for the average firm or company won't talk to a youthful prospective employee unless he has the benefits of a college education.

Great ado, also, could be made over the gains realized by our Nation, and thus on the welfare of the entire world, by having a growing number of our future adults approaching the problem of life with better tools of learning.

The Congress seldom, of course, looks with great favor upon proposals to allow tax exemptions. But think, for a moment, on some of the common exemptions in everyday usage—such as expense account allowances, oil well depletions, fast write-off of certain industry amortizations, donations. Why even industries are allowed to scratch off the entire cost of sending some of their executives to special training institutions.

So why not a tax relief for the long suffering parent struggling to keep his kids in school?

We'd like to make this suggestions to our congressional delegation:

Propose an income tax deduction of the cost of books and tuition, allowable either to the parents of the student, or to the student himself if he is working and sending himself through college.

Propose a limited allowance for board and room costs where it is necessary for students to live away from home.

We'll wager there'll be more young people attending college, and a lot of happy parents if some version of this needed relief is forthcoming.

Two Winning Essays in a Lincoln Day Oratorical Contest Held on Sunday, February 10, 1957, at a Boys' School in Los Angeles County, Calif.

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me heretofore so to do, I feel it is not only a pleasure but an honor for me to be able to present the text of two Lincoln Day speeches by elementary school boys in the great 23d District, Los Angeles County, Calif.

As you know, Mr. Speaker, for each of the 10 years I have already served in this great legislative body at the time of memorializing Abraham Lincoln in connection with the anniversary of his birth February 12, it has been my pleasure to obtain unanimous consent to insert in the daily CONGRESSIONAL RECORD essays and speeches and memorials about Abraham Lincoln emanating from my congressional district.

And now, the two essays by elementary school boys in my congressional district are very much worth reading. Mr. Speaker, if the youth of our beloved Nation could but pattern after Abraham Lincoln's industry, integrity, ambition, decency, and righteousness, how much better our Nation would certainly be.

LINCOLN DAY SPEECH
(By Arden Lakin)

There was an officer in the Confederate Army who had been severely wounded in action. This officer was a prisoner of war in an army hospital in Washington, D. C. The officer knew he was going to die so he sent his small brother out to look for a lawyer to draw up a will for him. His brother was out looking for a lawyer when he ran into this big, tall, not very good-looking, but pleasant man. The man said that he used to be a lawyer and that he could draw up a will for him. When they got to the room in the hospital there were two guards outside the door. They saluted and the boy thought they were saluting him, so he felt quite important. When they got inside the wounded officer was lying in bed with bandages over his face and eyes. The man drew up the will for him and when he had finished, the wounded officer asked the boy to read him the article in the paper about President Lincoln's speech at Gettysburg. The wounded officer said many things about President Lincoln and that he was greatly interested in his country. The wounded officer started to recite what he could of the Gettysburg address and finally got stumped; so this man who drew up the will picked up where the officer left off and as he started to speak he said it with all the detail and importance that he had done at Gettysburg; quote "The brave men living and dead who fought here have thus far so nobly advanced, that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion. That we here highly resolve that these dead shall not have died in vain—That this Nation under God shall have a new birth of freedom, and that government of the people, by the people, for the people, shall not perish from this earth." When he finished the officer asked him are you Mr. Lincoln, the President of the United States, the man whom I was fighting against? And Mr. Lincoln replied "Yes." At that moment the boy knew why the guards had saluted them outside the door and was thrilled at being able to meet the President, and he was very happy that he could say he shook hands with Mr. Lincoln, the President of the United States of America.

"I saw this incident in a movie."

LINCOLN DAY SPEECH
(By Alvin Jenkins)

On February 12, 1809, Abraham Lincoln, one of the most famous men of our Nation, wsa born in a place called Hardin County, Ky. His parents were very poor and had no thought that their son would become so famous.

When Abraham was only 4 years old, his parents had another son named Thomas after his father. Thomas didn't live to see his brother become President, because about 2 months later he died. This was only one of the tragedies of the Lincoln family.

When Abraham was only 9 years old, another tragedy came upon the Lincoln family. Mrs. Lincoln, his mother, died. Before his mother died she said, "My boy, I am going away, and you will not see me again. Be good; I know you will; help your father; take good care of your sister; live as I have taught you, and love God always."

When Abraham was 23 years old, there was an Indian war. The Governor called for volunteers to fight the Indians. Abraham was one of the first to volunteer. After they had gotten together, they had to elect officers. There were two candidates for captain, a man named Kirkpatrick, and Abraham Lincoln. When he was President he was heard saying, "No other victory brought so much satisfaction." This was Abraham's first success in public life.

When Abraham was 25 years old he was a candidate for the Legislature of Illinois in 1834. Many people knew that he was a just man, so he won by a large majority. He was also reelected in 1835–36, 1838, and again in 1840.

Abraham Lincoln was now 37 years of age, he was the Whig candidate for the Congress of 1847. This was the only district of Illinois where the Whigs had a majority win. This was his first term in Congress.

Once Lincoln was nominated as a candidate for a United States Senator. The Democrats nominated General Shields, a soldier of the Mexican War. There was another party called the Anti-Nebraskas, they nominated a man named Lyman Trumbull. Later on in the race the Democrats dropped Shields and nominated Joel A. Matheson. Abraham wanted this office but he saw that unless the Whigs and the Anti-Nebraskas united, the Democrats would win the election. He begged his friends to drop him and cast their

ballots for Mr. Trumbull. Mr. Trumbull was chosen. Abraham was chosen by general consent to be their leader.

When Abraham was 51 years of age, he was the Whig candidate for the President of the United States. The Democrats nominated Stephen A. Douglas as their candidate. When election day came, Abraham Lincoln was chosen to be the next President of the United States.

Soon after Abraham was elected South Carolina seceded from the Union. Later Florida seceded, then Alabama, Mississippi, Georgia, Louisiana, and Texas. Delegates from these States met at Montgomery, Ala., and formed the Confederate States of America.

On April 12, 1861, Confederate cannon opened fire upon Fort Sumter, striking the first blow of the Civil War, which was to be a long and bloody war between the North and the South.

On July 1, 1863, the Confederates were badly defeated by the Union armies. Until then the Confederates had been defeating all of the Union armies. This was the turning point of the war.

Resolution Memorializing Congress To Amend Title I of the Social Security Act

---

EXTENSION OF REMARKS

OF

HON. JOHN JARMAN

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include Enrolled House Concurrent Resolution 520, as the same was adopted by the House of Representatives and the Senate of the 26th Legislature of the State of Oklahoma.

The concurrent resolution follows:

Enrolled House Concurrent Resolution 520

A concurrent resolution memorializing the Congress of the United States to amend title I of the United States Social Security Act to authorize the Secretary of the Department of Health, Education, and Welfare to approve a State plan which provides, in determining need, an exemption of $50 per month earned income in the old-age assistance category as is now provided in title 10 of such Social Security Act granting this exemption, in determining need, to recipients of the aid to the blind category

Whereas the aged and indigent citizens of the State of Oklahoma and the United States blazed the way in the frontiers of America for the development of the United States of America, the benefits of which the present generation are now reaping; and

Whereas the courage and fortitude of these people laid the foundation upon which the State of Oklahoma and the United States have developed; and

Whereas they did throughout their period of struggle and did throughout their lifetime, insofar as they were able, support and maintain the government of the State of Oklahoma and the United States for the benefit of the present generation; and

Whereas the increase in the cost of living has far exceeded the increase in grants and aid that the aged and indigent people are receiving and, as a result of such increase in the cost of living, the living standards of our aged in the State of Oklahoma and the United States are such that our aged citizens must live in a manner incompatible with decency and health; and

Whereas an amendment such as is suggested herein would create a desire in recipients of old-age assistance to earn whatever amount they are capable of earning and, in so doing, raise the standard of living in such category together with all dependents for whom they are legally responsible; and

Whereas it is the consensus of the members of the House of Representatives of the State of Oklahoma, now duly convened in the 26th session of the Oklahoma Legislature, that the Congress of the United States should so amend such Social Security Act to permit the Department of Health, Education, and Welfare to approve a State assistance plan which will provide an exemption, in determining need, the sum of $50 per month earned income, as set forth above: Now, therefore, be it

Resolved by the House of Representatives of the 26th Legislature of the State of Oklahoma (the Senate concurring therein), That the Congress of the United States be memorialized to amend title I of the United States Social Security Act which would permit the Department of Health, Education, and Welfare to exempt $50 per month earned income in determining need in the old-age assistance category; and be it further

Resolved, That the people of the State of Oklahoma, through their representatives in the House of Representatives and the Senate of the 26th Legislature of the State of Oklahoma, hereby pledge the State to enact or amend any State laws necessary to comply with such Federal amendment; and be it further

Resolved, That copies of this resolution be sent by the secretary of state to the Chief Clerk of the Senate and House of Representatives of the United States Congress, and each Member of the Oklahoma delegation in Congress.

Adopted by the House of Representatives the 6th day of February 1957.

B. E. HARKEY,
Speaker of the House of Representatives.

Adopted by the Senate the 18th day of February 1957.

COWBOY PINK WILLIAMS,
President of the Senate.

Received by the secretary of state this 25th day of February 1957.

ANDY ANDERSON.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Effect of Cost Increases on Corporation Sales Gains

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Profit Plateau—Cost Increases Hold Corporate Profits Level Despite Sales Gains," which was published in the Wall Street Journal of March 18, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFIT PLATEAU—COST INCREASES HOLD CORPORATE PROFITS LEVEL DESPITE SALES GAINS—FIRST QUARTER DROP EXPECTED FOR AIRLINES AND METALS—ELECTRICAL FIRMS GAIN—RISING WAGES WORRY RETAILER

Corporate profits have paused on a plateau—a plateau somewhat lower than the record high reached in 1950.

Rising costs are widely blamed by corporate executives for the contrast between this standstill and the continued advance in other economic statistics such as those of national income and production.

A compilation of 750 earnings reports for 1956 shows practically no change from total 1955 income of the same companies. And early indications of how the first quarter of this year will stack up against the like period of last year suggest a similar comparison.

The 1956 figures, as brought together by the Wall Street Journal in its quarterly study show a total net income for the 750 corporations of $11,980,000,000, less than $8 million, or one-tenth of 1 percent, larger than their total of 1955. This comparison confirms the estimates of the Government, made a few months ago, that 1956 net profits of all United States corporations, at about $21.5 billion, would be up only slightly from the $21.1 billion reported for 1955.

These same Government figures, in turn, show 1956 earnings still below the $22.1 billion reached in 1950, and likewise not very far above the $20.3 billion achieved as far back as 1948. Totals for the other intervening years—1949 and 1951–54—ranged between $16 billion and $19 billion.

OTHER STATISTICS SHOW GAINS

These results stand in sharp contrast with other statistics of the Nation's economic system, which have been going to new record highs. National income, for instance, which includes compensation of employes, proprietors and rent receivers as well as earnings of corporations, is estimated at $342 billion for 1956. That was a 5.5-percent gain over the $324 billion of 1955, and it was 33 percent larger than the $240 billion of 1950.

The main cause of the decline in corporate profits from 1951 to 1953 was the excess profits tax imposed during the Korean war and not lifted until 1954. The latter was a year of mild recession in business generally, which naturally held down profits. But 1955 and 1956 were years of strong upsurge in the volume of business. The steel strike last summer, of course, depressed 1956 earnings somewhat, but even without it, the figures show clearly, the year's total would not have equaled that of 1950.

Rising costs, squeezing profits margins, are the principal factor blamed for the inability of the income figures to rise last year and early this year. This fact for last year is brought out by a comparison of 1956 and 1955 sales and profits of 204 large companies which have published detailed income accounts for both years. Their sales rose to $89 billion from $86 billion in 1955. But their net profits fell to less than $6 billion from more than $6.5 billion. It was not lack of volume which held earnings down.

SHOWINGS VARY BY INDUSTRIES

The over-all slight change in earnings for 1956 from 1955, of course, conceals some pretty wide variations among individual industries. The steepest drop was that of the auto and auto equipment industry—almost 35 percent. And the highest leap was that of the machine tool makers—over 40 percent. However, about half of the 33 industries represented in the compilation gained or lost 5 percent or less. In spite of the summer strike which shut down the industry for roughly one-tenth of the year, the steel mills found their aggregate earnings down only slightly more than 1 percent.

Pretty much the same sort of outcome is indicated for the current quarter as compared with a year ago. A few groups may do quite a lot better, and a few others a good deal worse. But overall, no very big change from a year ago seems likely.

One group which did particularly well in 1956 is likely to make a poor showing in the current quarter. It is the mining and metals companies. The principal cause of this change is the price decline in copper, which was at a record high just a year ago and has fallen sharply since then. Producers selling the metal at 32 cents a pound compared with 46 cents a year ago naturally are suffering declines in sales and profits. Other metal companies, including especially aluminum producers, are doing about as well as last year.

Outside of copper producers, in fact, last year's trends seem to be continuing currently in most groups. Aircraft makers, although some of them are plagued currently by changes in military procurement which later may affect their backlogs, seem unlikely to reflect such new order patterns in the first quarter. As a group, their 1956 profits were up 4 percent.

Airlines are still suffering from the rising costs which pulled their 1956 earnings down 1 percent in spite of rising revenues.

Here is the picture in other industries:

Auto and auto equipment makers show contrasting trends within their own industry, with Chrysler and Ford enjoying sharp gains in production and sales (even over the good 1955 rate) and General Motors lagging. Whether GM's probable earnings decline will be offset by the increases of the other two cannot be gaged yet. American Motors probably will show another loss—it lost $3.3 million a year ago—but Studebaker-Packard may be not far from the black, in contrast to a loss of $14.3 million a year ago.

Building materials from acoustical tile to zonolite also show varying trends. Concerns with a big stake in home building are not doing as well as last year but those which sell to commercial, industrial, and public construction customers report a favorable experience. Johns-Manville spokesmen say business for the first 2 months had a slight edge on the 1956 months, but National Gypsum, heavily in housing, will report declines in sales and earnings. Cement producers are doing well. The building group last year gained 6 percent.

Retailers find predictions of first quarter showings unusually difficult because Easter this year is later than usual. Treasurer G. H. Stuntz, of Interstate Department Stores says the whole first quarter is made or broken on Easter business. Agreeing with him, some merchandisers add that a late spring holiday often spurs ready-to-wear business.

But rising costs, as in many industries, are holding back profits. "It's difficult to predict the quarter's profits with costs going up so, particularly wage," says Isaac Liberman, president of Arnold Constable Corp. And Arthur C. Hallan, secretary-treasurer of Allied Stores Corp., chimes in, "We expect an increase in sales, but continued overhead rises make it difficult to say much about earnings." Except for grocery chains which gained 33 percent in part because of mergers and acquisitions, retailers last year showed small gains ranging up to 5.6 percent for department stores.

Chemical producers also complain of rising costs, together with inability to raise prices commensurately. Moderate gains in sales, perhaps 5 percent, over 1956 are expected for the first quarter, but earnings may be little better than steady. For 1956 this group fell almost 6 percent behind 1955.

Drug manufacturers, among the big gainers of 1956 with earnings up 30 percent, expect further improvement, though not as wide. Abbott Laboratories earnings and sales in the first 2 months showed definite progress over a year ago, a spokesman says.

Electrical equipment makers will pretty surely report gains in the first quarter, in contrast to their 3 percent decline in 1956. Much of that drop reflected the troubles of Westinghouse Electric, which was on strike much of the first quarter and lost money in that period. In addition to Westinghouse's better showing, huge General Electric says its sales are up so far this year.

Farm-equipment makers also appear to be on the way to better results than last year's 2-percent earnings drop, with employment increasing. However, there is some doubt the first quarter will have had time to reflect the improvement in earnings figures.

Sales finance companies say their earnings are running something like 10 percent better than a year ago in the first quarter. In all of 1956 their gain was 12 percent. "The receivables (loans outstanding) on our books are still bringing in good money and new volume continues fairly high, although there has been some falloff in new automobile sales," says an official of a big auto sales finance company.

Food products handlers are continuing gains which last year brought their earnings up almost 5 percent. Joel S. Mitchell, president of Standard Brands, Inc., predicts about a 13-percent increase for the first quarter to about $1 a share on the common, and the head of Sunshine Biscuits also foresees a gain.

Iron and steel earnings for the first quarter probably will show little if any decline and may show gains from a year ago. While production now has slid off to somewhat under a year ago, it was at record highs in the first 2 months. And while wages are up, so are prices, as a result not only of the general boost announced after last summer's strike was settled, but also of increases on individual products in the form of higher charges for extra qualities of specific steels.

Petroleum producers and refiners foresee higher profits in the first quarter than a year ago. Domestic consumption here and exports together exceeded the total of a year earlier in the first 2 months by 9 percent, and prices are higher. International oil concerns such as Socony and Gulf, of course, may receive lower dividends from some segments of their foreign operations as a result of the unsettlement surrounding Suez.

Paper producers may not do quite as well as a year ago, in contrast with a 9-percent gain for all 1956, because production in some sections of the industry is down a little.

Rubber companies should at least hold their own in the first quarter and the majority probably will show small gains. E. J. Thomas, president of Goodyear, has said his company expects another new record in sales and earnings this year, and other companies also express optimism. Tire shipments are calculated to rise about 6 percent over 1956, with automobile output scheduled to be up a little and replacement sales rising steadily year by year.

Textile earnings in the first quarter are reported by the vice president of one major mill concern as suffering a decline which is general, broad, and painful. Slow sales, slipping prices, and higher costs are all contributing. Earnings of this group in 1956 were down 17 percent.

Cigarette sales so far this quarter are mildly ahead of a year earlier, and some big tobacco companies believe their earnings will be up. Philip Morris sales in the first 2 months were up 15 percent, and Liggett & Myers also reports sales gains; but another big producer finds no important change either way. Costs are rising in this industry, too, so that the trend of earnings may not be quite as good as in sales. Tobacco profits in 1956 were up 6.5 percent.

Machine toolmakers look for first quarter sales and earnings to top those of a year ago. Orders came in last year at a very high rate, and though these have fallen off in the last few months, shipments, on which earnings and sales are calculated, continue high. For the first quarter they're figured at an average of $80 million monthly, compared with only $64 million monthly a year ago. Earnings of this industry in 1956 soared 40 percent.

Railroad earnings in the current 3 months probably cannot quite equal those of the comparatively good first quarter of 1956. Though freight rates were raised late in December, 7 percent in the East and 5 percent in the West, and later in February this year 5 percent for Southeastern carriers, the pressure of costs on profit margins continues. From a traffic standpoint, loadings in January this year ran 5.4 percent less than in the similar month last year, but the decline has been lessening, and was below 5 percent for the first 2 months.

Utilities continue their calm and steady gains of close to 10 percent, with consumption of electricity and gas growing with the country. Their 1956 gain was 9 percent.

TOTAL PROFITS OF 750 COMPANIES IN 1956 JUST ABOUT EQUALED EARNINGS IN 1955

The columns below show earnings reported for the year 1956 as compared with those of 1955, with percentage increases or declines by groups from 1955. A number of companies included do not report for the calendar year. In such cases, earnings for the nearest comparable period have been used:

	1956	1955	Change from year ago
13 aircraft makers	$222,724,000	$213,918,000	Up 4.1 percent.
8 airlines	45,409,000	46,005,000	Off 1.3 percent.
25 autos and equipment	1,216,363,000	1,860,738,000	Off 34.6 percent.
30 building materials	387,949,000	366,405,000	Up 5.9 percent.
24 chain retailers:			
6 grocery	62,366,000	46,864,000	Up 33.1 percent.
7 variety	73,346,000	73,107,000	Up 0.3 percent.
11 miscellaneous	72,635,000	70,499,000	Up 3.0 percent.
23 chemicals	816,140,000	866,894,000	Off 5.8 percent.
11 department stores	92,534,000	87,572,000	Up 5.6 percent.
6 distillers	51,518,000	40,435,000	Up 27.4 percent.
13 drug companies	186,162,000	142,963,000	Up 30.2 percent.
14 electrical equipments	287,512,000	297,418,000	Off 3.3 percent.
8 farm equipments	147,549,000	150,849,000	Off 2.2 percent.
15 finance companies	186,629,000	165,969,000	Up 12.4 percent.
25 food products	200,938,000	191,959,000	Up 4.7 percent.
25 iron and steel	1,015,532,000	1,028,520,000	Off 1.2 percent.
6 leather	30,808,000	26,538,000	Up 14.9 percent.
22 metals and mining	589,537,000	484,193,000	Up 21.7 percent.
7 movies and movie theaters	22,153,000	21,558,000	Up 2.7 percent.
9 office equipments	119,668,000	97,082,000	Up 23.2 percent.
25 petroleum products	2,045,427,000	1,846,249,000	Up 10.8 percent.
8 printing and publishing	29,516,000	23,700,000	Up 23.7 percent.
23 pulp and paper	169,325,000	155,321,000	Up 9.0 percent.
6 radio and television	63,276,000	82,529,000	Off 23.3 percent.
14 railway equipments	69,061,000	57,584,000	Up 19.9 percent.
12 rubber companies	218,909,000	216,806,000	Up 0.9 percent.
15 sugar companies	22,694,000	18,569,000	Up 22.2 percent.
21 textiles	88,027,000	105,579,000	Off 16.6 percent.
13 tobacco companies	181,486,000	170,391,000	Up 6.5 percent.
40 tools and machinery	199,673,000	142,197,000	Up 40.4 percent.
143 other industrials	912,796,000	810,453,000	Up 12.6 percent.
Total 604 industrials	9,827,162,000	9,908,864,000	Off 0.8 percent.
55 railroads	828,358,000	852,767,000	Off 2.8 percent.
91 utilities	1,324,946,000	1,210,651,000	Up 9.4 percent.
Total 750 firms	11,980,466,000	11,972,282,000	Up 0.1 percent.

Has the Republican Party a Future?

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Clarence Budington Kelland at the meeting of the Central Committee of the Republican Party at Tucson, Ariz., on March 16, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HAS THE REPUBLICAN PARTY A FUTURE?

(Address by Clarence Budington Kelland, at the State Central Committee of the Republican Party in Tucson, Ariz., March 16, 1957)

The time has come when we assembled here, and all other members and workers in the Republican Party should give gravest consideration to our present condition, perhaps it would be more accurate to say our plight, and to what steps should be taken by Republicans of intelligence and integrity to meet and overcome the perils that so obviously lie before us.

In any such analysis we must hold before the eyes of our mind the high and noble history of our party. We must consider our obligations to that past and to the men of bygone days whose wisdom and foresight created our party, established its great principles, and built under our feet a sound platform upon which the future could erect itself. At the same time we must exercise such foresight as heaven has endowed us with to look into the future, to endeavor to foresee what obligations that future shall impose upon us, and to make certain that our future shall be worthy of our past.

As we look into the future we must peer with eyes clear of prejudices and ideologies. We must not listen to unreasoned clamors. We must not mistake will-of-the-wisps for lamps of wisdom. We must not make the fatal error of believing that merely because a proposal is new it is better than what has stood the test of time. Nor must we err on the other side, blindly to believe that mere age is sanctity.

The time is here, now, today, when we who have given our allegiance to the Republican Party for many years must face and answer certain hard, unpleasant questions. Upon our answer to these questions depends whether the Republican Party shall endure and persist as a party of recognizable principles and intentions; a party which has drawn a battle line between its principles and intentions and the principles and intentions of what we can only term the Socialist-Democratic Party. Or whether we shall become a mere shadow party without substance or reality.

A shadow is an unsubstantial, imponderable pattern of darkness caused when something stands between the sun and the earth. It imitates in form and movement the thing that casts the shadow. But it has neither warmth nor vitality. The first pertinent question we must ask is, Shall we permit the Republican Party to exist only as a shadow cast by the New Deal? Shall we permit our party which once proudly created such solid, such real, figures as Abraham Lincoln and Theodore Roosevelt to lie flat and unsubstantial on the ground as the shadow of Franklin Roosevelt or ill-tempered little Harry Truman?

Perhaps the most important question for Republicans to answer is this: Shall the Republican Party continue to exist at all? Or shall it, because it stands for nothing, and is a mere weak imitation of something else, cease to be and vanish from the earth as did the Whig Party of a hundred years ago? The Whig Party was buried in an unknown grave because it had nothing to offer—no leadership, no reason for being, no integrity. Shall these same tragic reasons sap the lifeblood of our party which has given high

leadership and stability to our Nation for a hundred years?

Shall the Republican Party drag along, pale, anemic, lifeless down the middle of the road? Shall it walk the white line between lanes of traffic, too busy with dodging vehicles coming at it from both directions to be able to do anything but cringe and duck and sidestep? Shall we accept that contemptible destiny, taking no sides, initiating no action, content merely to pussyfoot down an imaginary line content to do nothing except avoid being bumped by passing events? We are advised by high authority that the middle of the road is the path for us. Just what impact upon the welfare of a Nation will be exerted by a party whose sole end and aim is to dodge from island of safety to island of safety breathing only the fumes from long lines of exhausts traveling in opposite directions?

Are we going to adopt this heresy known as New Republicanism? I have examined this new brand of sophistry—and lest there be any misconception of what I mean by sophistry, it is a clever argument based on fakery. It is a quibble.

* * * * *

New Republicanism betrays every historical tenet and principle of our Republican Party. It is a bridge, disguised as a rainbow, to carry us across the river which separates the land of sound, honest, efficient national finance from the treacherous morass of state socialism and ultimate bankruptcy.

Already we stand appalled at some of its results, the most dire of which is a budget of more than $70 billion. A budget which outdoes all the reckless spending in our history. It outdoes even Harry Hopkins whose idea of finance was to spend and spend, tax and tax. He added the words "and elect and elect." But I am afraid that formula will no longer serve its dire purpose. The country stands appalled at this budget put forward by an administration whose preelection promises were to economize and to balance. It is a formula dreadfully out of tune with the thinking of the rank and file of the Republican Party. If not modified, if persisted in, it will go down in history not as a sardonic, unscrupulous, successful device of spend and spent, tax and tax, elect and elect, but as one more stupid device to undermine and destroy the Republican Party. To spend and spend, tax and tax the Republican Party out of existence.

The initiative, the courage, the hope of the doers of our country are being sapped by this state of affairs, which is not far from confiscation. The country, cracking under a crushing burden of taxation from which no relief is in sight, moves ever nearer to a financial disaster which may forever destroy our way of life. Which may send our standard of living downward and downward until our despairing people may even grasp at the rope of straw of socialism or even communism. And so in their hopeless despondency swap their most precious possession—human liberty—for a doled crust of bread flung to them by an American Stalin.

The way to avoid this gulf of prodigality has been shown us by one of the greatest minds of our or any other generation. By a man whose probity and Christian patience under trial, whose unselfish services to our land and humanity, have earned him the love of his fellow citizens. One sure way, I repeat, to call a halt and face in the opposite direction has been shown to us by Herbert Hoover in the reports of his Commission into the conduct of our Government. To adopt his efficient plans alone would enable us to reduce the annual expenditure by billions of dollars and multiply the efficiency of the administration of our affairs.

Wise heads and thinking minds who have analized this Gargantuan budget believe that no less than $12 billion could be cut from its prodigality without impairment of safety or security, and without harm of any sort to our citizens.

Let us compare this offered budget of 1958 with the budget of Throw-It-Away Harry Truman for 1949. Harry's information service cost 15 millions. The Eisenhower information service is to cost $175 million in 1958. And for what? Asleep at the post, it could not even inform us of the impending treacherous adventure of Britain and France into Egypt which almost gave birth to a third Armageddon. Truman's public assistance in 1949 was $931 millions. Under the Eisenhower budget it will be $1,684 millions. Public health is jumped from the Truman high of $174 million to $606 millions. Education leaped from $65 million to $538 million. Agriculture, conservation and the like were increased from the Truman figure by 2 billions of dollars.

Foreign spending, which has brought us little but enmity—and latterly the double crossing 2 of our two greatest pensioners, Britain and France could, in competent opinion, be reduced by $3½ billion.

Another 3 to 4 billion dollars could be cut from the budget if our present unnecessary military forces in Europe were cut to adequate battallions plus retaliatory air forces capable with coping with any emergency.

So able and honest and patriotic experts say at least $12 billion could be cut from the Eisenhower budget without doing a dollar's worth of harm, and with a resulting cut in our cruel taxes of 30 percent across the board.

In a little more than 3 years, who will be blamed for this wastefulness and its resulting hardships when we enter another national election? Who will be blamed for these things when in 2 years we enter another congressional election? Why, the blame will be placed upon this administration, and unjustly as a consequence, upon the Republican Party. The country will not distinguish between administration conduct and Republican Party conduct.

And, my fellow Republicans, if we do not take speedy and severe and efficient steps during the next 3 years to remedy these conditions and to rehabilitate the Republican Party in the eyes of the Nation, then the Republican Party will take such a shellacking as no other party has ever taken in our history. Nor, in my opinion, can it survive, even in name only, such a drubbing.

Now then, as a matter of practical politics and party procedure, what can we do to save the life of the Republican Party?

My loyalty—and I have served the Republican Party to the best of my ability for 55 years—is not to any individual nor any coterie, but to those ideals and principles which are the Republican Party and which it personifies.

There may be those even in this room who may misunderstand or take amiss what I am about to say and to suggest. I do not utter these words without having taken prayerful thought, nor without asking the advice of men in whose commonsense and honorable intentions I have confidence.

I will commence this final portion of my remarks by repeating what I have written and spoken many times during the past 5 years. I repeat and emphasize that the first Eisenhower election was in no sense a Republican victory but a personal Eisenhower victory. In that election of 1956 President Eisenhower was elected by an unprecedented torrent of votes, but the Republican Party lost both Houses of Congress. What did this anomaly indicate?

It indicated that the United States, North and South, were infatuated by the personality of Dwight D. Eisenhower; but that the Nation was by no means infatuated by the party under whose emblem he ran for office. Again it was not a Republican victory—indeed it was a Republican defeat. It was a personal triumph for one individual. It was not the principles nor the platform of the Republican Party which sent General Eisenhower to the White House, but a national emotional orgy deriving from a sort of paroxysm of impassioned enthusiasm for the personality of Mr. Eisenhower. Such waves of febrile affection have swept various nations since the dawn of history, and will sweep nations again in the future. They have nothing to do with logic or reason, but are a sort of volcanic, instinctive outflowing of affection.

It was a similar phenomenon which kept Theodore Roosevelt in power and which elected Franklin Roosevelt three times. In the case of Theodore Roosevelt it gave new life and meaning and energy to the Republican Party; in the case of Franklin Roosevelt it destroyed the integrity of the great party of Jefferson and Jackson and Grover Cleveland.

In the case of President Eisenhower we do not know what affect it will have on the Republican Party, but the next 3 years will determine what it shall be.

But we do know this: That in the next election the Republican Party will not have General Eisenhower for its candidate. Whatever benefit his prodigious personal popularity has been to the party will not be a fatcor in the next presidential election. It is not an exaggeration to say that as a political figure 3 years from now he will be all but negligible. For the next 3½ years as his tenure of office becomes shorter and shorter so will his influence both as a Chief Executive and a political leader wane. And with his waning so will the power of that little coterie in the White House who have ridden roughshod over Republican Party organization diminish, And so, unless immediate vigorous steps are taken to rehabilitate Republican organization nationally and in the 48 States, we will face a vacuum.

Upon what we do or fail to do in the next 3 crucial years depends the fate of our party, and whether it shall live or die.

Already we see signs of the struggle that will continue and increase through the next 3 years to take over and control the remains of the Republican Party. If any man or woman is so naive as to believe the White House Janizaries will surrender the power they have wielded through this administration, they should buy themselves a book of fairy tales. This group who have had so much to do with our President's thinking and conduct, who are the inventors of New Republicanism, and who have labored in season and out of season to uproot and destroy Republicanism as we who are true to it and revere it conceive it to be, will occupy a most favorable strategic position.

They will be able to dominate such machinery as exists. They will possess, because of a supine, subservient national committee, to dictate the organization of the nominating convention. They will be able to name every officer and committee of that convention from its chairman and rules committee to its sergeant at arms and its committee on badges. They will be able to name its keynoter, its committee on contests. They will be able to dictate who will head its platform committee. Potentially, they will be able to control that convention, name its candidates, and compel the adoption of the set of principles upon which the party will go to the country.

I say that, as of today, this little headstrong un-Republican group of me-too New Dealers possess this potentiality. But it is only a potentiality. It is not a certainty. It is, as yet, only a plot—and the first step in frustrating a plot is to recognize its existence—to expose it to the light of day for what it is. And, having so exposed it, to create a force that will destroy it.

The only force that can save our party from disintegration is a nationwide revival—a revival that must start at the grassroots, in the precincts. It must work upward from the people, moving from precinct to

ward, from ward to county, from county to State. It must rise and swell as a great flood. There must arise and be heard eloquent voices who will restate the principles which are the backbone of Republicanism and which are anathema to New Dealism and New Republicanism. It must organize, and organize, and organize.

These United States are not a radical nation; our citizenry has its origins in a basic, decent, admirable conservatism. There is under us a firm foundation of integrity based upon such splendid copybook maxims as that honesty is the best policy. That a penny saved is a penny earned. That Satan finds work for idle hands to do. Our ideals derive from sturdy ancestors whose most admirable quality was self-reliance and a will to conquor a savage wilderness. Those men and women bequeathed to us something fine and strong and imperishable, which even 20 years of New Deal heresy could not erase. Mr. Roosevelt and Mr. Truman and their ilk did their dire best to change a maxim which was real and true to our forefathers and without which this Nation never could have become what it is today. They strove to substitute for that splendid old saying—"God helps those who help themselves," a new and shameful rule of life, "Don't bother to help yourselves, let Washington do it for you."

Our grandfathers went out in the morning to plow their virgin fields not knowing if at night they would come home with their backsides full of Indian arrows. Nevertheless they went out and plowed.

That is the spirit and the courage that gave birth to the Republican Party, and it is not dead. It lives. It is vigorous. All it requires is the ringing of a tocsin, the sounding of an alarm to awaken it from its lethargy and set it to marching once again. Set it to marching again, to trampling out the vintage where the grapes of falsehood and treason are stored.

We have but little more than 3 years in which to accomplish everything or lose everything. We must, one and all, enlist in this war. We must join the ranks and do our all to wrest control of our great party from those who would degrade it and make it unworthy to live.

It is a practical matter. At the end of 3 years President Eisenhower will be here no more as a political force. We must efficiently make ready for the day when he lays down the power and the authority. We must not let chaos result. But we must be prepared. In the interim we must join together to pick up the pieces and to weld them into a strong working whole, with leadership of enthusiasm and vision and probity.

Our opponents, the New Deal Party, have chosen the radical side; the left wing side, the socialistic side. They have laid down their battleline. They have stated their principles and shouted their battle cry. If we are to oppose them we cannot fight from their trenches or with their ammunition. We, too must draw our battleline and assert for all to hear the conceptions of policy and politics which shall be our battle cry. There is but one position we dare assume. We are left no choice if we are to be true to ourselves, true to our party, true to our obligations to this Nation. They, our opponents have chosen the radical side. We, then, must counter them by alining ourselves on the conservative side.

On these lines the battle must be joined, radical against conservative. Where is any victory if radical Democrats fight a war with radical Republicans? If tweedledee fights tweedledum.

Let us decide this thing once and for all. Let us put it to the test. Shall this Nation toss away its most precious boon, which is human liberty, for the swamp-born firefly of state socialism? It is for us—of the Republican Party—to give the answer. We must gird our loins. We must fight for possession of our party. Fight for its possession not merely for political advantage or patronage or offices, but because if we lose possession of our party we have lost the only instrumentality, the only weapon that holds back the attack of black forces which ultimately will plunge us into the gulf now occupied by Communist Russia.

I say to you, my friends, that the hope of the world is in the ballot boxes of America. The hope of a free, serene, prosperous America is in the ballots of the Republican Party. It is a high destiny that is ours. It is a noble obligation that rests upon our shoulders. Time is all too short before the fateful decision shall be made.

So let us dedicate ourselves to the task. Let us, in every forge from coast to coast, from north to south hammer out the weapons of true, wise, patriotic, forward looking Republicans.

We have 3 years. Let us not waste a moment of them. Let us be ready. Let us, when those 3 years are over and the crucial struggle comes in the national convention of our party, be prepared with a trained, devoted army equipped for a battle which may determine whether human liberty shall vanish from the earth.

I say to you again, in parting, that the hope of the free world lies in the revival, the rehabilitation, of the Republican Party. Not in that betrayal of every tried and proven principle masquerading as new Republicanism, but in uprooting that heresy and abolishing the men who have foisted it upon us.

Salary Raise for Postal Employees

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. IVES. Mr. President, at the request of Mr. Thomas F. Corbett, Jr., secretary of Rochester branch No. 210, National Association of Letter Carriers, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a letter which he wrote to me under date of March 11, 1957.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ROCHESTER BRANCH, No. 210,
NATIONAL ASSOCIATION OF
LETTER CARRIERS,
Rochester, N. Y., March 11, 1957.

Hon. IRVING M. IVES,
Senate Office Building,
Washington, D. C.

DEAR SIR: On Sunday, February 10, 1957, at the Powers Hotel in Rochester, N. Y., approximately 600 postal employees gathered for the purpose of a salary rally. After much discussion by our invited guests, the following resolution was adopted:

Resolved, That we here gathered wholeheartedly endorse bills S. 27 and H. R. 2474, providing for postal employees, salaries of $5,500 to $6,100, and also bills S. 21 and H. R. 607, providing increases of $800 for our annuitants; and be it further

Resolved, That we request our Senators and Representatives to insert said resolution into the CONGRESSIONAL RECORD.

At this time, Senator, I would like to request this of you.

Your consideration will be greatly appreciated.

Sincerely,

THOMAS F. CORBETT, JR.,
Secretary, Branch No. 210,
National Association of Letter Carriers.

Politics and the Budget

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. HENNINGS. Mr. President, I should like to make the briefest possible statement on the question of the President's budget.

I believe that everyone will agree that what we want is the best possible budget. This does not necessarily mean the cheapest possible budget. If we were foolhardy enough, we could slash each item in the budget by, say, 10 percent or 25 percent or even 50 percent. In this manner, we could get a very cheap budget, but it certainly would not be a good or, in any event, a safe budget.

The President has sent a very large budget to Congress and asked the Congress to cut the fat out of it. In essence, the administration has confessed that it has not sent to Congress the best possible budget.

The House of Representatives threw the budget back to the President, suggesting to him that it was his responsibility to pare the fat out of the budget before submitting it to the Congress. As in the field of foreign affairs, the President refused to exercise his full responsibilities; he threw the budget right back at the Congress—still with the fat in it.

As matters stand, I see no choice for the Congress but to attempt to ferret out and eliminate unnecessary budget items. We do not have the facilities to do a very efficient or thorough job, but, in default of action by the administration, I do not see where we have any other course open to us.

In this connection, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial on the budget which appeared in the St. Louis Globe-Democrat on March 14, 1957. Mr. Richard Amberg, the publisher of this newspaper, is a close friend of mine, and one of the ablest journalists it is my privilege to know. I wish to commend Mr. Amberg and Mr. Louis La Coss, the editor of the editorial page, for this penetrating editorial on a very difficult subject.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

POLITICS WON'T PARE THE BUDGET

Political steam enveloped the resolution a Democratic House volleyed at the President, demanding Mr. Eisenhower indicate where and by how much his $71,800,000,000 budget can be slashed. But more than politics is involved.

This newspaper has respectfully urged Mr. Eisenhower to submit a revised budget to Congress, substantially cutting the aggregate requests, which represent a $6 billion boost over expenditures for the fiscal year ending last July.

There are two basic reasons we believe he should set the brake on a dangerous spending trend that is draining pyramiding billions down the Federal maw:

1. This is the President's budget, his initial responsibility. It is his recommendation for executive appropriations.

2. Realistic precedent in Congress is against overall budget reduction. Congress often makes gestures at retrenchment; in the end it almost invariably raises the total budget.

The President dispatched his budget to Congress with open reluctance at its size. He lamented that it was so big and urged Congress to trim it wherever possible.

Now the House of Congress has tossed the ball back to Mr. Eisenhower, saying, in effect: We, too, think the budget should be cut. But it's your baby. Tell us where to clip it, and how much.

Of course, this was a political gambit. Only a few Republicans voted for the resolution. Primarily, it was a Democratic riposte. Democrats want Ike to shoulder the obligation for slashing pet projects of pressure and lobby groups. They want to get out from under the onus of cutting back the spree largesse that sits on Uncle Sam's back like a mushrooming incubus. They argue Ike's budget paternity makes it his obligation to deal with the problem child.

Sure this is politics. But it is also salted with truth. It is a primary responsibility of the Chief Executive to fashion the budget; the administration should know best what the administration needs and make initial judgment of what the Nation can afford.

But it is also, as the administration and the GOP Senate conference contend, the ultimate duty of Congress to determine how much shall be appropriated. Congress has a right to look to the White House for budget leadership. It has the inescapable function to decide finally what shall be spent.

Playing political shuttlecock with the budget issue will settle nothing. By offering such a huge expenditure schedule, Mr. Eisenhower perhaps invited political action in Congress.

By passing the buck back to the President, the House accomplishes little toward solution of the inflationary budget, which has aroused a tumult of grassroots protest.

A wise course for the President now would be to offer a series of suggestions as to where his budget can be pared. Or better yet, present a whole new document to curb the excessive prodigality of Federal disbursement.

He need not do so legally. He can ignore the House resolution, which political advisers may urge him to do.

But the Nation believes in Eisenhower integrity. It trusts and expects his leadership. The President could again demonstrate that leadership by submitting a new, significantly lower budget—or showing where Congress can best slash the present requests.

Mr. Eisenhower is a big enough man to do this. Such conduct should enhance the country's economic outlook and the administration's prestige.

United Front of All Religions Against the Communist Threat

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. DIRKSEN. Mr. President, Rabbi Dr. Abraham M. Hershberg, chairman of the Voice of Religious Freedom of United States of America, has prepared a very interesting statement why all religions must unite against the communistic threat which seeks to destroy them. He points out that physical weapons alone cannot penetrate the Iron Curtain, and that it requires spiritual weapons.

I am sure the statement will be of interest to many persons, and therefore I am requesting that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

All the religions must unite against the communistic threat which is out to destroy them. The Communist movement makes no exception of any religion.

The loss of religion means the loss of the people's rights and if there is not freedom of religion, there is not freedom of anything else because it was God himself who gave all the freedoms to humanity.

The Iron Curtain can be penetrated, not by physical weapons but by spiritual ones. And that means by the spirit of God. I have found in the Talmud of Babylonia, that was written 2,400 years ago, "that even an iron curtain will be penetrated by the spirit of God, by the prayers of people." When I was in Moscow in 1941 I asked a young college student, "Tell me, who is your God?" and he replied, "Stalin." And I then asked him, "What will happen when Stalin dies?" and he answered, "God knows." That proves to me that no one can destroy faith in God.

There is no physical shelter from A- and H-bombs. Therefore, we must use the spiritual atom to protect us from the physical ones. Because of this, all of the religions will ultimately unite and fight communism, not with arms, not on the battlefield, but with prayers and with spiritual weapons. United we stand, divided we fall.

It is not sufficient for us merely to be anticommunistic, we must also be truly democratic in the fullest sense. We must cultivate world brotherhood. Anti-Catholicism, anti-Protestantism, anti-Semitism, and national racial prejudices all weaken us in our fight against the totalitarian communistic regime. We need to work together in harmony to bring peace into the world.

Peace is not a negative of war. Peace is a positive term. We must teach people about peace. It is a great education and that will help to keep us from destruction. Lige the great Prophet Isaiah said, "Not by an army, not by strength, but by the spirit of God will be your strength."

Our organization has united already in an interfaith movement leaders of all the religions to speak by radio, television, publications, personal lecture tours—in the United States, South America, and other parts of the world, about peace and the danger of the Communist regime of destroying religions. Just now the Iron Curtain's started a new campaign, through the press, radio, to destroy religion. It proves to me that behind the Iron Curtain after the Communists are destroying the religion for 40 years, still they need now again to destroy religion because you cannot kill religion by bullets and concentration camps, because the faith of God exists in the depth of the soul and the hearts of people. I just noticed in the newspapers that the Russian Government is setting up a Rabbincal seminary in Moscow to train religious leaders for the Jewish faith. This contradicts the other news that Russia recently undertook a campaign of destroying religion. It contradicts the idea that they are destroying religion, but since it is known that the tactics of the Communists are to cover up with an Iron Curtain everything that they are doing, and that the Rabbincal seminary is a good coverup.

President Eisenhower, in his speech on the Voice of America, February 25, 1957, said we must face that, while we are trying to help build a world of freedom and justice among sovereign people, the masters of international communism are working constantly to tear down that kind of world.

Communism, according to all its own leaders, must be a system of international control and conformity. Thus, at its very heart, it is the complete opposite and enemy of any kind of nationalism. Its avowed program is to destroy totally the religion, governments, institutions, and traditions of the Christian world, the Buddhist world, the Islamic world, the Judaic world, and the world of every religion and culture. The Communist rulers then propose to substitute a whole new system of thought and control dictated from Communist Party headquarters. They think that a few theorists and rulers know what is best for everyone, and they are determined to drive everyone toward that kind of world.

The Kremlin destroyed Stalin, but not Stalinism and we hope and pray to the Almighty God that he will shine his glory upon the people behind the Iron Curtain.

The Death of Ramon Magsaysay, President of the Philippines

SPEECH
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BURNS of Hawaii. Mr. Speaker, will the gentleman yield?

Mr. GORDON. I yield to the gentleman from Hawaii.

Mr. BURNS of Hawaii. Mr. Speaker, there are some 63,000 Filipinos in Hawaii, more than half of whom are citizens of the United States of America.

I have not had the privilege of knowing the great President of the Philippines, President Magsaysay, but I have learned of him through the Filipinos of Hawaii. He was a great inspiration to them. His rise to the presidency of the Philippines brought them the realization that their country was truly and really free and that it was going to assume a position of leadership which would extend throughout the Asian continent and the Pacific basin, a leadership in which all of them in Hawaii could take pride.

I join with other Members of the House in paying tribute to great man who was an exemplary Christian and an outstanding leader in the Asian and Pacific basin. A man like this is never really dead. He remains an inspiration to the future. Those who, in their ringing tributes, have referred to Lincoln can add even further and more pointedly that it is for the living to carry on the fight for which President Magsaysay so nobly gave his life.

I am sure that the people of the Philippines will take the inspiration, the leadership and the guidance provided them by President Magsaysay and carry the torch forward that he so nobly exemplified in his life.

I convey to the people of the Philippines and to his family the deep regard of all the people of Hawaii for President Magsaysay and for the great goals he has attained and the even greater visions he has made clear. To them we extend our condolences and our deep sorrow at his sudden and shocking passing. May the Almighty receive his spirit.

Results of Questionnaire Mailed to Iowa

EXTENSION OF REMARKS
OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, March 18, 1957

Mr. MARTIN of Iowa. Mr. President, under unanimous consent granted me by the Senate, I submit the results of my annual questionnaire from the State of Iowa.

On February 15 I mailed 41,348 questionnaires to Iowa. They were addressed to every 20th householder—both town and country. I used rural directories and all available city directories and telephone directories for towns not having householder directories. With each householder ballot I included also a woman's ballot of identical questions for the use of the wife or nearest female relative of the householder. The special women's ballots are tabulated in a separate column.

We have received a total of 8,312 replies which are included in the tabulation. The occupations listed by those replying are as follows:

Farmer	2,035
Labor	742
Business	607
Professional	465
White collar	544
Woman's ballot	3,486
Miscellaneous	433

Yellow sample copies were distributed freely but in order to preserve the true grass-roots value of the enclosed tabulation of the ballots, I have followed my practice of not including any sample-copy replies therein. Iowans returned 6,256 yellow sample ballots to me and more than half of them wrote special letters of utmost value.

This year has brought not only the largest number of ballots but also the largest number of good discussions that I have ever received in reply to my questionnaire and I deeply appreciate the good cooperation of the people of Iowa in this wonderful response.

The purpose of this questionnaire is best described in the words of Edmund Burke, 18th-century British statesman, as follows:

Certainly, gentlemen, it ought to be the happiness and glory of a representative to live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. Their wishes ought to have great weight with him; their opinions high respect; their business unremitting attention. It is his duty to sacrifice his repose, his pleasure, his satisfactions, to theirs—and above all, ever, and in all cases, to prefer their interest to his own.

But a representative's unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to any man, or to any set of men living. These he does not derive from your pleasure—no, nor from the law and the Constitution. They are a trust from providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion.

Questionnaire—Tabulation of total Iowa grass-roots vote

	Total vote	Yes	No	Percentage Yes	Percentage No
1. Do you approve President Eisenhower's general foreign policy?	7,276	5,126	2,150	70.45	29.55
2. Do you approve inviting to this country for conferences the foreign heads of states with whom we are not in agreement?	7,909	5,818	2,091	73.56	26.44
3. Do you approve requiring all new National Guards men and Army Reservists to take 6 months' training on active military duty?	7,529	5,552	1,977	73.74	26.26
4. Do you favor industry taking the initiative in developing and producing atomic power, with the Federal Government paying part of the experimental and developmental cost?	7,376	5,206	2,170	70.58	29.42
5. Do you approve Congress authorizing the admission of a greater number of immigrants to the United States from Hungary?	7,854	1,694	6,160	21.57	78.43
6. Do you approve Congress authorizing the admission of a greater number of immigrants from all countries?	7,886	848	7,038	10.75	89.25
7. Do you favor requiring compliance with a soil-bank program to qualify farmers for price supports on corn?	7,414	5,091	2,323	68.67	31.33
8. Do you approve stricter controls on what farmers can plant on land diverted from major crops?	7,534	4,083	3,451	54.19	45.81
9. Do you favor requirement that acreage placed in either acreage reserve or conservation reserve of the soil bank should not be harvested or grazed under any circumstances?	7,424	3,268	4,156	44.02	55.98
10. Do you favor a price support program of 70 to 90 percent for corn for the next 3 years for farmers qualifying in a soil-bank program?	7,064	5,019	2,045	71.05	28.95
11. Do you favor reduction of Federal taxes even though it unbalances the budget?	7,835	1,876	5,959	23.94	76.06
12. When the Federal budget is balanced do you favor reduction of the Federal debt before reducing taxes?	7,608	5,041	2,567	66.26	33.74
13. Do you approve tax reduction for small business?	7,537	5,900	1,637	78.28	21.72
14. Do you favor Federal assistance for a school building program uncomplicated with integration problems to aid children of all races?	7,624	6,066	1,558	79.56	20.44
15. Do you favor requiring registration of pension and welfare funds of labor unions and disclosure of financial transactions involving them?	7,418	6,866	552	92.56	7.44
16. Do you favor extending unemployment insurance to employees of firms having from 1 to 3 persons on their payrolls?	7,398	4,659	2,739	62.98	37.02
17. Do you approve a program of Federal aid for technical assistance and loans and grants to communities suffering from chronic unemployment problems?	7,169	4,034	3,135	56.27	43.73
18. Do you approve including private business in partnership with municipalities, States, and the Federal Government for the development of water uses in irrigation, flood control, power production, domestic and industrial uses?	6,777	4,155	2,622	61.31	38.69
19. Do you favor United States membership in the Organization for Trade Cooperation provided it is strictly an administrative agency without power to control United States tariff policies?	5,247	4,253	995	81.04	18.96
20. Do you approve the sale and barter of farm surpluses to communist nations?	7,719	3,162	4,557	40.96	59.04
21. Do you approve a food stamp plan under which needy persons would be given certificates with which to purchase surplus foods through normal commercial channels?	7,782	6,466	1,316	83.09	16.91
22. Do you favor the Federal Government subsidizing private companies for excessive losses on insurance issued by them against natural disasters?	6,787	1,980	4,807	29.17	70.83
23. Do you approve the Federal Government's providing credit with local banks for loans to disaster victims for rebuilding?	7,936	7,256	680	91.43	8.57
24. Do you favor direct Federal insurance against industrial atomic hazards?	6,400	3,298	3,102	51.53	48.47
25. Do you approve Federal legislation to ease the supply of housing credit, including greater Federal support of the mortgage market?	6,520	2,817	3,703	43.21	56.79
26. Do you approve increasing the maximum interest rate on VA-guaranteed home loans to secure more private funds for home construction or purchase?	6,940	3,278	3,662	47.23	52.77
27. Do you favor an increase in postal rates to meet Postal Department deficit and to provide better post office buildings and equipment where needed?	7,918	4,141	3,777	52.30	47.70
28. Do you approve enactment of Federal laws authorizing prosecution in Federal courts of anyone who intimidates voters in an election for Federal office?	7,677	7,269	408	94.69	5.31
29. Do you approve authorizing the U. S. Department of Justice to seek an injunction in behalf of anyone who believes his civil rights are about to be violated?	6,426	5,124	1,302	79.74	20.26
30. Do you approve permitting individuals to take complaints that their civil rights have been violated directly into Federal court?	6,545	4,619	1,926	70.57	29.43
31. With other safeguards to guarantee a fair price to the public, do you favor the return to the States by the Federal Government of controls over the production of natural gas?	6,557	3,755	2,802	57.27	42.73
32. Do you approve controls by the Federal Government of rents, wages and prices in peacetime?	7,694	2,237	5,457	29.07	70.93
33. Do you favor examination of our monetary policy and our financial system by a commission appointed by the President even though such examination may be made also by Congress?	6,434	3,486	2,968	54.01	45.99
34. Do you approve the Federal Government's encouragement of more liberal credit and lower interest rates for small business?	7,652	6,452	1,200	84.32	15.68
35. Please check 3 of the following 6 items you think should be cut most in Federal spending:					
(1) Number of Federal employees		(1) 7,315			
(2) Construction of Federal public works (dams, airports, buildings, interstate roads, etc.)		(3) 3,877			
(3) Federal aid to States, municipalities, school districts, and local public agencies		2,751			
(4) Foreign aid		(2) 6,810			
(5) National defense		1,361			
(6) Federal aid to agriculture and small business		1,721			
36. Please check 6 of the following 12 issues you think most important today:					
(a) Government spending		(3) 5,146			
(b) Balancing the budget		(6) 4,099			
(c) Reduction of debt of Federal Government		3,855			
(d) Taxation		(5) 4,465			
(e) Farm prices and policies		(4) 4,975			
(f) United States foreign trade policies		2,680			
(g) Control of communism in America		(2) 5,256			
(h) Labor policies		2,994			
(i) Defense and war preparedness		3,546			
(j) Maintaining peace		(1) 5,468			
(k) American foreign policy		3,501			
(l) Civil rights		2,609			

The total tabulation of the householder and women's ballots appears on this page and the tabulation by classification follows on the next page.

8. Do you approve stricter controls on what farmers can plant on land diverted from major crops?	1,208	740	362	307	339	220	228	178	295	199	1,491	1,597	160	210
9. Do you favor requirement that acreage placed in either acreage reserve or conservation reserve of the soil bank should not be harvested or grazed under any circumstances?	983	947	276	386	243	298	158	242	234	254	1,229	1,800	145	229
10. Do you favor a price support program of 70 to 90 percent for corn for the next 3 years for farmers qualifying in a soil-bank program?	1,448	425	412	213	384	156	253	125	307	158	1,995	843	220	125
11. Do you favor reduction of Federal taxes even though it unbalances the budget?	415	1,524	223	482	131	453	77	376	106	431	817	2,400	107	203
12. When the Federal budget is balanced do you favor reduction of the Federal debt before reducing taxes?	1,307	590	434	272	373	202	320	128	335	190	2,003	1,056	269	129
13. Do you approve tax reduction for small business?	1,411	419	541	152	465	100	294	117	361	135	2,530	619	298	95
14. Do you favor Federal assistance for a school building program uncomplicated with integration problems to aid children of all races?	1,442	421	583	122	404	67	304	136	394	126	2,631	605	308	81
15. Do you favor requiring registration of pension and welfare funds of labor unions and disclosure of financial transactions involving them?	1,628	134	591	84	565	17	434	16	496	24	2,816	231	336	46
16. Do you favor extending unemployment insurance to employees of firms having from 1 to 3 persons on their payrolls?	904	748	564	136	272	304	241	192	353	154	1,981	1,072	254	133
17. Do you approve a program of Federal aid for technical assistance and loans and grants to communities suffering from chronic unemployment problems?	920	786	478	196	250	302	195	223	275	220	1,696	1,271	220	137
18. Do you approve including private business in partnership with municipalities, States and the Federal Government for the development of water uses in irrigation, flood control, power production; domestic and industrial uses?	937	690	377	261	339	183	280	128	306	172	1,694	1,050	222	138
19. Do you favor United States membership in the Organization for Trade Cooperation provided it is strictly an administrative agency without power to control United States tariff policies?	1,036	261	384	101	332	81	264	53	335	58	1,699	392	202	49
20. Do you approve the sale and barter of farm surpluses to communist nations?	904	897	190	517	276	287	209	215	203	306	1,146	2,083	144	252
21. Do you approve a food stamp plan under which needy persons would be given certificates with which to purchase surplus foods through normal commercial channels?	1,628	289	617	92	437	127	320	111	414	99	2,736	525	314	73
22. Do you favor the Federal Government subsidizing private companies for excessive losses on insurance issued by them against natural disasters?	443	1,246	184	442	163	371	94	292	127	345	867	1,881	102	230
23. Do you approve the Federal Government's providing credit with local banks for loans to disaster victims for rebuilding?	1,804	158	675	43	524	61	397	50	477	46	3,017	285	362	37
24. Do you favor direct Federal insurance against industrial atomic hazards?	739	800	344	259	248	246	142	228	206	237	1,441	1,185	178	147
25. Do you approve Federal legislation to ease the supply of housing credit, including greater Federal support of the mortgage market?	605	909	348	270	246	291	157	245	142	240	1,165	1,496	154	192
26. Do you approve increasing the maximum interest rate on VA-guaranteed home loans to secure more private funds for home construction or purchase?	709	948	281	378	331	215	237	166	278	223	1,268	1,551	176	181
27. Do you favor an increase in postal rates to meet Postal Department deficit and to provide better post office buildings and equipment where needed?	924	1,006	443	268	342	240	295	180	359	167	1,666	1,752	212	194
28. Do you approve enactment of Federal laws authorizing prosecution in Federal courts of anyone who intimidates voters in an election for Federal office?	1,757	108	671	33	550	27	425	24	508	14	2,998	176	360	26
29. Do you approve authorizing the U. S. Department of Justice to seek an injunction in behalf of anyone who believes his civil rights are about to be violated?	1,196	279	500	129	389	103	260	119	357	96	2,166	516	256	60
30. Do you approve permitting individuals to take complaints that their civil rights have been violated directly into Federal court?	1,064	461	457	177	356	142	263	117	325	133	1,919	805	235	91
31. With other safeguards to guarantee a fair price to the public, do you favor the return to the States by the Federal Government of controls over the production of natural gas?	926	611	300	338	297	227	202	194	251	232	1,800	1,053	175	147
32. Do you approve controls by the Federal Government of rents, wages and prices in peacetime?	626	1,240	236	467	107	473	70	367	108	417	970	2,230	120	263
33. Do you favor examination of our monetary policy and our financial system by a commission appointed by the President even though such examination may be made also by Congress?	758	796	336	241	303	200	251	139	248	206	1,402	1,252	188	134
34. Do you approve the Federal Government's encouragement of more liberal credit and lower interest rates for small business?	1,658	248	604	97	442	126	317	100	408	105	2,710	450	313	74
35. Please check 3 of the following 6 items you think should be cut most in Federal spending:

Tree Banks for the Northeast

EXTENSION OF REMARKS
OF
HON. IRVING M. IVES
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most interesting article titled "Tree Banks for the Northeast," from the February 2 issue of American Agriculturist.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TREE BANKS FOR THE NORTHEAST
(By Edmund Northrup Moot)

The late Ray Pollard, one of the first New York State county agents, was always exhorting farmers to plant trees, something which Schoharie County, N. Y., farmers had never heard about.

In the years following World War I Ray's appeal for planting demonstrations stimulated my teen-age interest in growing trees, especially after taking a course in botany under Professor Needham at Cornell.

Without consulting dad or granddad, the seventh and eighth generations on two Schoharie County hill farms (one of which was settled in 1819), I wrote Mr. Pollard and received approval for a demonstration to include 5,000 red pine and 3,000 white pine. Mr. Pollard would bring the trees up the old hill in his Model T when planting time rolled around. My job was to convince a highly provincial parent and grandparent that we should plant trees on those old hillsides.

Granddad would spend lots of time telling me how he, as a boy, helped get out those big virgin hemlocks for the old immense barn. There were two so-called 32 foot swing beams in that barn, hewn from oak, and measuring 18 inches on one side and 24 inches on the other. That barn raisin' story could fill a book by itself.

Well, the entire Christmas vacation between the 1919 and 1920 college terms was spent in discussing what I had done in agreeing to a tree planting demonstration on the old farm. Mom, who was 80 on February 2, always inspired such new ideas. Dad, recently deceased, never actively opposed; however, he had to be guided by his aging father's wishes.

Granddad was very deaf and there were no hearing aids in those days. Each family lived in its half of the old 17-room hop picking house. I ate many of my vacation meals with granddad and grandma where I could yell at granddad and try to explain why it was a good idea. He never said no, but he laughed and laughed and would turn to grandma and said so often: "Jane, do you think they will ever grow?"

Twenty years later (he lived to be 92) he, dad and I walked through the trees which were all over 20 feet high. Tears came in his eyes. He never said much. He did, however, turn to me and almost whisper, "They are nice.". That was all the return I needed.

We used every tool under the sun to plant those trees. The farm work was nearly all done by hand, anyhow. The rows were planted just as straight as a modern concrete highway. Mr. Pollard put up a well painted large wooden sign marking the original demonstration.

Three of us planted the 8,000 trees during the vacation, working 11 hours my last day home. We carried water in pails to put in each tree hole made either by a round pointed shovel or a hoe. We had no mattock. The percent of growth of the original planting and the following 5 years of smaller plantings has been fantastic. Several forestry men have checked the planting and figured over 90 percent grew.

On January 22, 1956, I spent several hours going all over the large planting. Memories clouded most of my intended close inspection of all the trees. Unfortunately I do not have title to this land but I can still enjoy the trees on that old farm and now have many acres in another area, in the same town, where I can follow some of my eccentric forestry practices.

Only recently I have had much fun in logging 75 big logs with a good neighbor's interest and his $25 doodlebug. No horses to break legs or fall over big logs, break harness or even run away in the woods as they did when I was a kid. The neighbor takes all the top and limb wood for hauling the logs to a suitable logway. This keeps the woods good and clean. The logs are taken by truck to the large cooperative mill near Cooperstown, N. Y., where I can then go, with my little car trailer, and get lumber as I need it.

You may be interested in some observations made as I walked around among the three types of conifers—white pine, red pine, and Norway spruce. The white pine have suffered most from weevil, sleet storms, and the high velocity of winds whipping upstate New York from the tails of vicious so-called "women" hurricanes. The red pine has exceeded in health, growth, and cathedral-like appearance up until the last few years. The 500 Norway spruce, which Dad and I planted in 1922 in a hollow box system, are now ahead in height. We watched them every year for many years and wondered when they would start growing.

A 1-acre field left in the center of the hollow block planting of spruce is a fantastic natural cathedral. A few of those tall stately spruces have cone covered crowns.

But the interesting fact is that I could not find a single natural seeded spruce. Both the red pine and white pine have large natural seeded areas. The red pine second growth trees, very rugged and clean appearing, are all growing on the left side of the plantings away from the strong winter hill winds.

The white pine, natural seedlings are all over, hit and miss in every direction and not too healthy in appearance. Wind burn, weevil, and water shortage signs are prevalent among these young white pine. I, personally, have stopped planting white pine in recent years.

The spruce are far out ahead in providing protective ground cover for all small birds and other types of game. The red pine have little lower branch cover while the white pine are rather open and unprotective for security of small life. The area planted to spruce has a deep protected snow cover literally dotted with all types of small game tracks.

Deer have bedded down many times in the red-pine plantings. It seems that all wildlife sets up its own protective system once we give them the security of having that protection. Several bluejays were very angry or disturbed to see me walking around among the young trees.

There is a rather pathetic side to this tree-planting saga. There are just two reforested areas in the neighborhood. A woman doctor, who inherited a few acres directly across the valley, has planted several thousand over the years. She is now deceased. Both plantings stand out like large green signs on both sides of the valley for thousands of tourists to observe each year.

Meanwhile fly-by-night loggers, chain-saw hot rodders, and debt-ridden farmers are cutting timber even as low as 6 to 8 inches in diameter. Rising prices of pulp cordage and expanding building requirements cause "slap-happy" logging methods. Sometimes even a nonagricultural hillside, protecting a much-needed water supply, is completely denuded. This process destroys ground cover, shrinks game-refuge areas, and allows worthless scrub growth.

The entire problem boils down to one pertinent question, "How can the small farmer be induced to set up a yearly tree-planting program?" The national theme, in all agricultural circles, centers on two words, "soil bank." Trees do a masterful job of producing excellent soil. Our old family farm was settled in 1819. The first ancestor was, I guess, a Palatine refugee, a good fiddler, and an accomplished pioneer craftsman. He burned large piles of hardwood trees to produce charcoal which brought in the first real money on the old farm.

The main purpose of cutting the virgin stand of all kinds of timber was to hew out crop-producing areas and pasture. Rail fences and small hand-erected barns plus the old log cabin house used up some of the timber.

What better cover for idle land could be selected for the Northeast than a tree bank cover? My only male descendent is a young "full of fire" grandson of 4 years, the youngest of my daughter's two children. As the years tick along very close to threescore, my one silent prayer is that we can inspire the lad to appreciate the young forest and hope there will be suitable homegrown logs to produce timber for two homes when he and his sister grow up and get married. It is the only wealth I can ever expect to pass along.

I have placed a small marble marker near the little rustic cabin in the large woods where our small family has many happy inexpensive times together. This marker bears my father's name (deceased in January 1955) and is a dedication to him and seven generations before him who were paupers in England after being shipped out of the Palatinate area of Germany during the religious struggles following the Reformation. They gave me a desire to work with my hands.

The trees provide frequent rest under which to contemplate, wonder, and deeply respect the divine force behind everything we enjoy most in this hurried life.

Increase in Labor Force

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Predicts Big Boom in Labor Force," which was published in the Gary Post-Tribune of March 17, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PREDICTS BIG BOOM IN LABOR FORCE

TUCSON, ARIZ.—Secretary of Labor James P. Mitchell predicted Saturday that the Nation will have a labor force of 79 million by 1965. That would be an increase of 10 million in 8 years.

He said there is a growing shortage of skilled, technical, and professional manpower throughout the Nation. The shortage will become more acute, Mitchell said, unless educational training and employment opportunities are modernized and equalized for all workers.

In a speech before the third Arizona statewide industrial development workshop at the University of Arizona, Mitchell said:

"The economy must grow enough by 1965 to provide $560 billion in goods and services for a population exceeding 193 million.

"What we have already seen of industry's hunger for skilled workers is a powerful clue that we may be confronted in 1965 with a painful shortage of capable people."

Sound Money

EXTENSION OF REMARKS
OF

HON. GEORGE W. MALONE

OF NEVADA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19, 1957

Mr. MALONE. Mr. President, the action of the Nevada Republican State Central Committee announcing a platform of sound money, protection of the workingmen's jobs and investors' money, and for States rights, has attracted wide attention from both Republican and Democratic publications.

The Longview (Tex.) Sunday News-Journal of March 17, 1957, published a very interesting editorial in support of the Nevada party actions.

The same Sunday edition included a special dispatch by George Rothwell Brown and also reprinted supporting editorials which had been published originally in four Nevada newspapers, namely,, the Nevada State Journal, of Reno; the Elko Daily Free Press; the Ely Daily Times; and the Las Vegas Review Journal.

I ask unanimous consent that these editorials and article be printed in the Appendix of the RECORD.

There being no objection, the editorials and article were ordered to be printed in the RECORD, as follows:

[From the Longview (Tex.) Sunday News-Journal of March 17, 1957]

NEVADANS ASKING FOR HONEST DOLLAR

(By George Rothwell Brown)

WASHINGTON.—It is a curious fact that although the Eisenhower administration has deplored the tendencies in this country today working for inflation, nobody in the Government has even so much as mentioned the one sure cure for it.

Inflation in the last analysis springs from the unholy union of a printing press and a stack of paper. If the Government really wants to stop inflation and prevent its further disastrous spread it will have to go back to the honest little dollar—the gold standard which F. D. Roosevelt repudiated in frightful violation of his most solemn campaign pledges in 1932.

(NOTE.—United States Senator GEORGE W. MALONE, of Nevada, is the inspiration and moving force behind the plea for return to an honest dollar and an end to sky-high taxes and inflationary free spending. For editorials on Senator MALONE'S position and the general subject, "Foundations of Our Freedom and Progress," and the popular response his stand is being accorded by the people, see below.)

Now the metal minded State of Nevada has revived a question of recent times all but unheard of in Washington.

The Republican State Central Committee of Nevada has come up with three recommendations of policies based on principles embodied in the United States Constitution.

First, it expresses the opinion that the Republican Party must advocate a free market for gold, with removal of all restrictions upon its purchase, sale, and ownership.

Coupled with this is a recommendation for a return to the hard money standard, gold and silver certificates redeemable in those precious metals.

It is more than an economic absurdity, it is an economic sin, that American gold mines should be shut down, idle and unproductive, while Communist Russia reaps the benefit of a world gold market from which American gold at only $35 is excluded. That price, fixed by law, has paralyzed the American gold mining industry.

Nevada Republicans also urge that the Reciprocal Trade Agreements Act be permitted to expire next year. Under this law the tariffmaking power was transferred by Congress to the President, and by him relegated to obscure bureaucrats in the State Department.

The administration wants to extend State Department authority still further by legalizing GATT through the establishment of an international trade organization.

Nevada also suggests that the Republican Party rally to the support of State rights.

Commenting on this forward-looking stand taken by the Republican central committee, Senator MALONE told the Senate the other day that Nevada is the first State to reaffirm the principles of Washington, Jefferson, and Lincoln in 24 years.

"Since 1933," said Senator MALONE, "inflation has been encouraged, so that Congress can appropriate any amount of money for any purpose at any time, including billions of dollars to European and Asiatic countries, and can have the money printed without regard to its ultimate value.

"Under the free-trade policy of sending billions of dollars to Europe and Asia, more than $30 billion of American capital has gone abroad to operate plants with cheap labor and to ship the products to the United States to compete with our own labor and investments."

This word from Nevada sounds almost like a voice crying in the wilderness, but it isn't. Evidence piles up in congressional mail from back home every day that national public opinion strongly supports the point of view of Nevada and her senior Senator.

Runaway Government spending is properly spotted as the prime cause of inflation.

[From the Longview (Tex.) Sunday News-Journal of March 17, 1957]

FOUNDATIONS OF OUR FREEDOM AND PROGRESS

Constitutional government, based upon our traditional American principles, is sound and safe government. It is most refreshing, therefore, to note the encouraging response that comes to Senator GEORGE W. MALONE on his fortright call for a return to constitutional government and restoration of those basic principles upon which American freedom was founded and our strength and prosperity developed.

Senator MALONE, Nevada Republican and a professional engineer, for some years now has been a lone voice crying in the wilderness of party politics and Federal Government councils in Washington against pouring out the economic lifeblood of our Nation in the form of billions upon billions of dollars of subsidy money from the Federal Treasury to foreign countries.

Recently, the Senator more strongly than ever had advocated a return to the Constitution in the regulation of foreign trade and the national economy, ending of the ruinous free-trade policies which are enabling foreign sweatshop labor factories to compete in the American market and endangering our workingmen's jobs and investors' money, and return to our traditional gold standard which would do away with the funny-money regime and the ruinous inflation that has been riding high, wide, and handsome for the past 24 years.

The note of popular concern and public response which Senator MALONE'S vigorous advocacy of these policies has aroused in his own State and elsewhere across the Nation is perhaps best illustrated by three editorials from prominent Nevada newspapers. Republican and Democratic newspapers alike carried editorials and feature news articles explaining their Senator's position and complimenting him for his bold stand.

The editorials carried in Nevada Democratic newspapers, however, are most significant and revealing in their content. Because of their unusual significance and bearing upon current national policy, we are reproducing two of them and one from a Republican newspaper in the following order, and we will comment further at the end of the third one.

[From the Longview (Tex.) Sunday News-Journal of March 17, 1957]

REPUBLICANS SET THE STAGE

(Editorial from the Nevada State Journal of Reno, Paul Leonard, editor; and from the Elko Daily Free Press, Chris Sheerin, editor; both of which are leading Democratic newspapers.)

Taking almost a directly opposite stand to the rubberstamp attitude which dominated the party in the recent campaign, the Republican State central committee, meeting in Fallon on Saturday adopted a resolution advocating States rights, a return to the free market for gold and hard-money standards, and the resuming by Congress of the regulation of the tariff and foreign commerce.

Long will it be remembered in the political annals of Nevada that the Republican State central committee and the candidates for the Senate and House repeated time and time again that whatever President Eisenhower wanted they would favor.

No one ever before in Nevada's history ever agreed to surrender congressional rights to the executive branch of the Government in advance of an election. It did not happen in the Roosevelt era when the pressure from the White House was terrific.

The rubberstamp attitude gained very little support for the Republican contenders and left the party leaders out on a limb.

Senator GEORGE MALONE, who has never been a rubberstamp, told Republican leaders and candidates during the campaign that they were on the wrong track but MALONE was relegated to the sidelines in the campaign and did not seem to care very much.

He dominated the meeting at Fallon on Saturday. It was called at his request and the Republican Party, represented by its executive committee, went on record favoring the Malone policies. The resolutions adopted by the Republicans could have been adopted by Nevada Democrats not many years ago with a few changes.

Senator MALONE set the stage at the Fallon meeting for his 1958 reelection campaign and it behooves the Nevada Democrats to take a good look at what the Republican leaders did to help him.

The statement of policy set forth in the resolutions will appeal to most Nevada people, Democrats and Republicans, and if the Republicans go into the 1958 campaign on that basis and in the meantime straighten out some of their internal troubles the Democrats had better come up with something substantial for campaign material. The Republican rubberstamp policy was tossed into the discard at the Fallon meeting.

The resolution adopted by the Republicans is important in Nevada's political arena and it is as follows:

"The Republican Party of the State of Nevada strongly advocates the return to constitutional government by adopting the following principles which have been the

basic tenets of the Republican Party since its inception more than 100 years ago.

"We believe the Republican Party must advocate a free market for gold, with removal of all restrictions upon its purchase, sale, and ownership, and a return to the traditional hard-money standard using gold and silver certificates redeemable in the respective metals.

"We believe the Republican Party must urge the Congress of the United States to resume its constitutional responsibility of regulating foreign commerce through the adjustment of duties, imports, and excises, through its agent, the Tariff Commission, and allow the so-called Reciprocal Trade Act, which transferred such responsibility to the President, to expire in 1958.

"We believe the Republican Party should urge Congress to respect the rights of the individual States in all those matters which have been historically matters of State concern."

[From the Longview (Tex.) Sunday News-Journal of March 17, 1957]

BATTLE BY MALONE

(Editorial from the Ely Daily Times, Darwin Lambert, editor; a leading Nevada Democratic newspaper.)

Senator MALONE has certain ideas for the benefit of Nevada—and of the country as a whole in the long run. He has talked these ideas for 10 years, some of them even longer, before he was a Senator. As far as we can find out nobody in Nevada has put up a very strong case against them, but most of us have shrugged our shoulders and said they might be good for Nevada but are contrary to Federal policy; therefore, we can't do anything about them.

So we have smiled good naturedly at the Senator and let him go on talking, while his message goes in one ear and out the other. This has not been good. If our senior Senator's ideas are contrary to our ideas, then we should talk them over with him and see that his ideas are changed. If, on the other hand, his ideas are right, then we should listen carefully enough to understand them and give him wholehearted support in putting them across.

Surely, now, the time to resolve this ridiculous situation has arrived. In December the Nevada Republican executive committee backed the Senator in reaffirming what were called the three fundamental principles on which the Republican Party was based—sound money, protection of workingmen's jobs and investors' money, and States' rights—and now the Senator is drafting legislation on these subjects for introduction in Congress.

The Senator is a Republican. Most Nevadans are Democrats, as is the editor of this newspaper, but this has little to do with the situation. Surely, we are Nevadans and Americans first, and if the policies advocated are good for Nevada and America, they deserve our support.

A sound money policy is urged, including a free market for gold and return to the hard money standard, with gold and silver coins and gold and silver certificates. This policy would almost certainly be good for Nevada, and we suspect it would be good for the entire country. If not, let someone come forward and tell why. Let's not just shrug our shoulders and ignore the situations.

A policy of protecting workingmen's jobs and investors' money by means of a tariff—as provided in article I, section 8, of the Constitution—is urged. It is proposed that duties be paid by foreign nations to make up the difference between wage standards and general cost of doing business here and in the chief competing countries on each product. Surely, this would be good for the mining and livestock industries of Nevada, without hurting other industries in the State, and, we suspect, without hurting the country as a whole. If this belief is wrong, for goodness sake let someone come forward and tell why. Let's not just shrug our shoulders and say nothing can be done. The steady encroachment of centralized government in Washington on the rights of the States is opposed. Right now the Federal Government is collecting around $100 million a year in taxes in the State of Nevada, then giving a small part of this amount back to us under certain terms and conditions to which we must kow-tow. The Federal Government is taking us over, for the taxes collected here by Uncle Sam are far in excess of those we collect for government, within our own State. If this trend should not be reversed, for the the benefit of Nevada and the Nation, let someone come forward and tell why. And if they do not come forward, let's pitch in and work to strengthen States rights before it is too late.

We know these ideas are contrary to some trends. We know there are arguments against them, and we suspect that those arguments are arguments against Nevada and against free enterprise. We know it is being said now that tariffs must be still further relaxed, to build up other countries in the fight against communism, but we suspect that we are involved in a frenzy with little reason, and that American methods of building up other countries should be reexamined in the light of reason and logic—not entirely because they result in weakening Nevada but also because they seem to represent not a strengthening but a weakening of those other countries in the long view. Those countries must be strengthened from the ground up, not from the top, lest they collapse from topheaviness.

We haven't time or space to explore all the factors involved in one editorial. What we are calling for is serious consideration of the ideas advanced, serious discussion throughout Nevada, and then full support for the principles that are found to be good. Let's quit spinning our wheels. Down with the weak idea of rubberstamping anything the Federal administration advocates. After all, Nevada is part of the United States too.

[From the Longview (Tex.) Sunday News-Journal of March 17, 1957]

GOP PURGE

(Editorial from the Las Vegas Review Journal, John Cahlan, publisher; a leading Nevada Republican newspaper.)

Citizens of Nevada who are interested in politics should keep their eyes peeled on the Washington scene, because history is about to repeat itself. There is a desperate struggle developing in the Republican Party, much the same as came in the Democratic Party about 15 years ago and, now as then, a Nevada Senator is right in the middle.

This time it is United States Senator GEORGE MALONE, a rather outspoken critic of many of the Republican policies and the man who intends to introduce bills into the Senate to point up the GOP administration's failures. Fifteen years ago it was United States Senator Pat McCarran who battled the liberals in the Democratic Party, and found himself placed on the purge list by President F. D. Roosevelt.

The liberals of the GOP are laying plans to gain control of the party during the next 2 years and, marked on their lists as must go are Senators JOHN BRICKER, of Ohio; WILLIAM JENNER, of Indiana; BARRY GOLDWATER, of Arizona; JOSEPH MCCARTHY, of Wisconsin; and MALONE.

If a close look at the record is taken, it will be found that these men are far from being rubber stamps as the liberals demand of their cohorts. These men frequently are singled out as men who should not occupy seats in the United States Senate. However, their home States continue to vote them into office because they believe the men are doing a good job for their constituents and do not care what the Republican Party thinks about them.

It is a strange thing about the citizens of Nevada that they brook no interference in their politics by the upper echelons of either party. That has been demonstrated time and again during elections and both parties have steered away from bringing in outsiders during election campaigns to tell them how to vote.

During the McCarran purge, every effort was made to sidetrack the Senator at the polls but, when the votes were counted, McCarran was elected by larger majorities than before.

The same thing happened when Thomas Mechling ran for the United States Senate against MALONE. The people of Nevada believed that Mechling was an outlander, sent in by adverse interests, to take over the politics of the State.

The Republicans, if they don't know it now, will be convinced, the same as the Democrats were 15 years ago, that Nevada voters are a pioneer breed of citizens. They like their Senators to express themselves and steer clear from the rubberstamp label.

No matter what anyone thinks of United States Senator GEORGE W. MALONE, he cannot be tabbed with going along just for the sake of partisan politics. He is a wild maverick, who believes he represents the people of Nevada rather than the Republican Party, and doesn't care what his party thinks so long as he pleases the voters who elected him to office.

If the purgers have laid their plans on getting rid of MALONE, then they had best keep it a secret, because any attempt to influence the voters of Nevada through such action will backfire, just as it did in the case of the late Senator Pat McCarran.

[From the Longview (Tex.) Sunday News-Journal of March 17, 1957]

THREE PRINCIPLES OF FREEDOM

We want to go on record as being 100 percent in favor of Senator Malone's position calling for a return to a sound money policy, protection of the workingman's job and investor's money, and recognition of States' rights.

These three principles, enunciated by the Republican Party 100 years ago, are foundation stones of the Constitution and as such are the basis of our individual freedom and the springboard from whence arises our national strength and prosperity.

The first of these three great principles is a sound money policy. This kind of a policy was in effect when America had its great basic growth and expansion. It includes a free market for gold, with removal of all restrictions upon its purchase, sale, and ownership, and a return to our traditional firm money standard, using gold and silver certificates redeemable in these metals. As long as big government can control and depreciate the value of our money through inflation to meet its free-spending and give-away programs, there can be no sound basis for saving and investing, nor any assurance that the workingman's wages will buy reasonable value in merchandise and services. Progress and prosperity thus eventually must bog down and fail.

The second of these principles calls upon Congress to resume its constitutional responsibility of regulating foreign commerce through the adjustment of duties, imports, and excises, through the Tariff Commission, which is an agent of the Congress, and to let expire in 1958 the so-called Reciprocal Trade Act which transferred this responsibility to the President, who then delegated it to the State Department where it has become little more than an instrument of foreign meddling and give-aways.

The third principle would require the Congress to respect the rights of the indi-

vidual States in all those matters which have been historically matters of State concern. This is fully in line with the Constitution which specifically declares that all rights not transferred to the Federal Government by the Constitution nor prohibited by it to the States "are reserved to the States and to the people."

It has been no accident that the people of this Nation now are free people, and that as free people they have been able to plan and work and produce and sell in our own market so that we have developed the strongest nation in the world and the highest living standard of all time. The underlying principles which have permitted such progress had to be just and right.

These great fundamental principles of freedom and justice and sound economics have not been repealed, although they have been pushed into the discard in recent years by a "tax and spend and tax" wild-money philosophy, a "buy friends by the dollar" diplomacy, and a denial of individual and States rights by a mushrooming Washington bureaucracy—all of which is bleeding the Nation of its economic lifeblood, robbing the workingman of his wages through exhorbitant taxes, and taking away his job and the investor's capital by a free dumping of foreign-made goods in America.

These principles, since they are constitutional and fundamental, have been in bad repute in Washington. It is quite natural that in calling for a new recognition and practice of them in the Federal Government, Senator MALONE has been as a lone voice crying in the wilderness.

It is now a most encouraging sign to find the leading newspapers of Nevada, including both Republican and Democratic papers, coming out in strong support of the Senator's stand. It can only be a reflection of the way more and more people in Nevada are thinking today.

We commend you, Senator MALONE, for your bold stand. And we commend your position, and a restudy of the principles which you have cited, to all public officials everywhere and to every citizen who prizes his freedom, is proud of his heritage, and wants to protect and preserve his rights and privileges.

The Enemy at His Back

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19, 1957

Mr. HENNINGS. Mr. President, I should like unanimous consent to have printed in the Appendix of the RECORD an editorial from the St. Joseph (Mo.) News Press. The editorial was written by my old friend, and a distinguished journalist, Mr. Arthur V. Burrowes. It is, in effect, a review of a new book by a friend of many in this Chamber. The book is entitled "The Enemy at His Back," and it is by Mrs. Constantine Brown. I have not yet had the opportunity to read the book, but certainly the estimate of it by Mr. Burrowes most strongly commends it to the attention of all thoughtful readers.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

TIMELY OBSERVATIONS

No man dare make a study of the international situation in this midcentury before the year 2000 without reading a book just published. It is The Enemy at His Back. It is by Elizabeth Churchill Brown, wife of Constantine Brown, syndicated columnist. It is frankly the clearest and most factual expose of Communist influence on American foreign policies we have read inside one cover.

This book is recommended for every public library, every high school in America, for every newspaper office that pretends to treat editorially of the international situation. And not least by every Member of the Congress. Gen. A. C. Wedemeyer, retired, declares that it should be required reading by every American in Government service. With that thought we agree.

A House chairman on un-American activities has declared that "Liz" Brown, as she so graciously autographs this book to this desk, has done what few writers have been able to do. She has brought "the most dangerous enemy of our country" to be shown what it is, "the enemy at our back," and that is the hidden Communist. Here is a most amazing, almost unbelievable recital of how Communist strategy influences United States policies.

This is not an anti-Roosevelt book. It is not an anti-Truman book. It is coldly documented page by page with marginal notations, not footnotes. And there are pages that President Dwight D. Eisenhower himself will not be too happy to read. For this book indicates rather strongly that there are men in high place close to Mr. Eisenhower who this very day are dupes of qut and out Communists or of fellow travelers.

Here are some of the highlights we hope you catch as soon as Librarian Sexton can get the book on the shelves of each of our three public libraries. (He has already ordered the book for each library.) Early in the book you read of a secret meeting that took place in Tokyo, June 29, 1944, between a Mr. Kase, Prince Takamatsu and Shigemitsu. The younger brother of the emperor told Shigemitsu that after Saipan fell it would be highly advisable to end the war without delay. Then is shown the evil mind of Red Russia duping United States foreign policy to prolong the war. Chiang Kai-shek showed General Wedemeyer two notes from the Japanese emperor, in the winter of 1944–45, in which favorable terms to the National Chinese Government were provided.

When you get your hands on the book turn to page 49 and read where Admiral Leahy was warned at Yalta by a security officer not to mention high level secrets in the presence of Alger Hiss. And in the face of that remember what Harry S. Truman said just the other day, that this Red business was a red herring. We gently suggest Mr. Truman read "Liz" Brown's able book without delay.

The whole tenor of the book is that Russia too strongly influenced our foreign policy and dragged the war with Japan out until August of 1945. On page 63 of this book you will read that a highly strategic service of the United States reported that "by January of 1945 Japan was in fact a defeated nation." And yet at Yalta Joe Stalin was playing his cards like the man with the ace in the hole and Mr. Churchill and Mr. Roosevelt were the come-on boys.

On page 64 of this book you will read in the words of Mrs. Constantine Brown that "instead of persuading Japan to accept defeat, Roosevelt was persuaded that he must buy Russian help to defeat an already defeated foe." And then she adds "The price was high in blood, treasure, honor and in peace itself." On page 146 the author quotes Admiral Leahy that he has never once seen nor heard of the military intelligence report on the Chinese Communists until he read the manuscript of this book The Enemy at His Back.

We have said there are lines of this book the President himself will be unhappy to read. Not in his own behavior. But in permitting some men to get too close to him. You will find the names in the book. Let this be said for General Eisenhower and we quote from page 155 of this book that General Eisenhower warned Truman at Potsdam not to make any concessions to get the Russians into the Far Eastern War. And then Mrs. Brown adds "Forrestal says 50 divisions could not keep the Russians out."

Perhaps most controversial, and yet something that will be argued long after Mr. Truman is dead, is the question of dropping the bomb on Japanese cities. Mrs. Brown said it was unnecessary. We as Americans were confused by Russia pretending how hard Japan would be to defeat and how greatly we needed Russian help. On page 180 Mrs. Brown comments on the unanimous recommendation of 71 scientists against the use of that atomic bomb to be dropped on civilians in two cities of Japan and how Mr. Truman ignored that recommendation.

Read the book. Some of your favorite statesmen may be hit. The publishers are The Bookmailer, something unique in publishing. It is a bookstore by mail to all 48 States and 109 foreign countries. It is at Box 101, Murray Hill Station, New York 16, N. Y. Forewords to the book are from Senator WILLIAM F. KNOWLAND, of California, and Whittaker Chambers, ex-Communist, whose own Witness has been widely read.

Nomination of John S. Hastings to the United States Circuit Court of Appeals

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis News of March 16, 1957, commenting upon the excellent appointment made by President Eisenhower in nominating John S. Hastings to membership on the United States circuit court of appeals at Chicago.

I also ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the same subject which was published in the Indianapolis Star of March 17, 1957.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Indianapolis News of March 16, 1957]

AN EXCELLENT APPOINTMENT

There will be widespread approval of President Eisenhower's nomination of John S. Hastings, native son of Washington, Ind., as a judge of the United States circuit court of appeals at Chicago.

Mr. Hastings, who is known as Jack to a host of friends and acquaintances, has the qualifications that make him eminently fitted for this important post in the Federal judiciary.

He is a member of a pioneer, distinguished Daviess County family and is thoroughly steeped in traditionel American principles.

The law firm of which he is a senior member is widely and favorably known in the Midwest and Mr. Hastings has given an additional luster to its reputation. He has been a member of the Indiana University board of trustees since 1936 and board president since 1950.

In many other ways Mr. Hastings has demonstrated that he can meet the exacting requirements of a good Federal judge.

We congratulate Jack Hastings on the high honor accorded him and President Eisenhower on his good judgment in making the nomination.

[From the Indianapolis Star of March 17, 1957]

A GOOD APPOINTMENT

President Eisenhower is to be commended for the nomination of John S. Hastings, of Washington, Ind., to the Federal court of appeals. It is the best appointment the President could have made, holding faithfully to the principle of choosing high-ranking Federal jurists for ability and integrity, not out of political expediency.

The 59-year-old Hoosier has demonstrated his qualifications ably in winning an outstanding reputation among Indiana attorneys in serving as a trustee of Indiana University and in otherwise devoting himself to public service. His elevation to the Federal bench will strengthen that judiciary arm considerably.

By temperatment, training, and experience, Hastings is remarkably suited to his new position. We believe he will make a great judge.

Promotion of Scientific Education

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. HUMPHREY. Mr. President, there recently appeared in the Sioux Falls Daily Argus-Leader an excellent editorial referring to a bill introduced by our colleague the junior Senator from Florida [Mr. SMATHERS].

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GOOD PLAN TO AID SCIENCE STUDY

A proposal that deserves favorable consideration in Congress is the one advanced by Senator GEORGE A. SMATHERS, of Florida, to promote scientific education.

Senator SMATHERS would use a part of the proceeds obtained under the provisions of the Trading With the Enemy Act "for scientific scholarships and fellowships for children of veterans."

The funds involved are those obtained from the wartime confiscation of enemy property. There are claims of various amounts against these but Senator SMATHERS believes that at least $100 million could be made available for the scholarships and produce a return of about $3 million a year for the purpose he has in mind.

Under the terms of the proposal made by the Florida Senator, scholarships would be determined on a basis of ability with a broad distribution throughout the United States.

There is much merit in this suggestion. Scientific education has been lagging in the United States and Russia today is devoting much more attention to this type of education than this country. Unless we do something about it, we could find ourselves seriously handicapped in future years because of inadequate training in fields that are important to our security and well-being.

A question might arise, however, in respect to the limitation of the scholarships to children of war veterans. Perhaps it should be broadened to make eligible all children.

But, nevertheless, the general idea is an excellent one and it is to be hoped that Congress approves it.

Visit to Refugee Encampments

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Oregonian of Portland of March 12, 1957, entitled "Mrs. Rene Bozarth Visits Refugee Encampments." This article describes the unselfish and humanitarian trip to Europe of Mrs. Alla Bozarth, wife of the pastor of St. Luke's Episcopal Church in Gresham, Oreg. Mrs. Bozarth, who is herself a refugee from Communist tyranny in Russia, has a special interest in the plight and problems of men and women who have fled from Soviet depotism in a later generation. She is also a talented writer in her own right.

Because the Senate will soon be considering legislation dealing with the need for these refugees to find sanctuary, I believe that the article about Mrs. Rene Bozarth should be of particular interest at this time. I ask that it appear in the RECORD in full.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MRS. RENE BOZARTH VISITS REFUGEE ENCAMPMENTS

"Anxiety and expectation of the strange unknown—and then perhaps a flicker of hope."

That's the attitude of the thousands of Hungarians still waiting in Austrian refugee camps, according to a first-hand account written for the Oregonian by Mrs. Rene Bozarth, wife of the pastor of St. Luke's Episcopal Church in Gresham, now in Europe with a flying team of Lutheran World Federation workers.

Mrs. Bozarth, herself a refugee from communism after the Russian revolution, plans to write a book on the refugee situation. She reports the whole problem seems in a completely different perspective in Europe.

YOUTHS FLEE DEPORTATION

"During the time that I worked in Oregon in the resettlement of refugees, it appeared that all was quite remote," Mrs. Bozarth explained in a letter from Camp Roeder near Salzburg, Austria. "We had the refugee's application sheet—his declaration to emigrate to the USA—found sponsors for him, job and housing, and when the refugee finally arrived, all the processing behind him, he was a finished 'product,' so to speak.

"Here the stark reality of the refugee's urgent desire to come to the United States, his escape, hopes, and longings, are strikingly pronounced."

The Gresham pastor's wife reports of individual interviews with several Hungarians. There were Szabo and Horvath, aged 20 and 19. Through an interpreter, they explained they had fled Hungary, "because we, along with many other young Hungarian boys, were rounded together to be sent to Russia and Siberia. Now we want to go to the USA"—which they pronounced "Oosha."

Then there were two doctors—a surgeon and an internist—who were trying to help refugees in a grimy dispensary at the camp. They, too, wanted to go to America—even though they realized that they might have to work as orderlies or assistants until they could get professional recognition as physicians.

SINGER LACKS SPONSOR

"My last encounter at Camp Roeder," Mrs. Bozarth reported, "was with a once prominent opera singer in Budapest. He talked to me eagerly with the affability and finesse of a gentleman and cultivated artist. In Hungary he was blacklisted by the Communists, he said, because his father was a prosperous farmer. He showed me a picture of his 8-year-old daughter, still in Budapest, with a father's joy.

"'If I could only go to America, I would sing to all the people there—all the free people,' he offered with touching emotion. 'But,' he sadly added. 'I have no one in America who will furnish an assurance for me from there.'"

At Camp Spratzern, a barracks occupied first by Hitler's Wehrmacht and then by Soviet occupation forces in Vienna, Mrs. Bozarth was attracted to a little woman who had fled Hungary with her 9-year-old son. Her husband had been deported to Russia and Siberia in 1946.

WOMAN EAGER TO SERVE UNITED STATES

"And where to from here? I queried," says Mrs. Bozarth's letter.

"To which she promptly answered, with a hopeful glow coming into her tear-filled eyes: 'To America.'

"When I told her that I am from America too, her heart overflowed. Profusely and warmly she reached out her hand to me: 'American people are good, so very good,' she murmured. 'When I come there, I want to do very much for the United States of America.'"

Third and apparently best run camp Mrs. Bozarth visited was Camp Traiskirchen near Vienna, under supervision of the Swedish Red Cross. There she inspected the dispensary, kitchen, and a kindergarten.

Her interpreter on the visit to the kindergarten, Mrs. Bozarth writes, had a particularly sad personal story. In November 1956, he had escaped from Hungary with his wife and three children.

WIFE WANTS TO GO BACK

"But no sooner were he and his family safe than his wife, wrecked emotionally—and mentally by now—decided that she wanted to go back. Her parents lived in a small place near Budapest, and she missed them now and was anxious for their safety.

"'She returned with the children into living hell,' he said, wringing his hands. 'The irony is that no sooner was she back in Hungary than she wrote me urgent letters that she wanted to escape again.'"

The man made every effort to get his family out, but nothing came of it. Meanwhile, his application to go to the United States came up but when the church organization which processed his case came upon his domestic tangle, it deferred him, explaining it did not want to separate families.

"And so," Mrs. Bozarth reports, "he had to remain there, crushed, hopeless, and completely wasting his life away in inactivity."

After visiting the three Austrian camps, Mrs. Bozarth planned to visit 5 or 6 refugee stations in Germany.

Public Aroused Again Against Oil Interests

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. WILEY. Mr. President, a major matter of discussion in recent weeks has been the role of the United States oil and gas industry at home and abroad.

As I have frequently pointed out, the oil and gas industry is one of America's great industries, one of the real pillars of our free economy.

At the same time, because this industry so vitally affects 170 million Americans here at home and throughout the world, Congress, as we all know, has been taking a careful look-see into its activities.

I have in my hand the text of an editorial which was carried in the Stevens Point Journal of Wisconsin with regard to reactions from the public and from the Congress on various phases of oil and gas industry activities.

I ask unanimous consent that the text of this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PUBLIC AROUSED AGAIN AGAINST OIL INTERESTS

Stories coming out of Washington relate that the oil and gas industry is in the doghouse again. It landed there last year through distasteful and arrogant lobbying practices employed while advocating the suspension of Federal controls on natural-gas producers. This time the reaction was touched off by the recent cent-a-gallon boosts in the price of gasoline and fuel oil. Judging from protests reaching Washington, almost everyone except the oil interests believes these hikes were unjustified. Widely cited are the current surpluses, despite shipments to Europe as the the result of the Suez Canal closing.

A writer at Washington for a Milwaukee paper reported the other day that Congressmen have been getting some "high octane" protests from folks back home. As a result, 6 congressional committees and a Federal grand jury have gone into action.

It has been conjectured that the oil and gas industry may be sorry it tacked on that extra cent a gallon "because it has created a climate (in Washington) that imperils efforts to try again with a natural gas bill." Another development may be increased efforts in Congress to reduce the 27½ percent oil depletion tax allowance that oil and gas producers have long enjoyed. This is an economic incentive allowance authorized by Congress in 1926, and has long been criticized as special interest legislation, which it is.

Another element has also entered the picture in Washington. Some sources predict a tough road ahead for the new gas bill, despite support this time from President Eisenhower, as the result of election changes in both the House and Senate. The bill would exempt producers of natural gas from regulation by the Federal Power Commission. Mr. Eisenhower, who killed a similar bill last year by his veto, cited the arrogance of the oil lobby. But in a message this year, to the surprise of many, he came out in favor of the basic objective of the oil interests in principle.

Wisconsin officials and various communities have taken a strong stand against relinquishing of Federal control. Senator WILEY is committed to this stand. He wants effective regulation at the wellhead in order to protect the consumer.

The Washington scene will continue to be watched with special interest by Stevens Point, which is scheduled to get natural gas. Meanwhile, the oil and gas interests seem to have lost another round of public good will by boosting gasoline and fuel oil prices, judging by the price gouging complaints reaching Congressmen.

The Constitution and the Supreme Court

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA

IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. SPARKMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Dr. James A. Chandler, a retired Methodist minister, entitled "The Constitution and the Supreme Court."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Masonic Monthly, Mobile, Ala., for September 1956]

THE CONSTITUTION AND THE SUPREME COURT

(By Dr. James A. Chandler, 32d degree Knights Templar)

"They who mutually injure the state, mutually support each other." (Herodotus.)

From the signing of the Declaration of Independence (1776) to the ratification of the Constitution (1788) was one of the most precarious periods of American history.

Freedom from the tyranny of England had been won, but the fight to establish the Union was yet to be won. The States were like a barrel of 13 stout staves without a single hoop to hold them together. They were more like 13 hostile nations ready to fight each other.

The confederate system hurriedly devised in the summer of 1777 amid the horrors of war was pitifully weak. A ruined credit, a bankrupt treasury, the States in utter bewilderment, no executive, no judiciary, no power to levy a duty or impose a tax, and no authority to enforce obedience, were frightening conditions. Particularly from 1783 to the call for the Convention (1787), "the civil powers were in a state of chaos." George Washington with almost infinite sorrow said, "After all the sacrifices of the war, the Government of his country has become a thing of contempt in the eyes of all nations."

The call for the convention to meet the second Monday in May 1787, "in Philadelphia for the sole and express purpose of revising the Articles of Confederation" was approved by Congress. Because of an insufficient number of delegates, the convention was not organized until May 25, when George Washington was elected its presiding officer. The wiser men, such as Washington, Franklin, Pickley, and Madison soon saw the inadequacy of a revising of the Articles of Confederation and the absolute necessity of a constitution to form a more perfect union. Merely the suggestion occasioned a clashing of opinions and a discord of interests possibly never before witnessed in a deliberative body. The smaller States became fearful they would be swallowed in a great consolidated government, a monarchy in which the rights of the people would be utterly engulfed. * * * They were devoted to their local self-government and they had distrust and hatred for absentee authority * * * they were fearful that a strong federal government might, in time, produce a counterpart for that which the sacrifices of the revolution had sought to destroy—tyranny, despotism and oppression." (Walter J. Fourt.) Disunity, anarchy, chaos was imminent. Civil liberty was fading from the land.

But for Benjamin Franklin's wonderful address and call to prayer, it is possible that constitutional government would have failed utterly. Said he:

"The longer I live, the more convincing proofs I see of this truth—that God governs in the affairs of men. And, if a sparrow cannot fall to the ground without His notice, is it probable that an empire can rise without His aid? We have been assured, sir, in the Sacred Writings that 'except the Lord build the house, they labor in vain that build it.' * * * Without His concurring aid we shall succeed in this political building no better than the builders of Babel." All future deliberations were preceded by prayer to the Almighty God for His guidance. The men of the convention were men of deep learning and solid piety.

After long debate and many reverses, the Constitution as finally drafted was signed by 39 members of the convention, September 17, 1787, and sent to Congress, which soon sent printed copies to the States for action. By June 21, 1788, conventions in nine States, the required number, had ratified the Constitution. Other States approved it later. The Constitution was adopted by Congress July 2, 1788, and was in effect March 4, 1789.

The victory was won by forming a dual government, or a duality of sovereignty, within the same orbit. The Constitutional Convention, a delegated body, representing the States and the people, formulated a plan of government whereby the powers necessary to the proper functioning of the National (Federal) Government, in providing order and security for all the people, were granted, and, whereby, at the same time, the sovereign rights of the States to be supreme in the conducting of their own internal affairs, without any encroachment upon or usurpation of those rights, were reserved to them by the people, in whom the totality of power resides, and only from whose consent can just powers be derived.

The States were very jealous of their own rights to self-government and they sought by all possible means to prevent the usurpation of those rights by the Federal Government. Accordingly, the powers were diluted by a distribution into three departments of government, the legislative, the executive, and the judicial, a government of checks and balances, which was further fortified by the creation of two Houses of Congress. Those precautions and provisions further indicated the fear the sovereign States had of an unbridled democracy, or the concentration of too much power in any one branch or body.

Still fearing that the Constitution as drafted would open the way for tyranny over the States by the Federal Government, the States demanded a declaration of rights that would fully protect and reserve to the States their rights. Certain State conventions had demanded in their ratification of the Constitution the adoption of a Bill of Rights, lest the rights unmentioned in the Constitution be assumed by the Federal Government.

James Madison, Member of the House, July 21, 1789, offered a resolution to the new Congress to consider such amendments as would be necessary to fulfill the pledges or assurances as had been made on all sides every-

where in securing the ratification of the Constitution "to quiet the apprehension of many that without some such declaration of rights the Government would assume, and might be held to possess, the power to transgress upon those rights of persons and property which by the Declaration of Independence were affirmed to be unalienable." Accordingly, the first 10 amendments to the Constitution were proposed by Congress September 25, 1789 and adopted June 15, 1790. Thereby the amendments became an integral part of the original Constitution.

Unless very definite promises had been made that the rights of the sovereign States would be protected and reserved to them, and amendments adopted adequate thereto, the States woul not have ratified the Constitution.

Massachusetts, Rhode Island, New York, South Carolina, New Hampshire, North Carolina, and Virginia specifically demanded the protection of their States' rights, said demands of those States being practically the same, e. g., that of Massachusetts: "That it be explicitly declared that all powers not expressly declared by the aforesaid Constitution are reserved to the several States to be by them exercised."

Our ablest legal talent who have access to all the records say that in all the discussions in the Constitutional Convention and in all the various States anent the ratification of the Constitution, no voice was raised anywhere that the national or Federal Government would be given any authority in the field of education, or that the Federal Government would have any powers except those delegated to it by the States and specifically listed to it in the Constitution. In full confidence of the pledges made of additional amendments to the Constitution, the Constitution was adopted.

Of the 1st 10 amendments to the Constitution adopted as the Bill of Rights, the 9th and 10th amendments were as follows: "The enumeration in the Constitution of certain rights, shall not be construed to deny or disparage others retained by the people—the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively."

It does not require a Philadelphia lawyer or a legally trained mind to understand the plain meaning of those two amendments. Until May 17, 1954, no court had ever questioned their plain, unequivocal meaning, namely, that the Constitution and the Bill of Rights gave to the Supreme Court no power not specifically stated and defined therein. Under that interpretation, our Nation has grown to be the greatest in the world. Thirty or more nations have molded their constitutions after our own.

The word education is not mentioned in the Federal Constitution, and there is no word in the Constitution that empowers the Supreme Court to say that segregation is unconstitutional. In all State constitutions, including the Thirteen Original States, education is mentioned as being exclusively the responsibility of the States.

The great men of our national history, such as Washington, Jefferson, Lincoln, and others recognized the constitutional rights of the sovereign States to govern their own internal affairs, such as their schools and public education.

The greatest jurists of all time, such as John Marshall, Joseph Story, Samuel P. Chase, Roger Fanney, Melvin Fuller, Edward Douglas White, Charles Evans Hughes, William H. Taft, Oliver Wendell Holmes, and many others on down to 1954, recognized and never questioned the fact that public education was the right and responsibility of the sovereign States.

When the 14th amendment (1868) was adopted, segregation was practiced in 23 of the 37 States that constituted the Union, while certain other States had no public school at all. There being no word in the 14th amendment, or civil-rights legislation or the Constitution to indicate otherwise, it was commonly understood that the 9th and 10th amendments reserved to the States full right to control their public schools. For 86 years, the Supreme Court said that the field of education belonged solely to the sovereign States and that the Supreme Court had no right to interfere with or in that field.

It is a very significant fact that, when the 14th amendment had been drafted and was being argued in the Congress, the proceedings of the Congress disclose the fact that not one argument was ever made that the 14th amendment should be adopted in order to enable the Federal Government to exercise the power in the 9th and 10th amendments reserved to the States in the field of education. But, contrariwise, the Congress at that very session enacted laws recognizing segregation in the Distrcit of Columbia. So, at the very time the 14th amendment was adopted, segregation was universal in Washington schools.

Ramon Magsaysay

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the Washington Daily News of March 18, 1957:

RAMON MAGSAYSAY

The tragic death of President Ramon Magsaysay of the Philippines is an immeasurable loss to America, as well as to the young republic which idolized their incomparable "Monching."

In the little more than 3 years he served as President, he emerged as the key man of free Asia. His was the most exemplary, and, by virtue of his position, the strongest voice in all that tense area speaking for democracy against the threat of communism.

His physical and political courage was absolute. As leader of a guerrilla force against the Japanese invaders his operations became a legend in the Philippines.

Subsequently against the Huks—the home-grown Communists—he was usually at the forefront of daring raids on their strongholds. But as Defense Minister the youthful Magsaysay did not confine his war on communism merely to military expeditions. His long-range strategy was to get at the roots of what caused Filipinos to turn Communist.

Solution came in the form of a vast resettlement project, moving the dissidents and impoverished to the fertile but unpopulated areas of Mindanao.

"He makes the handling of commies sound easy—given courage and high purpose, of which he has plenty." That was the summation cabled just last week by Walker Stone, Scripps-Howard editor in chief, who had recently visited Mr. Magsaysay.

Yet the Filipino masses who swept Mr. Magsaysay into the presidency in late 1953 did not do so simply because they loved his shy grin, his boyish manner, his unchallenged reputation for honesty—and the fact that he sometimes campaigned in his bare feet. Their vote represented an irrepressible force sweeping the country—the new Philippine Republic was finding itself as the staunchest of our liberty-loving allies in Asia.

Mr. Magsaysay shaped the course of his relatively brief administration to close ties with the United States and the free world. We can prayerfully hope that his successor—who will be elected this fall—will be no less dedicated to the causes he served so well.

The Report on Foreign Aid

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Report on Foreign Aid," from the March 15, 1957, issue of the Albany (Ga.) Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE REPORT ON FOREIGN AID

The President's citizens advisers on the mutual security program proceeded to study foreign aid on the major premise that the purpose of foreign gifts and grants parallels the constitutional provision that the purpose of the Government is, among other things, "to provide for the common defense." That being so, the committee has reached the unremarkable conclusion that this purpose has crystallized since the beginning of the Marshall plan into a program of defense alliances now embodying 42 nations all joined to the United States in a protective periphery against Communist aggression. And the committee reasons that "our policies are proving their worth" and "a collective security program will be essential for some years to come."

As to the first conclusion, even recognizing the usefulness of a practical policy of collective security, it would be well to point out that the committee has anticipated what has not occurred. Our defense pacts policy has not been put to the sternest of all tests—a total war. The fact that we are pledged to defend 42 other nations of the West and Asia, and they are pledged to defend us in case of an aggression against anyone, may on the face of the treaties be a posture of strength. On the other hand, unless that strength is tested, and until that strength prevails, there can be no valid statement that the policy is successful. Survival is the sole true test of the mutual security policy, since it is upon ultimate survival in case of war that the policy was first conceived.

Concerning the committee's second point, that collective security with its huge outlays must be continued in the years ahead, and that the United States can afford to pay the cost now running at the rate of $8 billion a year, one need only observe that the committee itself had a great deal of reservation about foreign aid. Since our economic strength "is the foundation of our total strength," the committee was "disturbed by the high level and rising trend of our Government's expenditures at home and abroad." Yet these solid economic facts are used not to caution that the Communists would be delighted for this Nation to spend itself into bankruptcy, but rather to recommend that foreign aid not be increased above the currently whopping total of $8 billion. The committee does, however, insist that America's partners in the adventure

of collective security make sizable contributions, a recommendation not designed to sit well in certain foreign chancelleries where the "let Sam do it" theory controls all policy decisions. The committee goes on to propose, where possible, that aid should be in the form of loans, not grants, and where feasible our Government should promote private capital investment abroad to replace Government aid, through commerce and friendship treaties, by promoting freer trade, helping to create a climate that welcomes American capital, and by "more equitable taxation of foreign business income." All of these points, then, clearly are arguments against blank-check foreign aid, making the committee's ultimate conclusions even more mystifying in the circumstances.

With the national tax structure almost at the confiscatory level, there will be a great many Americans who will disagree, and some violently, with the foreign-aid program as outlined by the Fairless Committee. For the central core of disagreement remains, as it has always been, how much aid this Nation can afford. The committee says we can afford $8 billion, then proceeds to question its own decision. If the experts cannot agree, how can anyone expect the American public to render an intelligent decision on the issue?

Georgetown University To Name Foreign Service School After Rev. Edmund A. Walsh, Boston-Born Priest-Scholar

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article entitled "Memory of Boston-Born Priest-Scholar To Be Honored" which appeared in the Boston Daily Globe on March 18, 1957:

MEMORY OF BOSTON-BORN PRIEST-SCHOLAR TO BE HONORED—GEORGETOWN UNIVERSITY TO NAME FOREIGN SERVICE SCHOOL AFTER REV. EDMUND A. WALSH

(By William Hallisey)

This is a day of honor for a famous priest, born in Boston but a citizen of the world.

He was the late Rev. Edmund A. Walsh, S. J., founder of the Georgetown University School of Foreign Service from which have been graduated numbers of American and foreign diplomats.

Tonight Georgetown men will gather at the University Club to hear Very Rev. John Bunn, S. J., president of Georgetown and a close friend of the late Father Walsh, discuss the future of the School of Foreign Service.

One of the first facts he will tell them is that in September 1957, the name of the school will be changed to the Edmund A. Walsh School of Foreign Service of Georgetown University, to commemorate its founder.

Men and women throughout the world knew Father Walsh as a priest, diplomat, author, educator, lecturer, and adviser to the Vatican and the United States Government.

A few are lucky enough to remember him as a boy in Boston.

His brother Fred, 43 years an organist in St. Bridget's Church, South Boston, a retired State employee and a volunteer worker for the National Braille Press, still lives in South Boston.

BOYHOOD RECALLED

Fred Walsh can remember as if it were yesterday the conversation Edmund Walsh had with his mother and father on a day in 1901. He had been born in South Boston and the family lived there, except for a few years in Dorchester.

Of the five children in the Walsh family, Edmund made his mark as the only one who ever was a problem to a teacher. Mrs. Walsh was summoned to school one day to help discipline her son who had tied to a chair the pigtail ribbons of a little girl.

In Boston College High School Edmund was an athlete—a sprinter on the track team—but most of all a student—such an enthusiastic one that he was graduated at the age of 16, a year ahead of his class.

He had applied for Annapolis and it was one day in 1901 that he received a letter from the Naval Academy telling him he was too young to be accepted, though his marks were satisfactory. He could have waited a year and entered the academy at 17.

But he didn't. He couldn't bear the thought of a wasted year. So he enrolled at a Jesuit seminary at Woodstock, Md., and the man who might have been a naval officer became a priest and pioneer American diplomat.

BORN IN VICTORIAN AGE

Once Father Walsh wrote about his boyhood in Boston, and he spoke rather wistfully: "It was my luck to be born into the waning years of the 19th century when life in Boston was tinged with roseate hues of a setting sun, rather condescendingly called the Victorian Age.

"The times were not violent nor harried nor hard on the nerves in 1885."

This statement wasn't typical of Father Walsh, who rarely was wistful and who thrived in violent times that were hard on the nerves.

He studied at St. Joseph's College, Philadelphia; at the University of Georgetown, in Detroit; in Poughkeepsie, N. Y.; at the University of London; the University of Dublin; and at Innsbruk. He held degrees in philosophy, law, and literature, but his scholastic career was just beginning when he entered the seminary.

Father Walsh started teaching in 1909 as instructor in freshman English at Georgetown. Before long he was teaching dramatics and coaching Shakespearian productions, some so polished that they were presented on the New York stage.

ORDAINED IN 1916

In 1916, he was ordained a priest by James Cardinal Gibbons and returned to Boston to celebrate his first mass at the Immaculate Conception Church.

He soon was named dean of the College of Arts and Sciences at Georgetown, but left to work with the War Department as a member of a commission to administer a student program with officers of the United States Army.

Father Walsh's particular job brought him back to New England. He was assistant educational director of the Student Army Training Corps in the New England States.

While studying in Europe, Father Walsh had taken a close look at diplomatic schools abroad, particularly in Germany.

He knew the United States should have such training spots for young diplomats and in 1914, when he was forced to leave Germany, he brought back the idea of a college for diplomats.

He turned to that job in 1919 and founded such a school at Georgetown. It was the first school for diplomats every established in the United States, and for many years the only one.

MISSION FOR POPE

Father Walsh didn't remain very long to run his new school. In 1922 Pope Pius XI appointed him director of the Vatican Family Relief Mission to Russia and Father Walsh left on a journey that was to affect him far more than he could ever expect.

His job in Russia was a big one, but the effects were even greater. He ran relief kitchens for hungry Russians, dealt with top Bolshevists; acted as liaison between the Vatican and the Kremlin on church affairs such as church property and the religious rights of Catholics in Russia.

Named director-general of the Peoples Relief Mission to Russia, he supervised the feeding of 158,000 persons a day through Catholic relief agencies.

For 5 years longer he served as president of the Catholic Near East Relief in Soviet Russia, and toured Greece, Palestine, and Egypt to study post-war relief problems.

Meanwhile he became an expert on Russia. He built one of the greatest libraries of Russian books in the Western World. He gave more than 1,500 lectures on Russia in Europe and the United States.

Most of all, he studied communism. He warned Americans and Europeans of the danger of communism. He gave, for 18 years, an annual public lecture series of 10 talks in Washington on Marxist communism.

AUTHORITY ON REDS

Few men in the West knew as much about communism and Russia as Father Walsh did, and his message was always the same: Only armed force backed by spiritual strength and good government could halt the expansion of Soviet power with its negation of religion and moral standards.

In 1929 Father Walsh left Russia again on Vatican work.

This time, he negotiated with the Mexican Government. Two years later, he concluded the agreement with the Government of Iraq which brought about the establishment of an American college in Baghdad.

He was always busy. World War II brought additional responsibilities, such as lecturing at Army camps and officers' training schools, serving as a consultant to the geopolitical division of the War Department; lecturing at the Judge Advocate General's School at the University of Michigan, and at the FBI training school.

Between wars, he lectured, traveled for both the Vatican and the United States, was vice president of Georgetown, served on presidential commissions and wrote four volumes, The Fall of the Russian Empire, The Last Stand (both on Russia), Total Power, and Total Empire, the Roots and Progress of World Communism (on Nazi and Russian geopolitics).

AT NUREMBERG TRIALS

In 1945 he was summoned to Germany as consultant to the United States chief counsel at the Nuremberg trials.

That same year, he circled the world when he was appointed by the general of the Society of Jesus to visit and suggest means for development of a Jesuit mission in Japan.

A friend and critic of Presidents, world traveler, international diplomat, he still found time to put on overalls and an old sweater and build an elaborate miniature railroad system for the young sons of an instructor in the school, a project which went on for several years.

Father Walsh celebrated his 40th anniversary as a priest in 1956, a short time before he died.

His death brought letters from all over the world to his order, and to his family in South Boston.

One such note read: "In 1928 I had the rare privilege of listening to a magnificent

lecture (of Father Walsh) on the growing menace of communism. I think that I could recite some parts of it today."

That letter was signed "Dwight D. Eisenhower, President of the United States."

St. Patrick—A Living Memory

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. FLOOD. Mr. Speaker, each year the feast day of St. Patrick is celebrated as a national holiday in Ireland. The memory of St. Patrick lives on after nearly 15 centuries.

Today, St. Patrick continues to hold the same high place in the minds and the hearts of the Irish—and of Christian peoples everywhere—as he has in the past. He is the patron of the See of Armagh and of Ireland's most illustrious college. Churches are dedicated to him not only in Ireland but also in all parts of the world to which the Irish have emigrated or which attracted their missionaries since the time of the Middle Ages. The name of Patrick is one of the most common of Christian names of the Irish both at home and abroad. He is indeed the national hero of Ireland.

Much has been written on the life of St. Patrick. The life and legend of the good St. Patrick is told again and again in song and story—in poetry and prose. His life is studied by adults and children alike. Interest in the life of St. Patrick and of all the traditions surrounding that life is as alive today as ever.

What kind of a person was this man? The average Irishman knows at least part of the legends associated with St. Patrick and through them something of the patron himself. He knows the wonderful story of how the shape of the shamrock helped St. Patrick to explain the Holy Trinity. He knows the story that his patron saint expelled the snakes and all venomous reptiles from Ireland.

Some of the facts surrounding his life are known, too. St. Patrick was born in Britain sometime around the year 387. When he was 16, he was captured by Irish raiders. There he became a slave. During his captivity, he learned the language of the country and the ways of the Irish. Six years after his capture he escaped to France and prepared himself for the holy orders. After he became a priest, he returned to Ireland as a missionary about 432.

In the years which followed, St. Patrick walked up and down the island, working zealously at his task of converting the Irish to Christianity. It is said that he alone founded 360 churches, baptized some 12,000 people, and ordained a countless number of priests. He conquered an entire nation with his weapons of unlimited faith, an indomitable courage, and a tremendous love of his fellow men. The apostle of Ireland, mystic and man of action, brought a faith to an entire people.

No matter how striking the personality, it is not the man who counts here. It is the faith that he brought to the nation. It is a faith that has stood the test of time. It is a faith that is interpreted today in the same integral way as it was interpreted by the church of St. Patrick in the fifth century.

It is a faith that has done well by the Irish. It has helped them to survive centuries of domination by foreign powers. It has helped them to survive religious persecution without forsaking their own beliefs. There can be no doubt in anyone's mind of the Irish love of freedom and justice. These two principles were a part of the teachings of St. Patrick. They have been cherished down through the centuries, giving strength and character to the people.

Thus it is that the Irish have been able to bridge the gap of almost 1,500 years between the religion of St. Patrick and that of modern times. They have proved that faith and freedom go hand in hand.

It is fitting that we should pay tribute on this day to St. Patrick. It is fitting that we should honor the Irish both in their native land and abroad. They and their beloved St. Patrick have contributed greatly to the world.

The memory of St. Patrick continues to live on through the people he loved so dearly. Through his heritage, they will ever be a glorious people.

America Speaks

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a poem entitled "America Speaks," written by H. I. Phillips.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

AMERICA SPEAKS
(By H. I. Phillips)

To meet both ends I seldom can
(But I'm a help to Pakistan);
It's hard to keep my shirt and pants
(But after all, I'm fond of France);
I guess I'll have to break my lease
(I must cooperate with Greece);
Hedged in by debts quite vast I am
(But I must not neglect Siam).

The wolf from door I can't repel
(Still I must help keep Burma well);
By Tuesday I am out of dough
(Malaya's feeling better, though);
My dollar very little buys
(But Egypt's safer, I surmise);
My own financial outlook's murky
(But still my heart belongs to Turkey).

I'm busted, flat, and feeling blue
(But I'm a pal of Timbuktu);
We're adding breadcrumbs to our hash
(Who cares? Ain't Tito short of cash?);
The sheriff's knocking on my door
(However, England's asking more);
I'm in a hole, but feeling noble • • •
I wish things were not quite so global!

The Modern Republican Battleground

EXTENSION OF REMARKS
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1957

Mr. CHIPERFIELD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Secretary of Commerce Sinclair Weeks before the Women's National Republican Club, Inc., Waldorf-Astoria Hotel ballroom, New York City:

THE MODERN REPUBLICAN BATTLEGROUND

We gather today in this the first year of the second century of the Republican Party—proud of its accomplishments and determined that our generation shall lay the foundation of another 100 years of dedicated service.

At the start of a new Congress and a re-elected administration, it is a fitting time to take our bearings and chart our course. So let's study some of the lessons of recent events and discuss frankly a few controversial topics, which Al Smith used to call hot potatoes.

I shall try to do so without reflecting narrow partisanship and by giving full credit to those Democrats in Congress and the Nation, who believe in sound principles and support the President.

THE NEW DEALISM CHARGE

Now let's tackle the first controversial hot potato—New Dealism.

Right here I should like to say a word to those old friends we sometimes hear complaining that the Eisenhower program is "just like the New Deal."

Obviously, this just isn't so, period.

How short are some memories. How blind are some eyes. If the Eisenhower program really is a repeat performance of the New Deal, why is it that old line New Dealers and a new crop of leftwingers are fighting that program tooth and nail?

If it is a New Deal carbon copy, why did the last Republican National Convention—represenitng rock-ribbed Republicans from every State in the Union—endorse that program?

This administration's actions are different in spirit from the New Deal practices of its predecessors, who tried to pack the Supreme Court, seize the steel mills, and draft strikers into the Army.

The record clearly proves the sharp contrast between our middle-of-the-road administration and the New Deal which fostered socialized medicine and socialized agriculture, filled regulatory agencies with members hostile to private enterprise, tried to make electric power a Federal monopoly, used the tax system to change the social order, encouraged the squandering of tax funds, harassed honest business, retarded the sound recovery of agriculture, set class against class, played politics with civil rights, treated spy hunts as "red herrings," and some of whose leaders even condoned corruption.

Let those who grumble that we are New Dealish point out in what way the following great popular accomplishments of the Eisenhower administration are a second edition of the New Deal.

We rejected the despairing philosophy that prosperity must be based on a war boom. We stopped the agony and slaughter in Korea and thereby freed a peacetime economy to produce the greatest prosperity in all history.

We rejected the alien theory of nursemaid government which claims that distant bureaucrats know better how to run business and meet a payroll than businessmen.

In sharp contrast and often with the help of members of both parties in the Congress we created a climate favorable to private competitive enterprise and free labor—we removed straitjacket controls; we reduced Government competition with private industry; we checked fast-rising inflation; we kept Government's hand off the scales in collective bargaining; we checked monopoly and helped small business by enforcing antitrust laws; we established new programs to promote world trade. We made the greatest tax cut in history, paid installments on the public debt, balanced the budget twice, and plan to do it again this time. And we are making progress with the recommendations of the Hoover Commission.

The disposal of the Government's smelter in Texas, its synthetic rubber plants, and the liquidation of the RFC and its former activities, plus the release of cash previously held for working capital for these programs, have resulted in a return to the United States Treasury of more than $1 billion. That's the kind of benefit the public receives when this administration gets Government out of business—and I have cited only a part of this particular program.

Yes, my friends, when President Eisenhower was inaugurated in 1953, the New Deal went out and a new day dawned.

A wave of confidence lifted this Nation to unprecedented heights of prosperity because of his inspired leadership.

That which this administration is doing today is a projection of the Republican record of the past 4 years and is in keeping with the 1956 Republican campaign promises.

THE 1958 BUDGET

Now let's tackle a second hot potato—the budget. It provides for the expenditures of $71.8 billion between next July 1 and June 30, 1958, to finance national security and other services. It was designed to carry out the Republican program of peace, prosperity, and progress.

In order to present the whole truth about the budget, let us tell the public some of the facts which some critics fail to mention.

It is a fact, based on the latest comparative figures, that while Federal expenditures went down 13.2 percent, State and local spending went up 22.8 percent.

It is a fact that our population has grown more than 11 million in the last 4 years—that in the same period our gross national product rose more than $49 billion and that our national income increased $40 billion. Obviously, the Federal Government must expand some functions to keep pace with this tremendous growth.

It is a fact, nevertheless, that whereas in 1953 the budget, measured against the gross national product, was 20 percent, it has now gone down to about 16 or 17 percent.

It is a fact that the chief reason for the current size of the budget is national security—payment of former wars and spending to keep us out of future wars. The price of security and peace is not cheap.

This problem can be readily appreciated by showing where the budget dollar goes: 62.6 percent of expenditures are earmarked directly for national security, including defense and aid to our free-nation partners; 27.7 percent are earmarked for interest on the national debt, veterans' benefits, agricultural supports, and grants to States; 9.7 percent are earmarked for all the rest of Government—executive, legislative, and judicial, actually less than a dime in every dollar appropriated.

I repeat with grim emphasis that Americans, living under the awful shadow of the hydrogen bomb, must pay a lot of money to remain free and stay alive.

A disturbing paradox of modern times is that while science, technology, and invention have enriched modern civilian life, these innovations also have increased the heavy burden of national defense.

Every year it takes more money to buy the absolutely essential new weapons in the field of guided missiles, atomic forces and other ultra-modern war material.

One example will suffice:

The old B–29 bomber plane cost $693,000; our current B–52 bomber costs $8 million. Suppose a necessary household expense jumped from $6.93 to $80, can you imagine what a problem that would create in a family budget? Yet that is the comparative increase in just one type of modern airplane.

If we are ever to escape from the increasing burden of military expense, we must concentrate our utmost efforts in easing world tensions, in making friends among the nations, in spreading international good will and in bringing a just and lasting peace to this war-cursed generation.

I say—what I believe is the response of every woman at this gathering—that no man on earth is working harder and doing more to bring this era of peace than our great President, Dwight D. Eisenhower.

Because the price of survival is so high, we dare not waste our substance. If we are to provide the private savings to produce the new plant and equipment that create jobs for the growing number of young people, we must do a better job in reducing the drain of taxes.

I should like here to enlarge on my reference to that portion of the budget (27.7 percent) which goes for interest, veterans' benefits, agricultural supports, grants to States, etc.

The almost insatiable demand of different groups and different people for new Government services and the continuing expansion of the old is one of the most difficult aspects of the budget problem. In turn, the temptation on their Representatives in Congress to vote for money to be spent in their district is almost irresistible. And, just so no one will think I'm trying to let the executive branch off too lightly, let me admit that in my opinion we in the executive branch can improve upon our record in this regard.

If we ever are going to be able to tighten the tap on public spending, all of us must throw our weight against the mounting pressure, year after year, to swell special favors, subsidies, pet projects, grants to States and pork barrel expenditures. By all of us, I mean the executive branch, the Congress and the public.

Ask most anyone today if he favors reducing the cost of Government and the reply is "yes." Then suggest stopping some Federal service which he wants and the reply is a loud "no." We'll not get very far in reversing the trend in Government spending if everyone says, "Cut the other fellow's benefit, but don't touch mine."

If every section, every segment, every pressure group succeeds in grabbing more and more, the future economy could crumple under the increasing weight of taxes. But if, on the other hand, the aroused people of the United States rise up and demand greater economy in Federal, as well as local and State appropriations, then they will get greater economy.

Let me ask every woman in this room to reflect a minute: Are you a member of any group which is pressing for projects that will expand the Federal budget? Is your husband? If you are, consider well whether your activity in this respect is right or wrong.

MEETING MODERN NEEDS

Still another "live wire" subject is meeting modern needs.

Complicated life in an urban industrial society and the rapid progress of science create many serious problems—undreamed of a few years back—which must be solved soon or we and the coming generation could face stagnation in our economy and other critical conditions.

Progress in an electronic-atomic age is one of the cornerstones of the Eisenhower Republican program.

To meet modern needs, programs have been designed for highways, peaceful uses of atomic energy, water resources, power development, St. Lawrence seaway, flood control, soil bank, widened opportunities for small business, a transport policy aimed at cheaper transportation, and a 4-year emergency program of Federal cooperation with States in overcoming the critical shortage of schoolrooms.

Although there may be some differences of opinion about some of these items, they are aimed at helping to create valuable private and public assets and at meeting the requirements of a growing population and a growing economy.

For example, in my own Department is lodged the duty of protecting the safety of those who fly—now and in the jet age.

Already the highways of the sky face congestion. The situation is being handled now. But it could grow more dangerous in the years ahead as slow-moving vertical-flight helicopters cross the slanted path of commercial and military jets, traveling at breathless speed.

If we do not get ready now to safeguard the airways of the future, the toll of tomorrow's crackups and collisions could be appalling.

To forestall such a hazard, the President appointed Edward P. Curtis, an outstanding expert, to recommend a long-range solution. In the interim the Civil Aeronautics Administration of the Commerce Department is embarked on the greatest air-safety program in history and is providing air-navigational aids such as radars, electronic devices, and other safe air-traffic controls. But this is costing money—nearly three times the bill in 1953.

One of the great current and future needs which we are trying to meet at the Bureau of Public Roads of the Commerce Department is modern highways. Had public demands not been neglected so long, we might not have had such traffic bottlenecks and road accident slaughter as now.

Although the President's highway program is by far the greatest public-works program in all history, its cost does not appear in the budget. Instead of passing along debts for our children to carry we have undertaken—thanks to sound legislation—the first major project of its kind that is entirely self-liquidating. Pay-as-you-build taxes on the gasoline and oils of highway users are footing the bill. Not a mile of road is laid until the money to pay for it is in the Treasury.

MODERN REPUBLICANISM

In conclusion, let us size up modern Republicanism—about which there is so much interesting talk today.

Modern Republicanism is not something brandnew, dreamed up recently—as some folks think—by maverick stargazers. It is as old as the principles of the first successful Republican candidate for the Presidency, Abraham Lincoln.

The Republican Party, in its finest hours, has been concerned with human freedom and human welfare. In fact, it was born to fight for freedom—and still does.

The Republican record of a century clearly proves that all through our history our party has provided sound Government services to foster the well-being of farmers, workers, businessmen, children, and others and to meet future national needs.

The Lincoln administration founded the Department of Agriculture and initiated the first Homestead Act, which gave land to farm families who would work it. Republicans passed the Sherman Antitrust Act to protect

small business against monopoly. To insure workers' rights Republicans started the Bureau of Labor which later became the Department of Labor. Republicans established the merit system through the Civil Service Act of 1883.

Republicans protected family health through the passage of the Pure Food and Drug Act and the Meat Inspection Act. Republicans in 1912 established the Children's Bureau after the passage of child labor laws in many Republican States.

The Panama Canal was built to meet future needs. Under President Theodore Roosevelt, programs also were launched to conserve the Nation's forests, minerals, and water resources. One of the conservation measures to preserve water and timber resources was the Weeks' Act of 1911—introduced in Congress by my father, when he was a Representative.

Later the Reconstruction Finance Corporation was established; the Federal Land Banks were strengthened; a new system of agricultural credit-banks was organized and the Home Loan Bank System was created to assist individual farm and individual homeowners. These latter protections against adversity were initiated in the administration of your honored guest, that lifelong humanitarian—President Herbert Hoover.

Republican policies today are the expression of our party's great century-old principles, dressed in the clothing of this current age.

So we are in keeping with a century of Republican accomplishments for the American people, when Republicans insist that Government must have a heart as well as a head.

We also are in harmony with our 1956 platform, in step with our Republican President and in line with the overwhelming majority of American citizens, when we support programs reflecting a hard head, a warm heart, and a far-seeing eye.

Let us go home with renewed faith that Republican policies are helping to encourage a healthy and growing economy with prosperity widely shared and are helping to advance peace, justice, and freedom. Let us, by our attitude on public issues, prove worthy of the trust the American people have placed in our party and in our great President, Dwight D. Eisenhower.

The Betrayal of Trade Unionism

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I wish to submit the following address by James B. Carey at the special convention of the United Paperworkers of America AFL–CIO in Chicago, Ill., this week.

Mr. Carey, secretary-treasurer of the Industrial Union of Electrical, Radio, and Machine Workers, AFL–CIO, made some very pertinent remarks on a subject which today is of very real concern to every reputable trade-union organization in the country. The title of his address was "The Betrayal of Trade Unionism."

His views in this field came at a most appropriate time when a number of so-called union leaders are being investigated by a Senate committee for consorting with gangster and racketeering elements for personal gain.

He has spoken out before on the subject, even going so far as to recommend expulsion from the AFL–CIO of any union proved guilty of unethical practices.

The union of which he is president, the IUE, is one of the cleanest and most respected of American labor organizations. There is no place in it for any officer or member who associates with individuals of even suspected criminal intent. Both he and his union are a distinct credit to the American labor movement. The great majority of United States unions share that distinction.

It is a real privilege and honor for me to include his following remarks in the CONGRESSIONAL RECORD:

THE BETRAYAL OF TRADE UNIONISM

Four memorable and deeply meaningful lines open the officers' report to this special and final convention of the United Paperworkers of America.

In a handful of words they encompass the story of your origins, the dramatic history of your growth and economic achievement, and your progress to the threshold on which you stand today—a proud, strong, militant organization ready to play a major role in the creation of a powerful, new, united labor movement in your industry. They are words that should not be forgotten in your new organization:

"The United Paperworkers was born in battle. It has grown in battle and it survived because its adversaries appreciated its willingness to stand up and fight for the principles which gave it birth."

Because I know your history I know that those words are as significant as any written by a union in our time; and I know also that they have enlarged significance today.

The adversaries your officers refer to—that ambushed and attacked you at various times down through the years—were not only employers who wanted to see your vigorous, young union dispersed and drived completely out of the industry.

Nor were your adversaries only the Communists who sought to destroy your organization, as they did others, by swallowing it.

There was a third enemy, even more insidious and dangerous than the other two, which would have pounced on your union had you ever let down your guard for a moment.

That enemy was racketeering and corruption, an ugly contamination that we now suspect has festered its way into a larger area of organized labor than perhaps we knew.

You of the Paperworkers can be justifiably proud that the wall of moral strength and integrity that you erected around your union proved impenetrable to racketeering and gangster elements, even to those who would have used your organization not necessarily for criminal activities but for unethical practices and personal enrichment.

You can be deeply proud that your union, throughout its history, has been one of the cleanest and most ethical unions in the labor movement. You are immensely fortunate, too, that the organization with which you are uniting in a few days has a similarly proud and unblemished record.

I do not digress from my theme if I tell you that a small flood of memories swept over me as I came into this scene of your final convention. There has been and will be, I am sure, a great deal of fond remembrance here of your hectic and sparkling history. Large quantities of sentiment and sentimentality will be wafted over tables and in corners of the lobby (which is as it should be), and more than one tear will plop nostalgically into a schooner of beer.

You will be sentimental and nostalgic for the simple reason that you have good things to look back on—such as your superb record of democratic trade unionism, your internal unit and militant sense of brotherhood, your many years of hard-won, pioneering economic gains, and the fact that you have been most happily blessed with gifted and aggressive leadership.

My memories of your union's early leadership extend back to the first CIO convention in 1938 and the episode, related in your officers' report, of Frank Grasso and his colleagues asking me to call a meeting of local industrial unions in the paper industry. I can take a special pride, therefore, in having been a participant in the very earliest stirrings of industrial unionism in your industry. I figure myself as something of a godfather to the United Paperworkers.

Your union's early leadership—I can tell you as one who personally survived it—comprised a real set of eager beavers; in fact, probably the eagerest beavers in the entire CIO. There were times, for example, listening to Frank Grasso's impassioned speeches and watching him scurry around that first CIO convention that you got the curious impression that the steel industry, the auto industry and the rubber industry were relatively minor and inconsequential problems compared to the paper industry, and that if we got the paper industry organized then steel, auto, rubber, shipbuilding and everything else would automatically fall into line.

You get the rough idea. Frank Grasso and his "paperworker pioneers" never sold the industry short. In fact, I have a vague but persistent recollection that at one CIO convention in those early days, Grasso tried desperately to get all of us to boycott the hotel dining room if it continued to refuse to serve us our meals on paper plates.

A few years later on, after your separation from the Playthings & Novelty Workers Union, on January 1, 1944, I recall that President Philip Murray asked me to serve on the new Paperworkers Organizing Committee with Allan Haywood as chairman. That post enabled me to renew my friendships with the leaders of your union and reacquainted me with the problems of your organization and industry. And I remember also the jubilation in your organization in January 1946 when you became the United Paperworkers of America and still later when you held your first constitutional convention in Buffalo.

At that first paperworkers convention, the unforgettable Allan Haywood urged your delegates: "Keep this union clean. Keep it free, free for all of you to express yourselves decently and proudly. You never can be too radical against evil nor too conservative for good."

Well, you did keep your union clean. And you kept it free. Your history shows that you kept it clean of unethical practices and free of racketeering and corruption. You kept faith not only with Allan Haywood but more important with your members and with honest, democratic unionism. You provided a model of sound, healthy unionism. The CIO was proud of you and the entire labor movement can be proud of you on this eve of your merger.

It is, of course, to your much greater credit that you maintained a clean and free union not in a moral vacuum but in the face of very grave threats and hazards.

The United Paperworkers didn't escape the greedy, criminal eyes of racketeers and gangster elements. They tried to lay violent siege to your organization in New York and New Jersey during the late 1940's. No doubt their cold-bloodedly evil plans were to capture your locals in those States first. Then they'd spin out their web into other areas to a private racket empire with the workers of

your industry becoming captives whose prime function was to pay monthly per capita tribute to these pirates.

In New Jersey racketeers sent in armed thugs and goons to break a paperworkers' strike. Your people were stunned and disbelieving when it was discovered that these armed strikebreakers carried union credentials. The credentials they flaunted, it is ironic to note today, were issued by two unions, the Distillery, Rectifying & Wine Workers Union and the Laundry Workers International Union, which last month were ordered by the AFL–CIO executive council to clean out the corruption in their leaderships within 90 days or face expulsion from the AFL–CIO.

The record of these two unions, the AFL–CIO reported, is "a sordid tale of irresponsibility, diversion of funds, jockeying of banking accounts, and heavy recompense for certain officers." Earlier, these two outfits brought disrepute to the labor movement when a Senate subcommittee headed by Senator PAUL DOUGLAS and the AFL–CIO council found they were "subject to heavy corrupt influence and domination."

It is to the eternal glory of the United Paperworkers that you stood toe-to-toe and slugged it out with the gangsters and goons, and finally sent them running for cover into their ratholes. The courage and incorruptible principles of the United Paperworkers defeated this racketeer mob, but other unions were not so fortunate.

It is because other labor organizations could not do what you did; it is because other unions were too weak and succumbed to corruption that the labor movement today faces an unprecedented crisis.

It is a crisis that is worse, in my opinion, than the crisis we faced in the 1930's when union-hating managements waged open warfare against us or in the 1940's when Communist infiltration and control of unions reached a decisive point of no return.

But the issue today is far more menacing, because this time it comes from inside our movement. It is betrayal from within. It is treason to trade unionism by those who pretend to believe in, and represent, trade unionism. It is pernicious perfidy by those who profess the ideals of union brotherhood only for the end of personal enrichment.

These betrayers of labor, these traitors to trade unionism, have brought a terrible disease into the labor movement, a disease that must be cut out surgically, swiftly and unflinchingly to prevent its spread into a corrupting contagion.

The hard, cold, inescapable fact is that we must utterly destroy racketeering and corruption in the labor movement or racketeering and corruption will destroy the labor movement.

Corruption is never a static thing. Corruption means decay, and decay, unless it is decisively halted, spreads from an unhealthy part of an organism to its healthy parts.

There is only one way to handle the betrayers of labor, the traitors to trade unionism, the men who have enriched themselves at the expense of rank-and-file workers. These men must be fully and mercilessly exposed as the loathsome disease-carriers that they are and quarantined off from the labor movement for the rest of their lives.

I have said before that such men are not unionists, but antiunionists. They are not labor, but antilabor. They are more dangerous to the democratic labor movement than the most vicious of union-hating managements and the most warped of Communist fanatics.

We should and must accord them their democratic rights—the kind of rights that labor racketeers and union gangsters themselves would never give the men and women they keep captive as faceless producers of per capita.

But after a determination has been made, swift and vengeful justice should be meted out to these betrayers and traitors. Their status as union officials should be erased, ruthlessly and uncompromisingly. And if they have committed crimes against society as well as against the labor movement, then union officials must encourage law-enforcement authorities to take action also.

There can be no compromising with these forces that would corrupt and destroy the democratic labor movement.

I insist, moreover, that it is incumbent upon the labor movement to initiate these actions itself, to police its own domain as completely as possible. We should not wait for State legislatures, grand juries or congressional committees to do our work for us. We should set our own house in order; we should not have to sanction others—outsiders with uncertain motives—doing our housecleaning for us.

Two other actions, to my way of thinking, are also required:

First, some union constitutions badly need rewriting, need to be made more democratic, need to provide more specific protections for the rank-and-file, and need to make union leadership both more responsive and more responsible to union membership.

Second, some unions very obviously need to follow the example of the national AFL–CIO and of the IUE–AFL–CIO in adopting comprehensive and enforcible codes of ethical practices.

The AFL–CIO could have no corrupt affiliates nor could unethical practices exist within AFL–CIO unions, for example, if all unions placed themselves into full compliance with the AFL–CIO constitution and the four AFL–CIO codes of ethical practices.

AFL–CIO ethical practices code, No. 3, declares that "there is no room within the federation or any of its affiliated unions for any person in a position of leadership or responsibility who is a crook, racketeer, a Communist, or a Fascist." This declaration is then made considerably more than a pious wish in the following words:

"It is the obligation of every union affiliated with the AFL–CIO to take appropriate steps to ensure that this principle is complied with. * * * It is the duty and responsibility of each national and international union affiliated with the federation to see to it that it is free of all corrupt, Communist or Fascist influences. Consequently, a trade union need not wait upon a criminal conviction to bar from office corrupt, Communist or Fascist influences. The responsibility of each union to see to it that it is free of such influences is not a responsibility placed upon our unions by law. It is a responsibility which rests upon our unions by the AFL–CIO constitution and by the moral principles that govern the trade-union movement. Eternal vigilance in this area is the price of an honest democratic trade-union movement."

But this AFL–CIO ethical practices code—adopted slightly more than a month ago—doesn't stop there; it carefully and specifically spells out a set of rules to govern AFL–CIO affiliates. These rules state, in part:

"1. * * * no persons who constitute corrupt influences or practices or who represent or support Communist, Fascist or totalitarian agencies should hold office of any kind in trade unions. * * *

"2. No person should hold or retain office or appointed position in the AFL–CIO or any of its affiliated national or international unions or subordinate bodies thereof who has been convicted of any crime involving moral turpitude offensive to trade union morality.

"3. No person should hold or retain office or appointed position in the AFL–CIO or any of its affiliated national or international unions or subordinate bodies thereof who is commonly known to be a crook or racketeer preying on the labor movement and its good name for corrupt purposes, whether or not previously convicted for such nefarious activities."

Right there in the AFL–CIO's ethical practices code, No. 3—backed by the constitution—is obviously the power and authority to purge the AFL–CIO of corrupt affiliates and the means, also, for AFL–CIO affiliates to cleanse themselves of corrupt elements.

I have no indication that this authority will not be used to its fullest extent where justified. It had better be, because the future of the labor movement may well hinge on our swift and uncompromising eradiction of corruption and unethical practices wherever they are found to exist in labor unionism.

As far as we know today, racketeering and corruption involve only a very small number of unions and a tiny percentage of union members. This is true even though one might gain the impression these days that there's one large union that's somehow been overlooked until now; the International Union of Procurers, Three-Horse Parlay Plungers, Pinball Professionals, Political Parasites, and Bawdy-House Promoters.

The problem of corruption may be, in itself, a relatively small one but the effects, the consequences of that problem are very far from small.

The entire labor movement, in fact, is already being hurt by the disclosures of corruption, magnified and exaggerated though they may be. The New York Times, it must be acknowledged, summed up the situation accurately in a headline which reads: "Senate Inquiry Is Likely To Hurt Labor Movement; All Unions May Suffer From the Corrupt Practices of Some of the Leaders."

The labor movement is being hurt, actually, not on one front but on three. We are being hurt in terms of public prestige and reputation. We are being hurt in terms of legislation both in Congress and in the States. And we are being hurt by the ammunition which is being given to union-hating employers in their fight against organizing drives.

The extent to which the labor movement's prestige and reputation is being injured can only be guessed at. Tragically, it comes just at a time when the labor movement had succeeded in winning a greater degree of public favor than at any time in the last quarter-century. A Gallup poll disclosed just last month that 76 percent of the people now approve of labor unions as compared with 72 percent in 1936.

We worked hard, awfully hard to achieve that improved reputation and we had reason to believe that the trend would continue.

On the legislative front there is reason for genuine concern. First, there is no way of knowing what kind of legislative proposals may come out of the current hearings of the Select Senate Committee on Improper Activities in the Labor or Management Field. The proposals could be for heavily restrictive legislation. This year or next could produce another upsurge of demands that industrywide and companywide bargaining be prohibited, that the union shop and the checkoff be outlawed or drastically curtailed.

The National Association of Manufacturers, however, isn't going to wait for any moves in Congress. Last week, the NAM announced the opening of a campaign for a seven-point program admittedly designed to weaken the bargaining power of labor. The NAM's program would, among other things, outlaw the union shop, prohibit picketing for organizational purposes, bar national and international unions from participating in contract negotiations, and stifle political activity by unions.

What the NAM is really after was clearly implied by its president, E. G. Swigert, when he told newspapermen that none of the wage

raises in steel or auto since 1949 should have been granted.

It goes almost without saying that the labor racketeering and corruption scandals have made absurd any idea of repealing or even modifying the Taft-Hartley Act in the present Congress.

The racketeering charges have made the picture in State legislatures equally dark. In New York State Republican members of the legislature are pushing hard for a $150,000 investigation into the alleged domination of labor unions by hoodlums, racketeers, and gangsters. Similar demands are cropping up in other State legislatures, all aimed at the enactment of restrictive legislation designed either to supplement or supersede Federal antilabor laws.

The floodgates have now been opened for a new deluge of State right-to-work laws, encouraged in part by the fact that Indiana last week became the first major industrial State to outlaw the union shop. Indiana thus joined 17 other States—13 in the South and 4 in the North—which have enacted right-to-scab statutes.

Employers have already started brainwashing unorganized employees with propaganda drawn from the Senate committee hearings. But I don't think we've seen even a beginning of this management campaign yet. Before long it will probably start coming in huge waves, particularly at unorganized plants in the South, as more and more ammunition is made available in the hearings.

In our industry and in other industries employees in newly opened plants are being bombarded with propaganda that their dues payments will serve only to keep union leaders in sumptuous luxury and in such extravagances as racing stables, vacation trips abroad, and gambling expenses.

The heat has been taken off big business and industry as organized labor has been placed on the defensive.

A billion-dollar electrical manufacturing corporation is involved in the employment of call girls to push appliance sales but that immoral spectacle is quickly overshadowed in the daily press by the involvement of a few union officials with bawdy houses.

The immorality of 9,000 employer violations of the child labor law last year is swiftly forgotten as headlines report connections between unions and pinball machine rackets.

The immoral spectacle of major manufacturers instigating and exploiting race hatred in the South as a means of blocking union organizing efforts is obscured by the supposedly more dramatic crime of union welfare funds mishandled.

Unethical profiteering persists in industry after industry. In your industry, for example, the price of newsprint has been hiked from $68 a ton in 1946 to $135 a ton 3 days ago. But that's made to appear trivial in comparison with the unethical behavior of a union leader who pads his expenses.

And so it goes. The publicity picture of big business and industry comes out one of relative purity and whiteness against a blackly evil picture of trade union abuses.

We can find neither excuse nor consolation in the fact that present day racketeering and corruption in the labor movement started here in Chicago in the early 1930's not with unions but with employers.

When Al Capone, "Bugs" Moran, and other gangsters first moved into the labor union field after the repeal of prohibition it was at the invitation of employers in the cleaning and dyeing industry. The employers wanted strong-arm men and gunsels to provide protection against what they termed "unfair competition" but what was actually the reluctance of a few companies to adhere to price-fixing conspiracies.

Once they obtained a foothold in that industry the racketeers moved quickly into other industries, organising phony unions for the benefit of employers and collecting from both sides—dues from captive members and shakedown payments from the employer who soon found himself as much of a trapped victim as his employees.

The labor movement cannot afford to let its moral and ethical standards fall to the level of big business and industry standards. We cannot let the false impression prevail that trade unionism is as susceptible to racketeering and corruption as big business.

The ground we have lost we must regain; we must reestablish our hard-won reputation as a movement of dedication, high principles, idealism and brotherhood.

To do this we must not tolerate for 1 minute longer than is necessary those elements that have brought disgrace and shame on the labor movement.

Either we drive the betrayers of unionism out of our movement quickly and forever or else we risk irreparable loss of integrity and even the possibility of ultimate defeat.

This is a time for anger; this is a time more than ever before for indignation and outrage in the labor movement. This is a time for wrathful action against those who would despoil an ideal that thousands of men and women have devoted their lives to building, an ideal for which others have even sacrificed their lives.

We will keep our faith with them, with both the dead and the living, and not only with the men and women of the labor movement today but those who will inherit the labor movement from us—our children and the generations to come.

We will let nothing—absolutely nothing—prevent us from leaving the American labor movement a finer and cleaner and more effective instrument for the brotherhood of man under God than we found it.

The Death of President Ramon Magsaysay

SPEECH
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. ROOSEVELT. Mr. Speaker, I join with my colleagues in expressing grief over the tragic and untimely death of Ramon Magsaysay, President of the Philippine Republic.

This is an occasion for a reaffirmation of the close ties the people of this country have, and have had, with the people of the Philippines. When the United States gave the Philippines their independence in 1946, it was an outstanding example of what an enlightened policy toward underdeveloped areas can produce. At that time, after a distinguished and courageous record in leading the Philippine guerrilla army against the Japanese invader, President Magsaysay entered public life as a member of the Philippine Congress and as a stanch friend of the United States. He never wavered from that friendship.

In 1950, when the Communist-dominated Huk movement posed a grave internal threat, Ramon Magsaysay, as Defense Minister, set to the task of reforming the army and defeating the Communists. He did not do so simply by military means, but by a policy of land reform and service to the people so that the Huk movement would have no grievances to exploit. Rank and file Huks were given land to work and an opportunity for a new life.

Mr. Speaker, the loss of such a great national leader, sincere patriot, and American ally, should spur us on in developing policies in Asia that will have a deep and friendly understanding of the burning desire for independence and the desire for equality which characterize the development of these new nations. We took the lead in granting Philippine independence after World War II, a fact which was never forgotten by President Magsaysay. It is my hope that we shall continue to espouse democratic causes in Asia, by deed as well as by word. If we understand Asia and think in terms of her people and their aspirations for freedom, if we throw our influence behind the new democratic forces there rather than authoritarian ones, we will make freedom more powerful than communism there. We must shift our emphasis from the military to the political and, like Magsaysay, employ the human approach. No finer testimonial to the life of Ramon Magsaysay could be offered by the United States.

St. Patrick's Day Address by the Honorable Eugene J. McCarthy, of Minnesota

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following outstanding address delivered by the Honorable EUGENE J. MCCARTHY, of Minnesota, at the dinner held by the Friendly Sons of St. Patrick on Saturday evening, March 16, 1957, in Wilkes-Barre, Pa.:

EXCERPTS FROM AN ADDRESS OF EUGENE J. MCCARTHY, MEMBER OF CONGRESS, FOURTH DISTRICT, MINNESOTA, FRIENDLY SONS OF ST. PATRICK, WILKES-BARRE, PA., MARCH 16, 1957

St. Patrick's Day is a day for remembrances. It is a day on which we recall again the great names of Ireland, the names of the counties and the towns and the villages, of the hills and of the valleys, of the lakes and rivers and bays of Ireland. A day on which we recall again the names of her saints and of her scholars, to recite and list again the names of her great patriots and leaders, of her singers and of her poets. Even though many of us have never seen the places, just as we have not seen or known the saints of Ireland, both the persons and the places come alive again in our minds and in our hearts. We recall the names of Donegal and Tyrone and Armagh in the North, of Kildare and Meath, Wicklow and Dublin in the east, of Waterford and Cork and Kerry in the South, of Limerick, Clare, Galway and Sligo in the west. The names of Niall, Cormack, Brian, Murray, O'Connor, Parnell, O'Connell, Plunkett, Emmet and Hyde; the names of Patrick, Bridget and Columkille, and Brendun and Malaky and all the rest of the saints, and the great leaders and the scholars, and the bards and genealogists and the poets of Ireland.

It is difficult for those who are not Irish to understand the character of the Irish. There is a strong undercurrent of sadness in any joyous Irish celebration. An on the other hand even in Irish mourning there is an element of the joyful. The Irish wake is not an accident. This seeming division characterizes the history of the Irish people as it does characterize the Irish personality. The line between the consideration of Ireland as a grey-haired old lady mourning in the shadows for the loss of her sons and waiting in vain for help from across the waves, and the consideration of Ireland as vigorous and fertile, producing sons and daughters and sending them forth triumphantly to the ends of the earth. The lines between the things of time and those of eternity, between the times of peace and the times of trouble have been finely drawn. It is common in the characterization of nations to picture them in an hour of triumph, and of strength and victory, rather than in a time of defeat and suffering. This is not the case with Ireland and the Irish people. The Irish character has not been formed and proved in 1 short test, or in 1 shining hour. It has been slow tested and proved in a long and bitter history, in defeat and oppression and suffering. It has been proved not only as to heroic virtues, but also as to unheroic ones; not only as to courage and fortitude and greatness of mind, but as to patience and tolerance and long suffering; the little, and unheroic virtues, without which neither a nation nor a man can claim perfection.

It seems as a result of this long slow testing, the Irish have developed a sensitivity which permits them to hear the last note of the harp, or the song of freedom, after other ears have become deaf to it. It permits them to see the last spark of freedom in what was once a great fire after other eyes no longer see that light, and to feel the warmth of freedom, and of hope, in what to others may appear to be a cold lump of peat. The Irish character as a result of this testing and trial has been marked by a great longing and aspiration for freedom. That longing and aspiration has been expressed in the five great loves of the Irish people.

First is their great love for country, for the soil of Ireland, for its towns and its people. So great is this love and longing, that the greatest punishment set for Columkille, the saint, was that he could no longer set foot on Irish soil. And so we have, all of us, in a sense remained exiles whenever we have been away from Ireland. Like Columkille we can say: "There is a grey eye which ever turns to Erin. What joy to fly upon the white-crested sea, and to sight the waves breaking upon the Irish shore. To return to Ireland where the song of the birds is so sweet and the clerks sing as well, where the young are so gentle and the old are so wise, where great men are noble and the women so fair."

The second great love of the Irish is their love for religion, for the things of the spirit. At the time of the coming of Christianity the Irish spirit was willing and ready. St. Patrick came and was received without martyrdom. The same cannot be said of the other lands, not of Rome, not of Gaul, nor of the East, nor even of the new continents found across the sea. Ireland gained the title of Isle of Saints and became the source of missionaries to all corners of the world.

The third great love of the Irish is their love of learning. It was this great love that kept alive the flame of knowledge and the pursuit of truth during the dark period of the fifth, sixth, and seventh centuries.

The fourth great love is that of political freedom—a love which sustained the Irish in standing against the Danes and the Normans, the Tudor armies, the hosts of Cromwell, and all the soldiers of the King.

The fifth great love is that of poetry and song. A love so strong and deep and so consequential that as late as the 15th and 16th centuries English rulers were moved to impose special penalties on bards, minstrels, rhymers, and genealogists who sustained the lords and gentlemen in their love of rebellion and other crimes and which moved the soldiers of Cromwell to break the harps still found on the walls of the cottages of the Irish at the time of the invasion. The ancient Gaelic law recognized this in forbidding the seizure by justice in any house of any Gael whatsoever, one of his books, his sword, or his harp. For his book was the symbol of his intellectual and of his spiritual freedom. The sword was the symbol of his political freedom, and the harp was the symbol of all the things that the human heart aspires to.

We must not, of course, forget the faults and failings of the Irish people. Not everyone is made perfect by adversity. There remains in some of the Irish a tendency to be cynical and to be negative, to find fault, to detract, and to criticize. It is not these which the world needs today of the Irish but a positive contribution based on the best of Irish tradition and inheritance. The times in which we live are not altogether bright. These may not be the worst of times, as some say. They may seem to be the worst in contrast with the hopeful optimism of this century in its beginning, for one by one modern man has seen the lights by which he thought he was guided grow dim and fade. The evils which the modern age asserted it was about to destroy forever—the evils of pain and suffering, of persecution, of torture, of ignorance, even the fear of evil, and finally the fear of fear which were to be abolished forever—all have returned in this century, and in this generation. And in some cases, like the evil spirit of the Gospel, once driven out they have returned sevenfold.

It is not enough for us merely to be aware of this distressful fact. These are not new difficulties. They were recognized long ago and best stated, I think, by the ancient Celtic monk, Cadoc the Wise. Cadoc expressed his concern over his own times and over times that might come in what was known and called Cadoc's Song of Hate. It was not really a song of hate, but rather a song of grief in which he catalogued all of those bad things, all of those undesirable things which he wished to see removed from the life of man. The Song of Hate runs thus:

"I hate the judge who loves money, and the scribe who loves war, and chiefs who do not guard their subjects, and nations without vigor.
I hate houses without dwellers, lands untilled, fields that bear no harvest.
Landless clans, the agents of error, the oppressors of truth.
I hate him who respects not father or mother, those who make strife among friends.
A country in anarchy, lost learning, and uncertain boundaries.
I hate journeys without safety, families without virtue, lawsuits without reason.
Ambushes and treasons, faults in counsel and justice unhonored.
I hate a man without a trade, a laborer without freedom, a society without freedom, a society without teachers, a false witness before a judge, the undeserving exalted to high position.
Fables in place of teaching, knowledge without inspiration.
Sermons without eloquence, and a man without a conscience."

The world needs the revival of the five great loves of the Irish today as it has always needed them. It needs love leading to positive action. In a time when the traditions of the past are rejected and frowned upon, when learning and truth must compete in the market place with falsehood and error and the only test is that of which is most useful, there is a great need for the return of the love of truth and the love of learning. When love of country and love of political freedom in many areas of the world have been destroyed, there is a great need for the revival of the Irish love of country. When the faith has grown cold and has been rejected my many, the love of the faith too must be revivified. When love of poetry is looked upon by some as unmanly, when it has little or no place in the deliberations of man, there is a great need for a revival of this Irish love of song and poetry. This, then, is the pattern and the way. For as Cadoc again said: "No man is the son of knowledge if he is not the son of poetry. No man loves poetry without loving light. Nor the light without loving the truth. Nor the truth without loving justice. Nor justice without loving God. And he who loves God cannot fail to be happy."

The responsibility of the sons of St. Patrick, of the Friendly Sons of St. Patrick, is clear. Let us hope that all may so meet and fulfill their responsibility that each and everyone say that he has been the good servant of learning and of song and poetry, but in all things God's good servant first. And then we can hope that the good St. Patrick, in his right, may judge us all with gentleness.

The Kids Fight Back

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, March 19, 1957

Mr. WILEY. Mr. President, there has been called to my attention by one of the pages of the Senate an article entitled "The Kids Fight Back," by Joseph N. Bell, and published in the January number of the Coronet magazine. Freedom Foundation recently gave a special award for progress against vandalism. This article gives a good answer to what we hear so much of; namely, the delinquency of our youth. The kids are fighting back. They are fighting for good government.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE KIDS FIGHT BACK

(By Joseph N. Bell)

The trouble in Dallas began on March 6, 1956, when a half dozen windshields on used-car lots were peppered with BB pellets, and motorists about the city were shot at from cars filled with teen-agers.

Nightly, thereafter, the number of these attacks grew, the damage mounted steadily and Dallas became steadily more incensed at its young people.

At the end of 2 weeks, police estimated that 1,000 autos and 250 houses, schools, and business firms had been damaged by flying pellets to a total of more than $50,000. Ballistics tests showed that the missiles were coming from a mixture of air rifles, .22 caliber rifles and slingshots.

On March 16, the police stepped up night patrols and began stopping and searching teen-agers seen loitering.

In the midst of all this, Bill Crowell, a 15-year-old sophomore at Forest Avenue High School had an idea. Bill was a member of a high school organization called the Key Club, which was dedicated to public service works on behalf of school and community.

Who, thought Bill, could better put a stop to this senseless deviltry than the kids themselves? He believed that only a small minority were involved in the shootings. Perhaps concerted action by the majority would bring them into line. So, with the help of three buddies, he prepared a pledge to be circulated in the schools.

On March 17, while Key Club members from all but 2 Dallas high schools were meeting to consider the pledge, the vandalism hit an ugly high. That night, police arrested 24 juveniles on suspicion of pellet-gun raiding. Two boys were caught breaking into schools where they smashed more than 100 windows. Windshields were shot out of 57 cars at one used-car lot—in spite of a night watchman especially hired to protect them. A motorist was hit by pellets in 2 different parts of the city.

Two days later, the Key Club pledge was read and explained to the students at Forest High School. It said, in part:

"We, as citizens of this great United States, realize that her future will lie in our hands. * * * To prevent damaging our heritage, we shall respect the properties of all people. * * * Therefore, we pledge ourselves to abstain from any form of vandalism and earnestly recommend that others do the same."

Students began signing the pledge at Forest that afternoon. Tuesday, it was circulating in other Dallas schools with Key Clubs. The following day it appeared at the two non-Key Club schools, sponsored by student leaders who had been approached by Key clubbers. Up to 95 percent of the students were signing the pledge.

On Thursday, damage began to taper off and by Saturday things were almost back to normal.

Prompt police action had had a decisive effect in stopping the pellet-gun spree. But so, too, had the Key Clubs, which both city and police officials were quite willing to admit.

Key Club members all over the Nation are used to coping with such problems. For it was a serious one in Sacramento, Calif., that brought about the creation of the first Key Club in 1925. The problem there was secret high-school fraternities which had gotten completely out of hand.

A high-school vocational-guidance director named Frank Vincent realized that the only way to get rid of fraternities was to offer the youngsters a satisfactory substitute. This he did, in the form of a boys' club dedicated to a community service. Mr. Vincent figured if he could get the key youngsters in the school to go along with the idea, the others would follow. Hence the name he selected: Key Club.

With the help of the local Kiwanis Club, the first Key Club was formed. In a few years Kiwanians all over the country were activating Key Clubs. In 1942, Key Club International was formed, and today there are about 1,443 clubs in the United States and Canada, with a membership of some 33,892.

Most Key Club activities center on local problems, which the youngsters attack with tremendous zeal. When money is required to do a job, they go out and earn it—usually by selling the club's manpower for baby-sitting, car washing or similar activities. The only financial help they get is an occasional assist from a local Kiwanis Club—usually to help send representatives to the national convention of Key clubbers held each year.

But while focusing their major attention locally, Key Clubs are also capable of getting together to attack a national problem with potent impact. In 1953, Key Clubs took a hard look at the growing problem of vandalism. Almost $2 billion was going down the drain annually in the United States from wanton destruction. The following year, Key Club International adopted stop vandalism as its No. 1 goal.

Because Key Clubbers are able to approach this problem from the understanding viewpoint of enlightened youngsters trying to straighten out kids who have gotten out of line, they have achieved some remarkable results throughout the Nation.

In Laconia, N. H., Key Club members prepared and distributed antivandalism posters, appeared on the local radio station, in school assemblies and anywhere else they could be heard, appealing to fellow teens to stop acts of vandalism. Club members were so sure they had won their point that they offered to clean up or make right any damage done the following Halloween. Result: they had nothing to do to make good their pledge.

The Lewiston, Maine, Key Club antivandalism campaign was centered around the theme of respect—for self, elders, school, and community. A Key Club-sponsored Teacher Appreciation Day was held to focus attention on manners toward their elders. Each one of the 1,047 students came to school in his best clothes and cooperated in a spirit never dreamed of.

Sunbury, Pa., Key Clubbers sponsored an imaginative and effective drive to rid the community of horror-crime comic books which they considered a basic cause of vandalism and delinquency. They hit newsdealers who handled such books with a three-pronged attack: through city officials whose aid they enlisted in the campaign; through private citizens, especially parents, whom they encouraged to stop in at newsstands and express their feelings; and through personal calls on newsstand dealers. As a result, there hasn't been a single horro-crime comic book sold in Sunbury for more than a year.

The most spectacular of all Key Club antivandalism projects has been a youth rally staged for the past 2 years at Chicago's International Amphitheater. Last April, more than 35,000 Chicago high-school students crowded into the amphitheater to hear a group of top professional entertainers (who contributed their services) along with a discussion of juvenile problems from civic leaders and representatives of the kids.

The Key Clubbers who put across the youth rally were hoping to accomplish two things: prove to doubting adults that most young people are not delinquents but really interested in making their city a better place in which to live; and focus attention on and build up popularity among youngsters in positive objectives, and thereby bring borderline juveniles over to the right side.

Well over 100,000 Chicago high-school students have signed the youth rally pledge: "To respect my parents and to act so as to bring them honor; to cherish my school, for it gives me the tools to think and work by; to keep out of trouble and help others to stay on the right track; to serve God, to be a credit to my country and to make my city a better place to live in."

The winner of the youth rally slogan contest for boys last year was an inmate of the State reform school. He made a moving appeal to the huge audience of youngsters to stay out of trouble when he accepted his prize. Amos Reed, superintendent of the Illinois State Training School for Boys, said: "In all my years of training schoolwork, I've never seen anything like this. The rally showed our boys that this is not the end of the line. We continue to reap a harvest of positive thinking and good will as a result of the rally."

Positive thinking is a commodity in which Key Clubbers deal plentifully. They especially like to impress one point: that any community, working in concert, can lick any problem, whether or not there is a Key Club to lead the drive. Thus, when a local Key Club comes up with a big idea (like the youth rally) which is adaptable to many communities, Key Club International at 520 North Michigan Avenue in Chicago puts out a bulletin blueprinting the plan for any community group that would like to try it. Where a Key Club is available, these youngsters usually lead the drive. But any group of kids—the high school letterman's club, for example—could take over the job.

The Key Clubs have no problem attracting members—in spite of the high local standards set for membership. Applicants are usually screened by school authorities, and the size of the club dictated by the facilities available. Some clubs have more than 100 members, but most have much less.

"We've never lost a club for lack of membership or flagging interest," says Frank McCabe, director of Key Club International, proudly. "Rather, our problem is keeping the club from becoming unwieldy while still bringing in all the youngsters who want to work. And believe me, there are lots of them."

Freedom's Foundation (at Valley Forge) recently honored Key Clubs with a special award for progress against vandalism. No group has ever deserved such an award more. And no group has ever fought harder to earn recognition for the overwhelming majority of young people who are not only sincere and respectful but conscientious Americans as well.

Blueprint for Survival

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. EDMONDSON. Mr. Speaker, the current issue of Life magazine—March 18, 1957—contains a timely article on civil defense entitled "Scientific Blueprint for Atomic Survival."

I commend this article to the House for reading in connection with our consideration of the bill to appropriate funds for the Federal Civil Defense Administration. In suggesting the type of civil defense programs our Nation needs, it contrasts sharply with the program advanced by the Federal Civil Defense Administration.

This article reflects the considered judgment of outstanding scientists who have been studying the hazards of nuclear weapons. Their conclusion is that to survive a possible enemy attack on the United States we must have shelters. Time will not permit us to run away, and even if we had considerable advance warning there is no place to go, so widespread are the hazards of nuclear weapons.

One of the men most responsible for the development of the hydrogen bomb, Dr. Edward Teller, states:

It is necessary to provide every person in the United States with a shelter.

Dr. Teller recently testified before the Holifield subcommittee of the Committee on Government Operations, at which time he urged the adoption of a realis-

tic shelter program as the essential first step toward insuring the survival of our people in the event of an enemy attack.

I ask unanimous consent to have the Life magazine article mentioned above printed in the Appendix of the CONGRESSIONAL RECORD.

The article follows:

SCIENTIFIC BLUEPRINT FOR ATOMIC SURVIVAL—DIFFERENCE BETWEEN VICTORY AND DEFEAT

(By Willard Bascom)

The nuclear bomb poses, for the first time in history, a serious direct threat to the American people. The means to annihilate our unprepared civilian population is already in the hands of our potential enemy and the need for preparation should be obvious. Yet the bulk of our population is totally unprepared today to meet a war emergency.

Our civil defenses are incomplete partly because the public is so little aware of its danger and partly because the few who have investigated the effects of nuclear attack tend to be overwhelmed by the horrors they foresee. There is a temptation to say, "What's the use?"

But there is a use. Civil defense is not a hopeless task. If war should come an adequate program could save millions of people. It could mean the difference between American victory and defeat. And although it cannot guarantee the survival of any specific person, it can guarantee that the United States will continue to exist and to work for the things that we believe in.

Civil defense could also be of great value in preventing a war. Our policy in foreign affairs is to take a strong stand against Soviet intimidation of our allies and the neutral nations. But a strong stand, with the threat of war it implies, may be meaningless if the enemy knows that our civilian population is virtually naked before an attack. Protective arrangements for the public would greatly strengthen the hand of our President in a crisis by increasing his bargaining capacity at the international conference table.

The development of adequate civil defenses will be expensive, difficult, and time-consuming. Defenses cannot be prepared after a crisis is reached. They must be methodically increased over a period of years as a natural back-up to our military readiness. The most practical way to accomplish this is by emphasizing dual-use projects with peacetime as well as wartime applications. The very fact that all-out nuclear war does not appear to be likely in the near future—one reason for the present indifference—gives us a chance to plan and carry out public defense programs at a pace that will not endanger our economy or cause any raised eyebrows in the world.

Before considering a detailed program of civil defense, we should understand the nature of the threat.

First we must face the fact that there is no complete military defense against atomic attack. Complicated defenses will be invented and improved but they will never be perfect. Nuclear explosives can be carried by planes, or, eventually, by missiles launched from submarines. In a few years intercontinental missiles capable of carrying the H-bomb may become a reality.

HIGH PRIORITY TARGETS

The targets these might be aimed at cannot be predicted with certainty, but it seems likely that our air striking force, our air defenses and our centers of government, industry, communications, credit, and shipping would have highest priority. However, since the effects of the explosions are far-reaching and since we can assume that many bombs and missiles will widely miss their targets, everyone in the country will be in danger.

There are three major effects of attack against which we must protect ourselves:

IMMEDIATE PHYSICAL DAMAGE

At the instant of nuclear burst there is a great flash of light and heat. People many miles away who are looking directly at the burst will be blinded, perhaps permanently. The heat from a relatively small A-bomb like the one that fell on Hiroshima is strong enough to ignite white paper or unpainted wood at 4,000 to 6,000 feet and to burn human skin or ignite newsprint at 5,000 to 10,000 feet, depending on the amount of haze in the air. The blast pressure 3,000 feet from the center is 15 pounds per square inch—the equivalent of doubling atmospheric pressure. Our bodies can stand fairly rapid and substantial pressure changes, but many of the things around us cannot. Injuries to people are therefore much more likely to be caused by falling structures or flying objects than by the blast pressure itself. Glass, for example, may be flung about by as little as one-half pound per square inch of pressure (at Hiroshima people were seriously cut by glass over 5 miles from the explosion) and brick walls may be toppled by only 3 or 4 pounds per square inch.

The effect of a hydrogen bomb is, of course, many times greater than that of the A-bomb: In a 10-megaton H-bomb explosion that extra 15 pounds per square inch of pressure would be felt 24,000 feet away instead of only 3,000 and it would last 8 times as long.

Besides producing immediate radiation, heat, and blast, nuclear explosions endanger life by the lingering radiation they release. It is the fallout of radioactive particles that poses the greatest danger at a distance from the explosion. The all-penetrating gamma radiation kills body cells and reduces resistance to infection. Protection against these rays will be a major problem.

PSYCHOLOGICAL EFFECTS

In the past our enemies have employed psychological warfare with considerable talent. They would certainly use it in any future attempt to destroy the United States. This form of warfare exerts its greatest power over people who are poorly informed about natural phenomena and who are likely to be terrorized by things which they do not understand. The possible hazards of radiation, germs, and chemical warfare could make every innocent bit of dust seem a radioactive fragment, every smoky cloud a poison gas attack and every ant a deadly germ, and make people afraid to eat, drink, breathe, go out of doors and mingle with others. The terror resulting from ignorance could paralyze large numbers of the people on whom national recovery and support of damaged areas would depend.

GENERAL DISRUPTION

A public which is confined in shelters or scattered to unfamiliar areas will have great difficulty caring for itself. People whose homes are destroyed will be threatened by the weather until they can be relocated or housing facilities can be rebuilt. They will be threatened by hunger until food processing and distribution systems can be reconstructed and farm products harvested. They will be threatened by sickness until drugs can be distributed and sanitation systems restored.

Finally, many people accustomed to easy living and much comfort may regard the loss of material things as the end of everything and may lack the spirit to continue. It seems possible that an attack could disrupt our society so completely that the ability to continue an organized fight would vanish and we would not be able to rise up again, reorganize and carry on—during the war or in the subsequent peace.

People who say they do not wish to survive amid the debris of nuclear war do not seem to realize that America is much more than the sum of its physical assets. Those it can lose, if it must, without irreparable injury. It is much more important that we do not lose the desire to maintain our part of the world in the freedom and democracy it has always symbolized.

A BUILT-IN DEFENSE

Such are the dangers. A defense must be devised that seems likely to counter them. Its goal should be the best protection we can actually provide rather than the best that is theoretically possible; it must get public support by being based on more durable motivations than fear or horror; it must offer a promise of better and more secure living; it must be made an effective part of our war deterrent; it must be built into our way of life.

The responsibility for this, as with all forms of national defense, rests with the Federal Government, which must provide the leadership, the overall planning and much of the financing. A real civil defense requires the following measures:

1. There should be general public understanding of enough of the physical and biological effects of nuclear explosions so that people can take the best possible protective action, before, during, and after an attack.

A Federal program to encourage the study of basic physical and biological science in schools at all levels would help prepare the public for both peace and war. Weapons effects should not be emphasized in such studies. Instead, the understanding of radiant heat or sunshine, of thunder, combustion engines or deep-sea diving problems, of X-rays—all things within common experience—would make possible an easy understanding of the similar thermal, blast, and radiation effects of nuclear weapons.

Subsidies might be offered providing part or all of the support for the additional teachers, books, and training aids required by schools that would accent science courses. A scholarship program would make it possible for good students to continue with these studies and for teachers to keep up with new developments in science education. Another possibility would be federally financed, university-produced TV programs, filmed and live, dealing with the same subjects.

Of all the bets that the United States can place on itself to ensure a bright peacetime future and contribute simultaneously to its defensive capabilities, this seems to be the most attractive.

2. Stout shelters are required, well equipped and provisioned and easily accessible to all people, especially while they are at home.

Evacuation of the crowded centers of assumed target areas has been ardently proposed as an alternative to shelters. At best, it would be an interim measure usable by some if the time between warning and attack is relatively long. Arguments for or against evacuation as a policy have hinged more often on whether it is feasible to move cars out of town rapidly than on whether it is the best thing to do for protection. As one measure that may help reduce casualties from direct bombing by manned aircraft, evacuation is worth consideration so long as it does not block a more permanent defense. Permanent defense means shelters.

It is possible to build shelters which will offer protection anywhere outside of the bomb crater (even within the atomic fireball) either by making them of very thick concrete or by excavating them in solid rock. Perhaps in densely populated areas near obvious targets, or for the protection of valuable facilities or workers, such high-strength shelters will have a place. Outside of this relatively small area, whose location cannot be forecast, shelters of somewhat lesser strength appear to be more economical and offer many other advantages.

Well-protected areas already exist in cities, in the form of deep basements, subways, and the like, which could readily be developed into shelters. New shelters can be most efficiently created by the construction of dual-purpose facilities which are kept in constant use in time of peace. For example, most cities seem to be in chronic need of transportation facilities, such as parking garages, bus and railroad terminals, or roadway underpasses. These are designed to bear heavy loads and could be adapted for use as shelters in an emergency. The Federal Government might subsidize construction of underground parking garage shelters just as it does that of ocean liners which can be converted to wartime use as troop transports. The cost of such structures would in many cases be self-liquidating.

Most Americans spend about three-quarters of their time at home, so the obvious place to have shelters which can be quickly reached at any time is in or near the home. There people will have the security of familiar surroundings and will be able to provide themselves with supplies from the house even when contact with the outside is cut off for several days. Although unattractive by comparison with ordinary living conditions, a family shelter should be incomparably more pleasant than a communal shelter shared with strangers of varying tastes and habits.

HOW TO GET SHELTERS BUILT

A Federal program is needed to stimulate the construction of such shelters. One or more of the following inducements might be offered: More favorable financing for homes with shelters, making materials or prefab shelter units available at low cost, providing property tax benefits for shelter owners—justifiable because it would be unnecessary to provide public-shelter facilities for people who have their own—or offering actual cash of up to two-thirds the total cost to shelter builders. As an absolute minimum effort, a social atmosphere must be created in which a person can provide a shelter for his family without being regarded as an idiot or an alarmist by his neighbors.

One way of demonstrating Government faith in the advisability of having shelters would be to build them for the families of the fighting men on or near military reservations, especially at Strategic Air Command bases and other likely targets.

3. A warning system should be established capable of arousing the attention of everyone in the country within the few minutes that will be available in the era of missiles so that all can quickly receive instructions and take protective measures.

To the present air-raid sirens which are effective in densely populated areas must be added a system of warning devices which will be more efficient in suburban and rural areas. One promising means of reaching into each home is via radio receivers which can be modified to monitor continuously for a broadcast warning.

It has been estimated that a system capable of warning 95 percent of the people in the United States could be built and maintained for about 80 cents per person per year. Some of this money would be spent in subsidies to manufacturers of warning devices, some would go into enlarging the public-warning system. An effective warning system is absolutely necessary for without it the vastly more expensive shelter program will be of little use.

4. Two major radio communications systems are required, one for the public, the other for the Government. The first should be capable of transmitting information to the public continuously from the instant of warning until the emergency has passed. The other should be able to keep government groups at all levels in contact with one another so that central control can be maintained in the emergency.

The public network would disseminate information about the imminent danger, the progress of the war and the best possible action to circumvent each danger. It would soothe and divert persons in shelters. Transmitters would (1) be manned continuously, in peace as well as war; (2) have several towers in dispersed locations; (3) have standby generators for emergency power; (4) have shelter facilities for staff and equipment; (5) have a stock of recorded announcements for use in each of many predictable contingencies; (6) monitor the Government network and accept instructions for retransmission to the public; and (7) have sufficient power to reach a substantial area. The Federal Government could designate certain existing commercial stations to be members of this national network, and could subsidize the expense of adding stations as required.

Radio receivers capable of operating independently of the public power system will be needed in or near every shelter.

The second communications network would enable State, local, and Federal Governments and subdivisions of each to maintain contact with one another. It also would allow the Nation's leaders to confer and to direct the work of reconstruction, thus permitting recovery and rehabilitation to be carried on as a coordinated national effort.

5. Some of the valuable assets of the country should be dispersed so that neither the bulk of our wealth nor any single irreplaceable element could be lost all at once.

The large nuclear bomb, if used against cities or large groups of civilians, is a cheap weapon. With it, great numbers of people can be killed a relatively small expense. One answer to a cheap weapon is a cheap target, and if people and their facilities can be spread so thinly that few are destroyed by each bomb, then the bomb is no longer cheap. The ideal (but obviously impractical) solution would be to distribute the people, the commerce and industry, the transportation and communications lines and other attractive targets evenly throughout the country. Fortunately, the most flexible and easiest of these to move—the people—is also the most valuable. If the people survive, the physical assets can be rebuilt; if the skilled people are lost it will take generations to replace them. Therefore the principal aim of dispersal must be to keep people spread as thinly as possible and separated from obviously attractive targets while danger is greatest.

There is already a marked trend away from urban areas toward dispersed living as a result of easy financing and inexpensive subdivision housing and more convenient automotive transportation to the cities and shopping areas.

Continued easy credit and development of highways and other transportation probably will produce as much dispersal as any direct program. The trend could be speeded even more by the construction of broad high-speed roads beyond those now required and by making credit easier in areas of less dense population.

6. A radiological defense plan must be developed so that areas of fallout can be identified and the hazard evaluated. It will be absolutely necessary to make rapid surveys as soon as the onslaught has subsided so that people will not spend unnecessary time in shelters in areas where there is little radioactivity, and will not emerge too soon in dangerous areas. Ground and aerial measurements must be made and passed along to points where they can be plotted and analyzed. The program must also offer instructions about the nature of the danger and means of decontamination.

7. Stockpiles must be accumulated of certain items such as medical supplies, processed foodstuffs, cloth (for tents or window coverings) and the like, as a safeguard against the temporary failure of our production and distribution system.

8. Measures must be taken to redevelop certain urban areas, especially for the purpose of reducing the possibility of great fires in areas which may not otherwise be seriously damaged. Shelters will not afford adequate protection to a populace unless safeguards are also provided against major fires.

A program of replacing slums with garden apartments and of constructing firebreaks in the form of parks and wide boulevards is clearly desirable from the point of view of improving city living as well as of defense. The Government could give additional stimulation and impetus to the existing desire for such projects by providing long-term financing at favorable rates.

9. Washington, D. C., must set an example if the United States public is to be expected to take a Federal program seriously. The Government must demonstrate a belief in the measures that are advocated, for it is obvious that our Nation's capital is a target of high priority on the enemy list. Government buildings, especially those now planned or under construction, should have built-in shelters.

10. A new department of the Federal Government should be set up to provide guidance and subsidies to those who require them during the periods of preparation, attack, and recovery.

This department would devise a comprehensive plan; it would conceive, build, and operate the parts of the program which are purely Federal (such as a warning system, a radiological monitoring system, a stockpile system); it would dispense funds for shelters and for dual-purpose developments to local government, private groups, and individuals; it would organize existing national facilities, both public and private, for effective use in wartime; it would encourage public education in technical subjects; it would devise means of testing the efficiency of its defenses—and it would be responsible for making the Washington, D. C., defense into a model for others as a demonstration of Federal interest. A bill to set up a Federal department somewhat along these lines has been introduced in the House by Representative CHET HOLIFIELD, of California.

The importance of dual-use projects for improving our defensive capabilities can scarcely be overstated. Many of the things proposed should be done anyway to keep pace with our rapidly expanding population and economy. It is quite clear that the country needs such things as improved educational facilities, especially in the sciences; a greatly expanded network of roads, including access highways to cities and to undeveloped areas; slum clearance; a widespread microwave communications system, and additional parking facilities in cities.

These are all-important elements of civil defense. However, they should be undertaken by local governments. They should not be under the centralized control of a civil defense department, nor should an important part of their cost be charged to it. Rather, this agency should (1) harness our protective instincts to furnish an additional motive and help us rationalize the costs; (2) see that the planning for each of these huge programs really does take the possibility of war into account; (3) supply the money for the additional cost of modifying the plans to make them more useful for defense.

It is not proposed that defense organizations take control of every aspect of our country's development. This is rather a plea for making a coordinated plan which takes all of the Nation's needs into account at the same time so that each can be accomplished more efficiently. It is hoped and expected that the percentage of the total

effort that would be identified directly with civil defense would be quite small.

How much might such a program cost? Anything that must be provided for 170 million Americans can't help being expensive. But in trying to estimate the price of this insurance against an event that we instinctively feel is unlikely, we must keep two things in mind: defensive facilities cannot be built at the last minute; their cost is necessarily spread over several years. And there can be a considerable contribution to peacetime efficiency and convenience from dual-use projects.

If we set as a goal the provision of 90 percent of the protective measures outlined here within 6 years (1 year of planning and 5 of construction), the total cost can be expected to be around $24 billion or an average of $4 billion per year. Not all of this expense, of course, would be borne by the Federal Government. In any case, it is not beyond our means: $4 billion is about 10 percent of the present Defense Department budget.

Most of the sum allotted to civil defense would go into shelters of various kinds. The warning and communications networks, the educational programs, and the stockpiling and radiological defense expenses combined might cost as much as a billion dollars each. The remaining programs as well as some not indicated here, plus the cost of administration for 6 years, would absorb the balance. After the principal construction period is over, the continuing budget for replacement, maintenance, education, administration, and so forth, would level off at perhaps $500 million a year.

These are admittedly rough guesses. Only the most rigorous engineering study of each item can be expected to produce accurate figures. However, it seems quite probable that they are within a factor of two, that is, the ultimate cost will be between half and twice these sums. For the purpose of making a decision to embark on a real civil-defense program that is probably close enough.

Most of the foregoing proposals have been offered many times before by others, and some of the needs, long since recognized, have been partly translated into reality. But the bulk of the work is still to be done. Unfortunately, too many people seem to believe that if war comes some magic will intervene to save them and that they are not personally required to make troublesome and expensive preparations on their own behalf. Let us hope that they are right and that evolutionists did not have them in mind when they speculated that war is a eugenic process which eliminates those without a special will to live.

Mr. Phleger Steps Out

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. YOUNGER. Mr. Speaker, it is with real regret that I noticed that Herman Phleger, legal adviser of the State Department and a resident of the Ninth Congressional District of California, is leaving the Government service.

Like so many other Government officials, he has stayed in Washington at a tremendous sacrifice to himself and his family; and while we are all disappointed to see him leave, we are extremely pleased to have had him here for the past 4 years.

The editorial in the Washington Post and Times Herald this morning paid a very deserving tribute to Mr. Phleger and his service, which I wish to include with my own remarks here in the RECORD:

MR. PHLEGER STEPS OUT

Herman Phleger, legal adviser of the State Department, will be slipping out of Washington on April 1 as quietly as he came in more than 4 years ago. He holds no place among the noisier elements of Washington's officialdom. His name has seldom been mentioned in the newspapers. Yet it is no exaggeration to say that his departure will leave a gaping hole in the Department; for Mr. Phleger, in his unassuming way, has managed the legal adviser's office with much distinction and exerted a strong influence in some areas of policymaking.

His quiet but effective work was in large measure responsible for the defeat of the ill-conceived Bricker amendment to undercut the President's authority in directing the country's foreign policy. He was a source of seasoned advice to the American delegation at the Inter-American Conference at Caracas, the Geneva Conference on Indochina and Korea, the Summit Conference, the Foreign Ministers' Conference at Geneva, and at numerous conferences abroad on the Suez crisis. As one of the country's eminent jurists, he has exerted a strong pull toward reliance upon international law in the conduct of our foreign relations. As Mr. Phleger returns to the practice of law in San Francisco, he will carry the best wishes of his coworkers and hosts of others who have come into contact with his keen mind and his engaging personality.

House Budget Resolution Popular

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. MADDEN. Mr. Speaker, I received a great number of favorable letters from Indiana in regard to the resolution which the House passed 2 weeks ago asking the President to assist in cutting the budget.

The following is an editorial from V. M. Simmons, publisher of the Fort Wayne Journal-Gazette, on this resolution:

EISENHOWER'S BUDGET TROUBLES

President Eisenhower is suffering from an acute case of budget troubles.

He has only himself to blame.

The Federal budget is an Eisenhower budget.

He, himself, submitted it to Congress. It bore his stamp of approval and his recommendation of passage.

It was the biggest and most bloated peacetime budget in the history of the Nation.

Ex-President Herbert Hoover felt it necessary to object publicly, and he issued a statement against the Government's extravagance.

A member of the President's official family, Secretary of the Treasury George Humphrey, told a committee of Congress that it was absolutely necessary to reduce the cost of Government, and predicted trouble if this was not accomplished.

The Secretary advocated substantial reductions in the Eisenhower budget.

The Wall Street Journal, heretofore friendly to the Eisenhower administration, complained bitterly and demanded budget cuts and Government economies.

The press in every section of the country joined in the demand for budget revision. Finally, the American people, surprised and angry, made themselves heard in Washington.

Congress, always quick to react when public opinion expresses itself, acted promptly.

Senator STYLES BRIDGES, chairman of the Republican policy committee and recognized as one of the most partisan Republicans in the Senate, loudly demanded in a speech from the floor a substantial saving in the operation of the Government.

The Republican members of his committee joined their chairman in criticizing excessive Government expenditures.

Finally, the House of Representatives passed a resolution asking President Eisenhower to point out where "substantial reductions could be made in his record peacetime budget of $71.8 billion."

The country will approve the action of the House in this connection.

President Eisenhower should be glad of the opportunity to justify the budget which he, himself, created.

Certainly the American people would not understand if the President were to show any reluctance on his part in cooperating with Congress on this very important legislation.

The Sugar Act

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. GUBSER. Mr. Speaker, one of the principal services performed by the Sugar Act since its original adoption more than 20 years ago is the stability it has brought to the American sugar market. It has assured consumers ample supplies of sugar at fair and reasonable prices. Simultaneously, it has permitted sufficient returns to producers to help maintain a healthy domestic sugar industry. The extreme market fluctuations of former years, when consumers and domestic producers alike were at the mercy of unstable and unpredictable world sugar developments, no longer exist.

When the Sugar Act came up for renewal last year, some opponents theorized that American consumers would pay less for sugar if we ignored the domestic industry and relied primarily on importation from foreign producers. To support this notion they pointed out that the world market price for sugar was below the domestic price, as indeed it was at that time. Even forgetting that sugar crops—like California's sugar beets—are vital to our agricultural economy, the fallacy of the argument is shown by the present relationship between the world and domestic prices of sugar. On the New York Coffee and Sugar Exchange today the world price of raw sugar for May delivery is 50 cents per hundred pounds higher than the domestic price for May delivery. International tensions apparently have produced a demand for sugar that exceeds the supplies available

on the world market, thus driving up prices.

World prices, in fact, doubled in the course of only 60 days. During the same period, domestic wholesale prices increased only 4 percent, with little or no change at the retail level. The reason, of course, is that the Sugar Act assured ample supplies of sugar for American consumers and thus there was no need for scare buying domestically.

Judging by the history of the past two decades, the world price will, in the future, be below the domestic price on some occasions, and above it on others. Thanks to the Sugar Act, however, the American housewife need fear neither depression nor inflation when she goes to the store to buy sugar.

Aid to Whom?

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Titusville (Pa.) Herald of March 15, 1957:

AID TO WHOM?

Goaded by constant hammering from several large pressure groups and nearly buried under a steady snow of publicity about the shortage of school facilities in the United States, Congress has before it several proposals to give Federal aid to local education projects. The spending proposals range from $1.3 billion to $5 billion over a period of 4 or 5 years.

But the question which should concern us in Pennsylvania, especially in our own community, is who would be aiding whom?

Based on the tentative allotments by the United States Department of Health, Education, and Welfare, the United States Chamber of Commerce has figured out that 16 States would get considerably less of each dollar back for each dollar of taxes paid to the Federal Government. Pennsylvanians, for example, would receive only 84 cents for each dollar going to Washington. New York would be hit even harder, receiving 33 cents in change for each dollar bill sent to the Nation's Capital.

On the other hand, 32 States would receive in allotments for education more money than their citizens paid in Federal taxes. Getting the biggest haul would be Mississippi, an admittedly poor State, which would reap nearly $6 return for each dollar of taxes. Even the so-called "boom" States would fare pretty well. Florida, for example, would get $1.14 cents in allotments for each tax dollar. Texas, the fabulous land of the "big rich," would do even better. It would receive $1.48 for each tax dollar.

The citizens of the "have" States would be wise to ponder the question thoroughly before being carried away by the magic phrase of "Federal aid to education" and shelling out tax dollars which would only benefit the "have nots."

It is well to remember that in Titusville especially we have foreseen our school problems, have taken concrete steps to solve them, and have made our own financial arrangements.

The Hebrew Home for the Aged

EXTENSION OF REMARKS
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. BUCKLEY. Mr. Speaker, under leave to extend my remarks, I include an address by the Honorable Robert F. Wagner, mayor of the city of New York, delivered Thursday, February 7, 1957, at the Sheraton-Astor Hotel in New York City at the anniversary luncheon of the men's club of the Hebrew Home for the Aged at Riverdale, N. Y.:

Mr. Toastmaster, ladies, and gentlemen, New York is very fortunate to have a great many voluntary organizations dedicated to serving our people on every level. Our religious bodies, institutions, service clubs, charity societies, educational, and social organizations and the like perform a most vital function in our city. They help to promote the general welfare and the well-being of our citizenry.

The millions of people in our city of different races, creeds, and colors could not live together in harmony without the human interest and sympathy and the active practical assistance of their neighbors.

I have been told that the Hebrew prayer book contains a special blessing for "all who in faithfulness occupy themselves with the needs of the community." It asks that "The Holy One, blessed be He, abundantly recompense them."

Surely, those men who are associated in the work of the men's club of the Hebrew Home for the Aged at Riverdale have richly earned this important blessing.

In the 11 years since the club was organized, it has performed valiantly in helping to establish this great new home for the Jewish aged at Riverdale where there are facilities for 350 elderly folk.

I understand that these accommodations will soon be augmented by the construction of a 100-bed infirmary addition. The current improvement and expansion program of this notable institution will enable it to provide shelter and care for 450 old people.

My welfare commissioner, Henry L. McCarthy, and his staff have frequently visited the Hebrew Home for the Aged at Riverdale. He informs me that it is a model haven for the aged, boasting facilities and services which have not yet been achieved by most institutions of this character.

The spacious ideal location of this home, in the most northerly section of our city, overlooking our beautiful Hudson River, is an excellent setting for the peace and comfort of those who must live their sunset years in a sheltered environment.

We are proud of the officers and supporters of the Hebrew Home for the Aged at Riverdale and of the members of its men's club, whose anniversary we are celebrating at this luncheon.

I congratulate Mr. Murray D. Sandler, the guest of honor, for his activities in behalf of this notable home.

In the last 10 years there has been a 40-percent increase in the number of Americans over the age of 65. There are today more than 14 million in this age group. They present problems to our society which cannot be completely and satisfactorily solved by Government agencies on the National, State, and local levels.

Our department of welfare has estimated that 620,000 persons 65 years of age and over reside in our metropolis. The city contributes to the support of the indigent aged. We also maintain special facilities to shelter and care for old people at the Goldwater Memorial Hospital, at the Bird S. Coler Memorial Hospital and Home and at the farm colony on Staten Island. We are about to add 250 more beds for the aged at Neponsit. We have appropriated a million dollars to convert the nurses' home on the old hospital grounds there for this purpose.

Furthermore, we have succeeded in developing a boarding-out program for old people who can reside with private families. We are giving special attention to creating special housing facilities for the aged. The mayor's advisory committee on the aged will soon launch a pilot project at the Vladeck houses for determining the needs and services required by older tenants.

Besides all of these important activities, we are continuing and improving our day center program for our older citizens. All told, a substantial part of our welfare budget is devoted to the care of the aged.

However, the important services performed by voluntary homes such as the Hebrew Home for the Aged at Riverdale, cannot be provided by the city. There are problems relating to religious observances, habits, and associations of a lifetime, that are not easily dealt with in our public institutions, even if we had the means to provide publicly supported homes for all those who require shelter care.

Our elderly neighbors need our personal interest and the attention of individuals such as we see here at this luncheon. Their profound human understanding, sympathy, and concern for the welfare of their fellow beings spur them on to provide special facilities for those who cannot help themselves when their strength fails them.

We proudly proclaim the advantages of our democratic way of life, where we operate in a free environment. We have succeeded in building great voluntary institutions to shelter and care for those who are unable to provide for themselves in their concluding years. The builders of these institutions give of their energies, time, and means. They give generously to construct these homes and to help sustain them. They deserve our profound thanks and appreciation.

The strength and security of our great city and our great democracy rests upon the men and women who graciously serve those who need their help.

Editors Favor Reducing Foreign-aid Spending

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. MACK of Washington. Mr. Speaker, throughout my 10 years in Congress I have been talking for and voting for cuts in foreign-aid spending.

As a Nation we have spent $53 billion on these foreign-aid giveaway programs. They have not produced returns commensurate with their enormous cost.

Almost everyone admits these programs have been and still are filled with waste.

I have been convinced all along that millions of American taxpayers have felt as I do about this subject—that they

were against giving away so much of their wealth to foreign countries.

Recently the American Press, official magazine of the weekly newspaper editors of the Nation, took a poll of all weekly editors asking them if the United States should, first, spend more; second, spend less; or, third, spend about the same on these foreign giveaway programs as it had been spending.

A total of 794 weekly newspaper editors sent replies to that poll. Of these 63 percent, nearly two-thirds said "cut foreign-aid spending," only 6 percent said "spend more" on foreign aid than we are now spending while 26 percent favored continuing the program at the level of last year. Five percent had no opinion.

Here is the question the American press propounded to the 794 editors and here are their answers by regions and by totals.

Question: During recent years Congress has appropriated about $4 billion each year for countries in other parts of the world, to help prevent their going communistic. Do you think Congress should appropriate more, less, or the same amount for the coming year?

[In percent]

Answer	North-east	South	North central	West	Total
More	7	4	7	8	6
Less	52	66	64	64	63
Same	34	24	25	24	26
No answer	7	6	4	4	5

Mr. Speaker, no one is closer to the people in his town than the weekly newspaper editor. Usually he helps gather his own news. He visits and talks with hundreds of his townsmen each week, on the street, in their offices and homes, at their clubs, lodges, and grange meetings. He has his ear to the ground and his hand on the pulse of public sentiment. He knows by daily personal contact what the people are thinking. As a trained newspaper man he knows how to evaluate public opinion.

Sixty-three percent of the weekly newspaper editors, in response to the American Press poll, say the people want foreign aid reduced. Nearly all citizens are agreed that the present $71.8 billion budget must be drastically reduced. One place the Congress can cut the budget drastically is by reducing foreign aid spending.

Gen. Ernest O. Thompson

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 19, 1957

Mr. JOHNSON of Texas. Mr. President, in Texas, we are very proud of Gen. Ernest O. Thompson, one of the truly great public servants of our times.

General Thompson, a member of the Texas Railroad Commission, probably knows more about oil than any other man. And he has applied his knowledge to help maintain a stable industry which is one of our greatest assets in war or in peace.

These are troubled, uncertain times for our domestic oil-producing industry. It is surrounded by problems, not the least of which is a great deal of misunderstanding.

Foreign imports are constantly rising, and during the first quarter of this year it is estimated that they amounted to nearly 20 percent of domestic production. This has led our domestic producers to ask just what happened to the protection which Congress approved for them.

Costs of discovery, drilling, and production are constantly on the increase. But any increase in price to offset higher expenses is met with a storm of protest.

It is fortunate for the Nation that in such a period we have a man of the caliber of General Thompson. He is an understanding man and a man of patience, as well as a good pilot to steer a ship through troubled waters.

The March 21 issue of the magazine Reporter carried an article on General Thompson, written by Douglass Cater, one of our more distinguished commentators. I ask unanimous consent that the article be printed in the Appendix of the RECORD, as a part of my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GENERAL AND THE UMBRELLA

(By Douglas Cater)

For the independent oil producers of Texas, Gen. Ernest O. Thompson, patriarch of the Texas Railroad Commission, is almost as much an object of veneration as the Lone Star Flag. Thompson, who joined the three-man commission in 1932, has been reelected without opposition by the people of Texas to his last 2 terms—a position lasting 6 years and paying $17,500 a year. When Thompson appeared before a House committee in Washington recently to give the Texas version of what was happening to the supply of oil for Europe since the closing of the Suez Canal, Senate Majority Leader LYNDON JOHNSON came across the Capitol to pay his respects. Speaker SAM RAYBURN, who usually chooses his words carefully, introduced Thompson, a lawyer who has never been in the oil business himself, as "the man who knows more about oil than any other man in the world."

Commissioner Thompson, a stocky and bushy-browed man of 65 whose fiery red hair is now grizzled, accepts such accolades as a matter of course. He can remember less popular times. "It used to be when I went to east Texas," he told me in Austin, "they would meet me with shotguns. Now they give a barbecue for me."

This change is significant. The general (he is a lieutenant general in the Texas National Guard) has been more responsible than any other man living or dead for persuading the Texas oilmen, renowned for his free-wheeling ways, to accept a number of strict regulations. Almost from the time he spuds in his first wildcat, the oilman is hedged about with rules and restrictions. He drills in compliance with detailed specifications about spacing and well standards. If he strikes oil, his production is subject to complex strictures relating to the gas-oil ratio, maximum efficient rate of recovery, and so forth. Finally, once his well's rate of flow has been determined, he must comply with the system known as prorations, which fixes the number of days each month the State's 173,638 wells (as of mid-February) are allowed to produce. If he exceeds this "allowable," his hot oil may be seized and sold at public auction, the proceeds to be turned over to the State.

The hegemony of the railroad commission extends from the independents to the giant subsidiaries, such as Humble Oil, of the oil empires known as the majors—Standard Oil of New Jersey, for instance. The line of demarcation between the majors and the independents is a rather vague one, since the independents range in size from individual wildcatters—a declining breed—to multi-million-dollar companies which, like the majors, carry on their own refining and marketing operations. Mainly, however, the independent is strictly a producer who disposes of his oil to the majors. Twenty-five years ago, when Commissioner Thompson began his career as oil umpire, it was the independents who met him with shotguns.

But the independents put their shotguns away a long time ago. Indeed, they gave every indication of being in complete accord when the railroad commission, in spite of urgent outcries about a pending breakdown in the oil lift to western Europe, refused for 3 months to add a few more producing days to the monthly allowables. Under prorations the wells were producing only 15 or 16 days a month. According to the commission's estimate, an additional million barrels a day could safely be taken from reserve capacity. (There are 42 United States gallons in a barrel of oil.)

Outsiders were puzzled by the turnabout that took place at the time of Suez in Texas' monthly ritual for adjusting its oil flow. Before the blockage of the canal in November, both the independents and the railroad commission had been complaining vociferously that the majors, who purchase and market the bulk of Texas oil, were holding the lid down too tight on production. Then suddenly the roles were reversed. The majors wanted more production but the independents were quite content to let the squeeze get tighter and tighter.

At the railroad commission's regular meeting on February 19, which I attended, there was little outward display of the dramatic conflict that had arisen over Texas oil. The buyers rose one by one to make their nominations. The most eloquent description of Europe's urgency—and of the case for raising the lid on production—came from the spokesman for Standard of New Jersey's subsidiary: "Humble Oil has a firm demand for 18 days and the capacity to move it." When the hearing was over, scarcely 3 hours after it began, the commissioners retired briefly and then announced that March allowables would be raised to 18 days. It meant a belated increase of approximately 210,000 barrels daily, which experts estimated would go a long way toward closing the gap in Western Europe.

Though the winter's oil controversy has had many effects in international relations, it didn't really have much to do with western Europe at all. Actually, it was part of a civil war being waged inside the American oil industry, with domestic crude pitted against the vast new wealth of foreign crude held by some of the majors. Suez merely provided the opportunity for a showdown—a chance for the independents to apply some pressure while the oil situation was tight. Out of it they emerged with a shining trophy—the January price boost of 35 cents per barrel on domestic crude. But there is every prospect that the fighting will be renewed with mounting fury.

THE BAD OLD DAYS

When General Thompson came to the commission in 1932 "Dad" Joiner's strike in the east Texas field 2 years earlier had let loose a vast new flow of oil that was glutting

the market and sending prices plummeting to as low as a dime a barrel. The discovery in east Texas raised acutely the problem of the independent in the oil business. An entire countryside was gushing oil; the Woodbine sands, stretching 10 miles wide and 60 miles long, passed under whole towns and villages, with their checkerboard patterns of landownership. It was just too big for the majors to control the way they had controlled Spindletop and the other large fields. Thousands of shoestring operators moved in, sinking wells and pumping oil as fast as they could with no regard for the consequences.

Governor Ross Sterling, who had once been president of Humble Oil, ordered the field shut down, and sent in National Guardsmen to quell the angry oilmen. When the courts refused to sustain this course of action, Sterling persuaded Thompson, who had had an illustrious record battling the utilities as mayor of Amarillo, to take an interim appointment to the railroad commission, which includes oil and gas among its wide variety of regulatory chores.

Thompson came to the commission, as he says, for 6 weeks and has stayed for 25 years. Gradually he and his fellow commissioners managed to put teeth in the State's statutes concerning physical waste of oil reserves and to bring a fair amount of order out of chaotic exploitation.

The problem has been uniquely difficult. In this country, the man who finds oil beneath his land can demand for it the royalty payment that in most oil-bearing countries goes to the national—or the sheik's—treasury. However, since the oil can be drained from beneath his land, a neighbor's well, taking advantage of the "law of capture," may deprive him of his wealth. In east Texas the anxiety to prevent this caused a frantic race to remove the black gold, one well being drilled to offset another, sometimes in such close proximity that the legs of their superstructures were intertwined. Of the first 24,000 wells drilled in east Texas it has been estimated that at least 21,000, costing $250 million, were unnecessary for efficient recovery of oil.

Over the years, the commissioners have made great progress in establishing more sensible spacing requirements. With the help of technicians they maintain surveillance all across the State, regulating the field "allowable" and the individual well "allowables" to prevent too rapid loss of pressure. (Pressure must be carefully controlled in order to get the maximum amount of oil out of the ground.) They have curtailed the needless flaring of natural gas and they have offered producers incentives to undertake secondary recovery practices that have considerably increased the amount of recoverable oil. Because of conservation practices the east Texas pool, which people once thought might produce 1.5 billion barrels, already has pumped twice that amount, with another 2 billion or so yet to come.

But the railroad commission has carried its fight against waste much further. Holding that the accumulation of excessive supplies of oil aboveground can lead to wasteful deterioration, it undertakes the proration of wells in accord with market demands. Here it has the aid but not the interference of Federal authority. The Interior Department's Bureau of Mines prepares a monthly market estimate which, along with the "nominations" of the buyers, serves as a guide for fixing market demand. The Connally "Hot Oil" Act, sponsored by the former Texas Senator, applies Federal sanctions against oil sold in interstate commerce in violation of State prorations.

Thompson was both a prophet and a pioneer in bringing this unique regulation to the oil industry. But he never had much patience for the intrusion of Federal controls, apart from the Connally Act sanctions. His feud with Secretary of the Interior Harold Ickes, who toyed with the notion of a permanent petroleum code after the NRA was knocked out by the Supreme Court, was long and ill concealed. Once Ickes sent a peremptory telegram ordering him to shut down a well that had gone wild in a disastrous blowout. Thompson replied by telephone, "Mr. Secretary, I have read your telegram to the wild well in Conroe and it is still blowing. Do you have any further suggestions?"

To independents who might be tempted by the idea of Federal regulations, Thompson warned that a "great monopolistic agency in New York would whisper over private wires down in Washington and tell us what we could do here in Texas." He even found occasion to warn President Roosevelt, who apparently had a liking for the peppery Texan, that some of his assistants had wrong notions about the oil business.

Thanks as much to Thompson as to anybody, the Federal Government has never played much of a role in the oilfields. The Interstate Oil Compact, which binds together a number of oil States, is purely a voluntary and permissive arrangement with no power to enforce anything. California, the second largest oil producer, is not even a party to it. Few member States carry out prorations as strict as those of Texas.

"Actually, we in Texas have to hold our umbrella over the whole oil business in this country," the head of a large independent company in Dallas told me.

The main reason the loose confederacy has managed to work so well is simply that half of the discovered oil reserves in this country are in Texas. The big umbrella that Thompson helped set up protected the oilman very well from the storms that buffeted his industry. It provided shelter for even the smallest independents, since the prorations guaranteed their wells a proportionate share of the market.

A CURIOUS INCONGRUITY

"In Texas we do not permit price to even be discussed at our hearings," General Thompson declared during a speech in Houston on January 15. "We are purely a physical-waste-prevention commission." Back when the Interstate Oil Compact was being drafted, he supported heartily the inclusion of article V, which specifically disclaims as the compact's purpose the stabilizing or fixing of prices.

Thompson may well have had his eyes on the antitrust laws. Critics point out that there is a curious incongruity in a regulatory system intended to equate supply and demand without taking price into account. They claim that the whole arrangement for oil, from the market reports sent out by the Bureau of Mines to the railroad commission's monthly meetings of buyers and sellers, constitutes collusion to fix prices that would be instantly prosecuted if undertaken by a private trade association. In 1955, Senator PAUL H. DOUGLAS, of Illinois, managed to tack on a proviso to the extension of the Interstate Oil Compact requiring the Attorney General to report whether article V was being violated. Mr. Brownell has so far avoided a direct answer.

A few years back a Senate committee labeled the oil arrangement "a mechanism controlling the production of crude oil * * * that operates as smoothly and efficiently as the finest watch." Certainly the net result has been price stability, accompanied by recurring increases toward which Thompson and his colleagues have shown themselves remarkably benign. Price cuts, on the other hand, have been a different matter. In 1938, for example, when Humble posted reductions ranging from 5 to 20 cents a barrel, Thompson hurried back from a National Guard encampment to Austin and got the other two commissioners to sign a 15-day shutdown order applying to every field in Texas. Then he called an emergency meeting of the Interstate Oil Compact Commission and persuaded four other major producing States to follow suit. Before the shutdown period had expired, Humble, its stocks depleted, was humble indeed. It rescinded the price cut, whereupon the railroad commission promptly allowed the fields to resume production. It would take a callous oil company to fail to heed the lesson.

IT'S HARD TO GET RICH ANY MORE

Thompson, for one, seldom makes any bones about the fact that he believes higher prices are good for oil conservation. "You can afford to spend more money to recover $4 oil than you can on $2.50 oil," he was quoted in Oil Daily a few years ago. Queried by Congressmen during his recent testimony, he announced that he believed the January price rise was "long past due."

In this belief he is, of course, in agreement with a good many Texas oilmen, who are complaining constantly these days that the economic incentive has gone out of the oil business. Today's cost of exploring and developing oil, they argue, is greater than the price paid for crude, even after the January rise. The wells are getting deeper, the chances of hitting a sizable pool much smaller. It's only because most of the oil now being sold was explored and developed a decade ago when costs were lower, the oilmen argue, that there seems to be a profit at all.

They go on to claim that prices for other products are fast outrunning the price they get for oil. They point to a chart prepared by the Independent Petroleum Association of America in January, showing a 21-percent price increase in crude oil since December 1947, compared to 77-percent and 87-percent increases in oil-well casing. (The figures were carefully chosen. If we use 1945 as the base year, crude-oil prices have gone up 162 percent compared to a 130-percent rise in finished steel.)

The hard-luck story has endless variations. Bunker Hunt, son of the fabulously wealthy Texas independent H. L. Hunt, told me emphatically that the oil business was going to dry up unless it was kept "plenty prosperous." He said that it takes 5 or 6 years to pay out on a well drilled nowadays. "You can build a factory that will do that good." Why hadn't there been any signs of a slowdown? "The truth of the matter," Hunt replied, "is that the little independents don't realize how tough the oil business has gotten. Everybody keeps looking at his hole card and doesn't see what's happening to him."

Hunt's dire picture seems overdrawn. One still hears stories in the oil meccas of Texas about successful entrepreneurs who started from scratch. The Nortex Oil & Gas Corp., of Dallas, for example, began 3 years ago with only a handful of leases for assets and a staff of bright young college-trained petroleum experts. Today it has gross assets of more than $4 million, excluding oil reserves, and is growing fast.

James Wendover, Nortex's young president, a graduate of Harvard Law School who specialized in tax work before he ventured out on his own, points out candidly that success for the newcomer lies in the complex workings of our Federal tax system. About a quarter of Nortex's business is in drilling wildcats for a profit and a percentage, with money put up by other people, most of them in the 90-percent tax brackets. Since dry holes are allowed a 100-percent tax writeoff for the investor, nobody stands to lose very much. When they hit, there is the 27.5 percent depletion allowance, or, alternatively, the investor can sell out and take a capital gain. Wildcatting is still a gamble, but many of the gamblers are playing with 10-cent dollars.

The lure of wildcatting is widespread. When General Eisenhower was NATO commander, he put $20,000 into a drilling "pool" at the instigation of his good friend Sid

Richardson. After the 1952 election he received in the mail a check for $60,000 as the first dividend on his investment. The President-elect, sensitively aware of his new position, returned the check and asked to have his original $20,000 sent back. Apparently one can still get a fairly attractive return on money invested in oil.

But the Texas oilman sounds one more note of gloom. Despite a record number of new wells drilled last year, new discoveries accounted for only about one-fifth of the total consumption. (Revised estimates of existing pools did put the total of additions to the reserve balance in the black.) This situation, the oilman argues, is certainly no cause for cutting domestic production. Instead, he claims, incentives must be given for new drilling.

COMPETITION FROM ABROAD

In the ordered world of the Texas Railroad Commission, one unruly problem has reared its head in recent years—the competition of foreign oil. Near the close of the Second World War, General Thompson was dispatched by Secretary of War Robert Patterson to survey the oil situation in the Middle East. As he flew over the deserts, he told me, he could see the sloping domes that indicate vast untapped reservoirs beneath. Within a remarkably brief span of years, proved reserves in the Middle East have mounted to more than five times United States reserves. The tiny sheikdom of Kuwait alone has greater proved reservoirs than the entire Western Hemisphere.

Thompson openly opposed the Anglo-American oil treaty proposed by the State Department in an attempt to deal with the new situation. It would, he charged, create an international organization to set oil quotas, fix prices, and regulate production. He had repulsed the attempt to set up Federal controls in the 1930's. He was equally adamant—and equally successful—in resisting international controls. The treaty died in Senate committee.

By 1948 Middle East crude oil began to enter the United States market in substantial amounts. To the Texas independent producer, all evil dates from the time of this invasion. In the past he aired his gripes against the majors but always with the comfortable assurance that, thanks to the beneficence of the Railroad Commission, they were all under the same umbrella. Today he no longer feel this certainty.

As a result of expanding interests abroad, the Texas independent has thought he could detect symptoms of the major's waning interest in him as a supplier. He has complained bitterly about the increasing numbers of his wells for which he couldn't get pipeline connections—an estimated 8,000 in Texas at the time of the Suez blockade. He has sworn loudly over the pipeline prorations—cutbacks over and above the Railroad Commission's prorations—which the majors have applied from time to time claiming insufficient storage capacity. He has charged angrily that cheap foreign crude was the real reason for the cutbacks and for the delay in price increase that he sought so determinedly.

The independents were among the first to line up at the door of Office of Defense Mobilization Director Arthur S. Flemming when Congress tacked the national-security clause onto the reciprocal-trade program in 1955. They came armed with a report by the President's Cabinet Committee on Energy Supplies and Resources Policy which concluded that anything above the 1954 ratio of imports to domestic production—16.6 percent, including crude and distillates—would impair the national security.

But though imports exceeded this barrier in 1955 and 1956, Flemming delayed taking action, calling on the importers to display industrial statesmanship and impose voluntary quotas. Finally, a formal hearing was held, and the matter was awaiting Flemming's decision at the time Nasser closed the Suez Canal. With obvious relief, Flemming laid the whole problem aside, declaring that except for the emergency he would have been obliged to recommend action—presumably quotas—to the President.

But nobody, least of all the Texas independent, feels that the matter has been settled. He points to the tremendous tanker-construction program, and to huge new refineries being built on the East Coast for the exclusive use of Middle East oil. He cites rumors that the British Petroleum Co. plans to step up its sales of crude in the American market, to recoup losses during the Suez crisis.

NO WORD FROM WASHINGTON

This, then, was the state of mind of Texas independents as the Middle East Emergency Committee, composed of representatives of 15 majors with international connections, issued a call for increased production. Hostility flared into open defiance when Humble and Magnolia, the latter a Socony-Mobil subsidiary, at first asked the Railroad Commission to suspend across-the-board prorations—a move, the independents suspected, to enable the majors to take the increase mainly from their own fields in the coastal regions. (The two companies later withdrew this incendiary proposal.)

All during this civil war, the role of the Federal Government has been strangely passive. Chairman Culberson remarked to me after the February meeting, "If President Eisenhower had called on us to boost allowables in the name of national security, we would have flooded him in oil within a week." But the call never came from the President or anybody else in high Federal authority. Shortly before the February meeting the Commission did receive a letter from ODM Director Flemming enclosing "for your information" a special supply-and-demand forecast from the Bureau of Mines. It was the first official communication on the subject of oil since the Suez Canal had been closed.

"YOU NEED A FAITH"

In Austin, I found General Thompson in his commission office, a cramped little room with shabby furniture offering startling contrast to the suites of the independent oil companies I had visited in Dallas and Houston. Thompson was in an affable mood. He discussed the early ordeals in east Texas and the long way oil had come since then. There had been times, one gathered, when he had been sorely tried.

But the general declared that he had always clung to one basic faith. "The Lord lets us find these things when we have brains enough to use them." It had been that way when the great Spindletop came through in 1901, only a short time after the internal-combustion engine had come along to make use of this vast new reserve. The east Texas field, once it was tamed, helped to fill the expanding needs of the automobile industry. Now there was the Middle East and Venezuela, and here again the problem was to maintain an orderly flow of nature's bounty. "As good stewards," Thompson said, "we should have the intelligence to conserve this wealth.

"You've got to have a basic philosophy in a job like this," the general concluded, "when you sit and listen to these men present their selfish little problems. Of course, you have to take care of them, but still you need a faith.

Undoubtedly, Thompson's faith has done much to bring order out of the chaos that the oil industry might have been. But the big question now is whether even such a tough and determined man as Thompson can be master of the situation any longer. The Texas umbrella just isn't big enough.

Public Housing and Local Taxes

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. O'HARA of Illinois. Mr. Speaker, in February of this year the Chicago Housing Authority paid $722,976 to the city of Chicago as the authority's contribution to local taxes for 1955. This was over three times the amount of taxes paid by private owners before the property was taken over for public housing. I am sure my colleagues who may have been inclined to accept without looking into the facts the charge that public housing does not pay its way in the matter of local taxes will be glad to get the real figures. Here is the complete factual recital as given in the March issue of Today, the CHA publication:

CITY'S PUBLIC HOUSING PROJECTS ADD THREE-QUARTER MILLION DOLLARS TO TAX REVENUE

A check for $722,976.91 was presented to Mayor Richard J. Daley on Monday, February 18, by Joseph P. Sullivan, Chairman of the Chicago Housing Authority. Payment represented the Authority's contribution to local tax revenue for the calendar year 1955 and is the largest in the history of CHA. The sum consists of 10 percent of all shelter rents (rents less charges for utilities) collected from tenants living in the 27 public housing developments in operation in 1955, plus residual income from 8 housing projects built with city and State funds.

The money was turned over to County Treasurer Herbert C. Paschen who will divide it among city and county taxing agencies in the same manner that real estate taxes are distributed.

This year's payment of $722,976.91 compares with $548,145.62 paid last year for 1954 an increase of 32 percent, reflecting (1) the addition of 1,767 apartments, (2) higher rents due to increased tenant income, and (3) the effects of a streamlined and more efficient renting procedure resulting in reduced vacancy losses.

While public housing is exempt from real-estate taxes, payments of a percentage of rents collected by the authority are made annually to local taxing agencies under agreements with the city. The current payment is more than three times the $236,300 total of real-estate tax bills issued to private owners of these same properties the year before CHA acquired them and rebuilt them with public housing.

CITY-STATE PROJECTS PAY 98 PERCENT OF FULL TAXES

Of the total payment, $197,391.80 came from eight small projects built to relocate families displaced by the city's renewal program. According to estimates by the county assessor's office, this sum is equal to 98 percent of the $202,053.57, which would have been billed in real estate taxes had the properties been in private ownership. Because these projects were built with outright grants of city and State money, there is no indebtedness to repay as is the case with the developments built with Federal assistance. By special agreement with the city, CHA's annual payment for these developments consists of not only 10 percent of rents collected, but also all residual income, after providing reserves for repairs and replacements, up to the amount of full real estate taxes. Before the projects were built, total

tax bills issued to private owners amounted to only $22,611.

The remaining $524,585.11 in the new CHA payment came from 10 percent of rents collected from tenants in 19 public-housing projects built with Federal aid. This is almost two and a half times more than the $213,689 billed in real estate taxes the year before the properties were redeveloped.

CHA payments "in lieu of taxes" are necessarily a year late because funds cannot be turned over to the local taxing agencies until the exact amount of rents collected has been verified by audit. The audits are not completed until several months after the end of the CHA fiscal year on June 30, but tax payments are based on the calendar year which ends 6 months earlier.

Correct Posture Week

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. WRIGHT. Mr. Speaker, the general standard of health among the citizenry of our Nation is a matter of increasing national interest. Since America's productive capacity is a composite of the individual capacities of all of our citizens, the general health and physical well-being of our people is important to the Nation.

As more and more diseases have bowed before the conquest of new discoveries and developments, we have seen witness to the inventive genius of a free people.

Yet, ironically, our very high standard of living has brought with it new maladies. No longer a Nation of woodsmen and plowmen, many of our people succumb to the dangers inherent in the easier and more sedentary life which we enjoy.

Surely any individual, group or official organization which is actively promoting better health for America's citizens deserves to have its contribution called to the attention of the Members of Congress.

For a number of years, 1 week has been set aside and observed throughout this Nation and Canada as Correct Posture Week. Sponsored as a public service by the chiropractic profession of America, this week is proclaimed by the governors of the States and by the mayors of our cities, and features events held by other groups interested in the well-being, growth and development of our national health standards. During this week, many teachers in the public schools place a special emphasis upon the importance of correct posture for schoolchildren.

This year, Correct Posture Week will be observed from May 1 to May 7. The national chairman of this observance this year is a constituent of mine, Dr. L. K. Griffin, of Fort Worth, Tex. Under leave, I am inserting his statement at this point in the RECORD:

STATEMENT BY DR. L. K. GRIFFIN

Today's high-speed, high-tension way of living demands the utmost from the standpoint of individual health. The stresses and strains of existence in modern society require that each person make a special effort to be in his best possible physical condition. There is no question that a great contribution toward better individual health—and thereby better living efficiency at home and on the job—is the contribution made by correct posture.

Poor posture is expensive and poor posture habits are responsible not only for many days of lost time, but for poor response to job needs and eventually for a shortened life of top efficiency. But correct posture provides so much in terms of better living that the chiropractic profession annually sponsors Correct Posture Week from May 1 to 7 in order to bring the benefits of posture improvement to the attention of all Americans. This is the time when chiropractors use every means of publicity to draw public attention to this primary aim of their profession. They believe, preach, and practice that correct posture will promote better health and appearance. In that belief we are in complete agreement with every branch of the healing arts, and we are sincere in our constant efforts to cooperate with all Americans in improving the standards of our national health.

It is encouraging to note that many agencies of our Federal Government have been in the vanguard of those advocating correct posture as a definite aid toward sound health and long life. These include, among others, the Children's Bureau and the Women's Bureau of the Department of Labor; the Department of Health, Education, and Welfare; and the White House Conference on Child Health.

THE WHITE HOUSE CONFERENCE

The White House Conference on Child Health, as early as 1930, recognized the importance of body mechanics in relation to health, as noted by the following quotations from its report:

"The part played by body mechanics, or posture as it is generally termed, in the health and well-being of the child, is another subject receiving more and more attention.

"While the majority of the medical schools give instruction on this subject, it is usually scanty or incidental and very inadequate. Definite information on the prevalence of bad body mechanics, its recognition as a casual factor in disturbances of health, and the methods of satisfactory treatment are needed.

"The idea that correct posture contributes to good health is based on the mechanics of the human body and is as sound as any principle that operates anywhere in the field of mechanics. The idea is gaining ground more rapidly now than ever before. And when it is finally accepted for its true worth by the whole populace, there will be a vast improvement in the health and vitality of men, women, and children everywhere."

The problem of poor posture and the low efficiency of workers which it brings on can be approached in two ways.

The first is a long, careful, and well-planned program to teach Americans how to walk and stand and sit in ways which will promote health and efficiency. We have such an educational program underway, and it is having its effect.

However, that takes time. Meanwhile, many postural faults can be corrected by proper care, or the bad effects can be modified or eliminated. In both programs individual doctors of chiropractic can play a decisive and important role.

OFFICIALS ENDORSE POSTURE WEEK

Without the wholehearted cooperation of the American people, Correct Posture Week would be a meaningless phrase. It is the wonderful assistance of school teachers and school authorities, of State legislatures, of governors and mayors, of Members of the United States Congress, and of the people themselves that has made Correct Posture Week an increasingly important observance in the United States.

Every year more and more officials at the city and State level proclaim its observance officially.

SECOND LARGEST HEALING PROFESSION

Chiropractic, as an organized professional body, is 62 years old, and now ranks as the second largest healing profession.

Chiropractic colleges are required to give 4,000 academic hours in a standard 4-year course to obtain approved ratings from the accredited committee.

Licensed by law in 44 States, District of Columbia, Hawaii, Alaska, Puerto Rico, and 5 provinces of Canada, there are some 25,000 chiropractors in the United States (for a population of 170 million), and 1,100 in Canada (for a population of 16 million). Chiropractic is an established but growing and dynamic profession, which has adopted high professional standards and ethics and is officially recognized as one of the four major healing professions in America by the Executive Office of the President of the United States, Budget Bureau, Washington, D. C.

A SIGNIFICANT CONTRIBUTION

This brief listing of professional training is encouraging, when we are told that one-half of all adults suffer from poor posture with resulting bad effects on health efficiency. The chiropractic profesison has made exhaustive studies which showed that 53 percent of adults and 76 percent of our children suffer from the effects of poor posture.

We may well conclude, then, that Correct Posture Week as sponsored by the chiropractic profession of America is a significant contribution to national health and welfare.

Active participation by everybody in observance of Correct Posture Week can bring many health benefits to the people of America.

Hungarian Independence Day

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. BYRNE of Pennsylvania. Mr. Speaker, before last October only a limited number of people were aware of what was happening among the satellite states of Eastern Europe. But today there is a different story, and the whole world joins in congratulating and commemorating this anniversary of Hungarian Independence Day.

Hungary was, as you know, geographically unfortunate. Europe's main railroad to the East and Near East ran through that country. It was indeed the passageway to Europe. As such its history is replete with the disheartening stories of conquest and occupation. Yet throughout its history Hungary has consistently proved its right to be considered among the bravest of all nations—large or small. No nation has demonstrated a more forthright love of independence. Thanks in part, perhaps, to its linguistic uniqueness, Hungary was able to maintain a cultural insularity, if not a political one, which it has sustained down to this day.

Courage is commonplace to Hungarians. And what we would consider

nobly courageous they take with the stoic nonchalance reserved to the brave. 1848 and 1956 are closer in essence than in time. The Hungarian rebellion of last fall will surely remain one of the most inspiring events in the history of mankind.

A curious similarity exists between the situations in 1848 and that of last year. Like 1848 resolute strength proved fruitless; but as in 1848 once more the villain in a play for freedom is Russia. Between October 23, 1956, and January 1, 1957, it has been estimated that 155,000 refugees fled their homeland to escape the unbearable burden of oppression and communism.

Hungary has given to America—indeed to the free world—a renewed confidence in itself and a new recognition of the perfidy of communism; it has demonstrated that mere barbaric, naked force cannot stifle the indomitable will for the most basic desires of humanity and freedom. It is with a sincere sense of the accomplishment of their forefathers that I humbly add my voice to the memory of Hungary on this, their day of independence.

A Time for Rebellion

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. ABBITT. Mr. Speaker, we hear, to my great satisfaction, on all sides, our people demanding a reduction in Federal expenditures. I think our people should be made to realize that the budget is prepared largely by people interested in spending Government funds. In many instances, the people in the department who prepare the budget for that particular department are interested in seeing the department enlarged and its prestige increased.

We have seen in the press recently statements attributed to the Chief Executive to the effect that in preparing his budget he was merely requesting funds to carry out programs provided for by the Congress. My information is that the budget includes requests for funds for 13 new programs requested by the executive department and have never been authorized by the Congress. In other words, these new programs are being requested by the executive branch both as to authorization of the program and appropriation of the funds.

Mr. Speaker, a very timely editorial appeared in the Richmond News Leader of Monday, March 18, 1957, entitled "A Time for Rebellion." I am in accord with this editorial and, as one Congressman who over the years has voted for reduction in Federal expenditures, I would like to call to the attention of the people of America this fine editorial in the hope that it will be of great assistance in helping the Congress to vote real reductions in the monstrous Federal expenditures requested by the executive branch and in many instances at the request of Members of the Congress.

The editorial is as follows:

A TIME FOR REBELLION

The time is at hand, if the American people only will mobilize their latent powers, for a massive rebellion against excessive Federal spending. The opportunity exists—it needs only to be seized and explointed—to cut the Federal budget drestically. To judge from the reports of Washington observers and the statements of Congressmen, never before has a smoldering resentment been so close to flame.

It is easy enough to understand why this should be so. Despite a widespread and continuing prosperity, thousands of families are feeling a serious pinch. They find it difficult to save, to get aside capital. More than this, the growing revolt evidences a simple longing for individual freedom, the natural desire of men who labor to enjoy the fruits of their toil. And perhaps there is this element also—it may be wishful thinking—that growing numbers of Americans are turning against Federal usurpation of State and local prerogatives.

Whatever the causes, the voters back home, in unprecedented numbers, are demanding that the budget be cut and that Federal taxes be reduced.

Can these ends be achieved?

Of course they can.

For our own part, we grow increasingly weary of the bland assumption that 70, or 75, or 85 percent of the budget is "untouchable," in that it represents expenditures for the national security. There is one item, and one item only, in the budget that is in fact beyond the reach of Congress; that is the $7 billion interest on the Federal debt. The rest of the budget, amounting to almost $65 billion, can be reduced at a thousand points.

And what are some of these expenses for "national security" regarded as sacrosanct? The budget of the Atomic Energy Commission is among them. And while most persons would agree, however reluctantly, that the design and construction of atomic weapons must continue, Congress may properly challenge the millions of dollars earmarked for research in commercial electric power reactors. When Americans are so greviously burdened by taxation, we may ask if it is in fact "essential to the Nation's progress" that vast funds be expended "in order to help other nations develop their own atomic energy programs."

It may be necessary—it probably is necessary—to continue some form of military aid to 38 nations, but what of the $2 billion budgeted "to continue to help our friends overseas better their economic conditions"?

President Eisenhower has asked a large sum for "overseas information services and cultural exchanges designed to facilitate sympathetic understanding of American life, culture, and institutions by other peoples." In 1956, we were taxed $111 million for such programs; in the current year, we are taxed $133 million for such programs. Mr. Eisenhower has requested $175 million for the next fiscal year.

May we inquire if it is indeed an "urgent national responsibility" that $250 million be appropriated for new slum clearance? Why should we be compelled to provide $120 million in subsidies to ship operators wanting to replace their ships? Why a $175 million loan fund for college housing?

It is high time for revolt against an agriculture budget now approaching $5 billion a year, more than half of it for price supports and soil-bank payments. We may seriously question if it is a proper function of Federal Government, under some perverted construction of the general-welfare clause, to refinance farm debts and to make loans to farmers whose farms are smaller than family size.

The briefest glance at the budget discloses appalling new sums for expansion of research and education in a dozen fields, for new ventures in socialized public power, for $91 million in subsidies to the mining industry. Why are we frittering away even a small sum in a Council on Youth Fitness? The ill-advised program of Federal grants for local sewerage construction was adopted only last year; surely it is not so deeply entrenched that the program cannot be speedily abolished.

This budget is as fat as a Poland China pig; it is full of lard from top to bottom. If the Congress were to put a ceiling of $60 billion on Federal spending, including interest on the debt, the world would not come to an end nor the safety of the Republic be jeopardized. Once the armed services were compelled to economize, they might cease some of the extravagant and wasteful practices so severely condemned by the Hoover Commission. And if Congress could get over its panic at the veterans' lobby, it might be possible to make some thoroughly merited reductions in the overinflated $5 billion budget for veterans' benefits.

Readers of this newspaper who are sick of wasteful Federal spending can make their wishes known for the cost of a 3-cent stamp. They can write their Congressmen at the House Office Building in Washington; they can write Senators HARRY F. BYRD and A. WILLIS ROBERTSON in care of the Senate Office Building.

Members of Congress are under constant pressure from groups wanting money spent. If a superior counterforce can be mobilized among angry taxpayers who want the budget cut back, the budget will be reduced. And with all the emphasis at our command, we urge Virginia's spokesmen on the Hill: "Cut it back."

The National Banking Act

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. MULTER. Mr. Speaker, I have today introduced a bill to protect the integrity and independence of national banks by strengthening the laws relating to ownership of stock in such banks. If we are to prevent monopoly in finance and banking, corrective legislation is necessary before it is too late.

Our distinguished colleague from North Dakota [Mr. BURDICK] has introduced a similar bill, H. R. 199. It is referred to in the article which follows.

My bill retains the principle of Mr. BURDICK's bill, but adds important enforcement features. I hope the bill will be enacted at an early date.

I commend to the attention of our colleagues the following article by Emil E. Placek, chairman of the board, First National Bank, Wahoo, Nebr. Mr. Placek's article appeared in a recent issue of the Independent Banker, and is as follows:

LEGALITY OF CHAIN BANK STOCK OPTION DEALS CHALLENGED

(By Emil E. Placek, chairman of the board, First National Bank, Wahoo, Nebr.)

(EDITOR'S NOTE.—Challenged in this provocative article by Mr. Placek is the legality of stock option agreements signed by direc-

tors of holding company banks. He urges independent bankers to back the Burdick bill requiring that at least two-thirds of the outstanding shares of stock in a bank be owned by natural persons. Mr. Placek is Nebraska director of the Independent Bankers Association.)

(About the author: Born in a sod house in Milligan, Fillmore County, Nebr., Mr. Placek has been a bank president for 50 years. He was associated with four other banks before coming to the First National in Wahoo in 1932. He was graduated from the University of Nebraska Law School in 1897. In addition to banking, he has been in public office, having been mayor of Wahoo for 4 years, 4 years in the State Senate and 4 years as a county and probate judge.)

The National Banking Act was passed in 1863 and created the office of the Comptroller of the Currency. The act authorized the organization of a local national bank by any number of natural persons, but not less than five in number, to engage in the business of banking in any State or Territory. No bank so organized could issue or circulate currency unless it was secured by Government securities.

Banks created by the National Banking Act were designed to be local institutions and independent of each other, but under the control and supervision of the Government.

The United States Compiled Statutes of 1901, section 5133, provide for the formation of National Banking Associations by natural persons and specifies that articles of organization were to be signed by the persons uniting to form the association.

If only natural persons can organize a national bank, the logical presumption is that only natural persons can operate a bank.

Section 5134 of the 1901 compilation provides necessary requisites of organization such as name of bank, place of business, location, name and place of residence of each stockholder and number of shares held by each.

Section 5140 specifically provides that every director must own, in his own right, at least 10 shares of the capital stock of the association. Without such ownership, he cannot be a director. The director, too, must take an oath that the stock is not hypothecated in any manner whatsoever.

FALSE SWEARING CHARGED

My contention is that a director in a bank owned and controlled by a bank-holding company, to whom stock is issued under an option agreement, is guilty of perjury when he swears his stock is not hypothecated in any way.

Bank holding companies were organized to evade and circumvent the National Banking Act and the laws of the various States which prohibit branch banking. A bank holding company buys all of the stock of a bank and then issues qualifying shares to dummy directors with an option agreement giving the holding company the right to repurchase the stock.

Such stock must immediately be endorsed by the dummy director and be delivered to a bank owned and controlled by the holding company. There the stock is held in escrow, so the dummy director never has possession of the stock certificate.

If the holding company chooses to exercise its option to purchase, it may do so simply by mailing or delivering to the bank having the stock in escrow a notice of intent to purchase, accompanied by payment of the purchase price.

The stockholder, or dummy director, is not even notified, except that his services are no longer required. For his stock he receives only the amount originally paid in. He gets none of the accumulated profits earned during the period of his employment. He does not even get the money he paid in until he surrenders his copy of the option agreement.

If the stockholder dies while the stock still is held in escrow, the stock does not become part of his estate. The holding company exercises its option and returns the purchase price to the estate.

OPINION BURIED

On November 6, 1911, Frederick W. Lehmann, in his capacity as Solicitor General of the United States, delivered an exhaustive opinion and held that holding companies are illegal. For some unknown reason, the opinion was pigeonholed. Finally, after 20 years, the opinion was ordered printed in the CONGRESSIONAL RECORD at the request of Senator Carter Glass, of Virginia.

Since Congress recently passed legislation regulating bank holding companies, it may be necessary to pass further legislation requiring that at least two-thirds of the outstanding shares of stock in a bank shall be owned by natural persons.

Such a bill has been introduced in the House by Representative BURDICK, of North Dakota. The bill is H. R. 7056. It is up to the independent banks of the Nation to press for passage of such a bill.

The only other alternative is to bring an action charging that directors in banks owned by a holding company are not qualified directors, because they do not own the stock in their own right under the option agreement they are required to sign.

The proper procedure would be for the Comptroller of the Currency to have the Department of Justice bring such an action.

The Comptroller and the Attorney General take the position, however, that the question was settled in the Federal case of *Transamerica Corporation* v. *Parrington, et al.*, the stockholder had possession of the stock, which is not true in the option agreements being signed now. Furthermore, the case was not appealed to the United States Supreme Court, which should pass on the whole matter.

After reading the *Transamerica* v. *Parrington case*, I am firmly convinced it was a friendly suit, and for that reason there was no appeal.

(EDITOR'S NOTE.—Reproduced below is a copy facsimile of the agreement cited by Mr. Placek in his article. The copy was obtained from the office of J. L. McLean, director of banking, Lincoln, Nebr., where it is a public record. The matter in brackets, for emphasis, was supplied by Mr. Placek.)

"This agreement, made and entered into this ——— day of ————, 19—, by and between Northwest Bancorporation (hereinafter called the company), party of the first part, and ———— (hereinafter called the shareholder) party of the second part,

"Witnesseth that—

"Whereas the company is the owner of a substantial amount of the common stock in ———— (hereinafter called the bank) and has this day agreed to sell and assign to the shareholder certain shares of said stock (said shares hereby so sold being hereinafter sometimes called shares of stock), for the consideration hereinafter set forth, and

"Whereas as an inducement to the company to sell said shares of stock to the shareholder and as a part of the consideration for the sale thereof to him, the shareholder is willing to make the agreements and promises hereinafter contained:

"Now, therefore, in consideration of the premises and other good and valuable considerations, the receipt and sufficiency whereof are hereby acknowledged, it is agreed by and between the parties hereto as follows:

"1. The company does hereby sell and assign to the shareholder ——— shares of the common stock of the bank and contemporeaneously herewith has delivered to the shareholder stock certificate No. ———— issued by said bank for said shares of stock.

"2. The shareholder does hereby purchase said shares of stock and contemporaneously herewith has paid to the company as the purchase price thereof the sum of ———— dollars ($ ————).

"3. [(A) The shareholder does hereby give and grant unto the company an absolute option to repurchase said shares of stock,] together with any and all additional shares (as hereinafter defined) and together with all rights appertaining to said shares of stock and additional shares, whether in the nature of subscription rights or otherwise, for a purchase price to be determined in accordance with the provisions of subparagraph (B) of this paragraph 3. The term additional shares as used in this agreement shall include all shares purchased by the shareholder pursuant to preemptive rights arising by reason of his ownership of the original shares of stock hereby sold and of any additional shares and all shares received by the shareholder as stock dividends from time to time upon said shares of stock and upon any additional shares, it being the intention of the parties hereto that said option shall cover and include all shares in the bank owned by the shareholder from time to time in any manner derived from the original shares of stock hereby sold and representing the proportionate interest in the bank which on the date hereof is represented by said original shares of stock.

"(B) The [aggregate purchase price for the original shares of stock and all additional shares, however acquired by the shareholder, to be paid upon the exercise of said option by the company shall be the sum of (a) $——, being the amount paid by the shareholder for the original shares of stock,] and (b) the issue or subscription price paid by the shareholder for the additional shares, if any, which he shall have purchased pursuant to preemptive rights arising by reason of his ownership of the original shares of stock or of any additional shares and shall then own.

"[(C) Said option may be exercised by the company upon or within 6 months after]

"[(a) the date upon which the shareholder shall for any reason cease to be a director of the bank,]

"(b) the shareholders of the bank shall have voted to authorize the consolidation or merger of the bank with any other financial institution, the assumption by any other financial institution of the deposit liabilities of the bank, or the voluntary liquidation of the bank, or

"(c) the date upon which the holdings of the company in the common stock of the bank shall be reduced by sale or otherwise to an amount representing less than 51 percent of the outstanding common shares of the bank.

"The shareholder may at any time make written request that the company exercise said option and the company may upon or within 30 days after the receipt by it of such written request exercise the same but, unless theretofore exercised by the company, said option shall terminate and become null and void 30 days after receipt by the company of such written request.

"[Any exercise of this option may be made by the company by mailing or delivering to Northwestern National Bank of Minneapolis, Minneapolis 2, Minn., a notice of the company's intention to exercise the same accompanied by the payment of the amount of the purchase price determined in accordance with the provisions of subparagraph (B).]

"(D) The shares of stock and any additional shares shall be registered in the name of the shareholder upon the stock books of the bank and at all times prior to the exercise of this option the shareholder shall have, enjoy, and exercise with respect thereto all the rights, privileges, powers, and duties of a shareholder of the bank, subject only to the terms of this agreement.

"(E) [The shareholder agrees that so long as the option in this paragraph 3 granted shall continue in force and effect, he will not sell or assign to anyone other than the company, or pledge, hypothecate, or otherwise dispose of the shares of stock or] ad-

ditional shares and that he will continuously remain the owner thereof in his own right. In order to prevent possible loss of the shares of stock or additional shares, the certificates representing the [share of stock hereby sold shall be endorsed in blank by the shareholder and delivered to Northwestern National Bank of Minneapolis for safe keeping and all certificates representing additional shares shall forthwith upon issuance be likewise so endorsed and delivered for safe keeping. Said Northwestern National] Bank of Minneapolis is hereby directed to hold and safely keep said [certificates and upon the exercise of said option by the company as provided in subparagraph (C) above, to deliver said certificates to the company and to deliver to the shareholder upon surrender by him of his copy of this agreement, the purchase price received by Northwestern] National Bank of Minneapolis.

"4. The shareholder agrees that any preemptive rights to purchase rights to purchase shares of the bank to which the shareholder may from time to time become entitled by reason of his ownership of the original shares of stock or of any [additional shares shall, if not exercised by the shareholder, be assigned by the shareholder to the company.]

"5. This agreement constitutes the only agreement between the company and the shareholder with respect to any of the shares of stock or additional shares and supersedes any and all prior agreements or obligations of either party to the other, howsoever arising or expressed, with respect to such stock, the dividends thereon, or any other rights derived therefrom.

"[6. This agreement shall inure to the benefits of and be binding upon the parties hereto and their respective heirs, personal representatives, successors and assigns.]

"7. This agreement has been signed in triplicate, one copy thereof to be delivered to Northwestern National Bank of Minneapolis and one copy to each of the parties hereto.

"In witness whereof the company has caused this instrument to be executed by its proper officers thereunto duly authorized and the shareholder has hereunto set his hand, all as of the day and year first above written.

"NORTHWEST BANCORPORATION,

Latins Standing Up Against Red Peril

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following article which appeared in the Washington Daily News of March 18, 1957:

CITIZENS NO LONGER COMPLACENT—LATINS STANDING UP AGAINST RED PERIL

(By Edward Tomlinson)

The Communists in Latin America once again are active.

But for the first time they are meeting with determined resistance from responsible citizens, as well as most of the governments.

BRAZIL SITUATION

In Brazil the Communist underground still is attempting to stir up trouble over the Kubitschek administration's agreement to permit the United States to set up a guided missile tracking station and radar communication facilities on the island of Fernando Noronha off the northeastern hump of the republic. They continue to circulate false stories about Yankee military penetration.

But the Brazilian Foreign Office has been knocking down the rumors with straightforward statements giving the facts and pointing out that Brazil intends to cooperate in a program of defense of the Western Hemisphere.

ARGENTINA SETUP

The government of President Pedro Aramburu in Argentina has been contending not only with the Peronistas, but Communists as well. The Reds have joined hands with the diehard followers of the former dictator to promote strikes, antigovernment demonstrations and spread confusion among the farm workers.

The Bolivian Government also is struggling against serious strikes and work stoppages, in which the Reds as well as other extremists are the ring leaders.

In Central America and Mexico, the people are no longer complacent about the dangers of communism. Last week prominent bankers, businessmen and civic leaders in Costa Rica gathered at a public luncheon to accuse the Partido Liberacion Nacional (the Party of President Jose Figueres), of promoting what they called "a class struggle in line with Communist ideas."

SCHOOL ACTION

Red propagandists and agents long have been active among Mexican students and professors in the big cities. Last May they organized several strikes in the leading colleges and normal schools. In several instances they provoked riots and violent demonstrations that almost got out of hand.

In the last few weeks large numbers of students in Mexico City have set up a strong anti-Communist front to expose and resist Red propaganda penetration. Leaders of the front charge that Moscow is promoting a "vast conspiracy to disrupt the national educational system."

The significance of all this is not so much the resurgence of Communist activities in Latin America, but that the decent people of the various countries and of all classes, at last are standing up and fighting the Red menace.

The Vision of the Gael

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. McDONOUGH. Mr. Speaker, with the spirit of St. Patrick's Day still in the air, it would seem appropriate that some remarks on that eventful occasion should be made today.

I am including in my remarks the following article from the Los Angeles Tidings which reviews the sentiment, cultural development, and search for intelligence and truth which has been characteristic of the Irish race for many centuries.

The contribution which the Irish have made to the world in the arts, literature and science is amazing considering the fact that Ireland has always been a small nation in comparison with the other nations of the world, but big in its generosity and contribution to the independence and freedom of mankind and to his intellectual and cultural development.

As this article indicates, everybody, regardless of nationality, wants to be identified with having a little bit of Irish in them on St. Patrick's Day:

THE VISION OF THE GAEL

Everyone boasts at least a drop of Irish blood on Patrick's Day. At festive gatherings, in speech and song, the saga of ancient wrongs and deathless glories will be retold, as long ago the tale was whispered beside the wayside hedge, before the humble hearth. Erin's tear and smile still mist the eye and lift the heart.

Someone has observed, perhaps an Englishman, that it is hazardous to write with realism of Ireland and her story. It is always surer and safer to be lyrical on the subject. We choose to be lyrical, especially after reading in an evening's sitting A Short History of Ireland by Roger Chauvire. Here is a Frenchman's testimony to the songs, the scholars, and the saints of Eire.

Ireland has been the land of songs from the dim days of the bards to Pierse and Plunkett in the glorious morn of the Easter martyrs. Sedulius had pride of place when Christian hymnology was aborning, and the earlier lyric and epic flights of her sons rival in imagination and vigor, if not in intensity, the later lament of the elegies when dread was over the land.

And Ireland has had her scholars, a host of them down the centuries in splendid array for the imperishable things of the mind. Her monks fed the flame of knowledge in Ireland's glorious age. They kindled anew the lamp of learning on the continent of Europe, after the marauding might of the barbarian pillaged and plundered. Her sons stimulated the intellectual zest of the medieval university with their devotion to the classics and their incisiveness in logic.

And this love of learning did not wane when doom blighted the land, but had prouder, if more pitiful, luster in the ragged hedgemaster spouting Latin and Greek to eager minds, beside the roadway, in bog and cave. With a price upon the head of him who taught and of him who learned, with a little fire to burn the scraps of lessons should the lookout's sharp eye weary, these generations, in penal servitude almost to the level of the brute, yet knew that the hope of freedom would not dim and could not die if fed with the faith and knowledge of Christian men. Other nations may tell of the genius of their sons in the splashed paint of canvas, in the spiralling devotion of stone. Only Ireland can boast of the heroism of the hedgemaster.

And saints—the little isle exudes an aura of sanctity in the innocence of her children, the strength of her martyrs, the purity of her virgins. And Patrick and Attracta and Brendan and Ita and Finbar and Columban and Bridget of Ireland, the whole Irish company of heaven, shall be names to give flight to the soul until time merges with eternity.

The Vision of the Gael has never been clouded with a surfeit of material things, and under the inspiration of these holy

saints of God, the Irish have wandered restlessly over the world, wedded to the things of God and vowed to sacrifice for the upbuilding of His kingdom. What continent, what island or even coral reef has not been shaken by their unconquerable faith, has not been charged with new-found faith in the flush of their devotion? The flower of her missionary sons and daughters looks now to Africa as the hope of the harvest, and Europe may see again other Columbans rescuing the nations from a newer and more sterile paganism.

If Ireland today has high and honorable place among the nations of the world, it is because her singers, her scholars, and her saints gave unending inspiration to her soldiers and statesmen, that right and honor and justice and truth might at long last prevail.

Statement on Railroad Retirement Bills

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. DAVIS of Georgia. Mr. Speaker, on January 31, 1957, I introduced two bills, H. R. 4194 and H. R. 4195, to amend the Railroad Retirement Act and the Social Security Act. The House Interstate and Foreign Commerce Committee began hearings on amendments to the Railroad Retirement Act on March 11, 1957.

I was privileged to present a statement before the committee in support of these bills.

Under unanimous consent previously obtained I insert my statement herewith:

STATEMENT OF REPRESENTATIVE JAMES C. DAVIS, FIFTH DISTRICT OF GEORGIA, BEFORE THE HOUSE INTERSTATE AND FOREIGN COMMERCE COMMITTEE ON RAILROAD RETIREMENT BILLS

Mr. Chairman and gentlemen of the committee, I appreciate very much your courtesy and consideration in extending me the privilege of appearing before your committee in behalf of the two bills I have had the honor to introduce and sponsor.

The first of these that I would enlist your consideration of is H. R. 4194.

This bill has three major objectives: (1) It repeals the dual benefit restrictions on spouse's annuities; (2) it allows survivor benefits under both the Social Security Act and the Railroad Retirement Act; (3) it removes the restriction on dual survivor benefits under the Railroad Retirement Act.

Under existing provisions of the Railroad Retirement Act the spouse of a retired railroad worker cannot receive the full spouse's annuity under the act if entitled to social security benefits, in which case the amount of the spouse's annuity would be reduced by the amount of such benefits. This is true whether the spouse has applied for such dual benefits or not. This restriction is equally applicable to a parent's insurance annuity under the Railroad Retirement Act. The spouse's annuity would be reduced by the amount of the parent's annuity.

Similarly an individual who is entitled to more than one insurance annuity under the Railroad Retirement Act as the surviving widow, widower, child or parent of a deceased railroad worker can receive only the one of such annuities which is the largest.

Finally, an individual cannot receive any social-security benefits (including a lump-sum death payment) as the survivor of an employee if he is entitled to an insurance annuity under the Railroad Retirement Act on the basis of the wages of the same employee.

This bill which I have introduced would remove these restrictive provisions of the act so that in no case would an individual lose any part of the social-security benefits to which he may otherwise be entitled merely because he is also entitled to a railroad annuity. Also an individual would not lose any part of a railroad annuity to which he is entitled merely because he is also entitled to a social-security benefit or to another railroad annuity.

The people of this Nation that have been most adversely affected by the inflation of the past 15 years are those who are or have been dependent upon pensions and annuities for their livelihood.

We all know what has happened to the value of the dollar. Its purchasing power has been reduced at least 50 percent. The majority of the Railroad Retirement Act was enacted in 1937. Compare the 1939 dollar with 1957. See what today's dollar buys in comparison with what it bought in 1939. It is unrealistic to contend that one can even exist today on the same amount that provided a comfortable living less than 20 years ago.

At a time when an individual's earning power has decreased or vanished entirely it is an impossibility for him to survive on a fixed pension or annuity that has failed to keep pace with the inflation in the value of the dollar.

We must not allow the living standard of our pensioners and annuitants to be reduced below a mere subsistence. This is especially true with respect to those annuities which have been purchased with sound dollars.

It is our duty to remove the restrictive provisions of the Railroad Retirement Act that would prevent a wife from receiving a social security benefit that she has earned solely because her husband may have earned an annuity for her by his service with a great industry. My bill would do only this. It would provide equity where it is most needed.

I have many retired people in my district who find it increasingly difficult to make their annuities meet the requirements of daily living. It is for this reason that I urge the approval of this bill. It will allow some of them to increase their annuity by an amount equal to that which they would otherwise be entitled to receive under the Social Security Act were it not for the present restrictions.

The second bill which I urge your favorable consideration is H. R. 4195. This bill would amend section 2 (a) (4) of the Railroad Retirement Act which presently requires certain permanently disabled individuals to attain the age of 60 years before they may receive their annuities. My bill would revise this section so as to lower the age limit to 50 years.

Here again we must consider the change in the situation of our country. Today the qualifications for employment of persons beyond the age of 50 have changed so very much since the enactment of the Railroad Retirement Act that we must give consideration to such present conditions. In the not too distant past an individual could live adequately on a very small income. Today that income must be increased.

This amendment to the act would allow a physically disqualified railroad employee with 10 years' service to receive his full pension at the age of 50 years whereas now he must wait until he reaches the age of 60.

Here again, I would point out that I have many people in my district that are adversely affected by the present restriction and I would seriously urge favorable action upon this bill so that the Government might do economic justice to these worthy individuals.

Finally, Mr. Chairman, I would urge your approval of these bills in fairness and equity for these people who have to bear the burdens of inflation and decreased earning power in a period that has seen the cost of living persistently increase month after month until pensions and annuities that in the past provided a decent living today hardly provides a subsistence level.

Trinity Partnership Project

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. GUBSER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following letter in opposition to my stand on the Trinity partnership project which comes from Mrs. Grace McDonald:

CALIFORNIA FARM RESEARCH AND LEGISLATIVE COMMITTEE,
Santa Clara, Calif., March 9, 1957.

Hon. CHARLES S. GUBSER,
Member of Congress, 10th District, California, House Office Building, Washington, D. C.

DEAR CONGRESSMAN: I am afraid that we were unprepared for the blow dealt the Trinity project by Secretary of the Interior Fred A. Seaton's favorable report on sale of Trinity's "falling water" to the Pacific Gas & Electric Co.

The intent of the Congress when the proposal was first made in 1955 seemed so clear, as spelled out July 27, 1955, in the policy statement submitted by the Senate Irrigation and Reclamation Subcommittee, and the need for transporting Trinity water south, interconnecting with the San Luis project, so much more acute today than it was even a year and a half ago, that we were really shocked by the failure of the Secretary to guide himself accordingly.

It is likewise difficult to understand your support for this twisting of reclamation policy. We had read newspaper reports of your position but not until we were able to thoroughly absorb your January 31, 1957, statement which appeared in the January 31, 1957, CONGRESSIONAL RECORD did we feel qualified to take issue with you.

1. You note "that the first two contracts for the Trinity project have exceeded the Bureau of Reclamation's estimates by more than 30 percent" and from this you assume that the public will realize proportionate savings if the power facilities are developed and distributed by a private agency.

It seems academic to call to your attention that we are operating in an inflated economy, aggravated, for California especially, by a new series of increased transportation costs for everything which must be imported into this State; that living costs have reached a new high and that it is inevitable that wages must follow with resulting increases in each new contract let by the Bureau.

2. You pose "public ownership" against what you choose to call the free-enterprise system, but there is no question of public ownership involved. Federal installations such as Mare Island and the Ames Aeronautical Laboratory at Moffett Field are underwritten by taxation and whatever can be saved in their operation by sale of hydroelectric power at replacement cost plus interest versus sale of hydroelectric power to

cover such costs plus a profit to stock and bond holders is in the public interest.

As a farmer who understands what irrigation costs mean to your fellow farmers in our semiarid state, you must be aware of the fact that whatever the Pacific Gas & Electric Co. proposes to pay for Trinity hydro will be reclaimed in higher rates to farmers for pumping charges and similarly higher rates to industry and housholders in Pacific Gas & Electric Co.'s service area. I assume that you know that on February 8, 1957, Pacific Gas & Electric Co. applied to the California Public Utilities Commission for permission to raise electric rates 6 percent at an annual increased cost in electric bills for its customers of $16,600,000.

Do you propose that the cities of Santa Clara and Palo Alto in your district turn over their electric distribution systems to private ownership and thus forfeit their present policies of operating such systems at cost for the benefit of their taxpayers?

Or that the Sacramento Municipal Utility District waive its historical right to be given preference in sale of hydroelectric power from water stored and passed through generators where reclamation projects have been authorized by the Congress such as the Central Valley project?

Or that the agricultural wealth of California which depends on irrigation and has been expanded and protected by interest-free money and a portion of revenues from sale of hydroelectric power from Feedral projects be penalized by removing such provisions of reclamation law?

Do you consider it "good business" for the Federal Government to have to buy back its own hydroelectric power to transfer water from its source, where it is surplus, to its ultimate use, such as the west side of the San Joaquin Valley or Santa Clara and San Benito Counties in your own district, at a price which first must have interest on bonds privately floated and an assured rate of return to stockholders as a lien before the public interest of irrigationists in areas of need are considered?

3. You state: "If public power were to serve all the people, perhaps I could find some argument to the public-ownership argument."

Here, again, you beg the question by stating: "But our power needs are so tremendous that even the wildest advocate of public power cannot hope for 100 percent ownership by Government."

Have you studied the rate maps issued by the Federal Power Commission, Mr. GUBSER? If you had, you would find that wherever reclamation projects of multipurpose scope include development and sale of hydroelectric power (even after fully covering construction amortization cost, replacement cost, operating cost, and interest on investment), the public which purchases private power in the area—the entire public—benefits through lower rates because publicly generated hydro, fully self-liquidating, establishes a yardstick and so keeps private rates in line, even though private rates assure investors a rate of return adequate to meet the obligations of the private company.

The much-advertised "lower rates" for electricity in California are directly related to the proximity of publicly generated hydro from the Central Valley project in the area north of the Tehachapi and from the Colorado River project in southern California.

Contrary to your conclusions that "low rates which are made possible by subsidies and tax exemptions" are "at the expense of other taxpayers across the country," may we point out:

1. Low-cost electricity means stimulation of new industries in the low-cost areas and a sharply increased use of electrical appliances which are extremely beneficial to business in those areas, both of which mean increased taxes to communities, the State and the Federal Government.

Facts and figures are available from the Bureau of Reclamation in every area where multipurpose reclamation projects are operating showing their tremendous wealth-creating stimulus. When any community prospers the entire Nation including all the Nation's taxpayers benefit thereby.

2. Cutting Trinity power off from an integrated power grid for the whole Central Valley project, as proposed in Secretary Seaton's "partnership with P. G. & E." plan, would deprive the entire service area of its maximum supply.

3. Instead of 650,000 kilowatts of energy available for local agencies eligible for such power under reclamation law, including various Army, Navy, and Air Force bases in California, the partnership plan would produce no more than 400,000 kilowatts, as a result of which the Federal Government itself, for its own installations would be paying $71 million a year more annually for required electricity.

4. The basic purpose of the Trinity project and of its integration with the entire Central Valley project and its extension south via the San Luis Reservoir, would be frustrated, because project pump lifts and irrigation needs would be subordinated to private power peak needs and the regulation of seasonal supplies during flood peaks and irrigation peaks would be unbalanced.

Our committee has consistently and constructively supported every phase of multipurpose development of our river basins during the 16 years of our activity; the American River project; the Sacramento canals; the Trinity and the San Luis yet to be completed.

At a time when California's population has reached 14 million, with an estimated 20 million by 1970, our committee considers the Seaton partnership proposal a dangerous step threatening the speedy and orderly development of our water resources.

At a time when the water table in our concentrated agricultural producing areas is dropping seriously, anything which will in any way impede transporting water as cheaply as possible to areas of need is a disservice to our farmers, to the national consumers of farm produce and to the economic prosperity of our State and Nation.

We are glad to be associated in support of a multipurpose Federal Trinity project with the California Water and Power Users Association, the Santa Clara County Water and Power Users Association, the Sunnyvale Chamber of Commerce, the California Municipal Utilities Association, and with the majority of California's representatives in the Congress, including Senator THOMAS H. KUCHEL, a member of the Senate Committee on Interior and Insular Affairs and Representative CLAIR ENGLE, chairman of the House Committee on Interior and Insular Affairs.

We sincerely hope that you will find it possible to adopt a similar position.

We would appreciate having this statement placed in the CONGRESSIONAL RECORD.

Very truly yours,

Mrs. GRACE MCDONALD,
Executive Secretary.

Christ and Civilization

EXTENSION OF REMARKS
OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. EDMONDSON. Mr. Speaker, recently the Subcommitee on Coal Research of the House Committee on Interior and Insular Affairs held two hearings in the State of Pennsylvania. At one of these hearings, members of the committee heard as a witness the minister of the First Presbyterian Church at Wilkes-Barre, Pa., the Reverend Jule Ayers, D. D. All of us on the committee were deeply impressed by Dr. Ayers' report upon the impact of a distressed industry upon community life. We were strengthened in our resolve to find some constructive answer, if at all possible, to the difficult problems of the coal industry.

On the Sunday following our second Pennsylvania hearing, Dr. Ayers delivered a memorable sermon, which a mutual friend in Wilkes-Barre, Mr. J. Muir Crosby, was kind enough to send me.

The sermon not only is significant because of its comment upon the effect of congressional hearings in the field, but more importantly because of the minister's analysis of the secret source of the stability of our American Government.

Under leave to extend my remarks I am making Dr. Ayers' sermon a part of this RECORD, in the hope that it will be of inspiration to many.

The text of the sermon follows:

CHRIST AND CIVILIZATION

(By the Reverend Jule Ayers, D. D.)

THE ENLIGHTENMENT INFLUENCE

There is a remarkable stability about the Government and the people of the United States of America. This was brought home to me this week in the city of Wilkes-Barre. On George Washington's Brithday several Members of the United States Congress came to our community to discuss with some of our leaders the subject of coal research. I wish that you might have met those men personally. They were sincere, able, intelligent, concerned and willing to work hard at their task of worthily representing the citizens of this great land. Just to be around them for a few hours was a privilege that I shall cherish always. The newspapers, television and radio stations have carried reports and impressions of our meeting together. Regardless of the exact and immediate effect of this visit, confidence in the processes and spirit of American democracy were strengthened immeasureably.

While these men were in town my mind recalled the career of the late Peter Marshall in the United States Senate. Up to the time that Dr. Marshall was Chaplain of the Senate, I never thought of that position as a very significant responsibility. To me it was just one more job that a clergyman was asked to perform. In fact after Dr. Marshall recovered from his first heart attack, and after he expressed the belief that he may have been spared for further service by God and that this service may have been in connection with the Senate, I thought that Dr. Marshall was just kidding himself. Now I know how wrong I was in my reactions. Those Congressmen got under my skin. They made me proud to be an American, and more sober and concerned in my own civic duties because they had been here.

The coins that we carry in our pockets have these mottoes on them: "In God We Trust" and "E Pluribus Unum." They mean that we trust in God. They mean also that out of many backgrounds and traditions we are one in purpose and in freedom.

How did we get that way? What is the secret source of the stability of the Government and people of the United States of America? Perhaps we cherish these mottoes about trust in God and about our essential unity because we have roots that go deep into the Old and New Testaments. The 33d

Psalm tells the story of the joy of the Hebrew people over their national deliverance from their foes in 701 B. C. This deliverance is seen as the work of God, and not of man alone. To those who trust in Him, God gives reinforcement that provides greater help than can come merely from armies and horses. The watchword of the Psalm is found in these words: "Blessed is the nation whose God is the Lord; and the people whom He has chosen for His own inheritance." (Psalms 33:12.)

We do not claim that the American people or the American Nation is precious to God in any unique way. God loves, cares for, and helps all who repent and put their lives in His service regardless of nation, class, race, or creed. Nevertheless, this land of ours was influenced in its development especially in the 18th century (between 1700 and 1800) by ideas and influences that were rooted in faith in the Almighty. It is those ideas and influences that we desire to explore together this morning, in this sixth of our series of sermons on "Christ and Civilization."

I

The 18th century is known as the century of enlightenment. During this century there was a notable increase in literacy. In this century also the newspaper developed, the cheap pamphlet gained wide circulation, and libraries and social clubs grew up in Europe, and spread to the colonies. With more and more people learning to read, there arose a strong literate middle class devoted to the ideas of the enlightenment.

A number of great scientists and philosophers lived in the 16th and 17 centuries. Their ideas and discoveries paved the way for the age of the enlightenment. Some of these leading personalities were: Bruno and Galileo in Italy, Descartes in France, Kepler in Germany, and Newton and Locke in England.

Men of the enlightenment showed great interest in the external world in which they lived. They marveled at the way it was constructed and the way that it operated. They referred to this world as Nature. In addition, they were impressed equally with the capacity of man to discover the laws of this world. They referred to this capacity as reason. They thought of the universe as a machine, and God as the first cause as well as the mind and purpose through it all. They also thought of the universe as like a clock which was wound up by God, but later was able to keep going by itself.

Men of the enlightenment believed in the doctrine of progress. This was a new idea. Ancient pagan religions looked backward to a golden age. But they did not believe or teach that man and civilization every year was getting better and better. Moreover, the Christian church was so steeped in orthodoxy, and in consciousness of original sin, that it never taught such a doctrine for 18 centuries. Nevertheless, in the light of scientific discoveries, it seemed natural and right to believe in progress—if in the realm of external change, why not in all of life? Voltaire, Diderot, and Rousseau in France, were representatives of this phase of the enlightenment.

In particular Rousseau emphasized again and again that man, in and of himself, was good, but evil was in the environment. This was in the form of institutions, ecclesiastical, political, and economic, which oppressed and frustrated the good in man. But man had the power of reason. The more that man was educated the better he might claim his true heritage.

The world itself was marvelous enough that God could be seen and known through reason, and the manner in which nature revealed its workings. There was no need for the supernatural, and for Heaven beyond, because this world in itself was so wonderful, so complete in its structure, and so capable of improvement. Condorcet wrote of the stages by which man has lifted himself from savagery to the brink of perfection. This happened through reason and the will to progress.

Such thinking posed problems for orthodoxy in religion. As it was suggested through fossils that the world was much older than the Bible said that it was, that life on earth developed over a much longer period than was covered by the 6 days of creation, that Moses probably did not write all of the first 5 books of the Bible, and that there may have been 2 or 3 Isaiahs instead of 1, new problems in the relation of science and religion were posed, which it took a later century to answer.

However, faith in progress and the will to progress were mighty factors in the 18th century. These convictions formed some of the bedrock of the thinking and spirit of our forefathers.

II

The 18th century witnessed important developmens in the arts as well as in science. In architecture the early part of the century was dominated by the baroque style. Buildings were inclined to be solid and massive. The clergy within the churches were richly decked. The vaults of the structures were tremendous. Statues, pictures, flags, candles, torches, floats, orchestras and organs predominated in triumphant and impressive churches. Although the Protestant churches inclined toward simplicity, they also were affected by the decorative spirit of the age in Europe.

The paintings of Gainsborough and Reynolds dealt with beautiful women, delicate children and fat-cheeked men. These were the popular subjects of aristocratic courts. Frederick the Great and Louis XIV were called enlightened despots. They showed interest in universities and education. But they had no interest in liberty. Rather this was the era of Madame du Barry and Mme. de Pompadour. You can see that these references are primarily to the 18th century in Europe. This is because many of the ideas of the enlightenment came to us from Europe. In some instances they were modified by us, and took a quite different direction here than they did later in France.

The subject of literature during the enlightenment was man. The chief object of research was man. This was the period of the development of the English novel. Writers of the 18th century who led in this development were: Richardson, Fielding, Defoe and Swift. These novels were distinguished for the virtues which they exalted and the morals which they taught. They lacked original creative force. At times they were satirical. Yet they were about man. They put into practice Alexander Pope's dictum "the best study of mankind is man." They showed that 18th century literature was interested in people, in their affections, habits and reactions. They dealt with conditions and life in this world. They were humanistic. They breathed the spirit of the day.

Mozart and Bach represented the realm of music in the enlightenment. Bach actually lived before the 18th century, but his compositions and style belong to that period. Mozart showed well proportioned style and balance in his symphonies. This perfection of form and technique reflected the time and similar tendencies in other fields of art. Bach stressed the use of instruments, the pedal keyboard and organ in his prolific writing. His cantatas, oratorios and chorales are among the masterpieces of composition. Later in the 18th century there was a decline in the leadership and influence of church music, but there was an increase in orchestras and musical organizations which were sponsored by towns, cities and universities.

III

From this survey of the enlightenment and its influence upon science and the arts, you can see that this movement had more influence upon the intellectuals, the artists and the nobility than it did upon the common people. That was true. Yet some of these ideas about the importance of man, and about man's right to be free from institutions and systems that denied him his fundamental rights were to have telling effect in the near future. Meanwhile the rank and file of human beings found that religion had to do with something more than a first cause. It had to do with the heart as well as with the head.

In this century —John Wesley lived. John Wesley was born in a Christian home. He went to Oxford where he helped form the Holy Club. This club consisted of students at Oxford who gathered together for Bible reading, and who also set aside a certain amount of time daily for prayer, for visits to the prisons and for works of mercy to needy men and women. Those who belonged to the club were called Methodists, because they tried to be methodical in the use of their time. John Wesley went to Georgia to help evangelize the Indians. He came in contact with Moravians, as a result of which he himself was converted. He found that he was unwelcome in the Anglican Church of his day. Therefore, he gave the rest of his life to preaching on street corners and outside of factories. He traveled on horseback all over England proclaiming the Gospel. In a sense the whole Methodist movement was a reaction to the enlightenment, and a result of the enlightenment.

Meanwhile in the colonies George Whitefield, Jonathan Edwards, Count Zinzendorf, the Moravian, and Muehlenburg, the Lutheran, proclaimed the Gospel, and planted seeds of new religious vitality in this country. Revivals were held at Yale University, and in Raritan, N. J. Gilbert Tennent, a Presbyterian, established a log college for the proper training of men for the Christian ministry—seeking to provide adequate scholarship and evangelical fervor. Just as the Methodist movement set the stage for land reform and humanitarian legislation in Great Britain in the next century, the revivals in the colonies led to efforts to convert the Indians and the Negroes. They also furthered the demand for free land and free democratic institutions in the New World. So we see that both America and France moved toward revolutions near the close of the 18th century. The enlightenment made ready for these momentous events.

IV

We have considered the influence of the enlightenment upon science, arts, and religion. What was its effect upon politics? The effect in France was different somewhat from the effect in the colonies. In France the criticism of social institutions, and the environment which oppressed man, led to a tendency toward atheism and a reign of terror. A king and a queen were beheaded. Church lands were confiscated. Monasteries were abolished. Then came Napoleon, a dictatorship, and a Concordat under which France lived for 100 years. Under that Concordat the state controlled the nomination of bishops, and the state treasury controlled the funds for church and clergy. So the net result of the revolution was anything but religious freedom and separation of church and state. One wonders whether this is not always the consequence of trying to change the conditions of society without reference to God, the moral law, and an understanding of both, the goodness and the sinfulness of man.

Something quite different happened in the colonies. Many of the same ideas of the enlightenment were believed here. However, consider several outstanding leaders of early America. Ask yourself whether they did not have something totally lacking among the French, namely the conviction "in God we trust" and "out of many one." These fathers of our country had their faults and frailties, but Almight God was a living reality in their lives.

Benjamin Franklin was born in Boston. At 12 years of age he was apprenticed to his brother as a printer. He ran away from home to Philadelphia. Later he went to London. Through his own industry he became an outstanding reader, writer, and editor. He made himself into an educator, scientist, inventor, and statesman. He lifted himself by his own bootstraps. Nevertheless he never forgot also his Creator and Master. When the debates were waxing hot in the Constitutional Convention, he sought to reconcile the extremists. He called for all parties in the dispute, for all in the convention to set apart time for prayer to God—for divine wisdom and guidance. Although Alexander Hamilton referred to prayer as an appeal for "foreign aid," yet Franklin carried the day and said, "God governs in the affairs of men. Except the Lord build the house, they labor in vain that build it." That was the voice of America speaking.

We give proper honor to George Washington and to Abraham Lincoln. They deserve our admiration and respect. But remember with me also Thomas Jefferson. His life purpose was to secure and defend the rights of man. He made an unsuccessful effort to free the slaves. He championed the separation of church and state. He wrote the Declaration of Indpendence. He fostered and secured the passage of the Virginia Statute of Religious Freedom. As Ambassador to France, as Vice President, and as President of the United States he served this Nation with dignity and honor. He had faith in the common man. He was kind. He lived the philosophy that he preached in these words, "I have sworn upon the altar of liberty eternal hostility against every form of tyranny over the mind of man."

Where was the secret of his strength? Was it in himself? Was it of himself? These declarations from his lips show the real source of his wisdom and his influence. These he wrote for a young friend. Now they belong to us, to all Americans, and to the entire world. They are: "Adore God, reverence and cherish your parents, love your neighbor as yourself, be just, be true, and murmur not at the ways of Providence."

The United States of America has many problems and responsibilities in these times. Yet our Nation has a secret stability in its Government and in its people. It is the stability of trust in God. Our Congressmen showed it to us this past week. We feel it in our hearts. We believe it in our souls.

When the psalmist said, "Blessed is the nation whose God is the Lord; and the people whom He has chosen for his own inheritance," he was speaking in response to a mighty event in the year 701 B. C. After that time the whole Jewish nation went into captivity, the temple was destroyed. From that time to this hour the Jews have witnessed trouble as well as triumph. Yet they have held to their faith in God.

None of us knows what lies ahead. But God has made us one. We trust in Him. Whatever the future may hold we shall continue to live under God confident that in His service is our destiny and our peace.

The Old Order Changeth

EXTENSION OF REMARKS
OF

HON. FRED MARSHALL

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks, I include an oration delivered by the late Bryan Gilkinson while a student at Carleton College in Minnesota. It was published in the February 20, 1917, issue of the Carletonia, and was called to my attention by Mr. Carl A. Ryan, secretary-treasurer of the World Peace Association, Jenkins, Minn.:

THE OLD ORDER CHANGETH

Man is a progressive being. In the process of attaining civilization he has robbed the elements of their terrors, has removed the barriers of distance, and has forced the earth and the sea to yield up their treasures. As man has thus far conquered economically, so he has conquered socially. For the promotion of his happiness he has sought to regulate human relations by the creation of a complex system of law and Government. So far as this system of law and government has been applied, it has been highly beneficial to the human race. But, as yet, this system is far from completion—indeed so far from completion that the relations of man as an international being are regulated by few laws and no government. For such a condition of human relations no descriptive term is adequate save that of international anarchy.

How has this condition of international anarchy evolved? What prospects are there of its improvement? How can its improvement be accomplished? These are among the gravest and most urgent questions which lovers of humanity are asking in these days of trial and struggle.

THE REIGN OF ANARCHY

The law which governed the actions of our savage ancestors, the cavemen, was the law of the jungle. Brute force, guided by primitive instinct, was the dominant factor in the relations of man and man. For a long time, the savage families refused friendly relations with each other, and stood opposed in desperate warfare. At length, becoming convinced that union was preferable to fruitless conflict, the families united into tribes; and reason scored a mighty triumph. Following the same course, the tribes spent countless generations in vain struggle with each other. But reason again triumphed, and the tribes united to form great nations. Each of these groups, as it was formed, made laws, suppressed crime, and established order and justice within its own domain. But between the groups there was no law or government to regulate the relations of one group with another. Family fought family, tribe fought tribe, and nation fought nation, whenever the impulse seized them. Even to this day there is no law to prevent one nation from invading and laying waste the land of another nation. Anarchy, abolished between the families and between the tribes, reigns yet between the nations.

FAILURE OF CONFERENCES

For many centuries after the formation of the first nations, international anarchy was scarcely challenged. Wars between the nations were considered as inevitable as the rising and setting of the sun. But at length a few great minds came forth with new conceptions of international relations. As early as the 16th century, Martin Luther denounced war as one of the greatest plagues that can afflict humanity. In the 18th century Immanuel Kant caught a vision of world peace. In the last century, many men declared with Charles Sumner that the true grandeur of nations consists not in warlike preparation but in Christian beneficence and godlike justice. Slowly attaining strength, the peace movement brought about in 1864 and in 1868 the conferences of Geneva, at which 38 nations adopted means of lessening suffering in time of war, and pledged their efforts toward securing peace. Following these came the Hague Conferences of 1899 and 1907. But, although these conferences did much for the cause of peace, some of the nations had not yet learned the lesson of international anarchy, and refused to limit their power of aggression by any law.

THE PRESENT TENDENCY

Today this lesson is being taught in a more terrible way than ever before. How the nations of Europe expected the present conflict and prepared for it, how they surreptitiously evolved their diabolical instruments of destruction—their 42's and their 75's—how they fanned the smouldering flame of jingoism till it ignited the magazines of national hatred, is a matter of common knowledge. But the destruction that has resulted is not yet within human comprehension. The French Revolution and the wars of Napoleon sacrificed the lives of 2 million men in a period of 25 years. The present war has sacrificed over three times as many in a period but one-tenth as long. And for the future the possibilities of destruction are even more appalling. Our scientists inform us that if America were invaded it would be possible for them to produce poisonous gases and destructive instruments many times as deadly as those now used in Europe. Look at the scientific magazines and see the descriptions of the warlike inventions already foreseen—giant engines of steel capable of crushing whole cities within an hour. Exaggerations? Certainly. But not without their terrible portent. Think of the machinegun's stream of bullets; think of the thousands gasping for breath in the clouds of chlorine gas; think of the steelclad tanks lumbering their slow but deadly way over corpse-strewn fields; and then ask yourself what modern inventive genius will do for wars of the future. Truly, if international anarchy is to continue, the prospect for humanity is nothing less than fearful.

IS IDEAL A DREAM?

Such, then, has been the evolution of international anarchy. Anarchy between the families of our savage ancestors gave way to tribal peace and security; anarchy between the tribes gave way to national law and order. As the next logical step, anarchy between the nations must give way to—but no; the militarist says there can be no forward step. "War is inevitable." "There will always be the trampled fields with the silent, upturned faces." "Peace is but a utopian dream."

Are these sayings true? Has the evolution of law and order halted, to move no more? Is the ideal of the brotherhood of man a mere dream? Are the discoveries and inventions of the future to be devoted to the degradation and destruction of man, instead of to his benefit and his advancement?

AN AFFIRMATIVE ANSWER

To answer in the affirmative is to deny the fact of human progress. The mind of man is not static, but evolutionary; evil institutions are not permanent, but transitory. In the past, government by kings, no matter how tyrannical, was said to be divinely ordained and therefore inevitable. But, although tyranny grew no worse, the people grew wiser, and tyranny was forced to give way to democracy. Slavery was long said to be inevitable, and so it seemed to be until an enlightened public sentiment proved the contrary. The brewers told us that intemperance was inevitable; yet public opinion is fast securing its abolishment. The duelist, the corrupt politician, the child-labor exploiter, and a host of other enemies of progress have told us that their favorite institutions were inevitable; but not one of them has been able to withstand an awakened public conscience. Even poverty, disease, and crime were long said to be inevitable; yet today we are alleviating and hope to eliminate the great suffering caused by these evils.

SHALL PROGRESS HALT?

And is our progress to halt here? Shall we deny tyrants the privilege of exacting a paltry tax, and allow war to take all we possess? Shall we deny men the right to drive other men to work with the lash, and allow governments to drive their conscripts to slaughter at the point of the bayonet? Are we to deny men the excesses of rum, and allow them the diabolical excesses of war? Shall we ban the duelist, imprison the corrupt politician, eliminate the child-labor exploiter, and yet allow the minions of war full sway? Shall we struggle to eliminate poverty, disease, and crime, and yet allow war to reap its harvests of misery and destruction? No. Man destroys and abandons the evil institutions which bar his progress, and moves on to better things. Call it evolution, if you will, or call it social progress; few will deny that—

"The old order changeth, yielding place to new,
"And God fulfills himself in many ways."

PUBLIC OPINION AROUSED

The present conflict may not be the last great conflict between the nations, but it is hastening the coming of world peace. Public opinion, that power against which no evil institution can prevail, is aroused, never to rest till the curse of war is destroyed. Sympathy with the cause of permanent peace is becoming almost universal. England, fearful for the cause of peace, accepts a conscription law because of temporary opposition. Germany, fast learning the fallacy of war, hints at her willingness for disarmament. France stretches forth her lacerated hands and cries, "We fight that our children may be spared the curse of war."

Even the rulers of the warring nations are looking forward to the day of peace. The idea of a league to enforce peace, advocated by ex-President Taft and recommended by President Wilson, has been indorsed by the governments of 12 nations, including England, France, and Germany. The idea is undoubtedly crude and imperfect, but it is a long step toward the suppression of international anarchy and the introduction of "the parliament of man, the federation of the world."

A LEAGUE FOR PEACE

But a league to enforce peace alone will not guarantee peace. The old fatal philosophy that might makes right must give way to a broader philosophy, the philosophy of the Golden Rule. The international mind must be cultivated. Narrow nationalism and short-sighted patriotism must give way to the spirit of internationalism; militaristic fatalism must be abandoned; and incipient antagonism between the nations must be destroyed by active international friendship. This program will take time and patience for its completion; for the present the nations must take the most practicable step for the prevention of future wars. Let us demand a league to enforce peace.

THE PRINCE OF PEACE

You will remember Tennyson's description of the great hall which Merlin built in the city of Camelot for King Arthur. Around that hall were four great galleries of sculpture. In the lowest gallery beasts were represented as slaying men. In the second gallery men were slaying beasts. In the third gallery men were slaying men. In the fourth and highest gallery men were represented as standing erect with growing wings. Man has passed through the first two eras of progress so represented, and is now living in the third. May we not hope that he is soon to enter upon the fourth? The vision of that era rises before us. We see the lands of the world teeming the harvests, the seas dotted with countless carriers of peaceful commerce. We see the pagan nations of Asia and of Africa, clothed and taught, taking their places with the powers of the world. We see Latin and Teuton, Slav and Anglo-Saxon, Oriental and Occidental extending to each other the hand of friendship and of confidence. And, far down the future's broadening way, we see man regenerated, disabused of his hatred, suspicion, and fear, his poverty and suffering alleviated, and the shackles of his economic and social slavery broken, walking in closer fellowship with that wonderful counselor, that Prince of Peace.

(The above oration, The Old Order Changeth, was delivered by Bryan Gilkinson, a Carleton College student at the time (1917), in a nationwide oratorical contest in which many colleges participated and in which he won first prize.)

Shippingport Is the Scientist's Dream Come True

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. PRICE. Mr. Speaker, a layman's description of the atomic-power reactor under construction at Shippingport, Pa., written as well as any article as I have ever read on the project, appeared in the East St. Louis (Ill.) Journal of Sunday, March 17. The writer, Thomas G. Duffy, managing editor of the Journal, visited Shippingport a week ago and subsequently set down in print his impression of what he saw there.

I found Mr. Duffy's article not only interesting reading but very instructive, and I am certain it will bring a better understanding to thousands of people of what the atomic era holds in store for future generations. Mr. Duffy skipped the scientific jargon and engineering details to picture to his readers in a human, entertaining way what an atomic reactor is.

Mr. Duffy was one of the first of the Nation's daily newspapermen to visit Shippingport and report directly to his readers on the progress of America's first large-scale atomic powerplant. There will be others to follow, because this is one phase of our atomic-energy program which has been completely declassified and to a large degree thrown open to public scrutiny.

Under leave to extend my remarks in the RECORD, I herewith include Mr. Duffy's fine article:

PEACEFUL ATOMIC ENERGY IS SCARY

(By Tom Duffy)

SHIPPINGPORT, PA., March 16.—They used to tell me that when I heard the word "scram" it meant to get going—get out of there. Nuclear science has produced a new vocabulary, adding to the language and changing the meaning of some established words. In the glossary of nuclear science, "scram" means the "sudden shutting down the reactor."

The reactor—the atomic reactor—wasn't in place in the United States first commercial atomic powerplant when I toured it here the other day. But the mere thought of it made me want to holler at the top of my lungs: "Scram."

In other words, shut down that reactor. Stop splitting atoms.

The scientists who have unleashed atomic energy and the engineers who harness atomic energy for the scientists are not afraid of it. But I am. And that's the sensation, I believe, any other ordinary person would experience if he were privileged to see this plant.

The project is amazing, beyond the imagination of the layman. What makes it the more so is that while shaking in his boots, even a guy who all but flunked high school physics can understand what nuclear science—today's physics and chemistry and engineering—offers us for the future.

I visited Shippingport through arrangements made by United States Representative MELVIN PRICE (Democrat, of East St. Louis), who is chairman of the Subcommittee on Research and Development for the Joint Atomic Energy Committee of Congress.

TO COST $55 MILLION

Here is a plant that will cost at least $55 million by the time it is in operation, perhaps by next November. Into it are going 5,700 tons of steel and 50,000 cubic yards of concrete. For what? To house what might be pictured as a cube of atomic reactor 9 inches on the side. More than that, not just to house that cube but to prevent the radioactive water and air it creates from escaping into the open.

It's like a huge packing crate filled with excelsior and in the very center of all that is one little old coffee cup. The difference is that the coffee cup only is breakable; that cube in the center of the Shippingport project is dynamite—more TNT than man ever has compressed into such a small space. It contains 115 pounds of enriched uranium and 12 tons of natural uranium. It is housed in a 6½- by 6-foot core clad in zirconium and other resistants to nuclear fission. And that, in turn, is housed in a pressure vessel 33 feet tall and 9 feet in diameter and weighing 250 tons.

Around the reactor pressure vessel is a spherical container made of steel 1 inch thick and having a diameter of 38 feet. Around the heat exchangers and steam generators alongside the reactor "house" are similar inch-thick steel plate containers ranging up to 150 feet in length and 50 feet in diameter. The containers are safeguards against a break in pipelines leading from the reactor to the generators and heat exchangers, for out of that possible break would flash radioactive steam or water pressurized at 2,000 pounds per square inch.

Millions upon millions of dollars have gone into this project with one aim in mind: To protect plant personnel and the countryside from the devil of the elements inside that 9-inch cube.

But while we're trembling, let's consider what this cube is expected to do for the benefit of mankind. We already know that it has been used to destroy man in war.

Shippingport is the scientist's dream come true, a dream of using atomic energy for the good of man. Here on the banks of the Ohio River, some 45 road miles northwest of Pittsburgh, they are trying to substitute atomic energy for coal, turn water into steam that will drive the turbine generator to produce electricity. They feel certain this atomic plant will produce 60,000 kilowatts, enough to power the two-county Pennsylvania area served by Pittsburgh. They won't be surprised if the plant actually produces 100,000 kilowatts.

And they figure that by 1980 there will be enough privately operated atomic powerplants in this Nation to produce more power than our coal-burning and hydroelectric system is producing today—close to 115 million kilowatts.

Atomic power is too expensive for your and my pocketbook at the moment. But from the initial cost of 52 mills per produced kilowatt as they start this operation, they confidently expect to have that cost down within our range before many more years have passed.

Those who are building this plant see atomic energy as an almost inexhaustible source of power, cheap power at that. But to realize this vision they are experimenting constantly. Million-dollar test facilities have been built to give them an idea of what to expect once this for-keeps operation at Shippingport gets underway. They are preparing to handle the waste material, which will be radioactive. That calls for a separate decontamination plant and an underground tank farm to hold the materials until tests prove radioactivity has disappeared.

Everything is to be operated by remote control, from the sampling of specimens to the disposition of waste. Emphasis is upon experimentation and day-to-day learning, upon safety.

This, then is Shippingport. It's a pressurized water reactor project, the first commercial atomic powerplant in the United States, the first in the world to be operated by private industry. The Duquesne Light Co., a Pittsburgh area utility, will operate this plant. The firm has invested $5 million in it, the Atomic Energy Commission the rest.

Working with the Duquesne company and the AEC are the Westinghouse Electric Corp., which is building the nuclear part of the plant under AEC contract, and scores of other contractors and subcontractors. There are more than 1,000 construction workers on the project.

At the head of all this effort is a thin, "runt" of a man named H. G. Rickover, rear admiral of the United States Navy and the father of the world's first atomic submarine, the *Nautilus*.

A wiry, white haired guy who scorns a hat, who eats and sleeps and breathes atomic energy. A guy who thinks in terms of insure the future and tolerate the cost today.

A guy who, when plagued by foreign industrialists about the cost of building atomic powerplants, barked:

"Forget the cost, it's too much to consider. But remember, you can't have conception without sex."

And when the women interpreters refused to relay that message, he barked again:

"If they won't tell you what I said, I'll wait until they're out of the room and I'll tell you."

Presumably, when the women retired he told 'em—in each of their languages.

"You can't have conception without sex" has become a byword of the atomic energy crowd here at Shippingport. It's the only way they can forget the staggering cost of harnessing atomic energy for peacetime use.

Rural Industries Bill: H. R. 5827

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. HAYS of Arkansas. Mr. Speaker, on March 11, 1957, I introduced H. R. 5827, designed to promote the industrialization of underdeveloped areas by means of the establishment of rural industries. It is my aim in introducing this measure to focus attention upon one of the Nation's major economic problems—that of underemployment in certain areas which are generally defined as "underdeveloped areas." My primary concern is to assist rural areas to increase their per capita income and to arrest the exodus of surplus farm population to the city. This assistance should also benefit the country as a whole, as it would prevent the continued growth of our already overpopulated cities and would ease the pressures on the urban labor market.

Briefly stated, my bill will mobilize the resources of three Federal departments—Commerce, Agriculture, and Labor—to achieve these goals: First, provide technical information to communities desirous of developing small industries that could be integrated into the economy of the affected areas; second, set up a $100 million loan fund for approved industrial developments, with no loan exceeding 50 percent of the total cost; and, third, set up a $10 million fund to underwrite private loans to industrial enterprise, a means of promoting the investment of many times this amount in new industry.

Regions which will come under the coverage of this bill are those rural areas "in which it is determined that there exist the largest number and percentage of low-income farm families, and a condition of substantial and persistent underemployment." The factors which will be considered in this determination include: "The number of low-income farm families in the various rural areas of the United States, the proportion that such low-income families are to the total farm families of each of such areas, the relationship of the income levels of the farm families in each such area to the general levels of income in the same area, the current and prospective employment opportunities in each such area, and the availability of farm manpower in each such area for supplemental employment."

Available data indicates that 37.7 percent of the commercial farms in the United States are classified as low production farms. The percentage of farm-operator families receiving under $1,000 per year net money income—in 1949—was 28.1 percent, with an additional 24.8 percent receiving between $1,000 and $1,999. Whatever income increase has taken place since 1949 has easily been offset by the rise in the cost of living; and, therefore, from 25 to 50 percent of our farm families are in a relatively low-income bracket, with regard to constant dollar purchasing power. Such farm families are gradually leaving their homes and moving to areas where they hope to earn an adequate livelihood.

Declining population trends, attributable to the lack of employment opportunities in many sections, clearly demonstrate the need for legislation on this subject. The Bureau of the Census estimates that between 1950 and 1955 the State of Arkansas suffered a decline of 121,000 people, or 6.3 percent, in population. While the national average on per capita—not family—income in 1955 was $1,847, Arkansas had an average of $1,062, or 57.5 percent of the national average, ranking 47th in the Union. Since Arkansas is primarily an agricultural State, it is safe to say that our family farmers are not sharing in the general prosperity.

I wish to make it very clear that I would not lend my support to any measure that would cause unemployment in any region of the country by providing Federal funds to redistribute existing industrial potential. The rural areas, however, are entitled to share more equitably in the continuing expansion of American industry, which does not mean profiting at anyone's expense by taking away something he now has. With the passage of this bill, agricultural areas will have an opportunity to provide for the establishment of industries integrated into the local communities, possibly processing plants with part-time labor, and people who prefer to live on the farm will be given the employment necessary to maintain an adequate standard of living. It is my belief that Federal loan funds would provide a real stimulus to private investment in those areas which have particular economic advantages not now being realized. Not only would the industries provide markets close to the farmer, but the payroll would be a boon to the business interests of the community.

I introduced this bill last year in the form of an amendment to the area redevelopment bill which was approved by both the House Banking and Currency Committee and the Senate, but was never voted on by the House of Representatives itself. It is my hope and expectation that it will obtain favorable action by both Houses this year. The important thing is to bring to immediate public attention the grave problem of the underemployed low-income family farmer.

Ramon Magsaysay

EXTENSION OF REMARKS
OF
HON. B. W. (PAT) KEARNEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. KEARNEY. Mr. Speaker, the news which came Sunday of the tragic loss of Ramon Magsaysay through an

airplane crash was greeted with deep sorrow throughout those nations of the world dedicated to the principles he so ardently supported during his lifetime. His death comes at a time of world political unrest when it becomes more apparent each day that there will be no rest from the struggle to defend our ideals against the undermining conspiracies of world communism. The free world can ill afford the loss of any of its great leaders, and chief among these was the beloved President of the Philippines.

Beginning with his elevation to the post of Defense Secretary of the Philippine Republic, Ramon Magsaysay waged vigorous battle against communism in his country. He made the Philippines a center of united resistance and a steadfast ally in the east upon whose loyal support the western democracies knew they could depend with assurance.

When a man of 49, dynamic, popular, and with the personal qualities of courage and integrity possessed by Ramon Magsaysay is lost from a position of high office it is always a tragedy to the nation affected. When the man occupies the position in contemporary world history which Magsaysay did it becomes a tragedy to be felt by that nation's friends, and all those who have followed his career with admiration and who have sensed above and beyond the spectacular biographical events of his career, the spirit of the man. I myself feel loss in the death of a personal friend.

The fact that the people of the Philippines saw fit to elect such a man to be their President gives us reason to feel certain his work for a better life for his people and for the cause of world freedom will live on.

Salaries of Federal Employees

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD, two resolutions adopted at the February 13 rally, attended by 500 Federal and Post Office employees of the Anniston, Ala., area.

These resolutions express the sentiments of these deserving Federal employees in their hope that their pay will keep pace with the constantly rising cost of living, and the hope that they will have the right of employee organization representation with the Government. These extremely able civil servants perform services beneficial to the entire Nation and I hope the Congress will give its attention to these employees' requests.

Mr. Speaker I also ask unanimous consent to have inserted with these resolutions, an editorial which appeared in the Anniston Star stating its esteemed opinion of these excellent people.

The resolutions and editorial follow:

Whereas salaries of Federal employees have consistently lagged behind those of employees of similar skills in private employment, and

Whereas such salary lags have caused Federal employees to be caught in an inflationary spiral which has caused living standards to be slashed far below the average, and has made more difficult the recruiting of qualified personnel and the retaining of trained employees by the Government, and

Whereas such a situation is not good for the Government or the employee: Therefore be it

Resolved, That this group, assembled at Anniston, Ala., February 13, 1957, go on record in favor of an increase in the compensation of Government employees to meet the increased cost of living and to compare with the compensation paid to persons performing similar work in nongovernmental employment; and be it further

Resolved, That our Senators and Congressmen be urged to give their full support to such legislation.

Unanimously passed by 500 Federal employees in rally at the city auditorium in Anniston, Ala.

Adopted February 13, 1957.

Attested:

DANE L. ROSSER, *Moderator.*

Resolved, That we favor the recognition of the right of employee organizations to represent their members and the granting to Government employees of the right to full participation in the political life of the Nation.

Unanimously passed by 500 Federal employees in rally at the city auditorium in Anniston, Ala., February 13, 1957.

Attested:

DANE L. ROSSER, *Moderator.*

[From the Anniston Star of February 18, 1957]

RELIEF FOR THE NFPOC

Those persons who are familiar with the hardships that are being undergone by many of the civil servants here in Anniston and Calhoun County will not likely be inclined to begrudge them the financial relief that they are asking, the reasons for which were well set forth here last Wednesday evening at the meeting in the local city auditorium.

It is known that many of these faithful and efficient servants of the public, those who serve in the post offices and elsewhere, more often than not have to get other jobs on the outside after hours to make ends meet in this day of high living costs. And in several instances both parents in the home have to work at outside jobs.

If these excellent ladies and gentlemen were organized into a union, such as the longshoremen, for instance, they could quit their jobs and embarrass the entire Nation, including those in the homes as well as those in places of business.

But it is against their rules to strike, as a result of which they must rely on an understanding public for their relief.

The average person will be loath to make any addition to the record peacetime budget that Mr. Eisenhower has submitted to the Congress; but if economies can be effected, the NFPOC should be among the first to be considered. And of course they should be given favorable consideration in the event of any increase in postal rates.

This paper has no sympathy whatsoever with price increases that are being exacted by several of the giant corporations today, and neither do we have any sympathy with labor bosses who send their workmen out on strike and tie up the entire economy of the Nation. But we do have a fellow feeling for our friends of the civil service who serve the public so faithfully day in and day out.

How Much Help to Poland?

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. BOLAND. Mr. Speaker, one of the pressing problems facing the State Department today is whether or not to grant economic aid to the Polish Government. Failure to accede to this request from the Gomulka government might well mean that the efforts of the Polish patriots who suffered and died in the famous Poznan uprisings last June were in vain. For it was this reaction by the Polish people to Soviet domination that won for them a measure of freedom last October, and to deny economic assistance to Poland now would be tragic and might well force the Gomulka government to turn to the East for assistance from the Soviet Union.

Poland is not completely free from communism, but it has started down the road to freedom from complete Soviet control. Religion, to which the stalwart Polish people clung dearly as the Red Russians tried to stamp it out, is again being taught in the schools. The Roman Catholic primate of Poland, Stefan Cardinal Wyszynski, is again free to mingle with his courageous people after 3 years of Communist imprisonment. Economic controls have been lifted, and the Polish peasant is now free to leave the collective farms. Poland needs United States assistance, and needs it immediately if she is going to consolidate this new freedom and press for further liberation from the Soviet-dictatorial influence.

Mr. Speaker, under unanimous consent, I include with my remarks editorials from the New York Times on March 12, the Washington Post and Times Herald on March 16, and an article by former Ambassador Chester Bowles which appeared in the Washington Post on March 18. I ask my colleagues to read these articles and to join with me in urging the State Department to favor economic assistance to Poland:

[From the New York Times of March 12, 1957]

HOW MUCH HELP TO POLAND?

Dispatches from Washington and Warsaw suggest that serious difficulties have arisen in the negotiations over American aid to Poland. Whether justified or not, the Poles apear to have the impression that the United States may offer them only about $30 million in economic aid as against the $300 million requested by the Polish economic delegation now in Washington. Since the Poles feel they are taking a very substantial political risk in turning to the United States for aid, the thought is apparently being considered that it would be foolhardy to take the risk involved if American aid offered them is far below what Poland needs at this critical juncture in its history.

All this suggests that our responsible officials in Washington who must make the decision carry a heavy responsibility. Should the present Polish-American negotiations break up fruitlessly, there would be serious political as well as economic repercussions. Moscow's friends in Warsaw would

be strengthened and the Gomulka regime might have no alternative but to go humbly to Moscow to get the needed economic aid on whatever conditions, political as well as economic, Moscow demanded.

The United States interest in Poland is clearly that the progress lately made toward a free and independent Poland be continued. Despite some recent disturbing symptoms, it is still true that Poland is breaking a path toward national sovereignty, greater internal freedom, and friendship with other nations, the non-Communist ones included, which could well be followed by others. But to continue that progress there must be the material prerequisites for a tolerable economy and society. Past Communist mismanagement, now freely admitted in Warsaw, has created great difficulties which the Poles are trying to correct, but the job cannot be done in a few months nor can it now be done without outside aid.

Finally, and not least important, it is the Polish people who need our aid. They need American wheat for bread and American cotton so their textile mills can continue to operate. Polish farmers need American fertilizer to grow a crop this summer. We have often spoken of our friendship for and our sympathy toward the long-suffering Polish people. In the present situation the issue of adequate United States aid for Poland would seem to represent a key test of how seriously we have meant and mean these assurances of friendship and sympathy. Surely there must be a way of surmounting any legal barriers hampering our negotiators in this matter.

[From the Washington Post and Times Herald]

STALLING THE POLES

If the administration fears that congressional objections will prevent effective economic help to Poland, the kindest thing would be to say so now. The Poles are taking a very considerable risk of Soviet reprisal when they approach the United States for surplus agricultural commodities and long-term loans. No doubt the $300 million total they reportedly are requesting is more than they expect to get. But a mere token gesture, a turndown after weeks of negotiation or even an inflammatory debate in Congress might make the whole request not worth the risk.

We hope that both the administration and Congress will take a broader view. President Eisenhower indicated at his news conference the other day that he would ask for revision of the Battle Act if necessary. Authority seems to be adequate to make available surplus commodities (Polish factories are crying for cotton, for instance), but a change in the law may be required in order to make a loan. If such a request should be made, we hope that Congress will be mature enough to avoid a political hog-calling contest.

But there ought to be no illusion that American aid will wrench Poland away from the Communist bloc. By dint of their own sagacity and restraint, the Poles have won some measure of freedom in internal affairs. There seems to be considerably more freedom in the press and in religion, for example, than prevails in Yugoslavia. But it would be folly to ask or expect Poland to renounce communism as such (even though the techniques are being modified on a national basis) or to break openly with Russia, for the Soviet Union has the means of squeezing Poland into submission.

About the most that can be looked for is that the Poles will be friendly to Russia in foreign affairs (while denying Russia the use of their army in any foreign adventure) and that domestically they will run their own government. In other words, this country must be satisfied with more freedom and independence in Polish internal affairs; the President and Secretary Dulles have made it clear that they do not expect an ally. The Gomulka regime is having a difficult enough time walking its tightrope.

Admittedly there is some risk to the United States in aiding Poland. There is an argument that even food sent to the Communist bloc would help Russia. The report of the Council for Economic and Industry Research to the Senate Foreign Relations Committee contends that aid to the satellites would release material for use elsewhere, and adds that although aid to Poland might strengthen pro-Western sentiment, refusal might weaken the Soviet position. This seems to us a narrow and cruel argument in the case of Poland, but it is likely to be seized upon by Senator KNOWLAND in his absolutism.

The more compelling argument, it seems to us, is that failure to heed the Polish plea would convince the Polish leadership that it cannot cooperate with the West and must look to Russia, and thus greatly increase the influence of the Stalinist faction. Changes in the satellite empire are not likely to come in terms of blacks and whites. Russia proved in the case of Hungary that she will use force rather than permit drastic change. Accordingly the best hope is gradualism that may persuade the Russians that more freedom and independence do not mean hostile governments on their borders. The distasteful alternative is to adopt the Knowland view that the Communist bloc is a total and eternal monolith—and to rebuff the hope for more freedom short of violence.

But the Polish request is a matter of great delicacy, and it requires urgent and understanding attention. The Poles cannot be left dangling without damaging the whole relationship.

[From the Washington Post and Times Herald of March 18, 1957]

CAUTION IS GOMULKA POLICY—POLAND EDGES SLOWLY TOWARD LIBERTY

(EDITOR'S NOTE.—This is another in a series of reports from the former United States Ambassador to India, who is currently on a 10-week trip to India, Pakistan, Afghanistan, Russia, Poland, Yugoslavia, and Germany.)

(By Chester Bowles)

WARSAW.—The young Polish student spoke with passionate earnestness. "Poland is now on the road to full freedom," he said. "Nothing can stop us."

Last fall he had helped rally factory workers, students and peasants to demand the end of Soviet control.

The older man across the table looked at him sadly. "I am afraid it won't work out that way," he said. "The support the people gave Gomulka was magnificent. Now the Russians know that any sudden move to seize the government will lead to an uprising, with not only the students and workers but the Polish Army against them.

"So Moscow will move step by step. No single move will be sufficient to set off the explosion. But added together they will spell Soviet control again. In Hungary the Russians proved that they will not retreat."

MIDDLE VIEW

Midway between these extremes of optimism and pessimism is another, and, I believe, more likely view. Gomulka is dedicated to Polish independence. Although still a Communist, his 5-year jail experience under the Soviets has modified his views considerably and he would like to give an increasing measure of individual and economic freedom to the Polish people.

But he is restrained by two factors. First, he knows that his Communist Party is a minority in an anti-Communist Polish sea. Second, he knows that Poland is at the mercy of the Red army.

So he will move cautiously. The final outcome of this drive for Polish independence will depend partly on his skill, but even more on developments between the Soviet Union and the United States, particularly in regard to German unification.

On one point everyone is in full agreement. The Polish people are openly, vigorously and almost unanimously opposed to Russian domination. This testifies to the total failure of Soviet efforts not only in Poland but in Eastern Europe.

THIRTEEN-YEAR RULE

Thirteen years ago the Red Army liberated Poland from the Nazis. For 13 years a Soviet-dominated government ran the country. Soviet planners directed the economy. Soviet educators shaped the educational system. Soviet-led censors decided what news the Polish people should hear and read. Yet Moscow's effort to tie Poland to the Soviet Union failed utterly.

To return to Warsaw after 9 years is an emotional experience. In 1948 when I came here on a United Nations mission, the city was a ruin, the most damaged of all cities in World War II.

Now, the city has been largely rebuilt on the same model as the old. The ancient city square, the Stare Miasto, has even been restored in all its beautiful 17th century detail.

But despite such great achievements in construction, Poland stands today as bitter evidence of the course forced upon Eastern Europe by Stalin.

WEST THRIVING

Western Europe, thanks to its free system and the substantial aid from us, is thriving.

"When you look at Italy or Belgium," I said to a group of Polish economists, "you can say, 'There but for the grace of Stalin goes Poland.'"

They agreed that Stalin's refusal in 1947 to let them participate in the Marshall plan, was one of the most costly byproducts of the Soviet occupation. Instead, the Russians forced Poland to create a topheavy economy designed to serve Soviet interests by concentrating on heavy industry and armaments.

With few consumer goods to reward the people for hard work, production in shops, mines, and on farms slumped lower and lower.

In June this economic failure touched off the heroic uprising of the factory workers at Poznan, which was followed last October by the reaction of the whole Polish people against Soviet domination.

RELIGIOUS UNITY

The Polish people never did succumb to communism. They are not only deeply religious, but unified in one faith. In the century-long darkness of German-Russian-Austrian occupation, the church was the rallying point for Polish patriotism. The individualist Polish peasant resisted Soviet collectivization so stubbornly that despite all kinds of tax and other pressures 80 percent remained individual farmers.

Now the Gomulka government has moved to satisfy the people on two important counts. First, there has been a drastic relaxation of economic controls, and incentives are being increased sharply. Peasants are now permitted to leave the collectives, and most are leaving.

Second, the Government has come to a working agreement with the church. In the upheaval of last October, Stefan Cardinal Wyszynski played a central role. The previous month he had been released from prison 2 years after his arrest.

I had looked forward to meeting the cardinal and hearing his views on recent developments. But he was away from Warsaw this week.

I did have a 2-hour talk with Dr. Jerzy Stachelski, minister without portfolio for church-state relations, who I am told played a major role in working out the present basis of cooperation.

Dr. Stacheiski told me that before the war religious teaching in the schools had been compulsory. In 1949 it was abolished by the Soviet-dominated government. Now it is available again to each child whose parents request it. Nearly 90 percent have done so.

LONG WAY TO GO

Poland is a long, long way from being out of the Soviet woods. On her eastern border are 100 Red army divisions. Twenty more are to the west in Germany. The government in power, although in no mood to accept direct Soviet domination is a Communist government.

Moreover, to a large extent Poland's future is tied to that of Europe. As long as Germany remains divided, Soviet divisions will remain there. Because its military communication lines run across Polish territory Moscow will allow Poland only limited independence.

PEACE NEEDED

Only through an agreement between America and her allies on the one hand and the Soviet Union on the other to pull back their troops from the explosive heart of Europe can Poland and the other Eastern European countries hope to become really free.

This will involve difficult negotiations, the establishment of many safeguards, and a more relaxed political climate. This is what the cardinal meant when he said on his release from confinement that the condition for Polish freedom is peace.

Thirty-eight Good Years

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the Pittsburgh (Pa.) Sun-Telegraph of March 16, 1957:

THIRTY-EIGHT GOOD YEARS

The American Legion originally was an organization of young men and women intent primarily upon preserving their wartime associations but eventually became something vastly different and bigger and better, as the American people are gratefully aware.

It was in the days following the close of the First World War that a group of veterans met in Paris, March 15 to 17, 1919, to organize the American Legion, which means that the Legion's 38th anniveraary is at hand.

America looks back over those 38 years with far more than a mere feeling of good will for the millions of men and women who have offered their lives in the country's service.

The American Legion has not been content to be an instrument of reminiscent nostalgia for people with a background of wartime service.

It has consistently and effectively been a fighting organization ever since its founding and has supported the vital interests of America in all its emergencies.

It has sought to avoid the mistakes of the past which have led to all our wars and it has strived for fulfillment of our national aspiration to universal and permanent peace.

The men and women of the American Legion have been warriors in the service of their country in peace as in war and have stood against its enemies in their home communities as on the battlefields.

They have made patriotism and loyalty words of meaning and vitality in the lives of all our people.

They have shown the same devotion and dedication to our free institutions that once they exemplified at the risk of their lives.

The American Legion now has spent 38 years in the service of its homeland, and it has the respect and affection of its countrymen.

The honor in which it is held attests its worthiness for the high place in which it stands.

St. Patrick Brought Christian Faith to Ireland 1,500 Years Ago

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a short statement by Mr. William J. Conlon, of 23 Breed Street, Lynn, Mass., a student of Irish history on the life of St. Patrick, patron saint of Ireland, that appeared in the Lynn Telegram-News, on March 17, 1957.

The statement follows:

ST. PATRICK BROUGHT CHRISTIAN FAITH TO IRELAND 1,500 YEARS AGO

More than 1,500 years ago, St. Patrick went to Ireland for the purpose of bringing to that country the faith established on earth by Our Lord and Saviour, Jesus Christ.

For more than 1,500 years that faith has burned brightly in Ireland. It has illuminated the world. It has brought the sons and daughters of Ireland into every far corner of the earth to spread abroad the light of that faith and reap a harvest of souls for salvation. Today, that faith is set as firm in the hearts and souls of the Irish people as it was during those first years when St. Patrick preached it on the Hill of Tara and poured the waters of baptism over the head of King Laoghaire, monarch of all Ireland. In no other country in the world has there been such fealty to faith, such loyalty to principle, and such willingness to suffer for both.

Today, that faith is set firm in the hearts and shootings visited on the Irish people by one English Government after another in an effort to break their faith, had but one result—to root Catholicity deeper into the soil of Ireland.

The penal laws, the most vicious and unnatural legal code ever devised by human beings, were enacted by England for the sole purpose of driving Catholicity out of Ireland. The penal laws failed.

Had Ireland given up the faith, had she been willing to sell her soul for material advantage as England did, Ireland would have been spared countless years of persecution and torment at the hands of the English bigots who were fired in their hatred by the knowledge that they had been false while Ireland had remained true.

So it is today. We not only celebarte 1,500 years of Catholicity in Ireland but 15 centuries during which the people of Ireland have been faithful and true to the teachings of the great apostle. It is a record of which every Irish man and woman may well be proud.

When St. Patrick went to Ireland, he found there a united and cultured race, a race that was far ahead of any other in Europe in its knowledge of the arts, in the methods of government, and in its devotion to high ideals.

It is, therefore, no wonder that St. Patrick met with such remarkable success. He lived to see the fruits of his labor. He lived to establish bishops throughout Ireland and to witness the erection of 365 Catholic churches and an entire people from the highest to the lowest, embraced in the church for which he had labored.

Such a result would have been impossible had Ireland not been at that time a center of culture, civilization, and unity. For in a disunited nation there would have been no possibility of such concerted action. It is not now necessary to dwell on these points. All fair-minded people have admitted that the evidence is such that it can no longer be denied. The old fable about Ireland being civilized by St. Patrick is now and then dug out of its grave by those who hate Ireland. Today, we rejoice because Ireland has been true to the faith and true to herself. As Ireland has triumphed in the faith, so Ireland will triumph in the resurrection of her national soul. We look back through 15 centuries of struggle and hard-won victories; we look forward to the coming final victory. With a sure knowledge of triumph, Ireland has been faithful and Ireland will emerge victorious.

In the days soon to come, Ireland will again be as she was in the days of St. Patrick, free and united, the center of light and culture, and the beacon of truth and liberty throughout the world.

Travel of President and Key Officials in Proper Perspective

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. DEROUNIAN. Mr. Speaker, I commend the following penetrating article which is devoid of some of the partisan statements we have been hearing lately, critical of responsibilities of our President, Vice President, and Secretary of State, which call them out of the country. The article, written by David Lawrence, appeared this morning in the New York Herald Tribune.

TRAVEL BY TOP OFFICIALS DEFENDED FROM CRITICISM

(By David Lawrence)

WASHINGTON, March 18.—Is the Democratic Party trying to turn the clock back to the days of Harding, or even McKinley?

Questions like this are being asked not only because so many of the Democratic Members of the Senate have been voting on the isolationist side of recent issues in American foreign policy but because the Democratic chairman of the House Judiciary Committee has just announced that he is introducing a bill to express the will of Congress that the President, the Vice President, and the Secretary of State should not be out of the country at the same time.

MODERN COMMUNICATIONS

One is led to believe that the airplane, which can land alongside a cruiser at sea with mail and official papers, or the radio

telephone or telegraphic communication from ship to shore have not yet been invented. It seems to be overlooked, too, that the President can be flown back to the mainland in a couple of hours.

One is led by the critics to think also that, when a President of the United States goes aboard a warship flying the American Flag, he is not on American territory. This is what they used to say 40 and 50 years ago, in fact until the late President Franklin D. Roosevelt started the custom of moving overseas to Yalta and other places—even during World War II—aboard United States Navy cruisers. Mr. Roosevelt went to sea once aboard Vincent Astor's yacht—a private vessel—without arousing even Republican criticism.

LAW OF SUCCESSION

The fact that the Secretary of State is out of the country hasn't a thing to do with Presidential succession, either. It used to be that the Secretary of State was next in line after the Vice President, but this was changed in 1947 by an act of Congress when the Republicans were in control. It provides that the Speaker of the House and then the President pro tempore of the Senate would become President in the event that anything happened to the President and Vice President. Since both Speaker RAYBURN and Senator HAYDEN are Democrats, it would mean the country would have a Democratic administration, so it would seem that this is something which should worry the Republicans, not the Democrats.

There is, of course, no function that the Vice President—even if he were in the United States—can perform that the President is required by law to do or which the President could not do when he is on board an American warship or inside an American Embassy abroad.

THE UNDER SECRETARY

When the Secretary of State, moreover, is out of Washington, the Under Secretary of State becomes acting Secretary of State and is empowered to handle all legal documents. No interruption to public business presents itself here.

It is not clear, therefore, what the purpose of the Democratic Party's spokesmen was in raising the issue of the absence of the President, Vice President, and Secretary of State unless it was to cast some reflection on the conduct of their respective offices.

The President has been away from the White House, of course, only because of health reasons, and surely even the Democrats haven't strayed so far in the partisan battle as to continue to try to make an issue of the President's health. It cost them plenty of votes in the last election.

As for Vice President Nixon, his mission to Africa to offset what the Communists are doing there was arranged by Mr. Eisenhower many weeks ago—long before the President found that his cough required sunshine and a sea trip to clear it up.

SENATE PRESIDENT

The President pro tempore of the Senate, of course, presides over sessions of that body in the absence of the Vice President. Few Vice Presidents traveled more than the late Vice President Barkley. No criticism was voiced then.

As for Secretary of State Dulles, he had a longstanding engagement to attend in Canberra, Australia, an important meeting of the nations which are members of the Southeast Asia Treaty Organization. It turns out now that, with the death of President Magsaysay of the Philippines, the close personal relations established at Canberra by Mr. Dulles with Vice President Garcia of the Philippines were especially opportune. For the United States to have sent a subordinate to that meeting in Australia would have been regarded as an affront by the other countries in the SEATO alliance. It is a lucky thing, too, that an experienced diplomat like Ambassador Charles E. Bohlen, who is familiar with Communist intrigues, is at this time being transferred from Moscow to Manila.

But the carping criticism really has little to do with the merits of all these questions. The truth is that some members of the Democratic Party in Congress now are outdoing what Senator MCCARTHY, of Wisconsin, was accused of doing in "encroaching on the prerogatives of the executive branch of the Government." Although the President is charged by the Constitution with the duty of conducting the foreign relations of the United States, the Senate Foreign Relations Committee has appointed a special subcommittee whose main object seems to be to badger the Secretary of State at the very time when a crisis is going on in the Middle East.

ITEMS FOR INQUIRY

Picayunish items in the press are seized upon for inquiry. Thus, when a former attaché at the White House made an off-the-cuff statement in a speech a few days ago about the breakup of the Aswan Dam negotiations with Nasser of Egypt in 1956, the Senate subcommittee promptly announced that it would "investigate."

But there's one thing the Democratic Senators will never investigate, and that's the background of the episode in which certain Democratic Senators served a warning against spending money for the Aswan Dam financing. In fact, the Senate Appropriations Committee early in 1956 wrote in its foreign-aid report a specific provision that no funds could be used for the Aswan Dam without the prior approval of the committee. It was quite clear at the time that Senators from cotton-growing States were fearful of the competition of Egyptian cotton grown at lower cost if the dam were built.

Many of the Democratic Senators, for some of these same reasons, voted recently against the provision in the Eisenhower doctrine resolution authorizing the President to use $200 million for economic aid in the Middle East. If the Democratic Party thesis of today is that Nasser should have been given the Aswan Dam, then the thesis of yesterday implies that the materialistic interests of a special economic group interfered with the peace efforts of the United States. It's a strange contradiction.

Bishop O'Gara Tells of Life in Red China

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. PATTERSON. Mr. Speaker and distinguished colleagues, we all know of the reign of terror that now prevails in Red China, but yet there are those in the Western World who entertain the thought of admitting Red China as a member of the United Nations.

Last month an expert on life in Red China spoke in my congressional district, and told of some of the shocking intentions of the Red Chinese Government. He was Bishop Cuthbert Martin O'Gara, and his address was so significant that under unanimous consent, I insert it in the CONGRESSIONAL RECORD:

CHRIST DID NOT WEAR A CROWN OF THORNS TO TEACH HIS FOLLOWERS APPEASEMENT

(Address by Most Reverend Cuthbert M. O'Gara, C. P., Bishop of Yuanling, Hunan Province, China, before the 15th annual communion breakfast of the Torrington Chapter Holy Family Laymen's Retreat League, Torrington, Conn., February 17, 1957)

This statement, especially to a group of Catholic men, might seem to be a truism except for the unbelievably dreadful things that are going on around us. I do not have in mind the immoral compromising of which our present day society is guilty—of the attempt to adjust Christian principles to secular, pagan action in the circle of the family and in the social order—rather, I have in mind the wider but even more devastating spirit and acts of compromise which are marking society at large today in the international sphere. Nations such as ours, founded on the principles of justice and truth, are compromising these sacred principles by appeasing nations whose only slide rule to conduct is injustice, barbarity, and deceit on the most colossal scale. That this is done by even supposedly Christian nations is not only the scandal, but likewise the tragedy, of our modern age.

Perhaps the supreme example of this tragedy at the present time, is what has come to be known as the Chinese question. For the moment a great debate is being carried on whether the moral principles of truth and justice or the base practices of appeasement are going to determine the solution of this pressing Chinese problem. In other words, whether this Christian Nation of the United States, or supposedly Christian Nation, is going to take a further fatal step along the path of appeasement, toward closer cooperation with another regime that has trodden under foot every principle of justice and truth and whose fundamental, avowed purpose is to destroy this country as it now exists—more especially, to do here what the murderers of the Kremlin have just done in Hungary, and what these same madmen have done to millions of other hapless people in the past 40 years.

Gentlemen, I have here the text of the Convention on Genocide and the Declaration of Human Rights, both adopted and proclaimed by the United Nations. Every article in this convention and in this Declaration is an arrangement of the People's Government of Peking. Do you realize that since the Convention on Genocide was adopted in 1948, the Chinese Red regime has liquidated (slaughtered) 20 million people? These are not my figures, but are to be found in the issue of Time magazine, March 5, 1956. This does not include, according to Time, the 23 million believed to be held in forced labor camps. Twenty million. Almost twice the population of present-day Canada. And not far short of the population of the United States at the time of the Civil War. In the section of Hunan Province entrusted to the Passionist Missionaries, over which I presided as bishop, a convervative estimate puts the number liquidated at 75,000. The Convention on Genocide covers inhuman treatment, slavery, and loss of human rights—what of the 20 million in China now doing forced labor? The Convention on Genocide condemns the causing of serious bodily or mental harm—what of the starving millions in China this very morning? Reports attested to by authentic statements made by released missionaries, reports taken from their own Red newspapers circulating in Hongkong.

The Declaration of Human Rights—which boldly affirms the dignity and worth of human persons, "no one shall be subject to arbitrary arrest, detention, or exile"—what of

the 4,000 foreign priests and the 3,000 foreign sisters haled before the people's courts without any legal defense and ignominiously expelled from the country. I read here that—"everyone has the right to presume himself innocent until proved guilty." However, I was instructed while in prison, in no unmistakable terms, that the imperialistic system was all wrong and that the communistic system was correct, namely, that under its system a man is guilty upon arrest, because the evidence has been gathered against him and he remains guilty until he can match this trumped up evidence and hence win pardon. I read again "that the will of the people shall be the norm of the government." But, the only will in Red China is the will of the so-called People's Government, and to oppose that will by any word, deed, or thought, brands the individual a reactionary and a criminal before the government and liable to arrest and detention until he has brought his mind over to conform to the demands of the Red authorities. I have heard too often the principle expressed, "bring your mind over to us and all your troubles will cease," not to know that the will of the people has no meaning for Red dictators.

To recognize the present outlaw regime in Peking and to bring it into the Assembly of the United Nations would be a cynical, colossal, and crowning act of international hypocrisy.

Gentlemen, I know of what I speak, time and time again, while a prisoner of the Chinese Communists, I was given to understand very emphatically that the chief objective of the People's Government of China, was to cooperate with world communism in liberating the peoples of the United States, and this means simply to destroy the United States of America as this country exists today. This overall plan was told to me not by some unimportant Chinese here and there but by responsible officials—intelligent, well-educated, Russian-trained—who were carrying out the orders of their bosses in Peking.

These Red Chinese officials are the very ones that we are being conditioned, brainwashed, by powerful influences around us, to accept as our new collaborators in world affairs. Already, one would think, we have a sufficient number of such collaborators in the world arena—Soviet Russia to name but one—who are trying to destroy us even from within. Are we completely mad that we must now invite another assassin regime into the sacred precincts of our very homes?

And this is just what, it would seem, is being done, if one can read between the lines, if one can interpret rightly, the cleverly slanted press, slanted radio, slanted television, the carefully guarded statements of some of our highly placed public servants, of some big corporation executives, and of some self-styled experts in international problems.

Within the past 2 weeks, Mr. Ford, in a nationally publicized speech, asked the pointed question whether it might not be to our national interests to call off the economic blockade of Red China, to bring the Peking regime into the United Nations, and so to win the people of China away from Russia and over to our side. Let me repeat—the millions of Chinese are being held against their will and in the iron grip of the Red army. They would throw off the galling yoke tomorrow if they could and they would gladly return to our world. To do business with Communist China is only to build up the Red regime—to forge still stronger fetters for the enslaved Chinese masses and to quench the last flicker in the flame of hope for their ultimate deliverance.

Surely, the bloody explosion in Hungary should have taught us how far the aspirations of the enchained peoples differ from the will of their Communist masters.

Mr. Dulles tells us that Red China will not be recognized "just at this time." In other words, later on, no doubt; and the overtone is—perhaps sooner than you think.

In the Saturday Evening Post of January 19 of this year, Mr. Robert F. Donovan, author of the best seller Eisenhower, the Inside Story—in which confidential information was given which, up to this time, was refused to Congress—has an article What Will Ike Do? He pictures the President as pondering and hesitating on the question of recognition of Red China, and Mr. Donovan goes on to suggest the possibility of a material change in the relations between Communist China and the United States during Mr. Eisenhower's second term.

On the side of nonrecognition must be quoted Mr. Walter S. Robertson, Assistant Secretary of State for Far Eastern Affairs, who is quoted at length in the February 15, 1957 issue of U. S. News & World Report under the heading "Recognize Red China?—No—That's the Official United States Stand."

That Mr. Robertson makes an adequate, even strong, case against recognition is gratifying and encouraging—but when we consider that Mr. Robertson's superior—Mr. Dulles—is not nearly so positive and that the President is wavering, and that big business is urging America to play the part of Little Red Riding Hood to the Chinese wolf, can one blame the people of the United States, if they are confused and if they demand to know who is shaping their foreign policy and would like to know who they are to believe?

If we would only read carefully, intelligently, and with penetration, the writing on the wall—that writing whose only purpose, at the moment, it would seem, is to confuse and mislead us—or in the words of our holy father, spoken only last Christmas, "to obfuscate us"—we would see clearly that there is some powerful influence which is working tirelessly, ceaselessly, resolutely, behind the scenes for the eventual admission of Red China into the United Nations.

You may ask yourselves what has this international adjustment to do with the domestic situation here in the United States of America—or, for that matter, with life in the fair State of Connecticut. It would be bad enough to have another band of Red spies, cloaked as you-may-not-touch-me-now diplomats, entrenched along the East River in New York City, but this unholy, insensate move would be the prelude to the inevitable establishment of diplomatic relations between Washington and Peking, and the opening up of Chinese consular offices in the principal cities of the United States—each office in harboring a nest of dedicated spies—but over and above this would be the tremendous moral and economic assistance recognition would give to the very regime that openly boasts of its avowed purpose to liberate our country—liberate—a word which in the Red lexicon means simply to overthrow our Government, to mangle, to crush and to obliterate the Catholic Church—in short, to make America over into the image of Marx and Lenin and to breath the foul spirit of godlessness and hate into the new formed Red monster of North America.

Gentlemen retreatants, you wonder, perhaps, why I have chosen to discuss the problem of Red China this morning, and why I have stated the case so strongly. To me the matter is simple—very simple indeed. During the 2 years that I spent in Communist jails my Red interrogators questioned me often about the Laymen's Retreat League fostered by the Passionist Fathers in the Eastern United States. They were curious, these Communist fanatics, about the Retreat directors, about the circumstances of the laymen making the retreats (their intellectual, political, financial status)—about the retreat houses. I was amazed at the fund of information they already had (they made it very plain that they knew you didn't precisely occupy flophouses); oftentimes they were better informed than I was and they would berate me for my ignorance. It was very obvious that my interrogators regarded the retreat work as a very important movement in the church in America and that they appreciated fully the fact that retreatants constitute an elite body of the Catholic laity; consequently, for them a prime target to be first completely immobilized if their all-out assault on the Catholic Church was to achieve its purpose.

As members of the Laymens Retreat League—as convinced, practical Catholics—you are recognized in the Communist camp as a select corps of defenders of the church. In the Red book you are marked men. I have forewarned you. Now I exhort you to be alert at all times, in every place, in your business associations, in your social activities, in your political affiliations.

Bear in mind always the solemn teaching of the Sovereign Pontiff Pius XI: "Communism is intrinsically evil, and no one who would save Christian civilization may collaborate with it in any undertaking whatsoever. Those who permit themselves to be deceived into lending their aid toward the triumph of communism in their own country will be the first to fall victims to their error."

Ponder well the solemn warning of our present holy father, Pope Pius XII—against the mirage of a false coexistence. There is one condition that must be fulfilled, he says, before any sincere coexistence is possible—a condition so fundamental that it cannot even be discussed. It is that the church have the freedom to live within the State in conformity with her constitution and laws, caring for her faithful and freely preaching the message of Jesus Christ.

In Communist China the church is in chains, her ministers expelled, jailed, murdered. In Communist China to be a Catholic is to be a reactionary and to be branded an enemy of the People's Government. Communist China—this Red regime—we would bring into the company of civilized, cultured, and in a large part, Christian nations.

Let us harken, one and all, to the inspired voice of the Apostle:

"Bear not the yoke with unbelievers. For what fellowship hath light with darkness? "And what concord hath Christ with belial? Or what part hath the faithful with the unbeliever" (2 Corinthians 6–14).

President Magsaysay

SPEECH

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. GORDON. Mr. Speaker, I yield to the gentleman from Louisiana [Mr. Boggs].

Mr. BOGGS. Mr. Speaker, in December last year, a group of us returning from the annual meeting of the Interparliamentary Union at Bangkok had the great pleasure of a long and fruitful meeting with President Magsaysay of the Philippines.

The President of the Philippines, who was killed on yesterday in a tragic airplane crash, was one of the outstanding

leaders of democracy in southeast Asia. He personified the ideals and the essence of democracy. He was a man of his people, who understood his people; a man who had given all of his talents and his courage both in the arena of the battlefield and in the arena of politics. He had been one of the great guerrilla leaders in the Philippines against the Japanese in the war beginning in 1941.

His love for freedom and his unalterable opposition to communism was expressed in speeches to young people on the very day before his death.

Neutralism is un-Filipino—

He told graduates of Southwestern College—

To attempt to foist it upon our people is to do them a grave disservice. The country has no need of fence sitters in the struggle to preserve our way of life.

At the University of San Carlo he said:

You do not need to be anti-American or antiforeign to be resoundingly pro-Filipino. * * * You are the battlefield on which future wars will be won or lost. You cannot remain neutral. * * * You have to take a stand.

The free world can scarce afford to lose men of the character of President Magsaysay. I am quite certain that all of us join in expressing to the people of the Philippines our profound regret and sorrow at this tragic accident.

Inflation Can Be Stopped—Promiscuous and Extravagant Federal Spending Must Stop—"The State Cannot Get a Cent for Any Man Without Taking It Away From Some Other Man, and the Latter Must Be a Man Who Has Produced and Saved It—This Latter Is the Forgotten Man"—Professor Sumner, Yale University

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. McDONOUGH. Mr. Speaker, it is apparent to anyone who wants to think it through that the Federal Government has nothing to give to anyone that it has not first taken from someone else and the most extreme equity and fairness must be used in order to be certain that no one or group of people in the Nation are burdened or treated unfairly in the process. Thousands of people have been led to believe that the Congress and the executive branch of Government have unlimited sums of money to pass out to the people or the States instead of the fact that the Congress and the Executive merely act as trustees of the people's tax funds and try to distribute these funds for the security and welfare of all of the people.

Here is a recent editorial from the Saturday Evening Post which makes the point quite clear. I am confident the 1958 budget can be reduced to reason and logic without impairing our national security or our general welfare:

TO CURB INFLATION, SQUEEZE THE WATER OUT OF THAT BUDGET

The disquiet which President Eisenhower's budget for the fiscal year 1958 has created in financial circles and to a considerable degree in his own party in Congress is not explained by the size of the budget alone, although $71,807 million is more money than the people of the United States have ever been asked in time of peace to contribute to the maintenance of the Federal Government. The qualms and anxieties, pale reflections of which appear in statements by Secretary of the Treasury Humphrey, and by the President himself in his statements regarding controls to curb inflation, arise from the suspicion that the administration has given up the retrenchment fight, so valiantly promised by Mr. Eisenhower in both his campaigns, and is now reconciled to spending "this kind of money" indefinitely.

Much of the responsibility for our fiscal confusion belongs to the present budget system itself. As matters now stand, the Federal budget bears only a remote relation to the ability of the Nation to pay for the services recommended. It is not a part of an appropriation measure, much less of a tax bill. Contrasted with the British budget, which puts the extra ha'penny tax on tea or cigarettes in the same bill which increases social-security benefits or the RAF appropriation, our budget is simply the sum of what the departments of the Government would like to have the taxpayer pay for.

As the survey of the Guaranty Trust Co. of New York for February points out, defense spending cannot be held accountable for the increase in the size of the 1958 budget. "Proper perspective is achieved by noting that the $2.7 billion increase in national-security programs over the 3-year period constituted less than four-tenths of the overall budgetary increase of $7.2 billion. Actually the $7.2 billion figure substantially understates the rise, owing to the fact that the greater part of Federal highway expenditures * * * are no longer in the conventional budget." There are plenty of places for cutting even if the military-security-foreign-aid items must remain sacrosanct—which may be doubted.

For example, Senator FRANK LAUSCHE, of Ohio, points to the item calling for $3 million to aid the States in fighting juvenile delinquency. "What," asks Senator LAUSCHE, "can be done by turning loose a swarm of social workers on the country to duplicate the job which schools, parents, ministers, priests, local officials and social workers are supposed to be doing already?"

Then there is the $1,300,000,000 for Federal aid to State and local school-building programs. According to figures supplied by the United States Office of Education, 36,000 new classrooms will be needed to provide for the expected increase in enrollment during the coming school year. Local communities have already committed themselves to build 69,000 classrooms—thus meeting the emergency shortage and cutting deeply into the overall shortage, which still exists. The need is still great. But the point is that, up to now, States and local communities have kept abreast of the classroom crisis largely from their own resources. Must we now—when the purchasing power of the dollar has fallen to one-half its value as compared to its worth in the 4 years 1935–1939—burden the Federal Treasury further?

Possibly any one of these isolated items, taken in comparison with the total budget figure of $71,807,000,000 is "peanuts." But a national budget is made up of an array of items, many of which in themselves are insignificant but which add up to a possibly unmanageable total. Furthermore, every new "service" taken on by the Federal Government is certain to stimulate new demands by new groups which want to cast their burdens on Uncle Sam.

Is Government spending at this level really the will of the people anyway? Members of Congress report that their constituents complain of high taxation which—at all levels of government—now exacts 29 percent of the national income. Few local school officials and taxpayers are seeking Federal involvement in that problem. In short, the pressure comes largely from the Federal bureaucracy itself.

Both the President and Mr. Humphrey urged Congress to look for hundreds of items where cuts in the estimates could be made. But surely it is the responsibility of the Budget Bureau and the Executive to point to these hundreds of items. If there is no positive lead at the top, it is unlikely that Congress—where pressures are even more intensively applied—can do much to resist the trend. Nor can labor unions and businessmen, caught in the inflationary squeeze, be relied upon to hold down wages and prices.

Perhaps those who order national spending could profit from perusal of the work of Yale's great sociologist, the late William Graham Sumner. In What Social Classes Owe to Each Other, which has been republished by Caxton Printers, Ltd., Sumner wrote: "The state cannot get a cent for any man without taking it away from some other man, and this latter must be a man who has produced and saved it. This latter is the forgotten man."

He certainly seems to have been at least temporarily overlooked in the budget for the fiscal year 1958.

The Federal Trade Commission Supports H. R. 11, the Equality of Opportunity Bill

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. PATMAN. Mr. Speaker, within the last few days we have been bombarded with many statements about H. R. 11, the equality of opportunity bill. In some of those statements assertions were made that the Government and the enforcement agencies are opposed to that proposed legislation. We know that representatives of many big business concerns are opposed to H. R. 11. Perhaps some members in the Cabinet of the present administration are opposed to it. However, reference to their opposition should be pinpointed. The record should show who opposes H. R. 11, and who supports it.

The Federal Trade Commission is the agency of Government which is charged with the primary responsibility for enforcement of Federal legislation dealing with price discrimination. That agency has dealt with the problem of price discrimination since it was created in the Wilson administration in 1914. Prior to

that the Bureau of Corporations, its predecessor, studied and reported upon the problem of price discrimination during the period from 1903 to 1914.

The Federal Trade Commission has just made—March 12, 1957—its official formal report on H. R. 11 to the Committee on the Judiciary, House of Representatives. In that report, the Commission stated:

The Commission is of the opinion that the objectives of H. R. 11 and H. R. 398 are of sufficient importance to the effective operation of the Clayton Act that such legislation should be enacted without awaiting further case by case development under section 2 (b) as presently worded. (H. R. 398 was introduced by Hon. BYRON G. ROGERS, of Colorado. It is an identical companion bill to H. R. 11.)

Except for a short period of time, the Federal Trade Commission has supported strongly, since 1914, Federal legislation against destructive price discrimination. For example:

First. Three of five Federal Trade Commissioners supported H. R. 11 in 1956.

Second. In 1951, the Federal Trade Commission, in testimony before the Committee on the Judiciary, House of Representatives, urged a strengthening of the law against destructive price discrimination.

Third. In the period from 1928 to 1934, the Federal Trade Commission made an extensive investigation of the practice of price discrimination. On December 14, 1934, it submitted to the Congress its final report on that investigation—see Senate Document No. 4, 74th Congress, 1st session. In that report the Federal Trade Commission urged that the Clayton antitrust law provisions against price discrimination be amended and strengthened. Such action was taken when the Robinson-Patman Act was approved on June 16, 1936.

In its report to the Committee on the Judiciary, House of Representatives, on March 12, 1957, the Federal Trade Commission stated:

The Supreme Court's decision in the *Standard Oil* case, followed by the opinions of the Court of Appeals (7th Circuit) in the matter, 233 F. 2d 649 (1956), and the Court of Appeals in *Balian Ice Cream Co.* v. *Arden Farms* (231 F. 2d 356 (C. A. 9, 1955)) and *Brown* v. *Standard Oil Co.* (238 F. 2d 54 (C. A. 5, 1956)), make it clear that section 2 (b) provides an absolute defense to all price discriminations regardless of the seriousness of the probable effect.

Of course, the representatives of some big business firms are not concerned about the effects of price discriminations they practice. One of their representatives in opposing the objective of H. R. 11, the equality of opportunity bill, not long ago wrote that the law should permit the practice of price discrimination when done in good faith regardless of the economic consequences.

H. R. 11 would limit the good-faith defense in price discrimination cases only in those instances where the price discriminations would "substantially lessen competition or tend to create a monopoly."

The Federal Trade Commission in its report on H. R. 11, the equality of opportunity bill, to the Committee on the Judiciary, House of Representatives, made it clear that that agency, speaking for the public interest and on the basis of its longtime experience in protecting the public interest, does not want a loophole left in the law to permit price discrimination which has the effect of "substantially lessening competition or tendency to create a monopoly." Who wants a "substantial lessening of competition and a tendency to create monopoly"? The lawyers and other spokesmen for the major oil companies made it clear in the testimony they gave before a congressional committee last week that they want a loophole left in the law so that the major oil companies and other big business firms will be left free to practice price discrimination with the effect of "substantially lessening competition and tending to create a monopoly." They have made it clear that it is for that reason that they are now opposing H. R. 11, the equality of opportunity bill.

Mr. Speaker, I submit that this is the time for each of us to reexamine our position on the question of whether we are for a free and competitive enterprise system, or for a system of monopoly. When that is done, we are confident that a majority will be found who are still opposed to "a substantial lessening of competition and a tendency to monopoly," and are therefore in favor of H. R. 11, the equality of opportunity bill. It is a bill against monopoly.

The Biggest Doublecross in History

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. MULTER. Mr. Speaker, during the course of my remarks today during the debate on the independent offices appropriation bill for 1958, I made some remarks which some of our colleagues have intimated were rather strong and caustic, referring to the misconduct of our foreign affairs by the President and his Secretary of State. I have no apology to make for any of those remarks. If anything, they were not strong enough.

Never before in the history of this country have we degraded ourselves by doublecrossing our friends. We have done just that in the Middle East.

In that connection, I commend to the attention of our colleagues the following item by Drew Pearson which appeared in this morning's Washington Post and Times Herald:

ISRAELIS VICTIMS OF DOUBLECROSS

(By Drew Pearson)

If you know the full inside story of the hectic negotiations by which Israel agreed to withdraw from the Gaza strip and the Gulf of Aqaba, you can't escape the conclusion that this little country has been given one of the biggest doublecrosses of modern diplomacy.

This may seem an extreme statement, but here is the hitherto unpublished record:

Around the middle of last month, the Eisenhower administration was worried sick over the position in which it found itself regarding the pending U. N. vote for sanctions against Israel. It was so worried that the first thing Secretary Dulles did when Premier Guy Mollet of France arrived in Washington was to ask his help solving the U. N.-Israeli impasse.

"If there ever was a time when the United States needs the good offices of France it's now," Dulles said in effect.

The reason was easy to understand. The Eisenhower administration by this time had got itself into a position where it was damned by the Arab-Asian bloc if it didn't vote for sanctions, and damned by a majority of Congress plus powerful political forces if it did.

What it needed was a compromise.

The West German Government had politely but firmly notified Dulles that Germany would not go along with sanctions. Germany's commitment to Israel, made as a result of Hitler's massacre of 6 million Jews, was a moral one, West Germany told the State Department.

Dulles also knew that France, plus probably Australia, New Zealand, Canada, and England would not go along with sanctions. Furthermore, both Senator LYNDON JOHNSON, the Democratic leader, and Senator WILLIAM KNOWLAND, the GOP leader, had publicly served notice on the administration that Congress would probably not agree to sanctions.

Finally, the administration was desperately anxious to get the Eisenhower Near East doctrine O. K.'d by the Senate.

All this was why Dulles literally begged Premier Mollet to help him out of the Near East dilemma.

DULLES GIVES O. K.

In the negotiations which followed, the French suggested that instead of getting a flat guarantee from the U. N. or Egypt that the Egyptian army would not go back into the Gaza strip, Israel might base its withdrawal on a series of assumptions which would be approved in advance by the United States and France.

So many murderous raids have been conducted from this little finger of land by Egyptian fedayeen that no Israeli Government could long remain in power if it permitted the Egyptian army to reenter.

As a result of the French suggestion, however, a series of assumptions were drawn up by Israeli Foreign Minister Golda Meir. One assumption was that the civil and military administration of the Gaza strip will be exclusively by the U. N. Another assumption was that the U. N. administration would continue until there is a peace settlement.

These and other assumptions were studied carefully in writing and agreed to by John Foster Dulles. He made six or eight changes in the wording. These Israel accepted.

It was also agreed that after Mrs. Meir made her U. N. speech outlining these assumptions, U. S. Ambassador Lodge should speak and describe the assumptions as "reasonable."

DULLES IN REVERSE

When Lodge spoke, however, he changed the signals. Instead of calling the assumptions reasonable as agreed, he called them not unreasonable. He also went out of his way to emphasize that Egypt could exercise control over Gaza.

This was what made the Israeli government almost reverse itself and not get out of Gaza after all.

Undoubtedly the Cabinet would have reversed its foreign minister's decision in Washington had not John Foster Dulles pulled a diplomatic rabbit out of his hat. He drafted a personal letter to Premier Ben-Gurion, which President Eisenhower cabled to Jerusalem.

The President said what Ambassador Lodge was supposed to say but didn't.

One day after the withdrawal, however, when it was too late for Israel to backtrack, Secretary Dulles told his press conference that President Eisenhower's letter did not mean what the Israelis thought it meant, that he did not endorse all of Mrs. Meir's assumptions.

It is important to note that these problems are not confined to the Middle East. They have worldwide implications. The best proof of that is found in the following item by Constantine Brown as it appeared in the Evening Star of March 19, 1957:

FAR EAST-MIDEAST ATTACK TIEUP?—POSSIBILITY SEEN THAT A GAZA OUTBREAK MAY BE SIGNAL FOR A RED DRIVE ON KOREA

(By Constantine Brown)

Will a possible new outbreak in the Gaza strip and the Gulf of Aqaba be the signal for renewed aggressive operations by the Chinese Communists against their three prospective victims, the Republic of Korea, China, and South Vietnam?

This possibility is being seriously taken into consideration by the military men in the Pentagon.

Reports from the Middle East indicate the so-called surprise move of President Nasser into the Gaza strip and his double talk about freedom of navigation in the Suez Canal are the work of his sponsors in Moscow, New Delhi, and Belgrade.

Without the prodding of the men in the Kremlin, the Egyptian dictator unquestionably would adopt a more conciliatory attitude and keep the promise he gave earlier this month to American and United Nations representatives that he would agree to a cooling-off period. Washington hoped that during that time some semblance of Egyptian-Israeli peace might be brought about.

Egypt is economically and financially bankrupt. Its military power is less than negligible. Its best troops collapsed within a few days last October under the impact of only a small portion of the Israeli forces. The U. N. resolutions backed strongly by America's persuasive arguments induced Israel to evacuate the Gaza and Aqaba areas. Thus Nasser's face was saved and he was able to represent himself before the Afro-Asians as a great man who had won over the "colonialist-imperialists." It was broadcast throughout the world that "justice had won over might." Under these conditions, it appeared logical to those who want to judge the present international situation by logic that he would be satisfied with the complete victory we and the U. N. gave him at a time when his position appeared hopeless.

There has been evidence for some time that the men in the Kremlin who seek to fish in troubled waters intended to synchronize military operations in the Middle East with similar operations in the Far East. Moscow, it is believed by competent military men not only in Washington but also in Paris and London, is neither prepared nor willing to tackle the United States militarily. But it persists in maneuvers, dating back to the Korean aggression in June, 1950, of engaging the United States by proxy. In this manner it can continue to cause a drain on our resources and manpower. And it always finds willing stooges. After the Korean Communist armies were crushed, Moscow pushed the Chinese Communists into battle. This operation cost us 140,000 casualties and more than $15 billion. We concluded a shaky armistice after 3 years of fighting. Now the 680,000 Chinese and Korean troops north of the 38th parallel are in a far better position to strike at the 500,000 ROK and the 50,000 American troops south of the 38th parallel than ever before.

But for the purposes of the Kremlin, it is essential that America should become deeply involved in another area as well, in the belief that we could not successfully operate on two fronts.

The nationalization of the Suez Canal Co. was, according to available information, not so much a Nasser as a Shepilov-Krishna Menon plan. It affected the United States only indirectly. But the Soviet-Indian bloc knew that America is a mother hen to all the free world and that the repercussions of the Nasser action would be strongly felt in this country.

We stopped peremptorily the military campaign of our British and French allies as well as that of Israel through our junior State Department, the United Nations. But even this patched-up peace was contrary to the plans of the Kremlin. No sooner did the handful of soldiers of the United Nations emergency force replace the Israeli army in the Gaza and Aqaba areas than Nasser went back on the unofficial assurances he had given that he would sit out a waiting period before he returned to administer the Gaza strip. And the fat was in the fire again, to the great satisfaction of the dictators of the Soviet Union. In the meantime, the men in Peiping are suspected of getting ready to strike in the Far East if the Middle Eastern pot boils over.

The Chinese Communists do not need any special preparations for an aggression against South Korea. They have been ready for such action since last summer. They are confident of success because we have taken no steps to provide modern military equipment either to our own troops in Korea or the ROK's.

Intelligence reports indicate a concentration of Red airpower in Fukien Province opposite the Nationalist offshore islands of Quemoy and Matsu. Conquest of these isles by the Chinese Communists would be the first step toward a much more difficult attack on Formosa itself. Recently the Communist subversives have shown a much greater activity throughout Southeast Asia and Japan.

All this information compels those directly responsible for our national security to draw the conclusion that another series of affrays by proxy is being planned for this spring and summer.

Mr. F. W. Rohrs, Octogenarian of Rosedale, Md.

EXTENSION OF REMARKS

OF

HON. KENNETH A. ROBERTS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. ROBERTS. Mr. Speaker, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD an article which appeared in the Baltimore Sun on March 16, 1957. This article is devoted to Mr. F. W. Rohrs, octogenarian of Rosedale, Md., who has a most enviable and admirable accident-free driving record of 60 years. In honor of his excellent record, Mr. Rohrs was awarded a Wheelmaster Safety Scroll by the Safety First Club of Maryland at its Wheelmaster banquet held March 14, 1957, in Baltimore.

As chairman of the Special Committee on Traffic Safety, I sincerely hope that Mr. Rohrs' record will encourage all of us to emulate his outstanding achievement.

OCTOGENARIAN HOLDS RECORD

(By Robert G. Breen)

"MAN AND AUTO

"Alcohol in the radiator
Prevents freezing.
Alcohol in the driver
Prevents thinking.
Moral:
When you can't think
Don't drive an auto."

—*Rohrs M–71.*

That is just one of the many hundred cataloged (and copyrighted) maxims from the collected writings of Frederick W. Rohrs, of Rosedale, Baltimore County, octogenarian, inventor, musician, writer, war veteran, and for 60 years an automobile driver who has never struck a man, woman, child, dog, or cat, and (has) never caused an accident.

Recognition for this meritorious feat was accorded Mr. Rohrs Thursday evening at the Wheelmaster dinner given by the Safety First Club of Maryland at a local hostelry.

NOT THE LEAST

Mr. Rohrs, a dapper man of benign mien, whose slim, nimble bearing belies his years, accepted the honor with "humility blended with modesty," the while admitting that in his heart he realized that many sacrifices were involved in reaching his safe-driving goal. (The goal is one of many years' standing.)

Not the least of these sacrifices was the handing over, carte blanche, the right-of-way to his own estimate of 13 million other drivers who had no right to it whatsoever.

In addition, here are some recommendations made by Mr. Rohrs (like a lion) on behalf of safe driving:

"Never operate a car in traffic
If you have a missing motor,
If your brakes are faulty,
If your tires are bald,
If your windshield visibility is bad,
If there is any serious mechanical fault."

Mr. Rohrs, who operated his first automobile on Chicago's Jackson Boulevard on March 8, 1897, and his first one in Baltimore in 1900, has since 1910 operated a garage on Old Philadelphia Road, Rosedale.

THE FIRST TICKET

While his driving record is accident free, Mr. Rohrs admits to three traffic tickets. They were all protested by Mr. Rohrs, and all thrown out of traffic court. It wasn't a mere case of dismissal. In each case the magistrate ruled "no case" whatsoever.

The first traffic ticket, he recalls, was served on him many years ago, when he was playing in a band at Carlins Park. Mr. Rohrs' offense (or so the traffic officer imagined) was that Mr. Rohrs' coal-oil-burning taillamps were not lighted. Mr. Rohrs (who had 2 taillights, not just 1, as the law required) contended that a culprit had stolen the coal oil from his lamps. Hence, the law had "no case."

It was a relief to be rid of that ticket, for even then Mr. Rohrs was already working for a traffic-safety record that would be free of any blemish.

Mr. Rohrs, who has a total of 337 inventions to his credit, having to do mostly with the internal combustion machine and radio, has only one of his cars left, an old model T Ford, remodeled to his own design. Mr. Rhors thinks it is the first house-on-wheels ever built, containing as it does, hot and cold running water, built-in bunks, kerosene and electric stoves, and full kitchen facilities.

Only recently he was able to dispose of his first car, a 1900 DeDion Bouton Motorette, the 4½-horsepower motor of which was capable to cruising at a top speed of 7 miles per hour. This past year he also sold his 1906 Franklin, which in his estimation was the best automobile ever developed.

Agile of mind and body, Mr. Rohrs, who still wears stiff detachable Prince Albert type

collars, has four recommendations which must be blended together to form the formula for his longevity.

The recommendations:

"Constant moving about,
Not taking it too easy,
Refraining from using intoxicants,
Making new friends every day."

Mr. Rohrs lays great stress on the last recommendation, saying that it is imperative for one who is gaining in years to make friends with the young as a means of keeping the spirit free and buoyant.

A Spanish-American War veteran, Mr. Rohrs, who at one time had his own show on the road (Colonel Rohrs, Refined Comedy Co. it was called), now only gets out his violin once a year—to practice for the annual muster service of the Spanish-American War Veterans. It is held at the War Memorial Building on the anniversary of America's entry into that war.

Sermon of Very Rev. Msgr. George G. Higgins at the Annual Mass, Feast of St. Patrick, St. Patrick's Church, Washington, D. C., March 16, 1957

EXTENSION OF REMARKS
OF

HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks, I would like to have printed in the RECORD for the benefit of my colleagues a most inspiring and informative sermon delivered by the Very Rev. Msgr. George G. Higgins, director, social action department, National Catholic Welfare Conference in Washington, at the annual pontifical mass for the Feast of St. Patrick in St. Patrick's Church, Washington, D. C., last Saturday, with Most Rev. Patrick A. O'Boyle, Roman Catholic archbishop of Washington, pontificating, and Most Rev. Amleto Giovanni Cicognani, the archbishop apostolic delegate to the United States, presiding.

The sermon follows:

SERMON OF VERY REV. MSGR. GEORGE G. HIGGINS AT THE ANNUAL MASS, FEAST OF ST. PATRICK, ST. PATRICK'S CHURCH, WASHINGTON, D. C., MARCH 16, 1957

"Hear ye all, lovers of God, the holy merits
Of the man blessed in Christ, Patrick the Bishop,
How for his good ways he is likened to the angels,
And because of his perfect life is deemed equal to the apostles."

(Hymn in honor of St. Patrick written by St. Secundinus in the fifth century.)

We have come here this morning to consider prayerfully the holy merits of the man blessed in Christ, Patrick the Bishop, the sainted patron and protector of this historic parish and the personal patron of our spiritual father and gracious host, the beloved archbishop of Washington. To the Most Reverend Pastor and the faithful of St. Patrick's parish and to His Excellency, the archbishop, who is so justly proud of his Christian name, we are privilege, on your behalf, to extend our sincere felicitations and the fondest greetings of the day.

It would, of course, be difficult, if not impossible, to talk about the holy merits of the man blessed in Christ, Patrick the bishop, without referring, however briefly and indirectly, to the glories of the fabled land of saints and scholars which he so successfully evangelized in the fifth century of the Christian era. Let us fulfill our pleasant duty in this regard by taking shelter, if only for the sake of Christian modesty, under the protective mantle of a recognized authority from another land—another land, indeed—across the Irish Sea. Our reference here, of course, is to the celebrated British biographer of the saints, the late Alban Butler. "If the virtue of children reflects honour on their parents," Father Butler writes—in a manner calculated to heal the wounds and erase the scars of centuries—"much more justly is the name of Saint Patrick rendered illustrious by the lights of sanctity with which the church of Ireland shone during many ages, and by the colonies of saints with which it peopled many foreign countries."

Suffice it to say, therefore—modestly, again, in the generous words of another friend of Ireland, not of Irish ancestry—

"For grandeur, nations, kingdoms have their day,
But faith like this will never pass away."

Speaking very frankly, however—and even at the risk of shattering an ageless tradition—we have not come here this morning primarily to praise the American sons and daughters of St. Patrick or to boast about the admitted glories of the Emerald Isle. Rather, our primary purpose is considering the holy merits of the man blessed in Christ, Patrick the bishop, is to ask ourselves in a spirit of humility and honest self-appraisal to what extent we are being faithful to his blessed memory and to the glorious heritage which he bequeathed to us approximately 1,500 years ago.

Surely it will be admitted at the outset that we are not being completely faithful to the memory of St. Patrick if we nostalgically glory in past achievements and contentedly rest on the laurels of an age which, for better or for worse, is gone forever.

In this connection, do you recall the delightful Irish fable entitled, "St. Columcille Foretells What St. Patrick Will Do for the Men and Women of Ireland on the Day of Judgment"? The concluding paragraphs of the fable contain a spiritual message which is full of meaning for American Catholics of Irish descent and indeed for those of every other nationality or national origin. "Thereupon," the fable concludes, "Columcille paused and Bauheen, in great anxiety, asked him: 'What will Patrick have to do for the people of Ireland upon that day?'" Colum-cille opened his mouth to speak. But at that moment the bell of Armagh * * * sounded. "That stroke is to remind us," said Colum-cille, "that it is fitter for us to be inside St. Patrick's church praying as St. Patrick taught us to pray, than to be foretelling what he will do for us on the day of judgment."

Paraphrasing the words which are here attributed allegorically to Colum-cille, we may properly say, I think, that it is fitter for us, as we gather in prayer this morning in St. Patrick's Church, to look to the future and its responsibilities more than to the past and its admitted glories, for the past, as the writers of history are so fond of telling us, is but the prologue to the future. The bell in the Vatican watchtower, like the ancient bell of Armagh, has sounded repeatedly and insistently, to remind us in this case that we are standing on the edge of doom. It behooves us, then, even or especially on the feast day of our glorious patron, to be perfectly honest with ourselves in the auditing of our spiritual and intellectual accounts.

In the face of the continuing crisis which his holiness has unweariedly brought to our attention in a hundred different documents and allocutions, is there anything that we can learn from the life of St. Patrick whose feast we are celebrating this morning in one of the oldest among the hundreds of American churches which have been placed under his official patronage and protection?

Obviously the first lesson to be learned from the life of any saint, and specifically, in this instance, from the life of the man blessed in Christ Patrick the Bishop, is the absolute indispensability of persevering prayer and complete abandonment to the providence of Almighty God. I think it can be said with perfect propriety and with all due reverence that the chronicle of Patrick's life of prayer reads remarkably like a chapter from the life of Christ Himself. When he was not engaged in the work of the sacred ministry, we are told by Patrick's biographers, his whole time was spent in prayer and penitential exercises. And on one occasion, in literal imitation of his Lord and Master, he prayed and fasted for 40 days and 40 nights on a rugged mountain peak which, for centuries now, has been known as Patrick's Mountain and which, until the end of time, will be honored and revered as the holiest place of pilgrimage in all of Ireland.

It was largely because they were men and women of perservering prayer and penance—because, in other words, they were faithful to the central core of Saint Patrick's heritage—that the Irish immigrants of the 19th and early 20th centuries were able to make such a magnificent contribution to the cause of Christ and His church in the United States in spite of prejudice and discrimination and in spite of their many natural handicaps and disabilities. It was the solidity and the intensity of their faith in God—plus a congenital and irrepressible sense of humor—which enabled them to mingle laughter with their tears in the face of staggering problems which would have broken the spirit of a lesser breed of men and women. We are justly proud of their phenomenal record in this regard, but again in the spirit of honest self-appraisal it must be said that a great deal more can rightly be expected of us at the present time. Thanks to a merciful providence, we have had the advantage of a formal Catholic education, an advantage which was denied to most of the early immigrants. In addition, we have at our disposal, as the immigrants did not, the rich fruits of the liturgical revival which was providentially initiated by St. Pius X and has been progressively enriched and extended by his illustrious successors in the papacy. And, finally, we have a degree of leisure which even the most optimistic of the immigrants never could have anticipated or even imagined. Our fathers, or in any event, our grandfathers and their fathers before them, were compelled to work 10 or 12 hours a day, 6 and even 7 days a week, for a very inadequate wage and, generally speaking, under miserable conditions. It was difficult for some of them to get to mass even on Sunday, and it was next to impossible for any of them to get to mass on weekdays. We of the present generation, on the other hand, have a greater degree of material prosperity and personal leisure than the rank-and-file of any other civilization in recorded history have ever enjoyed. This means that we are in a favorable position, with a modicum of self-sacrifice, to develop a new type of Christian civilization and Christian culture based on frequent, active and intelligent participation in the sacred mysteries of the liturgy.

Surely, then, the church has every right to expect to see us at mass and the sacraments more frequently as the years go by. And, by the same token, she has every right—in view of our unprecedented advantages and opportunities—to expect us to continue our education and to take an active interest as informed and zealous Christians in the social, political, and cultural life of our beloved country. What was good enough in this

regard 50 or even 25 years ago would be totally inadequate to meet the challenge of the present age.

This reference to our opportunities and responsibilities in the field of education brings us logically to the second obvious lesson to be learned from the life of the saint whose feast we are celebrating today. The Ireland which St. Patrick evangelized in the fifth century quickly became a land of saints, but let us never forget that it was also a land of scholars. Would it be out of order on St. Patrick's feast to ask ourselves, in all honesty, whether or not American Catholics, so many of whom can trace their origin to the land of saints and scholars, are adequately living up to the second half of her glorious title? This is neither the time nor the place to attempt to answer that question in detail. Suffice it to say that the tentative answers arrived at thus far by some of those who have seriously studied the problem are not altogether reassuring. If these answers are too pessimistic, so much the better. On the other hand, if they are reasonably accurate, then it would be the height of folly to ignore their implications for the future of Catholicism in the United States. We are no longer the underdogs of American society, no longer a beleaguered minority. We have long since "arrived"; we have long since been comfortably integrated into the mainstream of American life. And from the religious point of view, any fair observer would have to admit, I think, that we have already accomplished almost incredible wonders, under God, in many fields of practical service in the cause of Christ and His church. It remains for us now to assume our rightful share of leadership in the intellectual and cultural life of the United States—not only in philosophy and theology but in every other field of advanced study and in all the arts and crafts.

The third lesson that we can learn from the life of St. Patrick is a passionate interest in the missions, not only in the field afar but within the boundaries of our own country as well. The Irish-Americans and other Catholics of the United States have admittedly been very generous to the missions, financially as well as in terms of religious personnel. But, frankly, we have hardly begun to scratch the surface of the missionary problem either at home or abroad. Several countries are proportionately ahead of us, for example, in the number of priests, Brothers, and Sisters and lay auxiliaries that they have given to the foreign missions. What will St. Patrick do for us on Judgment Day? That will undoubtedly depend to a considerable extent on what we do for the untold millions of people around the world who have yet to find their way into the one true Church, the Mystical Body of Christ.

In our immediate backyard missionary approach to the millions of non-Catholics within the boundaries of our own country, there is still another lesson we can learn from St. Patrick, the exceedingly difficult lesson of charity and patience in the face of religious prejudice, contention, and misunderstanding. We are told by his biographers that when people mocked at St. Patrick in the exercise of his missionary apostolate, he instinctively turned the other cheek. "It was not because of malice on their part," he was wont to say, "but on account of my want of education." In citing St. Patrick's example of Christian forbearance, we do not mean to suggest that the Catholics of the United States in their missionary approach to our separated brethren should compromise or water down the content of their faith. On the contrary, we must steadfastly hold to the truth at any cost. But in the words of St. Paul's characteristically terse injunction to the Ephesians, and after the example of St. Patrick in his personal dealings with our ancestors, let us "practice the truth in charity."

In passing, and with particular reference to the unique role of the laity in the Mystical Body of Christ, it should be pointed out that there is also a tremendous missionary task to be performed in the application of Christian principles to the problems of the temporal order. This is primarily the task of the laity. We have time this morning to mention only two of the many fields of lay activity which are ripe for the Christian harvest—the field of race relations and the field of international affairs. Surely the field of race relations is preeminently one in which Americans of Irish descent—if only because of their own bitter memory of prejudice and discrimination—should be exercising energetic leadership at the national as well as the neighborhood and the local level. The courageous example of so many of our bishops in this important field of Christian social action is a source of legitimate pride to the Catholic Church in the United States. May it likewise be a source of inspiration to all of us.

In the field of international understanding, is there any group of people from whom more can rightly be expected than the descendants of St. Patrick, who, in the Providence of God, have been scattered to the farthest reaches of the world and, to their everlasting credit, have shown a phenomenal ability to adapt themselves to a hundred different cultures. Temperamentally and by reason of their historical background, they would seem to be providentially fitted to bridge the widening gap which separates the nations and the peoples of the world. Incidentally, if we Americans of Irish descent are ever tempted to withdraw from the rest of the world in a spirit of selfish isolationism, let us stop to recall that the saint to whom we owe our conversion and whose feast we are celebrating today, came to our spiritual homeland as an unwelcome foreigner—so much of a foreigner, if you will, that even today there is no substantial agreement among the historians as to the country of his origin.

We are conscious, in conclusion, that we have probably been too sparing in our praise of the American sons and daughters of St. Patrick on this the occasion of their patronal feast. As a matter of fact, what we have said about them thus far—and what we have failed to say about them—has probably reminded many of you of the ungracious orator who, in addressing the Roman gentry at the funeral of Caesar, stated very bluntly: "We have come to bury Caesar, not to praise him." If so—if that is the image which our public examination of conscience has evoked in your minds—it behooves us to say in conclusion that while we have not come here today primarily to praise the American sons and daughters of St. Patrick, neither have we come to bury them. They have had a glorious past, and as one who is proud to be numbered among them, we like to think that they have an equally glorious role to play in the years ahead in cooperation with their fellow Catholics and their fellow citizens of every other race and clime. And if, at times, that role is not too clear and if the obstacles in the way of its fulfillment should tempt us to become discouraged or disheartened, let us turn to Almighty God, through the intercession of the man blessed in Christ, Patrick the Bishop, and, with all the rugged faith of our hardy ancestors, confidently plead for spiritual guidance and for the gift of fortitude. Let us pray in the words of the collect which His Excellency has already solemnly chanted in this morning's mass:

"O God, who has pleased to send the blessed Patrick, Thy Confessor and Bishop, to preach Thy glory to the heathen, grant, through his merits and intercession, that by Thy mercy we may be enabled to accomplish the tasks Thou settest us. Through our Lord Jesus Christ, Thy Son, who livest and reignest with Thee in the unity of the Holy Spirit, God, world without end. Amen."

Textile Committee Urges Steps To Bolster Faltering New England Industry

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting and factual article written by Juan Cameron, entitled "Textile Committee Urges Steps To Bolster Faltering New England Industry" which appeared in the Boston Sunday Herald of March 17, 1957.

The article follows:

TEXTILE COMMITTEE URGES STEPS TO BOLSTER FALTERING NEW ENGLAND INDUSTRY—SOME AREAS OF PROGRESS NOTED DURING LAST 4 YEARS

(By Juan Cameron)

Intensified research, lower regional property and corporate taxes, increased productivity, cooperation between mills and apparel makers, and higher national minimum wages were recommended yesterday by the New England Governors' Textile Committee as steps needed to bolster the region's faltering industry.

While New England textile mills continue to shut down and employment declines, the committee, in its first public report since 1952 to the Conference of New England Governors, noted areas of progress in the past 4 years.

PRODUCTIVITY UP

The committee reports the North-South textile wage differential has been narrowed; productivity in the industry as a whole increased; and needed protection from imports has been provided by the Federal Government.

New England's continuing textile decline, according to a supporting research report by the committee chairman, Prof. Seymour E. Harris, is part of a national decline in the industry.

Between 1947 and 1955 the industry nationally lost 243,000 jobs, or 18 percent. Investment declined 38.6 percent in the same period. Production increased 1 percent in textiles against 34 percent for all manufactures. Profits were 3 percent of sales nationally in 1955; 1.6 percent in New England.

New England's decline, however, has been swifter in the same period, the committee reported. In 1950, New England textiles employed 268,000 workers. Last January 158,000 were on textile payrolls.

Employment in Massachusets dropped 47.1 percent; 31.9 percent in Connecticut; 26.4 percent in Maine; and 46.3 percent in Vermont, Harvard's Harris reported, in the same period.

While some subindustries, such as knit mills, carpet and rug makers showed employment gains in recent years, textile machinery has experienced even greater losses than textiles.

New England textile machinery makers showed a 45-percent drop in employment between 1947 and 1954, compared to a national decline in the industry of one-third, Harris reported.

MORE DECLINE DUE

In his research report, Prof. Harris finds the industry destined to further decline in relative importance, to both the States and to the national textile industry.

Textiles, he adds, remain important within the region, particularly in Massachusetts, as much because other industries have failed

to replace it or offset its decline as because of its initial dominance.

The committee, composed of 21 men drawn from textile labor and management, and the public, found the reasons for this somber situation within and without the industry.

First, the cotton industry, despite a drop in the number of spindles in recent years, is plagued by overcapacity resulting from improved machinery and three-shift operation. This overcapacity tends to depress textile prices.

Secondly, changing patterns of consumer purchasing has hit textiles hard, the committee reported. In the last 8 years, Americans increased spending on housing nearly 100 percent; on autos, by 137 percent. Clothing expenditures, however, increased only 8 percent in the same period.

CHANGE PATTERN

The committee blamed Federal investment and guarantee policies for stimulating the changing consumption pattern.

"The vast increases in spending, inspired in part by Government policies," the group stated, "has brought great increases in spending in these fields that are fertilized by credit. But apparel profits little from these changes in financing, while products that compete for the consumer's money profit greatly."

The Government was also blamed by the textile committee for the high price of raw cotton at home, and for spurring the development of manmade fibers that hurt the region's textile industry.

Government support of cotton at home, and its disposal abroad at low prices, increased the price domestic mills must pay for raw materials and allows foreign competitors to obtain raw cotton more cheaply, the committee observed.

Manmade fibers, whose consumption has increased 200 percent in the past 15 years, now account for 20 percent of total fiber consumption. The new plants and machinery being built to utilize synthetic yarns are concentrated in the South, the group found, "where the industry tends to grow or lose less."

The popularity of the synthetic yarns with mills, Harris' research report said, is based on its price stability, and declining cost. In addition, synthetic yarn makers through research have provided qualities desired by consumers.

SUPPORT PRICES

The high Government support prices for cotton and wool are important reasons for the search for cheaper fibers, the committed stated, as is the rapid amortization program allowed under Federal tax laws, which stimulated the production of new plants at the expense of the taxpayer.

While textile wages dropped relative to manufacturing wages from 81 to 71 percent between 1947 and 1956, the committee reported that largely through Federal minimum wage legislation the wage differential between North and South had closed.

This wage gap has been common reason given for the decline of New England textiles.

Since 1952, Harris' research study shows, overall hourly wage differential between northern and southern mill wages well from 21 cents to 15 cents. A large part of this reduction, he adds, was the result of wage reduction in New England plants.

In the fall of 1956, the United States Department of Labor's Bureau of Labor Statistics showed a 12 to 13 percent differential between average gross hourly earnings; New England's rate was $1.62; the South, $1.45.

SOUTH WAGES HIGHER

"The most recent evidence suggests," the committee said, "that wages in the South are about as high as they are in the North. In the fine fabrics there is little difference. In the organized mills in the South wage rates are at times even higher than in the North."

Low productivity, another common reason given for textiles' weakened position, had improved for the industry as a whole, but had dropped in worsted and woolens, an industry segment still largely concentrated in New England.

"From the limited evidence available," the committee reported, "we find that from 1947 to 1954 productivity in three major branches of the industry had increased from 30 to 47 percent. The overall record compares favorably with the economy (productivity increase) as a whole."

The woolen and worsted mills, however, on incomplete statistics) showed a gain of only 18 percent in productivity between 1947 and 1954.

"This lag concerns us," the committee reported, "because the woolen and worsted industry is still centered in New England. Losses have been large especially in Massachusetts. This segment of the industry is especially vulnerable because its total national output is declining, and because southern competition is just beginning to be felt in a serious way."

Although the committee stated that its productivity results are little more than indications of trends, the improvement can in some part be laid to labor's willingness in recent years to allow new machinery to be introduced and approve adjustment of workloads.

REJECT INTEGRATION

The committee rejected diversification and integration as solutions to the industry's problems. "The use of limited funds and management to move into new fields, would not, in our opinion, be helpful. This approach seems to us to be a way out of getting out of textiles rather than of preserving the industry."

In his accompanying research report, Professor Harris reports little industry enthusiasm for diversification, as was urged by an Arthur D. Little, Inc., report, sponsored by the Federal Reserve Bank of Boston several years ago.

Mergers and integration, the committee said, can enable textile firms to reduce costs and expand markets. But the mergers in New England often destroy jobs without compensating advantages.

Vertical integration, it commented, seems to be disintegrating. Vertical integration means the control, through acquisition or merger of various firms, to control the whole textile operation from cotton production to sale at wholesale of finished textile products, such as blouses.

Several large firms, including Textron and Burlington, have recently given up attempts to integrate vertically.

The committee recommended more outlays on direct research. New England textiles research expenditures in 1956 estimated at $2.5 million by Boston's Federal Reserve Bank to increase productivity.

MORE RESEARCH

Closer contact with textile researchers and engineering studies at regional schools; more use of the fiber producers' extensive developments; more cooperative research with New England's textile machinery producers; as well as a periodic regional research conference on fibers, processes and machines, was urged by the committee.

The region's industry, the committee said, must press for enforcement of Federal minimum-wage laws, and support policies that protect the rights of workers to organize in the south in order to close further the gap between northern and southern wage levels.

New England textiles must urge State and local governments to place less emphasis on general property taxes, which are heavier here than in other textile regions.

The committee urged New England's governors and Congressmen to keep an eye out for State and Federal policies that work against the region's interest.

In particular, the committee urged that flood control or insurance that directly concerns the textile industry be speeded, and amendments made that will allow Massachusetts and other States to participate directly after 1959.

Ominous Outlook in Mideast

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. MULTER. Mr. Speaker, the foreign policy of this administration is nothing short of disgraceful. I commend to the attention of our colleagues the following article by Constantine Brown, which appeared in the Washington Evening Star of March 14, 1957.

OMINOUS OUTLOOK IN MIDEAST—NASSER BELIEVED USING U. N. TROOPS AS SCREEN FOR RESTORING GAZA SETUP

President Eisenhower appeared concerned over the developments of the last 2 days in the Middle East when he touched on the subject in an off-the-record conversation with Senate and House leaders early this week. All the same, he expressed his hope and belief that, thanks to the activities of the United Nations, the situation may not become "irruptive."

His qualified optimism is not fully shared by those outside the executive branch of the Government. These men are inclined to believe that Egypt's dictator Nasser is using the presence of the United Nations emergency forces as a screen behind which he will in the near future restore the situation as it existed before the withdrawal of Israel from Gaza and the Gulf of Aqaba, and also do exactly what he pleases regarding the passage of ships through the Suez Canal.

The official optimism in Washington is based on the mistaken belief that Egypt and its Communists or antiwestern supporters share our awesome respect for the United Nations. The American people have been propagandized in the belief that the cessation of hostilities initiated by the French-British-Israeli forces last October was caused by the immediate and determined intervention of the United Nations. The fact is that the forces of the three nations stopped their military operation when Washington put its heavy hand on their shoulders. It was the lack of a flow of oil from the United States to Britain and France that was the compelling reason why the British and the French complied so eagerly with the General Assembly's orders.

Equally it was some promissory notes, the contents of which have not yet been divulged to the American people, that have prompted Premier Ben-Gurion to order the withdrawal of the Israeli forces from the two "security areas" occupied after the Egyptian Army melted away last fall. The administration is eager to give the United Nations credit for these achievements in the hope of strengthening its weak structure.

Unfortunately, Colonel Nasser, whose word is supreme in Egyptian affairs, has other ideas. This week he attributed the withdrawal of the British-French forces from the Suez Canal to the "glorious resistance of the Egyptian peoples backed by a small armed force to the aggressors" and described the only military affray at Port Said as "the Stalingrad of Egypt." He also described Arab nationalism represented by the "heroic Egyptian Army" as an impregnable force

which has ground the power of France, Britain, and Israel like a millstone, and is ready to do it again. The Egyptian dictator has only an ill-concealed contempt for the United Nations. He is putting all his eggs in one basket. In a recent conversation with a foreign ambassador in Cairo, Colonel Nasser spoke about the difficulties he encountered in organizing Egypt's economy to increase the standard of living of the Egyptian people. He pointed out that he could not use Egyptian economists in his project because they were all "British educated." Hence, he added, "I must look to India, the Soviet Union, East Germany, Yugoslavia and other Socialist countries for experts to formulate a national pattern for my country's economy."

For the time being, the UNEF is useful to the policies of the President of Egypt. When the Yugoslav contingent entered the Gaza Strip and was ordered by the Danish colonel in overall command of the United Nations token forces to carry out duties of the civilian police, it refused to do so. The Yugoslav officer in command insisted that it was the duty of the Egyptian police to undertake such chores. He said the task of the UNEF was, under instructions he had received from his own superior officer, only to replace and prevent the return of the Israeli forces. Shortly afterward, Cairo announced that it would take over the civil administration of Gaza. Ralph Bunche, Deputy Secretary General of the United Nations, who was on the spot at that time, rushed to Cairo, where he talked with some of Colonel Nasser's underlings. He agreed that juridically Egypt had that right but obtained their promise to delay the taking over of these civilian duties until later.

According to diplomatic reports from Cairo, India's roving Ambassador and troubleshooter (he is described in Washington as troublemaker), Krishna Menon, is the most-listened-to-person. When the question of Israel's right to use the Suez Canal was recently raised with Colonel Nasser he replied, "We are still studying the proposal and consulting with our friend Mr. Menon."

Californians Depart From Top Jobs in Washington

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. HILLINGS. Mr. Speaker, the Los Angeles Times on March 17, 1957, carried a very interesting article concerning Californians in Washington. It expresses the concern of many of my colleagues and me over the fact that so many outstanding Californians had departed from Federal service recently.

The article follows:

CALIFORNIANS DEPART FROM TOP JOBS IN WASHINGTON—ZELLERBACH ONLY MAJOR CHOICE OF SECOND TERM

(By Robert T. Hartmann)

WASHINGTON, March 16.—Are Californians being eased out of top Government jobs in the second Eisenhower administration?

Or is the evident exodus of Californians from the Capital the result of homesickness for the western way of life combined with the curious coincidence that not one new Californian has been nominated to a high Washington position since the November election?

President Eisenhower's only major California appointee in his second term has been James D. Zellerbach of San Francisco, Ambassador to Italy, where he headed a special foreign aid mission for President Truman in 1948.

RESIGNATIONS LISTED

Consider these recent resignations:

Undersecretary of State Herbert Hoover, Jr., of Pasadena, succeeded by Christian A. Herter, of Massachusetts.

Secretary of the Navy Charles S. Thomas, of Los Angeles, to be replaced by a Pennsylvanian.

Philip A. Ray, of Hillsborough, general counsel of the Department of Commerce. His successor is from Michigan.

Herman Phleger, of San Francisco, State Department legal adviser, whose successor has not been named.

RETURNS TO PENTAGON

Presidential Assistant Thomas P. Pike, of San Marino, to return to the Pentagon as a special consultant to the Secretary of Defense. Pike formerly was an Assistant Defense Secretary.

Four years ago, so many Californians descended on Washington it provoked considerable resentment and jealousy from other States. Vice President NIXON, of course, shared President Eisenhower's triumphant reelection and Chief Justice Warren holds a lifetime appointment. But the third stellar Californian, Senate Minority Leader KNOWLAND, has announced his intention of leaving town in 2 years.

OTHERS HAVE LEFT

Other first-term Eisenhower appointees have long since departed for their California homes, among them Under Secretary of Labor Lloyd A. Mashburn, Under Secretary of Interior Ralph Tudor, Assistant Attorney General Stanley Barnes, Assistant Air Force Secretary Trevor Gardner, and Assistant Secretary of Agriculture J. Earl Coke, to name a few. The Cabinet is still without a single Californian.

Today there are no Under Secretaries from California and only 5 Californians serving as Assistant Secretaries in 4 executive departments: Warren Olney III and Victor Hansen in Justice; Floyd S. Bryant in Defense; William W. Parsons in Treasury; and Harold C. McClellan in Commerce.

Among the independent Federal offices and commissions there are Californians in top positions only on the Interstate Commerce Commission, the Housing and Home Finance Agency, and the Securities and Exchange Commission.

The State is not represented at the top policymaking level on the Atomic Energy Commission, Federal Reserve Board, National Labor Relations Board, Federal Power Commission, Civil Aeronautics Board, Civil Service Commission, Veterans' Administration, Federal Civil Defense Administration, Federal Home Loan Bank Board, or the United States Information Agency, according to the latest Federal Register.

RADFORD TO RETIRE

Admiral Radford, Chairman of the Joint Chiefs of Staff, calls southern California home, but he is reported about to retire, as are some of the other officials listed above.

On the White House staff only two Californians can be found: Former San Juan Bautista Representative Jack Z. Anderson and John H. Hamlin, of Pasadena. Joseph S. Davies is a member of the Council of Economic Advisers and Dr. Lee DuBridge heads the President's Science Advisory Commission.

A number of Californians have been appointed to temporary White House commissions and citizens committees which submit specific recommendations and disband. But the present influence of the Union's second largest State inside the Eisenhower administration is giving genuine concern to the handful of Californians who remain. Without Vice President NIXON it would be meager, indeed.

Thirty-eighth Anniversary of American Legion

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 4, 1957

Mr. KEATING. Mr. Speaker, March 15 to 17 marked the 38th anniversary of the founding of the American Legion. The formative caucus convened in Paris on those dates and from that caucus emerged the American Legion.

In the brief years of its existence, the Legion has achieved a remarkable record of devotion to its high ideals. In hewing close to the avowed purposes of the organization, Legion members have contributed greatly to many phases of American life.

A succinct way of delineating the accomplishments of the Legion is by examining some of the many ways in which the provisions of the preamble to its constitution have been carried out. Included in the preamble are the following:

"To uphold and defend the Constitution of the United States of America." In carrying out this provision, the Legion has led the way in promoting education in Americanism and flag etiquette for the youth of our Nation.

"To maintain law and order." Many branches of Legion organizations, including fire departments, auxiliary police, and ambulances help in time of disaster.

"To foster and perpetuate a 100 percent Americanism." Through Boys States, more than 19,000 boys each year learn the principles of good government.

"To preserve the memories and incidents of our associations in the Great War." In fulfilling their pledge in this provision, Legion members work diligently in many ways to preserve the memory of every veteran.

"To inculcate a sense of individual obligation to the community, State, and Nation." Legionnaires are well known as leaders in community ventures, striving to build better homes, churches and schools.

"To combat the autocracy of both the classes and the masses." A fine example of Legion activity in fulfilling this purpose is the national oratorical contest, which encourages some 340,000 of our young people to become leaders in preserving democracy.

"To make right the master of might." Vigorous Legion efforts helped make the GI bill a reality, enabling 7,800,000 veterans to receive educational and other training.

"To promote peace and good will on earth." Knowing at firsthand the horrors of war, members of the Legion work diligently for the cause of peace. The

Legion's child welfare program helps provide care and education for the children of veterans.

"To safeguard and transmit to posterity the principles of justice, freedom, and democracy." More than 1,500,000 young people receive training in Americanism each year. Junior baseball and other programs also promote respect and practice of sportsmanship among our youth.

"To consecrate and sanctify our comradeship by our devotion to mutual helpfulness." The American Legion, through the years, has never forgotten the less fortunate comrades of all wars at home or in hospitals.

Mr. Speaker, in putting into practice with vigor and perseverance the purposes set forth in its preamble, the American Legion has become a strong and important organization for the public good. Extending beyond interest in purely veterans' affairs, the Legion has worked in myriad fields for the good of the whole Nation.

In times of peace and in times of war, the Legion has been a bulwark of freedom. Through the years, it has realized that there is a crying need to spread an affirmative doctrine of the things for which this country has always stood. In joining in the battle for men's minds—a struggle surely as vital today as the struggle on the battlefield—the American Legion has added a powerful and effective voice to the arsenal of democracy.

Truly, for God and for country, the American Legion today continues to live up to its proud traditions. I am delighted to join in extending to my fellow Legionnaires congratulations on achievements thus far, and confidently express the expectation that in the years to come we will continue to see the Legion in the forefront of major movements for the good of our Nation.

Governor of Guam

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Pittsburgh Press of Sunday, March 10, 1957, by Fred Wertenbach, entitled "Governor of Guam":

GOVERNOR OF GUAM
(By Fred Wertenbach)

It is a far cry from a judge's bench in Pittsburgh to the Governor's duties in Guam, 9,000 miles away in the central Pacific. But the change has been happily and successfully made by Mr. and Mrs. William T. Corbett.

Both lifelong Pittsburgh residents until the transfer to Guam last May, they have taken the change in stride, and been received by the islanders with open arms.

Prior to his appointment to Guam, Mr. Corbett had served for 2 years as a county court judge here. His wife, the former Helen Topping, was a Mount Lebanon girl.

Mr. Corbett's original appointment to Guam was as secretary, and second in command. But he was made Acting Governor when Gov. Ford Q. Elvidge resigned soon after his arrival.

The people of Guam like the Corbetts so much they have taken them to their arms, and they regularly attend all their social and religious functions.

ALMOST A SHOWPLACE

Now, acclimated and entirely satisfied with his island domicile, the former Pittsburgher finds life on Guam too active to pine long for the teeming steel metropolis which always will be his first love. For here are his mother, Mrs. S. J. Corbett, of Bellevue, a sister, and a brother, Congressman ROBERT J. CORBETT. To say nothing of the couple's attractive home in Wellington Heights, which they had landscaped and furnished until it was almost a showplace in that district.

"Mrs. Corbett and I found the people of Guam friendly, cooperative, highly intelligent and deeply intent upon advancing their island's progress," Mr. Corbett wrote, in a letter to a friend here.

The people of this progressive tropical isle are an intensely patriotic group, proud of their American citizenship.

The transition was made without too much ado from the beautiful Wellington Heights home the Corbetts own in West View to the spacious frame dwelling provided the United States official in Guam.

In Pittsburgh, of course, we had the home fixed up as we wanted—in accordance with our own tastes. Here on the island it is different. We had our own refrigerator units transported over here and some of our furniture. But my good old jalopy, a 1954 Buick, I left behind. Now I have only the official car provided by the Government—and I miss my own.

LEGISLATURE MEETS TWICE A YEAR

The new island official writes that Guam's form of government is a good bit like that in the United States.

The legislature is composed of but one body—not a senate and a house, as in Pennsylvania. It meets twice a year. Then is my busy season. During the last session, which I addressed and before which I presented my budget message, my days sometimes would run from 6 a. m. until past 8 p. m.

Mr. Corbett says that the heat, contrary to the impression of many not familiar with the island stronghold, is not oppressive.

The temperature rarely gets above 92 and generally stays around 70, with an ocean breeze frequently lessening any possible discomfort. Covers are necessary for comfort at night.

Mr. Corbett's annual address before the Guam Legislature was a 22-page document which drew high praise from the Guamanians.

It touched on all problems pertaining to the island. These dealt with public safety, medical services, agriculture, land management, commerce, education, public utilities, water resources, civil defense, labor and personnel, and parks and monuments.

Among the bills urged in Mr. Corbett's message were legislation dealing with insurance, health and sanitation, taxation, and even a zoning map for Agana, where the Acting Governor resides.

But it isn't all work and no play for the Pittsburgh lawyer and ex-judge who has transplanted his life and loyalties—at least for some years to come—to the Pacific.

He and Mrs. Corbett have plunged pellmell into the island's social life as well. Big vessels from the Pacific, some of them huge, trim-lined warships, come with admirals and others to be feted and entertained.

Liberation Day in Guam, Mr. Corbett finds, is a gala occasion. Marking the island's liberation from Japanese rule, it gives the islanders a chance to vent their patriotic fervor. A sort of combination July 4 and Mardi Gras, it is featured by huge floats, costumed parades, music, and festivity. The Corbetts entered into the festival like natives and enjoyed themselves immensely.

Most signs of Japanese occupation have been removed, Mr. Corbett says. But Pepper, the family's springer spaniel, finds untold canine pleasure in sniffing about the abandoned Jap pillboxes and dugouts, remnants of which still remain.

"It is odd how the problems and concerns of the Guam people have become my own," Mr. Corbett says. "Were I addressing the legislature of my own State here I would not be more deeply enwrapped in my proposals than I am in any suggestion or cooperation I may offer the citizens of Guam."

Mrs. Corbett likewise finds ample work for both her agile hands and her equally agile mind.

She has become one of Agana's "gray ladies," women who devote 100 hours to training for work in the hospital and then spend 2 days a week in actual service. There are two such institutions on the island, the 164-bed general hospital and the tuberculosis hospital.

MRS. CORBETT BUSY, TOO

Mrs. Corbett also serves on the board of advisers of the Guam Fine Arts Society, which includes Mrs. W. B. Ammon, wife of Admiral Ammon; Mrs. C. R. de La Cruz, J. Flores, and Guam Congressman C. P. Taitano. The board, composed of leading citizens of the community, aims at bringing the best musical talent to Guam for concerts and performances.

Mr. Corbett, whose nickname is Ted, served as judge of county court through 1954 and 1955. He is 54 and is a graduate of both Cornell and the University of Pittsburgh, and of the Pitt Law School.

Although his post in the diplomatic family of the United States is new to him, Mr. Corbett has had ample training in a public career. He was deputy attorney general of Pennsylvania for 8 years and later served 2 years as solicitor for the sheriff's office in Allegheny County and filled a similar post for 3 years under District Attorney Russell H. Adams.

Mr. Corbett is held in such esteem by the Guamanians that last December he was chosen Friend of the Year there.

The islanders also petitioned for Judge Corbett to become Governor at the time Governor Elvidge resigned. However, President Eisenhower recently appointed Richard B. Lowe, of North Dakota, to the position, instead.

Since that time Mr. Corbett has reverted to the status of secretary, acting as Governor also when Mr. Lowe is called away from the island for any reason.

He has visited his Pittsburgh home but once—and then for only 10 days—since going to Guam. Mrs. Corbett has yet to return here for a visit.

No Time for Bungling in Gaza

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by David Lawrence

which appeared in the Washington Evening Star of March 14, 1957:

NO TIME FOR BUNGLING IN GAZA—HAMMARSKJOLD CRITICIZED FOR NOT HALTING WITHDRAWAL AFTER SABOTAGE ATTACK

(By David Lawrence)

All the good the United Nations has done by interposing its mediating influence in the Middle East can be wiped out if the administrative responsibilities of the Secretary General, Dag Hammarskjold, are bungled.

The U. N. itself is a deliberative forum. It is not a supergovernment. It has no mechanism of its own for enforcing peace except as it may order a military mission or a peace commission, empowered with certain instructions, to take a specific action. The Secretary General has been given no instructions to go beyond the resolutions passed by the General Assembly.

Yet Hammarskjold has entered into an agreement with Egyptian President Nasser which upsets the whole mediation process of the U. N. itself. There was no instruction to the Secretary General to agree to allow the Egyptian Government to send in a civilian or anyone else at this delicate moment to take care of civilian matters in the Gaza strip. The general assumption was that the difficult problem of bringing peace within the Gaza strip would be handled cautiously, slowly, gradually, and with due regard to the emotional reactions that could come from both Egypt and Israel if a hasty move were made.

But at the same time that Ralph Bunche, an assistant to the Secretary General, was agreeing with Nasser that he could send a civilian governor, an Egyptian, into the Gaza strip, an act of war had just been committed against Israel through the cutting off of all rail and telegraph communications between the Gaza strip and Israeli territory.

The moment this happened, it became incumbent upon the U. N. Secretary General to stop all further moves and maintain the military units of the United Nations emergency force in complete control, with disinterested civilians taking charge until peace and tranquillity could be restored.

First reports said unidentified bands did the sabotage. This is the same camouflage which was used when the Suez Canal itself was blocked by unidentified Egyptians. But the Communists, who are trying to make more trouble in the Middle East, could easily have been behind both these moves.

Thus Moscow radio was quick to denounce the U. N. force for firing at the mob which was threatening it in the Gaza strip and, since the Soviets and the Red Chinese both use the device of volunteers, it is plausible to suppose that there is something of the same kind astir in the Middle East.

The reports that regularly come out of Cairo through the press and radio seem to have Communist inspiration and differ considerably from what the Egyptian Government actually says in its communications to the American Government and to U. N. officials.

Now, Egypt did occupy the Gaza strip before the events of last summer and, under the terms of the 1949 armistice between Israel and Egypt, the right to reoccupy the Gaza strip is technically vested in the Cairo Government. But, knowing this, the U. N. Secretary General's staff might better have waited for a plan to be drawn up that would prevent the outbreaks that have occurred. Certainly when the rail and telegraph communications with Israel were cut, it indicated clearly that this was no time to be handing over civil administration to the Egyptian Government and that it was much more desirable to set up a commission of civilians from neutral nations before arranging for the final transfer of authority or settlement of the issues involved.

Israel's chief concern has not been to occupy the Gaza strip at all but to insure conditions which would prevent the Gaza territory from being used as a base for raiding operations hostile to Israel. The cutting of rail and telegraph communications was such an act, and it is necessary now for the U. N. to discover who was responsible for this sabotage. The only way to prevent more steps of this kind is to suspend any further arrangements with the Egyptian Government for the reoccupation of the Gaza strip until a constructive plan has been set up that gives some assurance of being obeyed on all sides, particularly by those unidentified bands roving into Israeli territory from Egypt and the Gaza strip.

The United States Government has pledged itself to see to it that the resolutions of the United Nations are carried out. These call for protection for Israeli ships in the Gulf of Aqaba, unmolested passage of Israeli ships through the Suez Canal and safeguards against recurrence of the raids that have been carried on by Egyptians against Israeli territory from the Gaza strip.

The United States can insist that the U. N. take proper action but, if the Secretary General of the U. N. considers it his duty to appease Nasser and turn over the Gaza strip to the Egyptians without regard to the acts of violence already committed or that may be set into motion in the future, many Americans will begin to lose confidence in the efficacy of the U. N. to bring peace in the Middle East. The world may then find itself back again to a rule of force instead of reason. The U. N. Secretary General, who has a tough job on his hands, will not make things easier by ignoring the acts of sabotage already committed by unidentified Egyptians.

Budget Will Be Reduced

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. HERLONG. Mr. Speaker, the cry is being raised throughout my district and I am sure in other places that the Congress reduce the administration's enormous budget.

In this connection, I insert in the RECORD an excellent editorial on the subject which was published in the Ocala Star-Banner, Ocala, Fla., on March 11, 1957:

BUDGET WILL BE REDUCED

There seems to be little reason to doubt that the Federal spending budget of $71,800,000,000 submitted to Congress by President Eisenhower will be reduced by some substantial amount.

The administration's budget has drawn sharp criticism from both Republicans and Democrats. Shortly after it was introduced Secretary of the Treasury Humphrey made a statement to the effect if some of the spending authorized wasn't curtailed, this country would be in for an era of inflation that would make everybody's hair curl. Mr. Humphrey called for reductions in the budget but didn't indicate what items should be cut.

Senator BYRD, of Virginia, one of the strongest economy advocates in Congress, in a Senate speech called the President's spending estimate a "luxury budget" and declared that if the budget isn't slashed at this session of Congress "it may be our last chance to reduce entrenched spending."

There were two developments last week that indicate budget slashes are in the offing. The President at midweek stated he has ordered a governmentwide effort to reduce the budget by a "slow-up" in projects and programs not immediately essential to the national welfare.

The President said the Government should cut its spending "to the ultimate of its ability" to lessen inflationary pressures causing a new round of price increases. That is about the position taken weeks ago by Secretary Humphrey.

At the weekend the House Appropriations Committee, by a vote of 22–12, adopted a resolution asking the President's guidance in cutting his peacetime record budget. The resolution was adopted along party lines with Republicans voting against it.

Republicans explained their vote by stating that with the budget now in the hands of the committee, the resolution was a buck passing move, or an attempt to duck responsibility.

It does not appear that the GOP spokesmen are on sound ground in that position. Reference need only be made to the President's statement later in the week, when he called on Government agencies to slow up in programs not immediately essential. In his statement the President said:

"We don't have to pursue them (Government services and programs) in the same speed at a time like this when everybody is contesting for dollars."

Congress, of course, can and should reduce the budget, but to do so without asking the President for guidance would be unwise and bring about repercussions.

The President, no doubt, within a short time will have responses from the different departments on his request to slow down spending, here and there. When he has received those responses he can and should communicate with the House Appropriations Committee and that group would have the information asked for in the unusual resolution passed last week.

It should be noted that the House resolution set no deadline for the President to "indicate" if and where cuts may be made. Nor did it spell out what it might consider "substantial" reductions.

It may be as some members of the House committee have suggested, adoption of the resolution could culminate with Congress formally urging the President to submit an entirely new budget. That may turn out to be the wise course after Mr. Eisenhower has received reports from the various agencies which cannot but carry out his instructions to slow up on projects and programs not essential to the national welfare.

What is taking place in Washington gives strength to the thought that the budget will be reduced, either voluntarily by the President or arbitrarily by the Congress. It also appears that the administration could save face by indicating where reductions can and should be made.

Reasons and Meaning of the Law on Price Discrimination and H. R. 11

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. PATMAN. Mr. Speaker, recently I received a letter from a small manufacturer which asks an elementary question about the law on price discrimination. This is not the question of a lawyer. Nor is it the question of a big business executive, or even a small-business man

who is informed about this law. It is simply the question of a very busy executive of a small company, who has heard that there is a law of some kind, somewhere, which may forbid the manufacturer to sell to one account at a price different from that made to another account—and he asks what the law is.

I have given him a simple answer—not in legal terms, but in everyday, layman's language. It occurs to me that there may be others who would like a brief and simple description of the law, and what its purpose is. The purpose is, of course, largely defeated by the so-called good faith loophole in the law. So in my answer to this small-business man, I have also explained briefly what H. R. 11 would do. These are matters which are of vital concern to several million small-business people, so I am offering for the record the letter to me, as well as my reply, both of which follow:

JOSEPH A. SHIRLEY CO.,
Dallas, Tex.

Mr. WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN PATMAN: I understand that laws are designed, that is, certain laws are designed to prevent a manufacturer or distributor from selling to one account at a price different from that made to another account, all other matters such as quantity, etc., being equal.

Mr. PATMAN, would you advise me as to the law itself, what it actually states and how action can be taken under it to prevent price discrimination. I would be very grateful for your help.

Courteously yours,
JOSEPH A. SHIRLEY.

WHY WE NEED A LAW ON PRICE DISCRIMINATION

1. Big manufacturers, or big sellers can destroy their smaller competitors even though their unit cost may be greater than that of the smaller competitors. As you may remember, the old Standard Oil Co., which was subdivided under the Sherman Act in 1912, had acquired better than a 90-percent monopoly of refined products. Standard got a substantial size advantage over its competitors (by merger), and thereafter cut prices in one market at a time until its smaller competitors were driven out.

2. Where sellers are discriminating in their prices, it is almost invariably the case that the big buyers receive an unearned advantage by which they destroy or squeeze out smaller competing buyers.

THE LAW IN GENERAL

The law on this subject is contained in section 2 of the Clayton Antitrust Act of 1914, as amended by the Robinson-Patman Act of 1936. In general, the law says that a seller must not discriminate in his prices if the effect is to cause a substantial injury, or a lessening of competition, or a tendency to create a monopoly. There are clear and complete exemptions for price differences which are justified by differences in cost of manufacture, sale, or delivery. And there is a complete and clear exemption for price changes made from time to time, so long as these price changes are not cloaks intended to conceal discriminations made in favor of particular buyers.

THE LOOPHOLE IN THE LAW

In section 2 (b) of the Act there is also a so-called "good faith" exemption which was intended, when we designed the law, as a procedural matter which would help assure that in a case brought by the Government, the Government would proceed against the firm really responsible for a discriminatory practice. In the Standard Oil (Indiana) case in 1951 however, the Supreme Court ruled that a seller is completely justified in discriminating in prices among his customers where the discrimination in favor of certain customers is made to meet the price of a competitor, irrespective of the effect on competition. An example of what this means, or as it is taken to mean, is that a major oil company may cut prices to a retail gasoline dealer across the street from an off-brand dealer without, at the same time, reducing prices to another of its dealers just a block down the street, even though the discrimination puts the second dealer out of business. The practical effect of such pricing is, of course, that the off-brand dealer is also put out of business—by the sheer weight of the major company's superior marketing power—as is the oil jobber who supplies that station, and as is the small refiner who supplies that oil jobber.

H. R. 11 WOULD PLUG THE LOOPHOLE

At the present time Congress is considering a bill which will overturn, in part, the Supreme Court's decision in the Standard Oil (Indiana) case. This is H. R. 11, introduced in the House by me, and S. 11, introduced in the Senate by Senator KEFAUVER. This bill simply says that if the effect of the seller's discrimination may be, in the language of the bill, "substantially to lessen competition or tend to create a monopoly", then the discrimination is illegal. In this event the Government may institute legal proceedings and if the effect of the discrimination is proved, it then has the power to issue a cease and desist order. Similarly, an individual or business firm may bring a private suit in a Federal court, and if he proves his case, he may collect threefold the damages which he proves he has suffered as a result of the discrimination.

I have tried to explain this in every day terms, rather than in legal language, as I thought this would simplify matters. I hope these remarks will be helpful to you.

Sincerely yours,
WRIGHT PATMAN.

Solution to Mine Cave Problem

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following recent editorial from the Wilkes-Barre Times Leader Evening News on two major problems confronting the anthracite coal region—subsidences and strip mining:

SOLUTION TO MINE CAVE PROBLEM

It is heartening to note progress in the solution of two major problems confronting the anthracite region—subsidences and strip mining. While separate moves are under way to solve them, obviously they are related. But it is just as well not to confuse the situation by tackling them together. They are of sufficient importance to justify separate handling in the interest of efficiency and results.

It should not be too difficult to work out a solution to the problem of strip mining to the satisfaction of all concerned, for the course is pretty well charted. But the threat of mine caves is far more complicated because of the factors involved.

For more than a quarter century, mine caves have been a major issue in this community, among others. They have been with us for a much longer time, but they have been demanding increasing attention during the past three decades. In every coal town, there is presently cause for concern about the future, so a showdown is at hand. Action cannot be postponed.

There is no easy way out of the dilemma, no shortcut, no cure-all. It has to be done the hard way—by direct approach, positive measures, and possibly sacrifice. No vague promises or wishful thinking will be a substitute for action.

Local municipalities and the industry, left to their own devices, have not the resources to meet the challenges. Both are in a position to make substantial contributions and their cooperation is absolutely essential, but the backing of the Federal and State governments must be forthcoming in financing the program and in the realm of prevention. It takes money to flush mines and to repair damaged surface property. The proposed tax on tonnage and some form of insurance are logical steps.

More than that, future mining must be done with assurance surface supports will be maintained. It would be foolish to correct abuses of the past while creating new hazards for the future. Regulations will have to be spelled out, so nothing will be left to chance, especially in operations that are leased by major producers to smaller outfits.

The job is one that can be done if all parties will work together unselfishly in the public interest.

Commemoration of Hungarian Independence Day

SPEECH
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. ROOSEVELT. Mr. Speaker, today, during the special order of the gentleman from Michigan [Mr. BENTLEY], both the distinguished majority leader [Mr. MCCORMACK] and the distinguished minority leader took part in the commemoration of Hungary's Independence Day. I wish to join them in paying tribute to the long and distinguished record in fighting for liberty and independence.

One hundred and nine years ago in Hungary a revolt against the Hapsburg dictatorship was led by the patriot Kossuth. It was crushed by Russian force. In November of last year, another revolt was ruthlessly suppressed by the same enemy.

Already, 25,000 Hungarians have lost their lives in a transcendentally gallant but fruitless effort to achieve freedom. Already another 200,000 have been forced to flee their hearths and homes, with only the clothes on their backs, in a desperate effort to escape.

We cannot but be abashed, we in the free world, at the helplessness with which we have had to witness this example of bravery and devotion. Nevertheless, we humbly associate ourselves with the Hungarian freedom fighters today in their hope for eventual liberation. They have shown that they can make history repeat itself, and will continue to make history repeat itself, again and again, in

revolution after revolution, until what they have fought for has been won.

In conclusion, I want to bring the attention of my colleagues to the response of the United States to the challenge of the Hungarian freedom fighters. We have, commendably, given asylum to the Hungarian refugees despite our discriminatory immigration policy, and we have given bread and bandages. However, is that enough?

Should we not take more effective action for the people who have remained in Hungary? The silence of the United Nations, concurred in by the United States delegation, stands in stark contrast to the threatening of sanctions against the State of Israel. The Soviet armed intervention, coupled with the mass arrests of the puppet Kadar regime, is in direct defiance of 10 U. N. resolutions. We must appeal to the conscience of the world in this matter. I believe we should continue to press for an investigation by the United Nations of the events in Hungary, so that the spotlight of world public opinion might be turned on that brave, little country. I look forward to the day when a free Hungary, in a free, undivided Europe, will take its place in the family of nations.

When Congress Stood for No Nonsense

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. O'HARA of Illinois. Mr. Speaker, by unanimous consent, I am extending my remarks to include an article from the editorial page of the Chicago Tribune of March 3, 1957, as follows:

The United States Treasury says it is none of your business what organizations request tax exemption on the ground that they are nonpolitical and not for profit. You can ask for the information but the Treasury won't give it to you or to anyone else who may be interested in this aspect of Government.

This we learn from an indignant report made a few days ago by the House Committee on Government Operations, headed by Representative DAWSON, of Chicago. The report was based upon the researches of the Subcommittee on Government Information headed by Representative Moss, of California.

Well, it wasn't always so. In the February number of that spirited magazine, American Heritage, you can read of the Amistad case and learn that there was a time when Congress stood for no nonsense about the supposed right of the executive departments of Government to conceal the public's business from the public and its representatives.

The *Amistad* was a Spanish ship. In 1839 it was carrying 40-odd slaves who had just been bought in Habana to labor on plantations up the Cuban coast. These Negroes were newly imported from Africa, in violation of a Spanish treaty with England to abolish the African slave trade by 1820.

The slaves who had been treated with great cruelty managed to get possession of the ship and tried to sail it back to Africa but after many weeks found themselves in Long Island sound. They got back to Africa eventually, but it took a long time and, except for congressional insistence on the people's right to know, they would have been returned to Cuba and slavery.

The first thing that happened to them was that they were locked up. President Van Buren and his attorney general were determined to hand them over to the Spanish Ambassador for return to Cuba. This deeply offended the sentiments of abolitionists in Connecticut and elsewhere, and a defense fund was quickly raised. There was a trial in the New Haven Federal court in which the United States attorney represented the slave owners.

To nearly everybody's considerable astonishment, the judge, another Van Buren appointee, decided in favor of the slaves. The Government gave immediate notice of appeal, and it is at this point that John Quincy Adams enters the story.

He had been President of the United States from 1825 to 1829 and, after being denied reelection, became a Member of the House. He got Congress to adopt a resolution calling for all the official correspondence bearing on the *Amistad* matter. That is exactly the kind of thing that recent administrations, including President Eisenhower's, have declared to be a frightful invasion of the Executive department's right to secrecy.

What Mr. Adams wanted included letters that passed between Secretary of State Forsyth and the United States attorney in Connecticut. One of Mr. Forsyth's notes proved to be a "lulu." It was written while the judge had the case under consideration, it was marked "confidential," and it revealed President Van Buren's intention to deprive the Negroes of an appeal if, as was expected, the decision ran against them.

The President had ordered the Navy brig, *Grampus*, to New Haven, where the trial was held. Secretary Forsyth's letter instructed the United States attorney to hustle the slaves aboard the ship as soon as a decision against them should be announced and before their counsel could move for an appeal. The *Grampus* was then to set sail at once for Cuba.

"The order of the President is to be carried into execution," Mr. Forsyth wrote, "unless an appeal shall actually have been interposed. You are not to take it for granted that it will be interposed. And if, on the contrary, the decision of the court is different, you are to take out an appeal * * *."

Adams was one of the lawyers for the Negroes when the Supreme Court heard the Government's appeal. He spoke for 4½ hours and there is reason to believe that his scornful reading of the Forsyth letter went far to win the victory.

The Amistad Negroes were set free by the Supreme Court on March 9, 1841, which is to say almost exactly 116 years closer to the adoption of the Constitution of the United States than we stand today. We think it is fair to assume that at that time the Congress and former President Adams had a clearer idea of what the Founding Fathers intended to grant the executive departments by way of privacy in public matters than our latter-day Presidents have. Surely it is significant that President Van Buren and Secretary Forsyth did not resist the order of Congress on the plea of executive privilege. They came across, meek as lambs, with documents they had marked "confidential," as bearing on the foreign relations of the United States, even though the papers were utterly damning to them and their cause.

In consequence, justice was done. We can only guess how often injustice has been done in consequence of executive secrecy as it is now practiced.

The Federal-Aid Highway Program

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. MUMMA. Mr. Speaker, in accordance with the privilege granted me, I want to put on record a letter of March 13, 1957 received from my neighbor, Mr. Charles E. Pugh, manager of the Pennsylvania Motor Federation, Harrisburg, Pa. It indicates just how the officials and members of the federation feel about the President's highway program. The federation is a most worthy organization, covering the entire State of Pennsylvania, and is particularly active in our Harrisburg community.

Mr. Pugh's letter is as follows:

PENNSYLVANIA MOTOR FEDERATION,
Harrisburg, Pa., March 13, 1957.

Hon. WALTER MANN MUMMA,
Harrisburg, Pa.

MY DEAR CONGRESSMAN: There has been much publicity on the Federal expanded highway program. Just last week the president of our AAA organization here in Pennsylvania, who, incidentally, is chairman of the American Automobile Association's committee on highways, concluded some very interesting remarks. In the final paragraph he said:

"And now, speaking for all of the Pennsylvania Motor Federation, for our 564,000 members, and for myself, as president, our sincere thanks to the 84th Congress for their vision, their action in giving to our State of Pennsylvania, to the United States of America, this great gift, this one more freedom for all."

I got to thinking about these remarks and to my knowledge it is the first time that I can recall anyone congratulating the President and the 84th Congress for their vision and this great gift to the American public. I don't know what you think about it, but I am enclosing a resumé of the remarks of Mr. John S. Giles, president of the Pennsylvania Motor Federation, and I am wondering if they could be read into the CONGRESSIONAL RECORD, perhaps by you or some member of the committee which proposed this legislation.

I wish to take this opportunity to thank you for your many past courtesies.

Respectfully yours,

C. E. PUGH, *Manager.*

The remarks of President John S. Giles, which Mr. Pugh refers to, are as follows:

The Congress of the United States in 1956 enacted highway legislation, which, in my opinion, is one of the most important legislative acts in many, many decades.

Why? Because it provides for an overall interstate highway construction program, which, over a period of years will generate for the use of the American motorist a highway system in excess of 40,000 miles.

Highways of today are of supreme importance in the minds of all American citizens.

Yes, highways are a prime factor, a vital necessity to our American way of life and to our continuing growth.

Each year brings thousands upon thousands of new cars, and hundreds of thousands of new drivers more than the year before.

Thus, the expansive use of highways continues to grow and grow.

Millions of Americans drive to and from their jobs, more of them this year than last, more next year than this.

Then, too, we have a shorter workweek, more hours to drive the roads for pleasure, a swim, a visit, a shopping trip.

And longer vacations now for lucky Americans.

Longer trips by car to faraway places, Alaska, Mexico, California, Maine. Yes, we in the automobile clubs know that people with cars are going places, traveling all over their country, getting to know each other pretty well.

They want to see for themselves what makes this Nation of ours click.

How is this possible? Our highways, of course. Yes, right now on the roads of today—millions of us are traveling constantly.

But as these great new broad highways are built, more and more of us will travel—and travel faster with safety. We'll do things, we'll see things we've only dreamed about. A new and wonderful future lies ahead on the magnificent, new highways of these United States.

I am interested, too, deeply interested, in the actual quality of these roads of tomorrow. And, because they are your roads, you, too, must be concerned. They should first of all be safe—safe with safety built into them; they must be highly resistant to skidding and slipping in bad weather. They must reflect light at night, and they must be roads that are beautiful, and they must be roads that are clean.

Secondly, because you and I are going to pay for these roads, they must be roads with long service life that will stand up under the heaviest type of traffic, and yet will require low maintenance and low cost repairs. We have in Pennsylvania many highways of this type, which have served the State well and with economy.

And now, speaking for all of the Pennsylvania Motor Federation, for our 564,000 members, and for myself, as president, our sincere thanks to the 84th Congress for their vision, their action in giving to our State of Pennsylvania, to the United States of America, this great gift, this one more freedom for all.

Evaporation Control in Southwest

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. WRIGHT. Mr. Speaker, water is the one ingredient indispensable to the Nation's future. For the last few years, we have been increasingly aware of the growing need to conserve our water supplies. Under leave to extend my remarks, I am including an editorial from last Sunday's Fort Worth Star-Telegram, which conveys welcome news of progress in this important direction:

EVAPORATION CONTROL IN SOUTHWEST

The greatest thief of water in Texas is evaporation. Every year billions of gallons of the State's precious surface water supply simply vanishes into the air. In Fort Worth the loss by evaporation is almost the equivalent of the amount taken from the water supply lakes for use. In a year, evaporation will lower the level of a body of water across the western stretches of the State, until it reaches 120 inches annually at El Paso.

Obviously, the saving of this water is second only in importance to catching a new supply. If means could be found to prevent or even retard evaporation, it would add substantially to the volume of water available for municipalities, industry, irrigation, and livestock. It would also mean a saving in money to cities and other water users who find it necessary to add to their surface water supplies.

There are indications that such an agent may be near at hand. For 18 months experiments have been carried on with a wax-like substance—hexadecanol—which shows great promise. At least on small bodies of water, the protective film spread by the use of this chemical has been found to retard evaporation by 30 to 40 percent. The first large-scale use of this chemical covering will be made this summer at Lake Hefner, one of the major sources of Oklahoma City's water supply.

Independent experiment to determine the effectiveness and practicability of this evaporation-controlling substance are in progress in Texas under guidance of the Southwest Water Evaporation Research Council, of which Fort Worth's water superintendent, Uel Stephens, is an official. The results have been hopeful but not yet conclusive. Certain problems remain, such as the cheapest and most feasible means of applying and maintaining the film, safety of the use of commercial grades of the chemical, and means of protecting it against destruction by microorganisms in lakes.

So far the work has been privately financed, but a bill now is before the legislature to appropriate $89,000 to pursue the research. In view of the promising results so far and the immense importance of the project, the amount sought is infinitesimal in comparison to the potential benefits. And in view of the fact that nearly all the people of Texas would benefit from successful development of this water-saving technique, it seems properly an expense for the State to assume.

Lack of Executive Leadership on Budget Cut

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to commend to the attention of my colleagues an editorial which appeared in the Milwaukee Journal of March 11, entitled "President Shows No Leadership on Budget Cut—Congress Must."

This is a very timely and to-the-point editorial. It points to three related factors. In the first place, it asserts that the people of the United States are disturbed about the high level of Government spending and taxation. Secondly, it points out that our present Chief Executive is apparently willing to submit ever bigger budgets to Congress as long as there is a demand for increased Federal services and aids.

And, thirdly, the editorial concludes that it is up to Congress to curtail and reduce Federal spending.

Contrary to the President's promises, the Federal budgets have continued to increase during the past 4 years. The new budget, presently before us, is the highest one in our peacetime history. What is even more alarming is the fact that nonmilitary expenditures have gone up 50 percent under the Eisenhower administration—from approximately $20 billion in 1953–54 to about $31 billion in the new budget.

This shows us very clearly that we cannot hope for Executive leadership in the field of curtailing Government spending. On the contrary, judging by past record, one would have to conclude that, if we give the Executive a free hand, spending and taxes will continue to rise.

These developments are certainly a far cry from the Republican promises made during the election campaigns—and from the pledges given by the President himself.

Mr. Speaker, I sincerely hope that this House will exercise public will by curtailing Government spending and taxes. I, for one, will continue to work to that end.

The editorial follows:

PRESIDENT SHOWS NO LEADERSHIP ON BUDGET CUT—CONGRESS MUST

For all that it exhibits a lack of consistent Executive leadership, the President's announcement of a study to determine whether administration spending can't be slowed down is to be welcomed.

For one thing it represents a shift in Mr. Eisenhower's thinking. Back in January, in defending his $71.8 billion budget, he said, "As long as the American people demand and, in my opinion, deserve the kind of services this budget provides, we have got to spend this kind of money."

Since then it has become abundantly clear that the American people do not want this biggest peacetime budget in history. Particularly they do not want to pay the kind of taxes needed to support it.

Indignant mail has so impressed Congressmen that correspondent Martin Hayden, whose dispatches appear frequently in the Journal, observes: "The economy mood of a frightened Congress is apparent to every reporter walking Capitol corridors."

Now, frightened Congressmen may be spurred to action, but without sound counsel from the executive branch theirs may not be wise action. Already one meat-ax solution has been proposed—to set a ceiling on spending, then let the executive department determine how the Government should live within that income.

Yet, except for a general invitation to Congress to cut the budget, neither Mr. Eisenhower, budget boss Brundage, nor Secretary of the Treasury Humphrey has been explicit or helpful.

One new proposal to cut the budget has now come from the Council of State Chambers of Commerce. Its recommendations, if carried out, would reduce spending by $4.5 billion without touching military defense items. Some proposals are unrealistic—such as slashing Federal employment from 2,400,000 to 2 million persons—but others merely propose scaling 1958 expenditures to those of 1956.

In that connection, it is worth noting that of the almost $7 billion increase since the 1956 budget, only $3 billion is for national defense. The other $4 billion has been distributed over almost every department and program.

Certainly, it is not unrealistic to believe that a great number of these items can be eliminated.

If the administration's new study discloses some of these unjustified sums, it will be worthwhile—even though it is scarcely an orderly step in the process of budget making. And if Congress can then find further legitimate places to cut, the protesting public will be gratified if not wholly mollified.

Urge Use of State and Local Segregation Laws in Veterans' Administration Hospitals

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, this morning I presented to the Administrator of Veterans' Affairs, Mr. H. V. Higley, a petition letter signed by 56 Members of the House of Representatives. This letter urged that local and State laws relating to segregation be applied to the operation of the hospitals. Accompanying me at that time were Congressman JOHN BELL WILLIAMS, of Mississippi; Congressman GEORGE M. GRANT, of Alabama; and Congressman JAMES C. DAVIS, of Georgia. The petition letter is the outgrowth of racial incidents involving veterans in the hospitals throughout the country and their treatment in Veterans' Administration hospitals particularly in the South.

This petition letter was signed by representatives of the House of Representatives from the States of Louisiana, Mississippi, Alabama, Georgia, North and South Carolina, and Virginia. No effort was made to obtain signatures from States like Oklahoma, Tennessee, and Texas, and no all-out effort was made to obtain the signatures of everyone in the Congress who possesses this same viewpoint. On the contrary, the signatures just kept coming and we held the list open for them.

The delegation spent about 45 minutes with Mr. Higley, of the Veterans' Administration, discussing the problem and urging the use of State laws to eliminate friction and promote harmony in the operation of the hospitals in the South. At the end of this time, we were assured by Administrator Higley that the entire matter would be taken under careful advisement by him and his Administration.

I am presenting the copy of the petition letter, together with the names of the Congressmen who signed this letter, for publication in the RECORD.

The letter and signers follow:

Hon. H. V. HIGLEY,
Administrator of Veterans' Affairs,
Washington, D. C.

DEAR SIR: Veterans' Administration hospitals were authorized by Congress for the purpose of taking care of the sick and the wounded veterans who need hospital treatment. Nowhere in the law authorizing these institutions do we find any reference to the use of these agencies to put over racial or social reforms. Since September 1953, VA hospitals throughout the Nation have been integrated often in violation of State and local statutes. We believe that the criticism which has been rising against VA hospitals can be allayed and the service which these hospitals render to both Negro and white veterans will be greatly improved by allowing State and local laws relating to segregation to apply.

In the interest then of restoring the efficiency and the morale to these hospitals, we are calling upon you to authorize immediately the applications of State and local laws to these institutions. We want both white and Negro veterans to receive the best treatment which VA hospitals can give; but we want these races segregated and hospitals run with the benefit of local laws covering segregation. Operated in this manner, they will have the support of both colored and white veterans.

Yours truly,

Mississippi: WILLIAM M. COLMER, ARTHUR WINSTEAD, JAMIE L. WHITTEN, THOMAS G. ABERNETHY, FRANK SMITH, JOHN BELL WILLIAMS, Members of Congress.

North Carolina: A. PAUL KITCHIN, RALPH J. SCOTT, ALTON LENNON, HERBERT C. BONNER, L. H. FOUNTAIN, HUGH Q. ALEXANDER, GEORGE A. SHUFORD, GRAHAM A. BARDEN, BASIL L. WHITENER, Members of Congress.

Alabama: FRANK W. BOYKIN, GEORGE M. GRANT, GEORGE W. ANDREWS, ALBERT RAINS, GEORGE HUDDLESTON, Jr., CARL ELLIOTT, KENNETH A. ROBERTS, ARMISTEAD I. SELDEN, Jr., ROBERT E. JONES, Jr., Members of Congress.

Louisiana: OVERTON BROOKS, OTTO E. PASSMAN, E. E. WILLIS, GEORGE S. LONG, HALE BOGGS, F. EDWARD HÉBERT, JAMES H. MORRISON, T. ASHTON THOMPSON, Members of Congress.

Virginia: RICHARD H. POFF, BURR P. HARRISON, EDWARD J. ROBESON, Jr., J. VAUGHAN GARY, JOEL T. BROYHILL, HOWARD W. SMITH, WILLIAM M. TUCK, WATKINS M. ABBITT, Members of Congress.

Georgia: PRINCE H. PRESTON, JOHN L. PILCHER, E. L. FORRESTER, JOHN J. FLYNT, Jr., JAMES C. DAVIS, HENDERSON LANHAM, IRIS F. BLITCH, CARL VINSON, PAUL BROWN, PHIL M. LANDRUM, Members of Congress.

South Carolina: JOHN L. MCMILLAN, L. MENDEL RIVERS, JOHN J. RILEY, W. J. BRYAN DORN, ROBERT T. ASHMORE, ROBERT W. HEMPHILL, Members of Congress.

History of Effort To Outlaw Monopolistic Trade Practices

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. PATMAN. Mr. Speaker, I recently received a reprint of an article which reviews the history of the efforts which have been made, in this country, to enact antitrust laws against monopolistic practices, so that we may have free and open competition and markets where the independent businessman can participate. This article, which I commend to the Members' attention, was written by Mr. John A. Touhey, executive secretary of the Southern California Service Station Association. It deals particularly with legislative efforts to create checks against big business abusing its power through discriminatory selling practices; and it brings up to date this history, pointing out how a serious loophole came to be placed in the antitrust laws. It also explains why big business firms—those firms at the top of the pyramid in their respective industries—strongly oppose any effective antitrust law to deal with price discrimination. The simple fact is that license to discriminate in prices makes the competition soft for the big firms; and any curb on discriminatory practices tends to make the competition more vigorous, since more competitors can effectively compete; but it also tends to make the competition much harder for the big corporations, because it tends to remove from the competitive contest the artificial advantages of bigness. Mr. Touhey's article, which appeared in the Automotive Dealer News for November 26, 1956, is as follows:

PRICE DISCRIMINATION DECLARED BASIC EVIL IN STATION INDUSTRY—SCSSA BOARD ANNOUNCES INTENT TO CONTINUE FIGHT FOR PASSAGE OF EQUALITY OF OPPORTUNITY BILL

(By John A. Touhey)

In 1903, President Theodore Roosevelt recommended that "a Bureau of Corporations be established in the Department of Commerce and Labor" for the specific purpose of investigating combinations in restraint of trade and to publicize the result in the discretion of the President. In carrying out that policy, the Bureau collected evidence that led to the outlawing of railroad rebates as a factor in creating and maintaining combinations in restraint of trade and evidence that made possible the dissolution suits against Standard Oil, American Tobacco, United States Steel, and International Harvester combinations.

As far back as 1887 when the Interstate Commerce Act was passed, there has been a continued battle against discriminatory pricing practices of manufacturers and refiners; yet, that battle continues today because of decisions by the United States Supreme Court that stated, "it is not a violation of our antimonopoly laws for one to discriminate in price with the result of destroying competition if the act of the discrimination is in good faith in meeting the price of another." This particular decision rendered by our United States Supreme Court applied to the *Standard Oil Company of Indiana* v. *Federal Trade Commission* suit.

Perhaps we should delve into history to find out why gasoline retailers need to eliminate the above loophole that has been found in the Robinson-Patman Act.

FTC CREATED

In the year 1914, the Federal Trade Commission was created for the specific reason to "eliminate unfair methods of competition in commerce." During the same year, Congress passed the Clayton Antitrust Act "against the practices of lessening competition and restraining trade by specific acts, namely, discriminations in price, use of exclusive dealing and tie-in contracts, elimination of competitors through unlawful acquisitions or mergers, and the use of interlocking directorates by competing corporations."

Primary authority to enforce the Clayton Antitrust Act, prescribing the several inhibited trade practices, was vested in the Federal Trade Commission, with certain concurrent authority conferred upon the Department of Justice. In 1915 the chief functions of the Bureau of Corporations was taken over by the Commission.

In 1936 Congress amended section 2 of the Clayton Act by enacting the Robinson-Patman Antidiscriminatory Act. By its provisions, Congress made unlawful the practice of price discriminations where the effect may be substantially to lessen competition, tend to create a monopoly, or to injure, destroy, or prevent competition. It also cataloged as unfair and illegal certain types of brokerages and commissions, and, under certain circumstances, advertising and promotional allowances and services and facilities when discriminatory.

OTHER LAWS

There have been other laws passed since the above dates that are used as a guide by the Federal Trade Commission, but the basic argument between gasoline retailers and their suppliers is the good faith—meeting competition defense that has been estab-

lished under the loophole found in the Robinson-Patman Act.

All major suppliers, I believe, use some form of subsidy, rebate, or special allowance, under the guise of good faith—meeting competition to discriminate in wholesale prices to their dealers, to foster, promote, and encourage gasoline price wars. Because the United States Supreme Court ruled in favor of the oil companies, it has given the suppliers the chance to establish a method of control over the retail price of gasoline.

The argument of gasoline retailers in their effort to eliminate price discriminations altogether is going to have to be sharp to defeat the proponents of discriminatory pricing tactics.

The self-styled champions of the competitive and free-enterprise system scoff at the idea of halting price discrimination. These self-styled champions argue that "it does not matter if competition is destroyed so long as it is done in good faith." These same individuals say that nondiscriminatory pricing practices would create soft competition and that competition involving price discrimination is hard competition.

CLEAN MARKET GOAL

The membership of SCSSA is of the opinion that dealer aid, subsidies, rebates, and special allowances should be eliminated if we are to have a clean and legitimate market.

"Soft competition," as it is referred to by our most capable opponents, is created by them for the simple reason they have convinced the majority of gasoline retailers that they are in competition with the dealer across the street and not the dealer of their same brand.

It is our contention that after the supplier sells a dealer gasoline at wholesale, he has no right whatsoever to stipulate a selling price, nor has he the right to give a lower price to his customer to meet a dealer's price of another brand. Suppliers are in competition with each other at the wholesale level and that is the only time that one refiner is in competition with another refiner as far as the retailer is concerned.

When large sellers are not permitted to discriminate in price between purchasers located in different communities, with the effect of smothering a small seller operating in only one of them, or when they are not permitted to discriminate between large and small buyers competing in the same community, the "hardest kind of competition will result."

SOFT COMPETITION

This is the kind of competition which places upon sellers the necessity of lowering prices generally in order to sell at all. When the supplier is able to discriminate in price, it creates the softest type of competition, but, when he is forced to lower his tank wagon price, this creates the type of competition known as hard and this is the part that suppliers do not like because they have all their commercial accounts and other sources tied in to this price.

Naturally, the gasoline retailer wants this type of hard competition because he wants to operate his place of business on service and efficiency for profit and he knows to be able to do this, he has to eliminate the main source that is barring his success.

ANOTHER EFFORT

Gasoline retailers have been unsuccessful during the past 5 years to have the loophole in the Robinson-Patman Act plugged so the good-faith meeting competition defense would be eliminated, however, they will try to have this amended during the next session of Congress.

Only a quirk of fate defeated them in 1956 when the Senate adjourned with the equality of opportunity bill lying dormant in the Senate Judiciary Committee.

In accordance with the wishes of the membership of SCSSA, the board of directors have unanimously voted to continue support of the equality of opportunity bill in an effort to protect small-business men from discriminatory practices.

Gasoline retailers can no longer afford to finance gasoline price wars, nor can they afford to operate their place of business on any other basis but service and efficiency.

Efforts of Leopold D. Silberstein and Penn-Texas To Gobble Up Fairbanks, Morse & Co.

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. REECE of Tennessee. Mr. Speaker, I would like to call the attention of Congress to the latest list of tax free foundations published by the United States Treasury. Among these organizations, which this body has afforded special consideration because of their intended contributions to the public welfare, is an entity known as the Leopold D. Silberstein Foundation, Inc., of New York City. The man whose name this foundation bears is the same person who is manipulating the Penn-Texas Corp. in its unrelenting stockholder fight to seize control of Fairbanks, Morse & Co.

Mr. Silberstein, to whom this country recently granted haven from the vicissitudes of European politics, has forged this huge holding company to snatch control of this old American family industry. In his efforts to gobble up one of the oldest American family industries, he has enlisted an array of lawyers, lobbyists, public relations men and wirepullers which reads like a page from Who's Who in American politics. This bold move by Mr. Silberstein is understandable since he and the methods he used to try to gain control of Fairbanks, Morse & Co. are under investigation by the SEC.

While the Commission is examining the status of the Silberstein Foundation, it may appropriately inquire into the activities of the American Committee for the Weizmann Institute of Science, Inc., which is also on the United States tax free foundation list. It is reported as having a 5-percent interest in a syndicate set up by one Simon Jaglom, who had some arrangements for buying Fairbanks, Morse stock and reselling at a profit to Penn-Texas.

Another operator by the name of Jacques Sarlie, who has admitted a 20-year friendship with Mr. Silberstein, has recently emerged with a public press account of a fantastic bit of manipulation. In this almost unbelievable admission, Mr. Sarlie states that he acquired a large block of Fairbanks, Morse shares at a price far more than it was worth, without any prior commitment from Penn-Texas, but he nevertheless expects to make in excess of $2 million under his present arrangement to sell to Mr. Silberstein's Penn-Texas. The Commission should have no difficulty in determining that Mr. Sarlie's incredible profit will come out of the Penn-Texas stockholders. At the same time, they can determine whether operator Sarlie is another instrument of Silberstein's machinations whose true character as an agent for an undisclosed principal should be revealed.

The charges pending before the SEC against Penn-Texas in its attempt to gain control of Fairbanks, Morse & Co., include at least 5 evasions of disclosure regulations, 5 failures to comply with reporting requirements, 3 specific illegal solicitations of proxies and 3 failures to disclose required information.

The Commission requires disclosure of stock ownership, interest in securities and any arrangements with other people for acquiring, borrowing or financing securities. Penn-Texas has reported ownership of 669,000 shares of Fairbanks, Morse Co. stock. About 300,000 of these shares have been purchased through or from Swiss banks. One of the leading financial editors of this country, Mr. Leslie Gould, of the New York Journal American, stated on Monday, March 18, 1957, in his paper, that the Swiss banks which acquired these shares acted in contravention of the New York Stock Exchange rule 504 which requires that stock bought through the exchange from member firms cannot be acquired without disclosing the principals for whom they are acting. Over 200,000 shares are not paid for or only partially paid for. The Commission has been unable to get any information concerning the purpose of the Swiss banks in buying Fairbanks, Morse shares or whether they were bought for Penn-Texas.

As a Member of Congress who helped originally, under the chairmanship of our distinguished Speaker SAM RAYBURN, to draft the law for establishing the SEC, I have the utmost confidence that that agency will act in the best public interest. Its investigation has been carried on privately and is yet incomplete. I feel sure the results will be made public and any proposed meeting of stockholders of the companies involved will be held in abeyance until proxy solicitation can proceed on the basis of full disclosure of all pertinent facts. In drafting these strict provisions to police proxy solicitation it was always our foremost intention to safeguard the public interest through the medium of full and honest disclosure.

I am confident that the SEC will not be deterred by all of the wirepulling in its pursuit of the facts about all questionable practices and will develop all of the material facts about the organization claiming stock ownership which must be disclosed to give public stockholders a basis to exercise their best judgment.

The great public interest in this proxy contest is evidenced by the current publicity in five of our major national papers, excerpts from which I insert in the RECORD as a part of my remarks. These are the Wall Street Journal on Monday, March 18, 1957, a story entitled "Morse Calls for Penn-Texas To Report on 1956 Before Fairbanks Meeting; Sarlie Tells How To Make a Million"; the story in the Journal of Commerce on March 18,

1957, entitled "Penn-Texas Directs Ads at Fairbanks Workers"; the New York Journal American on Monday, March 18, 1957, an editorial by Leslie Gould, entitled "Exchange Members Must Know Customers—Do They?"

[From the Wall Street Journal of March 18, 1957]

MORSE CALLS FOR PENN-TEXAS TO REPORT ON 1956 BEFORE FAIRBANKS MEETING; SARLIE TELLS HOW TO MAKE A MILLION—COURT GRANTS LANDA GROUP RIGHT TO GET LISTS OF PENN-TEXAS STOCKHOLDERS

The already bulky record of intertwined proxy fights in Fairbanks, Morse & Co. and Penn-Texas Corp. got additional entries over the weekend involving a challenge, a disclosure, and a court order.

Robert H. Morse, Jr., president of Fairbanks-Morse, made the challenge—to Leopold D. Silberstein, Penn-Texas chairman and president—to issue the Penn-Texas financial report for 1956 before Fairbanks' annual meeting March 27.

Jacques Sarlie, Dutch-born financier and art collector, made the disclosure—that he stands to make about $1 million because he bought up a key amount of Fairbanks stock, assertedly offered it to both sides and wound up contracting to sell it to Penn-Texas at above the market price.

A three-judge court at Ebensburg, Pa., issued the order—to Penn-Texas to provide a dissident stockholder group with a list of and changes in Penn-Texas' stockholders.

SARLIE'S SHARES INCLUDED

Penn-Texas, winner last year of 4 seats on Fairbanks' 11-member board, is seeking this year to take control of the Chicago heavy equipment manufacturer. Mr. Silberstein has claimed Penn-Texas owns or has contracted to buy 48.7 percent of Fairbanks' outstanding common stock. Included in that amount are Mr. Sarlie's shares.

Mr. Morse, on the other hand, has said he has contributed $80,000 to the dissident Penn-Texas group, which is headed by Alfons Landa, Washington, D. C., attorney and chairman of the finance committee of Fruehauf Trailer Co. Mr. Morse has also indicated he may be one of the candidates Mr. Landa said his group plans to nominate for the Penn-Texas board.

In a statement in Chicago, Mr. Morse said Fairbanks' report for 1956, issued in mid-February, showed the company's profits rose 42½ percent over 1955 to $8,858,039 and "I have forecast that earnings for 1957 will be above those for the past years."

"Fairbanks-Morse is in a sound financial position," Mr. Morse asserted.

"What is the present financial position of Penn-Texas?" Mr. Morse asked. He also noted Penn-Texas' report to the Securities and Exchange Commission on its buying Fairbanks shares.

Mr. Morse asked what part of an $8 million profit Mr. Silberstein has estimated Penn-Texas made in 1956 "is from nonrecurring items such as the sale of properties."

He cited that Fairbanks paid an extra dividend of 25 cents a share March 1, along with the 35 cents it has been paying at quarterly intervals, and that Penn-Texas "is paying no cash dividends" despite a Silberstein statement that "he would recommend cash dividends."

Mr. Silberstein's comments on earnings and dividends were made at a special Penn-Texas stockholder meeting last December. He predicted the company would show a net profit of $8 million, equal to $2 a share, for 1956 and said he would urge directors to declare both stock and cash dividends this year. The company paid 35 cents a share last March and stock dividends of 2½ percent at quarterly intervals since then.

Under New York Stock Exchange rules, a listed company is supposed to issue its financial report within 90 days after the close of its fiscal year. Penn-Texas published at the end of last March its report for the calendar year 1955, showing a profit of $1,038,855.

The sale of properties referred to by Mr. Morse apparently are four transactions in which Penn-Texas sold and then leased back plants. Mr. Silberstein has defended these arrangements as a much cheaper way than loans or sale of securities to raise cash.

SARLIE TELLS HOW

Mr. Sarlie described at a press conference Friday his method for making a million dollars in a little more than a year: Find a company facing a proxy fight (Fairbanks-Morse). Buy the potential controlling block of stock, even if you have to pay a lot more for it than you think it's worth. Then sell it to the highest bidder (Penn-Texas), at a premium above the market price.

Mr. Sarlie said he has sold Penn-Texas 20,000 shares of Fairbanks common and has contracted to sell it another 110,000 shares at a total price of $8,155,700. As a result, he claims he now holds "voting rights to the shares that may determine the outcome of the battle."

Mr. Sarlie said he expects to vote these shares for Penn-Texas because it would be "most unrealistic" now to do anything else. But, he insisted, he has "no interest one way or the other" in how the fight comes out beyond his own profits. He estimated these "in excess of $1 million," though "I won't count it exactly until all the money is in my pocket."

Mr. Sarlie said he had twice offered through brokers to sell the same shares to Fairbanks management and desisted only because he got "no response indicating they would buy at the price I wanted." "I would have sold the stock to them if they had paid me a $1 a share more than Penn-Texas," he added.

Mr. Morse contradicted this in another statement issued in Chicago. "The Sarlie stock was never offered to me, and if it had been I would not have bought it," he said. "I could not have afforded to pay $69.80 a share" (the approximate price in one of Mr. Sarlie's transactions with Penn-Texas). Fairbanks-Morse stock closed at $56.75 Friday on the New York Stock Exchange. Its 1956–57 high has been $65 and its low $38.12½.

MORSE GROUP OWNS 34 PERCENT

The Morse family and management group own 34 percent of the 1,372,190 outstanding Fairbanks common shares. Mr. Silberstein has said his company owns or has contracted to by 669,270 shares.

Mr. Sarlie, a smooth-voiced, 41-year-old man who claims to own one of the world's most famous collections of Pablo Picasso paintings, said he had begun buying Fairbanks stock heavily on the open market in early 1956.

He said he stepped up his purchases sharply when Penn-Texas bid for control of Fairbanks at the March 1956, annual meeting and lost, because he calculated that both sides would need more stock in preparation for another round this year.

By last fall, Mr. Sarlie said, he had accumulated 70,000 shares—mostly through open-market purchases through some friends of mine—and approached Penn-Texas to sell them. Penn-Texas told him it could not pay immediately, he said so he contracted to deliver the stock this spring for payment then. He then figured out that another 60,000 shares would insure control for either side, he said, and set out to get them though an open order to brokers to buy whatever stock turned up on the New York Stock Exchange.

This order brought him the 60,000 shares in a 6-week period in November and December, Mr. Sarlie said, but he had to pay at least $1 million more than he thought the stock was worth. Though these purchases made him able to command a premium in reselling the shares, he asserted, "it was a calculated risk—I'll never do that again."

Mr. Sarlie several times seized occasions to emphasize laughingly his disinterest in the basic issues of the fight. Asked if he though Mr. Morse was doing a good job of managing Fairbanks, he replied: "I wouldn't think so, but I don't say Mr. Silberstein can do any better." After his contracts with Penn-Texas are fulfilled, he added, he won't own any Fairbanks shares at all and has no plans to buy any—not at these prices, thank you.

AN OPERATOR

Mr. Sarlie raised no objection when a reporter described him as an operator, but did object to some press descriptions of him as a "mystery man." He said he was born in Holland, the son of a broker on the Amsterdam Diamond Exchange, and made a great deal of money dealing in securities in his youth. He came to the United States in 1940, he said, was naturalized in 1943 and now specializes in financing of oil and gas properties. In addition he said he deals in special [stock market] situations, but only one at a time. "I'm already thinking of the next one," he remarked.

He has invested his own money in Fairbanks stock, Mr. Sarlie said, plus $2,200,000 borrowed from New York "banks and brokers." So far, he said, he has received only about $1 million from Penn-Texas for his stock, with the other $7 million-odd to be paid in "April, May, June, and July."

During his transactions, he noted, he had also freed some capital by selling 42,500 Fairbanks shares to 2 New York investment groups under contracts to repurchase them. This had previously been disclosed in a statement filed by Mr. Sarlie with the Securities and Exchange Commission.

Mr. Sarlie said he had met Mr. Silberstein socially in Holland as early as 1937, but had seen him only infrequently over the years. And when he approached Mr. Silberstein with the Fairbanks stock, he had to negotiate for weeks.

"I find Mr. Silberstein a very difficult man to do business with," Mr. Sarlie commented.

THE LANDA ANGLE

The Landa group has been raising the question of its seeing the Penn-Texas stockholder lists since last December, when it tried to have the court block an increase in the company's authorized common to 10 million shares. That rise, from .5 million was approved at the December special stockholders' meeting. Final court action on such an injunction still is pending.

In December, Penn-Texas conceded the dissidents had the absolute right to see the voting lists.

In the case decided in Cambria County common pleas court last Saturday, however, Penn-Texas contended it hadn't refused Mr. Landa permission to examine the list, but had requested him to appear at the corporation office to answer questions on his good faith in seeking the list.

It added that in failing to appear, Mr. Landa had not exhausted his remedies with the corporation.

Mr. Landa has said the group will wage a vigorous proxy fight to win seats on the 8-member Penn-Texas board at the annual meeting May 6.

[From the Journal of Commerce of March 18, 1957]

PENN-TEXAS DIRECTS ADS AT FAIRBANKS WORKERS

Penn-Texas Corp., acting on the assumption it will win control of Fairbanks, Morse & Co., has taken newspaper advertisements in the 11 cities where Fairbanks plants are located to inform employees that "we have great confidence in our ability to guide Fairbanks, Morse to new pinnacles of success."

The workers were also told that, "We think

that you will be especially pleased with our established policy of promotion from the ranks."

It became apparent that Penn-Texas may control the vote of more than 50 percent of all outstanding shares when Jacques Sarlie, a New Yorker of Dutch extraction said that he holds voting rights to 110,000 shares which he plans to vote with Leopold Silberstein's Penn-Texas group. The shares will be sold to Penn-Texas later.

MEETING MARCH 27

Penn-Texas Corp., is seeking to gain control of Fairbanks, Morse at the annual stockholders meeting in Chicago March 27. This effort is being resisted by the Fairbanks, Morse management.

All told, Mr. Sarlie said he had accumulated 130,000 shares of Fairbanks, Morse stock, Penn-Texas has brought and paid for 20,000. Penn-Texas has contracted to buy and pay for the rest in April and May, 1957, he said. But Mr. Sarlie said he retained voting rights.

Mr. Sarlie outlined his position in the struggle in this manner:

He owned a relatively small number of shares of Fairbanks, Morse in 1955. He noticed that a proxy fight was imminent. In early 1956 he increased his holdings. After accumulating 70,000 shares he agreed to sell them to Penn-Texas for $3,963,000 for delivery and payment in April and May of 1957. He retained voting rights.

By November 1956, out of the total number of 1,371,170 outstanding shares, Morse controlled 500,000 shares and Penn-Texas had 600,000 shares. Mr. Sarlie said he reasoned that anyone who bought 60,000 shares would be in a favorable position.

BOUGHT PIVOTAL AMOUNT

"I then took a calculated risk," Mr. Sarlie said, "by buying on the New York Stock Exchange 60,000 shares, which I accumulated as rapidly as possible, paying up to $60 a share. By the end of 1956, I had accumulated 60,000 shares.

"I felt that if I sold to Morse, management would remain in control and if I sold to Penn-Texas they could claim 660,000 shares, which would assure them of control. I was then in a position to demand a price for my shares in excess of the market price."

Mr. Sarlie said he then negotiated with the Penn-Texas management. Penn-Texas agreed to buy all Mr. Sarlie's stock. Mr. Sarlie said he also approached Morse management through a broker but received no answer.

While he has made no voting agreement with Penn-Texas, Mr. Sarlie said, "It would be most unrealistic for me to agree to sell my shares to Penn-Texas and then not vote them with Penn-Texas."

Mr. Sarlie said he expected to make a "handsome profit" in excess of $2 million from the deal. He said he used his own money in most of his buying. And, he added, "Anybody could have done this."

MORSE DENIES OFFER

Robert H. Morse, Jr., president of Fairbanks, Morse & Co., declared that "the Sarlie stock was never offered to me, and if it had been, I would not have bought it. Remember, we are operating on our own personal funds. Mr. Silberstein is operating on other people's money.

"I could not have afforded to pay $69.87 a share for the Sarlie stock and, judging from their earnings record, neither could Penn-Texas stockholders."

[From the New York Journal-American of March 18, 1957]

EXCHANGE MEMBERS MUST KNOW CUSTOMERS—DO THEY?

(By Leslie Gould)

The New York Stock Exchange has the following rule covering accounts with its member houses:

"Rule 504: Every member firm and member corporation is required through a general partner or an officer who is a holder of voting stock to use due diligence to learn the essential facts relative to every customer, every order, every cash or margin account accepted or carried by such firm or corporation, and every person holding power of attorney over any account accepted or carried by such firm or corporation."

Then under its supplementary material covering application of the above rule, there is this:

"When an agency account is carried by a member firm or member corporation, its files should contain the name of the principal for whom the agent is acting and written evidence of the agent's authority."

These rules take on new importance in light of the use of Swiss banks as fronts in trading in shares of American companies listed on the Stock Exchange.

Under the penal code of Switzerland, banks of that country refuse to disclose the names of their customers. The customers' identities are covered by numbered accounts, and the names covered by the numbers are known only to 1 or 2 officers.

MUST KNOW PRINCIPAL

A strict interpretation of the stock exchange rule cited above would require a member firm to know the principal for which any agent is acting. That should cover the Swiss banks, as well as their American agents.

Yet, the Swiss banks have acquired stock bought through stock exchange member firms without disclosing the principals for whom they are acting.

This has happened in the present Fairbanks, Morse-Penn-Texas Corp. proxy fight. A block of 100,000 Fairbanks, Morse shares was bought by Penn-Texas Corp. from the Union Bank of Switzerland. Part of these shares were acquired by the Swiss bank through a stock exchange firm, where the son-in-law of the head of Penn-Texas is a customers' man. According to court testimony, the son-in-law as a customers' man was accredited with this business.

On this block a profit of between a half and a million dollars was made by the undisclosed customers of the Swiss bank. There was that difference between what the Swiss bank's customers paid for the shares and what the bank got from Penn-Texas.

There has never been any disclosure as to the identity of the bank's customers. So far, all agencies of the Government seeking this information have run into the stone wall of the Swiss secrecy law.

That 100,000-share block can be the deciding factor in the voting at the Fairbanks, Morse March 27 annual meeting. There have been other Penn-Texas deals with Swiss banks. These cover an additional 152,000 Fairbanks shares.

The question is whether the exchange's rule on disclosure of a principal goes beyond one agent. That is: If there are two or more agents, need there be no disclosure?

Let's Save Some More

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a sincere, truthful, and straightforward editorial that appeared in the Lawrence Sunday Sun, Lawrence, Mass., on March 17, 1957:

LET'S SAVE SOME MORE

The free-wheeling, free-spending Federal Government is headed for trouble—this time from the people who pay the bills and who are demanding that they be given less bills to pay.

According to the Chamber of Commerce of the United States, the man in the street—and the womenfolk, too—are deluging their Senators and Representatives at Washington with mail urging action to pare billions of dollars off the new budget.

The Administration and the Palace Guard might be inclined to ignore the ordinary individual's petitioning for less spending. That is demonstrated by the record size of the new budget. But when Senators and Representatives get a squirmy feeling as they listen to the voice from home, they are certain to reflect the temper of that voice in their official acts in Congress assembled.

Over the years, the people have accepted the fantastic increase in Federal spending as a necessary evil. World War II and the Korean conflict were with us to convince us that such fabulous outlays of cash were absolutely a must.

But now, although we have committed ourselves to defend the free world against Communist aggression, we are actually at peace. It is true that the time of peace is the time to prepare to defend ourselves. It is also true that it is silly to go broke preparing for the uncertainties of the future. And there is plenty of room for paring down the amounts that would be set aside for peacetime purposes.

The Hoover Commission report shows where some 5 billions of dollars could be saved by eliminating waste, inefficiency and duplication of effort, and by getting the Government out of businesses that could be operated by taxpaying private enterprises.

Do not escape the fact that the bombardment of protest against excessive spending at Washington is no mere feeble gesture. Mr. and Mrs. Taxpayer are getting angry. They want action, not political speeches. They want the red pencil and the shears right on the desk of every Member of Congress—not as props but as working tools.

Economists tell us, logically, that in a time of prosperity we should set some of our income aside as a cushion against possible future reverses. But every working person finds that, although his income is going up, the amount of money he has left over at the end of the week—if any—is not consistent with his apparently good financial health.

The reason, naturally, is almost boundless Government spending and failure of the Government to execute some of the major proposals in the Hoover report.

Don't forget that the more the Government wants to do for you, the more it will have to do to you. Get that letter off to Washington today.

Air-Sea Rescue Unit at Los Angeles International Airport

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. ROOSEVELT. Mr. Speaker, the mayor of the city of Los Angeles has drawn our attention to a matter most vital to those tens of thousands of Americans who fly in and out of California each year. There should be no additional cost if presently available units are used. On the other hand, many

human lives may be saved. For the information of Members who are interested, I include the correspondence:

LOS ANGELES, CALIF., *March 12, 1957.*
The Honorable JAMES ROOSEVELT,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Attached is a copy of a letter sent to Secretary of the Treasury Humphrey on March 11, 1957. Because of the grave importance of having the Coast Guard establish an air-sea rescue unit at Los Angeles International Airport at the earliest possible moment, I shall greatly appreciate anything you can or may do to this end.

With best wishes and assurance of my continued high regard, I am,

Sincerely,

NORRIS POULSON,
Mayor.

LOS ANGELES, CALIF., *March 11, 1957.*
Hon. GEORGE M. HUMPHREY,
Secretary of the Treasury,
Washington, D. C.

DEAR MR. SECRETARY: Since the midair collision in January of a military jet plane with a commercial aircraft over this city, with its resultant loss of lives, including schoolchildren playing in the schoolyard where the transport plane crashed, I have been conducting a thorough investigation into all phases of safety in the air, as well as rescue operations resulting from aircraft crashes. This investigation brought out a startling fact, and one which gives me grave concern.

As you know, Los Angeles International Airport is located in close proximity to the Pacific Ocean. Ninety-four percent of the takeoffs at LAX are from east to west. The flight pattern, therefore, takes these planes directly over the ocean while they are still at a comparatively low altitude. Also, when it is necessary to stack planes prior to landings, such stacking operations are done over the ocean. To me, it seems not only advisable, but imperative, that the Coast Guard establish an air-sea rescue unit at LAX or in the immediate vicinity thereof for use in event of a crash in the ocean.

Since 1946 an active committee, made up of representatives of the Department of Airports of the City of Los Angeles, airlines, aircraft manufacturers, Los Angeles Chamber of Commerce, United States Coast Guard, United States Air Force and the Los Angeles County Sheriff's Aero Detail, has been trying to obtain an adequate air-sea rescue facility in this area. Much correspondence and many memoranda from conferences are on file in our airports department on this subject. In 1951, Admiral Richmond, of the Coast Guard, spent considerable time at the airport going over the problem and, according to my information, reported favorably to his Washington headquarters on the establishment of an air-sea rescue unit at Los Angeles. Also in 1951, the Los Angeles Chamber of Commerce adopted a resolution requesting Congress to provide facilities for air-sea rescue in this area. In January 1953, the problem was reviewed by the Board of Airport Commissioners and the chamber of commerce, and efforts were again made, without success, to obtain such a unit. In February 1957, the Los Angeles Chamber of Commerce recommended that its transportation division be authorized to request appropriate agencies of the Federal Government to take immediate steps to assure the installation of a United States Coast Guard Air-Sea Rescue Unit at the proposed Playa del Rey marina facilities. (I shall touch on the Playa del Rey marina in a subsequent paragraph.) Because the arguments upon which the chamber's recommendation was based are so compelling, I am attaching a copy hereto.

The responsibility for acquisition and maintenance of air-sea rescue equipment is, without question, vested in the Federal Government under the United States Code, title 14, section 29, we quote in part:

"For the purpose of saving life and property along the coasts of the United States and that sea contiguous thereto, the Secretary of the Treasury is authorized to establish, equip, and maintain aviation stations, not exceeding 10 in number, at such points on the Atlantic and Pacific Oceans, the Gulf of Mexico, and the Great Lakes, as he may deem advisable, and to detail for aviation duty in connection therewith officers and enlisted men of the United States Coast Guard."

Further, under Public Law 207 of the 81st Congress, chapter 393, 1st session, H. R. 4566, an act which may be cited as title 14 sets forth the primary duties of the Coast Guard and reads, in part:

"The Coast Guard shall enforce or assist in the enforcement of all applicable Federal laws upon the high seas and waters subject to the jurisdiction of the United States; shall administer laws and promulgate and enforce regulations for the promotion of safety of life and property on the high seas and on waters subject to the jurisdiction of the United States * * * shall develop, establish, maintain, and operate * * * rescue facilities for the promotion of safety on and over the high seas and waters subject to the jurisdiction of the United States."

To me, the meaning and intent of the foregoing quoted section and enactment are crystal clear and place the responsibility for such safety measures on the Secretary of the Treasury and, under him, the Coast Guard.

In addition to the reasons indicated above for the establishment of an air-sea rescue unit in the vicinity of Los Angeles International Airport, there will shortly be constructed a yacht harbor at Playa del Rey, which is very close to the Airport. When such harbor is constructed, there will be a still greater need for an air-sea rescue unit in the vicinity.

The city of Los Angeles has previously and again offers the facilities at Los Angeles International Airport of space for storage of aircraft and office space, free of charge, if the Coast Guard will establish and activate an air-sea rescue unit there. For the past 11 years we have been working on borrowed time, so to speak; however, the time has now arrived when positive and immediate action must be taken. I, therefore, respectfully request that an air-sea rescue unit be established at or near Los Angeles International Airport at the earliest practicable date.

With assurance of my continued high regard, I am,

Sincerely,

NORRIS POULSON,
Mayor.

Conference on Delinquency Proposed by Judge Rodgers

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, because of my interest in the juvenile delinquency problem, I wish to include a newspaper account of an address on the subject by the president judge of the Mercer County (Pa.) Court, the Honorable Herman M. Rodgers:

CONFERENCES ON DELINQUENCY PROPOSED BY JUDGE RODGERS

An effort to place the problem of juvenile delinquency in proper perspective was made by Judge Herman M. Rodgers in a hard-hitting address before the Sharon Kiwanis Club yesterday afternoon.

The president judge of the Mercer County court debunked the theory that juvenile delinquency is something new, saying that today's problem differs from yesterday's only in degree. The greatest single problem in the field today, he told the service club, is one of oversimplification of the issue.

At the same time Judge Rodgers proposed a series of conferences of leaders of all segments of community life to tackle the delinquency problem head on.

Said Judge Rodgers, in part:

A newspaperman holding a responsible position with a newspaper having a large local circulation told me very earnestly, within the past few days, that he and his people considered this a lost generation and that they must now fight to save the next generation.

"I am in complete disagreement with this position, because it is based on two false assumptions. First, because it assumes that juvenile delinquency is something new and, secondly, because it assumes that we have done what we can to correct it. How can they assume that juvenile delinquency, serious youthful misconduct, is a new problem? Are our memories that short? Have they forgotten that the fathers and uncles of these juveniles were vomiting their guts out on bootleg before these kids were ever born?

"Can they really, seriously, contend that fornication among teenagers is an innovation of the midtwentieth century? Some of the cruddy magazines they print these days are really trash, but is there no one here who remembers those Maggie and Jiggs jobs they used to pass around?

"Juvenile thievery is certainly a serious matter, as is adult thievery, but I cannot help remembering a situation out of little old Grove City. There was a fellow there who had a sort of general store, clothing, confectionery, sporting goods, and, unfortunately for him, he handled the distribution of the out-of-town newspapers.

"Everyone stole from him. He's still in business, but how he managed to survive is absolutely beyond me. Newspaper boys, friends of newspaper boys and just plain friends stole everything from Clark bars to shotgun shells to shirts and socks and golf clubs."

A MATTER OF PERSPECTIVE

"What I am trying to do is not to belittle our problems today, but rather to put it in its proper perspective. It is not a new problem. It differs from the problem of our generation only in degree.

"The advent of the 2-car garage and of the great increase in the number of children, plenty of cash and the very complexity of our society itself have all tended to compound the problem.

"The second assumption on which they base their decision to wash out this generation is even more serious. That is the assumption that we have already done all we can to save it. While there is general agreement on the fact that juveniles' misconduct is a serious problem, there is very little agreement on either the cause or the cure.

"If I may say so, I believe the greatest single problem in the juvenile delinquency field is the tendency to oversimplify the problem. Delinquency is a legal term. It is the symptom or outer manifestation of a personality, social or other disorder.

"The term, juvenile delinquency, itself, is as loosely used today as the term 'bellyache' ever was in the medical profession 100 years ago. What physician would be able to prescribe treatment on the basis of such a diagnosis when the specific problem could be anything from too much soda pop to an inflamed appendix or to cancer?

"How can you expect one specific prescription to stop this increase in juvenile delinquency when it results from all sorts of ills existing in all segments of this crazy mixed-up world in which we live?"

TOO MUCH PROPAGANDA

"We are all in a whirlpool of information and propaganda regarding delinquency. Radio, television, magazines, newspapers, and preachers, politicians, and public servants of all grades have aired literally thousands of heated words on the subject. Usually their comments are in the nature of an attack on the children or the parents or law-enforcement officers.

"The currently popular theory of the experts, and that includes everybody these days, is to blame the children's misconduct on the parents and the breakdown of family life.

"While I certainly believe that parental preoccupation in other matters is a major cause of our problem, I also believe that the recognition of this fact is of only limited value to use. That is, I am forced to say, 'so what, the parents are to blame.'

"How are you going to use that fact in helping the child? They say 'punish the parents.' A proper discussion of this point would require much more time than we have here, but in summary, I must say that the fact that we know that parents are to blame, in itself, is no solution to this problem—it simply suggests some things which may point to this solution."

FAMILY PICTURE HAS CHANGED

"Certainly we must do what we can to strengthen the family, but at the same time we must recognize that the very nature of our society is forcing changes, to say the very least, in our family life.

"The picture of the cozy little family of eight seated around the open hearth with mother knitting a sweater and father reading 'Pilgrim's Progress' is not a picture of our day, and I doubt that we can turn back the clock.

"The swing shift at the mill, the second automobile, mother working out to help meet the payments on the first automobile; in short, the basic change from a simple rural to a complex urban society with the increasing demands from outside the home evidences the changes we are talking about.

"And we believe that these changes explain to some extent the increase of the juvenile problem in America."

SUGGESTS COURSE OF ACTION

"In summary, I should like to list some things that we know and some things we don't know, and then suggest, perhaps, a course of action.

"First, we know that we love our children. Second, that they are important to our society. Third, that an increasing number of them violate the rules of society. We do not know, first, the specific causes of these violations. Second, the specific solutions of this problem.

"I think we also know some other things. I think we know that there has been a lot more crying, accusing, and wringing of hands that there has been of honest, constructive effort in dealing with these matters.

"The traveler who was beaten on the road was not aided by those who saw his problem and passed by. He got his help from the man who saw his injuries and went over, picked him up, took him to the inn and paid his bills.

"This problem, then being a many-headed enemy, must be met by all segments of society. All of us have an interest in this problem. I have had children in my juvenile court from homes in the $30,000-a-year class down to those on relief.

"Your interest, as members of the board of trustees of your church and as school directors, is obvious. Do you believe the tremendous physical plants at your command are being used to their maximum in this critical struggle?"

CHALLENGES UNIONS

"Our unions, in recent years, have been recognized as important forces in our civic life. We have a right to ask what specific steps they are willing to take. The merchant and the industrialist who are, by necessity, tax conscious, should be aware that the cost of maintaining one delinquent in a correctional institution averages $4 a day and that, in addition, he is at least temporarily a nonproductive drone in the community.

"The public press has great responsibility to spend at least as much space on the accomplishments of the over 95 percent of our youth who are hitting the ball, as it does on the 5 percent who are in a batting slump.

"In my remarks at my swearing-in ceremony on January 3, 1956, I promised to use the prestige of my office to promote in the lives of the young people a higher regard for the law and to promote in the community a deeper sense of responsibility to our young people."

PROPOSE CONFERENCES

"In conformance with this pledge and in my belief that the problems of our youth are the responsibility and concern of all of us, I propose to call in the Shenango Valley and in Greenville and in Grove City a conference of the leaders of all segments of community life to council together and to search for the best means of conserving and developing this most previous asset, this pearl of great price.

"In this conference, we will not only list our deficiencies, we will catalog our resources in the field of manpower and physical equipment.

"It is not our desire to make this conference an arm of the juvenile court. If it were that and nothing more, it would be, in our judgment, a failure. To be worthwhile, it must become an arm of the people in an assault on a very serious threat to our continued existence as a free, organized society."

Is Foreign Aid Useful?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

MR. SMITH of Wisconsin. Mr. Speaker, George Sokolsky in a recent column questioned the usefulness of our foreign-aid program. Under leave to extend my remarks I am including that article at this point:

THESE DAYS

(By George E. Sokolsky)

IS FOREIGN AID USEFUL?

Hans Christian Sonne, chairman of the National Planning Association which has made a study of foreign aid, has reported to the Senate Foreign Relations Committee that:

"If your committee's review of the foreign-aid program leads to the conclusion that it is useful for attaining our international objective, I believe the program should be continued at the present or an expanded rate, irrespective of the relatively minor effects on the domestic economy."

Two questions arise out of this paragraph:

1. Has our foreign-aid program been useful? What has it done for the United States? Precisely what political and economic benefits have accrued to the United States from it?

2. Is our present inflationary condition to be regarded as a relatively minor effect on the domestic economy? More paper money is being circulated now than during the period 1933–1952. The ratio of our gold stock to our nongold money is the lowest of yearly ratios since 1932. Is this to be considered a relatively minor effect on the domestic economy?

The argument that foreign aid is only a small part of the total economy seems to me fatuous. The fact is that Government expenditures of all kinds are now so high that the people are actually suffering from excessive taxation. The Hoover Commission believes that it can cut those expenditures by $4 to $5 billion, but nothing has been done about it thus far. When foreign aid was a dumping proposition to a great extent, it could be justified in a measure as a subsidy to industry, labor, and agriculture while making some friends perhaps in Europe.

Today, the problem is economy, not the expansion of expenditures.

Sonne's report says:

"If the United States were to double the present size of the foreign aid program (to $8.2 billion a year) by 1965, and assuming a gross national production level by then of $565 billion (in 1955 prices), there would be little additional impact on the United States economy."

The fallacy in this paragraph is the reference to 1955 prices which has nothing to do with the question. What does matter is what kind of dollars we are using, 50-cent dollars, or 35-cent dollars, or what. Sonne apparently disregards inflation altogether and pays no attention at all to the fact that individual debt has risen in this country to a point which all economists except the Keynesians regard as unwarranted and unsafe.

These days there is much talk in money markets of the raiders who use European or Canadian money to take over American companies, particularly those engaged in war industries. The scale on which the raids are taking place is now being defined by two Senate committees, the SEC, and other Government agencies, but thus far not enough data is available to establish any special reason for this activity, other than that money flows to a safe and profitable market. Should not the investigations deal with the question of the drying up of the reservoirs of private capital in this country? If interest rates are lower in one country than another or if money is taxed less in one country than another, borrowers seek the most advantageous market for money.

It is possible that those who borrow in Switzerland or Venezuela or who get tax-free arrangements in Liberia or Nassau are pursuing the ordinary course of private enterprise. The peril is that the beneficial owner of the securities or the rightful owner of the anonymous money employed may be an alien enemy of the United States.

It is impossible to study the full effects upon our economy of foreign aid without analyzing this particular phenomenon, namely, to what extent is the American reservoir of capital drying up because of the increasing individual indebtedness of Americans and the enormous bite that takes out of the individual's earnings.

Sonne's report also states:

"If the countries in need of foreign aid had to increase their own exports sufficiently to pay for all the goods and services they urgently need, they would probably have resorted to forcing or subsidizing exports, with

possible disruptive influences on world trade and on competitive conditions within United States industry."

Does this mean that foreign aid must last forever so that we can keep foreign subsidized goods out of our market? Why not use a high tariff?

There'll Be Dispute for Mr. Ballantine

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. BAILEY. Mr. Speaker, under special leave to insert my remarks in the Appendix of the RECORD, I desire to call attention to an editorial in the Louisville Courier-Journal, under date of February 22, commenting on the testimony of Thomas A. Ballantine, speaking on behalf of the United States Chamber of Commerce in opposition to Federal grants-in-aid for classroom construction before the Education Committee of the House of Representatives.

The editorial, under the caption "There'll Be Dispute for Mr. Ballantine," gives some true facts as to the seriousness of this problem in Kentucky. It questions the right of the chamber of commerce to tell the people of the Nation, and particularly the State of Kentucky, what they need.

The editorial follows:

THERE'LL BE DISPUTE FOR MR. BALLANTINE

Louisvillian Thomas A. Ballantine, speaking for the United States Chamber of Commerce, testified in Washington that Federal help to build schools is "unwise and unnecessary."

This is the other side of the picture. Only last week a group of Kentucky State and local school administrators told the same congressional committee that the need of new classrooms (around 10,000 in Kentucky today) is so great that many local districts cannot hope to provide them.

Even the extreme limit of assessment and taxation would not bring in enough for the job, said last week's delegation. It comes down to their point that there are simply not enough taxable resources everywhere.

There might be a lively debate if spokesmen for the two schools of thought got together. As chairman of the United States Chamber of Commerce committee on education, Mr. Ballantine speaks quite flatly on the subject:

"It is the consensus of business in this country that the States and their communities are responsible for, and able to finance the development of, the school systems required by their citizens."

It is to be assumed that Mr. Ballantine's soundings include the situation at home. Two years ago the Jefferson County school administration, preparing its case for a special school tax of 50 cents, reported on the dynamics of local population pressures. There were clear prospects that the number of county public school pupils, then around 27,000, would, by the school year 1960–61, go up to more than 43,000.

At the same time it was possible to report definitely, without leaning on estimates, that the "wealth" behind each county pupil had gone down from its peak of $15,197 in 1951 to $12,922 in 1954–55.

The wealth may be interpreted as values assessed for taxation. It was calculated at the time (1954–55) that the cost for each school child was $241 a year from the general fund (product of the $1.50 regular rate) and $67 from the building fund (product of the temporary 50-cent rate). This total of $308 for each child needed an assessment of around $15,000. The average residential assessment at the time was $3,550.

County school building needs, then projected through 1959, totaled $18,750,000. This was beyond the building program under way, supported by the temporary special tax of 50 cents and taking up all the anticipations from the full term of the tax.

We are not, of course, citing Jefferson County as typical of a school district in need of help, in spite of its experiences with explosive population growth. But if the situation has so large and troubling an impact on populous and wealthy districts, where we must admit people still need awakening, what must it be doing in many thousands of districts that are near or beyond their limit of resources and credit?

The Federal Budget

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. DOOLEY. Mr. Speaker, in a recent communication from the New York Board of Trade, that organization respectfully petitioned the Congress of the United States by resolution to reduce the budget. The resolution is a forthright and comprehensive one and in the opinion of this Representative from New York, it deserves to be engrossed in the RECORD. I, therefore, under unanimous consent to extend my remarks, include in the Appendix of the RECORD the aforementioned resolution and the program suggested in connection with the same:

Be it resolved, That the New York Board of Trade respectfully petitions the Congress of the United States. The principles and program contained herein are adopted by the board of directors in whom such powers are vested, meeting on March 5, 1957; and be it further

Resolved, That copies of this statement and resolution be forwarded to the President of the United States, the Secretary of the Treasury, the Senate Finance Committee, the House Ways and Means Committee, and to the Members of the Senate and House of Representatives from the State of New York.

PRINCIPLES AND PROGRAM

One of the greatest problems before the Nation today is the preservation of economic strength side by side with defense strength. The door to this is opened through the Federal budget. As the 1957–58 budget is now before the Congress, the New York Board of Trade advocates and commends to the Congress the following principles and program:

The restraints against inflationary pressures, urged by President Eisenhower upon business and labor, should be even more exemplified by government. Government expenditures, taxes, and debt should be sharply curtailed. Budget balance is not enough. What counts is to achieve it at the lowest possible level of expenditures and revenues. The Nation's full productive energies are thus released, defense heightened, and economic disaster thwarted.

The avenue to tax and debt reduction is expenditure reduction. Expenditure reduction requires determination and forthrightness by the people. Lipservice and pious resolutions won't do it. There must be sufficient social consciousness to accept the fact that expenditure reduction may temporarily curtail or eliminate advantages that certain groups, areas, or parties now seemingly enjoy.

Only those expenditures presently and absolutely essential should be approved. All others should be postponed or eliminated. Department and agency heads should be required to assign priorities to their expenditure requests. Congressional staff facilities should be improved to afford thoroughgoing incisive review of these requests.

Immediate consideration should be given to the recommendations, not yet acted upon, of the second Hoover Commission. It has found that $5 billion can be saved through improved personnel policies; and that $2 billion on defense expenditures can be eliminated without undermining defense programs one iota.

The Federal Government should get out of private enterprise, and out of State and local governments. At the very least, all business activities, or all functions like the post office, should be self-supporting. The trend of diminished responsibility and independence of State and local communities and ever-increasing recourse to Federal aid should be halted. This, in turn, requires a realinement of tax sources among Federal, State, and local governments.

Control of the purse strings must, at all times, be in the hands of the Congress. That control is lost when, as at present, departments or agencies can be almost indifferent to current appropriations by reason of the vast backlog of unexpended previous authorizations. Budget and accounting procedures should be on an annual basis along the lines recommended by the Hoover Commission, the Budget Bureau, and the Comptroller General of the United States.

No tax reduction should be considered that will yield revenues insufficient to cover all expenditures, including a regular program of amortization of Government debt. Tax reform is always in order—and the need accentuated by high tax rates. The tax structure lacks stability in its excessive reliance on an unstable income tax. Furthermore, the income-tax law leaves a great deal to be desired in simplicity, equity, certainty, and administrability. The recommendations of a nonpartisan tax commission along the lines of S. 769 (introduced by Senator WILEY) and H. R. 41 (introduced by Congressman COUDERT) should be sought.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. BURNS of Hawaii. Mr. Speaker, statehood for Hawaii is not only a desire of both political parties in Hawaii as well as of the mainland of the United States—it is the hope of the great majority of the people of Hawaii. Support for Hawaiian statehood comes from all levels of our social, economic, and political institutions. The people of Hawaii, in every walk of life, imbued with democratic ideals and principles, covet the status of equal sisterhood with the

United States of America. The following resolution, adopted by the Hawaii Mission of the Methodist Church at its conference on March 2, 1957, is inserted in the RECORD in full, in demonstration of the broad base of statehood support among the people of Hawaii—in this instance that of a religious and strictly nonpartisan group:

RESOLUTION ON STATEHOOD

Whereas statehood for Hawaii is a social and civic as well as a political issue. As such, it falls within the scope of the Methodist Conference and deserves our earnest attention and support; and

Whereas statehood is the aim and accepted destiny of every Territory of the United States. For Hawaii, in addition to political advantage (with voting representation in the Congress of the United States) it would be of material aid in our Pacific and Asian relations. It would be the most powerful single argument that can be offered that the people of Hawaii, of many racial ancestries, are accepted fully as citizens of the United States, and are not treated as colonials under the dictation of an imperialist government and bureaucracy; and

Whereas this would be an effective answer to the continued and insistent propaganda of the Communist agencies that Hawaii is being exploited by the capitalists of the United States mainland; and

Whereas statehood, furthermore, would encourage Hawaii to develop its social activities and agencies, directly along the line which the Methodist Church indorses and encourages: Therefore, be it

Resolved by the Hawaii Mission Conference of the Methodist Church (meeting in Honolulu, March 2, 1957), That we wholeheartedly support statehood for Hawaii and by this resolution ask that copies of this statement be sent to the President of the United States; to the Secretary of the Department of the Interior; to the President of the United States Senate; to the Speaker of the United States House of Representatives; to the delegate to Congress from Hawaii, the Honorable John A. Burns; to the Governor of the Territory of Hawaii; to the president of the Territorial senate; to the speaker of the Territorial house of representatives; and to the chairman of the Hawaii Statehood Commission.

President Ramon Magsaysay

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mr. WIGGLESWORTH. Mr. Speaker, the tragic death of President Ramon Magsaysay is a tremendous loss, not only to the Philippine Islands, but to the entire free world.

I knew him personally and am deeply distressed by his untimely passing.

Years ago I spent a year in the Orient, part of it in the Philippine Islands, as a private secretary to the Governor General.

Ever since this experience I have been deeply interested in the welfare and development of the people in the islands.

I have been happy in the friendship and cooperation developed between the two countries, evidenced particularly in World War II when the soldiers of both countries stood and fought side by side.

President Magsaysay was a stanch supporter of this country.

I met him some years ago when he came to Washington.

I met him some 15 months ago in Manila when several Members of this House at his invitation discussed with him Philippine problems and world problems over the breakfast table in old Malacanan Palace, where I had lived for a short time in days gone by.

It was impossible to know him without sensing his integrity, his ability, and his great courage.

It was impossible to follow his career without realizing how close to his heart were the welfare and progress of his people, and the triumph of freedom over communism.

He made a great contribution to his country, to southeast Asia, and to the free world as a whole.

I join in heartfelt sympathy to his family and to the people of the Philippine Islands.

Under leave to extend my remarks, I include at this point in the RECORD the following editorial appearing in the Washington Star of March 18, 1957, entitled "President Magsaysay":

PRESIDENT MAGSAYSAY

The airplane crash that has cut short the life of President Ramon Magsaysay has robbed the Filipino people of a great leader who well deserved all the confidence and affection they reposed in him. A man of incorruptible integrity, he labored tirelessly in their behalf, both for their material well-being and for the strengthening of their free institutions. To that end, among other things, he had liberated them from the terrorism of the Communist-led Huks and proceeded from there to promote their economic progress and insure their security as a nation allied with the United States and the Southeast Asia Treaty Organization.

In the international field, there was never any doubt about where President Magsaysay stood. Under his leadership, which had the overwhelming backing of his countrymen, the policy of the Philippines was stanchly pro-American, pro-liberty and anti-Red. Accordingly, since Filipino politics are volatile, and since his firm guidance will be sorely missed, there is some fear now that opposition elements (neutralists hostile to the United States) may be able to stage a comeback and change the excellent programs he had set in motion in domestic and foreign affairs.

This is a matter that only events themselves can clarify. Nevertheless, despite the uncertainties of the moment, there is reason to hope that Vice President Garcia will carry on without making any basic change in policy. After all, the vast majority of the Filipino people have repeatedly demonstrated their approval of the course set by President Magsaysay. Certainly, although his death is a grievous loss to the Philippines, to the United States and to the free world at large, his faithful followers are not likely to permit radical moves calculated to undo the good work he has left behind him.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

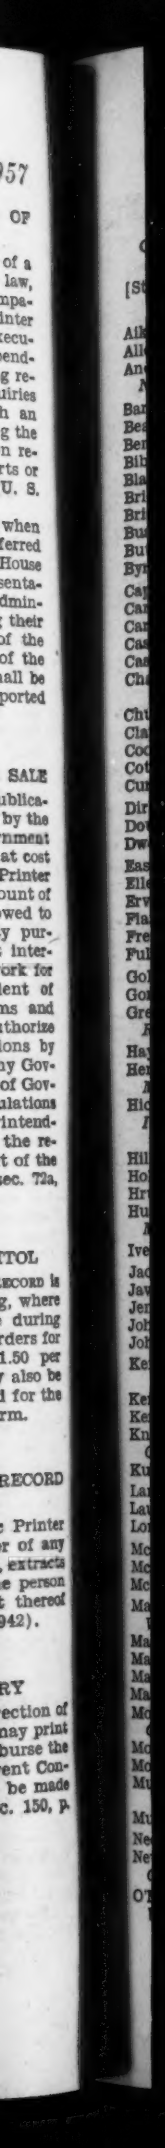
An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).



Appendix

Gangbustin' Game Warden

EXTENSION OF REMARKS
OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. REUSS. Mr. Speaker, this is National Wildlife Week. Under the leadership of Walt Disney, National Wildlife Week chairman, Americans throughout the Nation who love the great outdoors are focusing public attention on the need to protect and preserve our great natural heritage of soil, water, forest, and wildlife.

It is most appropriate, therefore, to call attention to the colorful story of Ernie Swift, today the national executive director of the National Wildlife Federation which sponsors National Wildlife Week, in cooperation with its State affiliates. The following excerpts from an article in the April 1957 issue of True magazine is not only fascinating reading but gives the reader an appreciation of the coming of age of the conservation movement in America and of the kind of contribution made by thousands of conservation workers to protect our wildlife and our natural resources. The people of his home State of Wisconsin already admire and respect Ernie Swift, and I hope that all those who read this article will share that admiration and respect:

GANGBUSTIN' GAME WARDEN

(By Ken Smith and John Keats)

The young game warden had known what he was going to find ever since he first spotted the big Lincoln in the forest clearing, and saw the machinegun lying across the back seat. After glancing quickly around him, he had moved quietly and carefully through the woods toward the dam and now, standing on the edge of the riverbank above the rushing water, he could look down and see them. He stood there silently in the shade of the trees, nervously rubbing his hands on his trousers, knowing that only a fool would try to go down there and take them alone.

All I have to do is turn around and get the hell out of here, he told himself, and nobody will ever know. With those guns, they could cut me to pieces before I'd gone 2 feet. His eyes traveled from the automatic rifle that was leaning up against the sign reading "Closed area, fishing prohibited" to the heavy pistol butts that protruded from the pockets of the three fishermen. Why should I get myself shot over nothing but a few lousy fish, Ernest Swift thought.

But he knew all along that he had made his decision before he had even seen the Lincoln; he had made it back when he first heard that Chicago mobsters were coming up into his territory in Wisconsin. He had realized right then that sooner or later he would have to tangle with them. * * *

One eye on the guns that stuck out of their back pockets, Swift moved rapidly, counting on the noise of the water to drown out his movements. Just as he was congratulating himself for having successfully taken them by surprise, the three men whirled around—guns gripped in their hands. * * *

"What in hell do you want?" a cold voice demanded. The heavy face behind the voice would have been instantly recognizable to any newspaper reader in those days of 1928; chiefly celebrated as the inventor of the one-way ride, he was known as "Machinegun" Frankie McErlane.

Fighting to keep his voice steady, Swift said, "I'm going to have to arrest you. Let me see your fishing licenses."

"Jesus, a hayseed cop," McErlane sneered. "Well, whatta you know." * * * The second gunman, an ugly, stupid giant named Frank Novak, stood looking at Swift out of contempt-filled eyes. With his attention on McErlane, Swift did not realize that the third man had circled around behind him until he heard the soft, emotionless voice: "Good-by, you ———. We're settling this one right now."

In that instant, Ernie Swift knew for sure that he had been a fool. But he'd done what he said he'd do; what he thought he had to do. At least, he had that.

* * * * *

When Swift signed up as a State game warden in 1926, he figured he'd made a man's solemn promise. His first assignment had been to ride herd on a gaggle of transplanted Kentucky mountaineers who had just run the former warden out of the woods in the northeastern end of the State.

* * * * *

* * * On many occasions in the next 2 years he found himself alone in a woods full of slouch-hatted, spindly, bewhiskered mountaineers, every man-Jack of them armed. If they met casually, Swift and the mountaineers would nod with mutual respect. If it was a business meeting, Swift would walk boldly up and tell them to consider themselves under arrest—he'd expect them in court next day. * * * The Kentuckians admired this skinny little blue-eyed, redhaired lawman, who would walk right up to a band of armed clansmen and tell them where to head in and then have the guts to turn his back and saunter away.

Swift turned in such a brilliant arrest record, and earned himself such a reputation that in 1928 he was assigned to Sawyer County to take on the toughest chore any game warden in this Nation was ever called to face. High-riding Chicago gangsters had chosen the woods around Swift's hometown, Hayward, as a place to get cool when Chi got a little hot. * * *

Al Capone had a resort for his boys on the east fork of the Chippewa River. Bugs Moran and the Barker-Karpis gang showed up, along with Potatoes Koffman, Lefty Counsel, and Gus Winkler. The incredible Joe Soltis, * * * had a resort and a golf course on Barker Lake on the Chippewa's east fork.

The Chicagoans gaily machinegunned deer at night with the aid of auto headlights; fished illegally for muskellunge in the dam across the Chippewa where the big fish were held in a huge trap until the wardens could net them out and lift them across. Rules? Laws? Those were for suckers, the Chicagoans said. Trifle with us, they snarled, and you'll wind up at the bottom of a lake wearing a concrete kimono.

* * * * *

The man behind Swift, a chunky Italian named Joe Milaga, was about to fire when McErlane suddenly snapped, "Shove it, Joe."

Then, as the warden stood tense and sweating, the three gunmen began arguing about whether or not to kill him. Figuring his best bet was to take the initiative, Swift turned to McErlane and said, as calmly as possible, "Let's see your license."

The effrontery of it dazed the hoods. McErlane fumbled in his pockets and produced the last thing Swift expected to see—a fishing license. Silently, McErlane handed it over.

* * * * *

"G— d—, Frankie, I kill him now," Milaga howled, dragging his gun out again, but McErlane was doing the thinking for the mob that morning.

"Leave him go," he said. "He's just a hayseed."

Swift knew it would be silly to go up against such odds again, or to think simple candor would have any appeal to McErlane's kind of animal. * * * Specifically, he slipped into ambush beside the forest road that led to the dam, and 2 days later, nabbed Joe Soltis himself.

* * * * *

He took Joe to court and after half an hour of profane pleading and threatening, Joe Soltis contemptuously peeled $50 from a roll that was at least twice as large as the judge's and Swift's annual income put together.

* * * * *

Swift kept playing it that way, choosing his own ground and taking the offensive, but 2 weeks later he ran into a situation he couldn't handle on his own terms. He'd arrested 3 of Soltis' men, but couldn't herd all 3 of them to court. He told them to report, and when they didn't come to town to give themselves up, Swift knew he'd have to go after them—out to Soltis' camp on Barker Lake.

When Swift drove up, he saw four thick-bodied, mean-eyed, pasty-faced city types squatting on the front porch. They didn't say anything. "I want to see Joe," Swift told them.

Just as in the movies, one of them nodded slightly * * * and glanced at the door. It was an invitation. Swift walked past them, through the door, and the four men followed, pistols drawn, and took up various vantage points around the room behind him. Soltis waddled into the living room through another door, carrying a pint of whisky. * * *

"Why, Oinie," the beer baron rumbled genially, "whatsa matta, Oinie?"

* * * He waved one of the boys to pull up a chair for Swift. The warden ignored the hospitality. Then feeling trapped and tense, Swift told Joe how it was.

"Aw, Oinie," Joe protested, smiling greasily. "Don't get hard about it. Sit down. Let's have a drink."

* * * * *

For the next half hour Soltis tried to tell Swift in a hundred different ways to stop being a Boy Scout. Swift didn't seem to be getting it. At last Soltis seemed to think he realized the basic problem and hauled out his enormous bankroll. * * *

"It's yours, Oinie," Soltis said expansively. "Take any or all of it. Here, take a grand, whadda I care? Only lay off me and my boys."

"The State pays me," Swift said flatly, feeling idiotically heroic. The State was pay-

ing him $140 a month. * * * "I have to take three of your boys back to town with me," Swift added.

"You stupid bastard," Soltis exploded, lunging to his full 6 feet 3, his big face red with whisky and anger. "Do you know how easy it would be for me to kill you?"

Soltis brushed the table aside, lurched out the front steps and down the porch steps. There was a flock of chickens scratching around in the dirt a few yards from one of the cabins. * * * He drew his .45 caliber Army Colt and blasted away.

The big wasn't all reputation. He had gigantic shoulders and arms bigger than your legs, and he was a good fisherman and a good shot. Firing rapidly, he clipped the heads off three moving chickens. Then he turned back to Swift. "Catch on?" he grated.

"Yeah, I know," Swift said. "But all I came here for was to tell you your boys have to come to court today."

* * * * *

At 5 p. m., just as court was about to close, Soltis and a dozen hoods walked in. Three of the gunmen admitted they'd hunted out of season and Soltis, without a word, threw a roll of bills on the desk before the bench. As the big man turned to leave, he spotted Swift near the courtroom door. "Now lemme tell you something," Soltis sneered, towering over the slender warden. "Up to now I been easy on you. I thought maybe we could be friends. But the hell with that. Next time you think you gotta take me, you better come shooting."

"All right," Swift said, "I will."

Swift reported this conversation to the home office in Madison, and the effect was immediate—bringing Swift face to face with Gov. Walter Kohler, Sr., father of the present governor. After the warden had told his story, the Governor asked, "What do you intend to do about it?"

"Kill Soltis, if I have to," Swift said.

"I think you are absolutely right," Kohler said. "Stay with it, but use good judgment. Take all the men you need to get the job done. If necessary, I'll declare martial law in Sawyer County and call out the National Guard to back you up. * * *"

Characterically, Swift moved first. He called in four other wardens and this time, in addition to their issue Colts, they carried rifles. Instead of driving through the forest road that led to the dam, the law men entered the woods at dusk, worked their way around, and spent the night in a tent deep in the woods about 3 miles upstream.

* * * * *

The wardens arranged an ambush and Soltis and his two fishing companions eventually walked smack into the leveled rifles.

"Hey," the racket lord complained, his big face pale. "What the hell is this? How come all the G— d— hardware?"

"You told me the next time I had to take you, to come shooting," Swift explained. "Go on. Move."

* * * * *

The next day, Soltis was gone from Wisconsin forever. Told of this, Swift's only comment was, "I don't think Joe ever understood me."

But the remaining Chicagoans understood Swift only too well. He was a menace to their liberty and pursuit of happiness, and they marked him for death. The Federal Bureau of Investigation got wind of this and Swift was yanked into hiding, despite his bitter protests. "People will think I'm yellow," he said. "I'm damned if I'm going to run."

"We're getting you out of there before you get killed," the chief warden told him.

The State hid Swift and his wife in the Soldiers' Home at Mendota while FBI and State police began to comb the Chicago element out of Hayward's hair. Swift fumed and fussed, but he stayed put, and it's just as well he did, for the gang's threat was no joke.

Swift hadn't been out of Hayward long before a black Packard purred into town and stopped at the pool hall. Out stepped a good-looking, clean-featured youth, dressed with quiet taste in expensive city clothes. "Does anybody know where I can find Ernie Swift?" he asked.

George Taylor, an aged Indian wolf hunter, said sure, he knew. "I take you to him."

"That's awfully nice of you," the young man replied.

There were two sinister customers sitting in the back seat of the big Packard, surrounded by machine guns, rifles, pistols, sawed-off shotguns, and boxes of ammunition. All at once the Indian knew he didn't want to go anywhere.

"Get in there, you half-breed — — — ——," the young man said, and shoved the Indian into the car.

In front of Swift's house Taylor received his instructions. "When he comes to the door," the young man snapped, "get the hell out of the way and maybe you won't be killed."

Taylor knocked several times. * * *

Swift might have resented being yanked to one side while the cleanup went on, but the move proved a turning point in his life. He soon found himself riding a desk in Madison, learned the intricacies of top-level administration while advancing steadily through the ranks, and in 1947 he was made director of Wisconsin's Conservation Department.

There were two red-hot issues when Swift took office. One was the invasion of the lamprey eel, which had scuttled the lake-trout fishery, and the fishermen were lobbying for a law permitting them to use fine-mesh nets and claim anything caught in such nets to be a legal fish. Second, north country hunting-camp proprietors bitterly resented the conservation department's plan to kill off a percentage of Wisconsin's deer herd in order to save it.

This was necessary because there wasn't enough natural food for all Wisconsin's deer, so all deer were threatened with starvation. The department figured the only way to save the herd was to thin it, but thinning it, in the minds of the hunting-camp proprietors, meant fewer targets. And fewer targets meant less customers. One of the most influential resort owners in the north country came storming into Madison.

"Our deer are more important to us than you are, Swift," he said. "I'm warning you. If you insist on ramming a deer-killing program down our throats, I'm going to get you if it takes every penny I own and every dollar I can borrow."

"Look," Swift said reasonably, "You've been running a resort for maybe 30 years. Right here in my office there's a fellow been studying deer, scientifically, for as long as you've been in the resort business. Now if he told you how to run your resort, you'd laugh in his face. But when you come here, you're trying to tell him you know more about deer than he does."

"Maybe I do," the resort man said, unmoved. "I'm warning you. You prune that herd, and we won't rest till we get you fired."

The man left and Swift sighed. It was Soltis all over again; this time with political complications. The legislators committed to the fishermen and those committed to the resort men were all set to do a little log-rolling at the expense of the State conservation department. They'd vote for each other's bills and, meanwhile, try to cut the department down to size. Already they were reportedly cooking up a bill to support the public parks out of funds received through the sale of hunting and fishing licenses—funds which Swift's department then received and which it desperately needed. Further, the bill would reduce the department's cut of the State's general fund.

Accordingly, Swift found a friend in the legislature and got him to offer a bill that would support the public parks through an increase in real estate taxes. This thought so horrified the legislature that a hasty truce was arranged. They promised that hunting and fishing license funds would remain in Swift's department, and the department's cut of the general funds would be increased if only that real estate tax bill would be quietly forgotten.

All this was very well, but Swift had no intention of fighting one battle and calling it a war. He had the department prepare 24 conservation bills, and Sprecher went to the floor to fight them through. It went as planned. The legislators were kept so busy considering Swift's bills they never got around to those favored by the would-be fish thieves and deer-starvers. Instead, the legislature was maneuvered into passing 19 of the 24 bills Swift proposed.

In the 3 legislative sessions held during Swift's directorship, he and Sprecher got 79 out of 100 bills made into law—by far the best record of any government department with any legislature. * * *

* * * * *

Among other things, Swift's audits disclosed that the department operated several trout hatcheries so inefficiently that fingerlings were costing the State $4 each. The inefficient hatcheries were closed. * * *

* * * * *

The Federal Government had been dickering for Swift's service for years before 1954, when President Eisenhower's men asked Swift to quit the minors and join the big league in Washington. There was a newly created job tailored specifically for Swift in the Fish and Wildlife Service—that of Assistant Director. Under it, Swift would not only help form policy but see it carried out, and act as liaison man between the Federal Government and the States. * * *

* * * * *

As the months wore on, it became apparent to Swift that he and John L. Farley, Director of Fish and Wildlife Service, held different philosophies.

Swift couldn't stomach the granting of oil leases in public wildlife refuges and he said so. He told it to his superiors, and to anybody else in earshot.

Most important, he flatly refused, when ordered to do so, to compose a memorandum that would nullify all the Federal rules which make it illegal to bait ducks.

The story is interesting and ugly. The fact is, our duck population is so small that shooting over baited grounds would seriously deplete it. Hence, it's against Federal (and Canadian) law to bait duck. Rich men's gun clubs in Ohio, Maryland, and California want that law changed. In plain words, their politically potent members want a better chance for a bird than the chance granted any plain Joe.

One day Farley made a speech to conservation groups pledging the Federal duck-baiting regulations would be upheld. Two days later he called Swift into the office and told him to draw up a memorandum for Farley to sign—a memorandum so worded as to make enforcement of the regulations practically impossible. Swift pointblank refused to have anything to do with it, and the memorandum was prepared by someone else in the office.

"If you sign this after what you promised those people," Swift told Farley with unconcealed anger, "you better buy a one-way ticket to China, because they're going to come shooting."

It is to Farley's credit that the memorandum remained unsigned, for the political pressure on him was immense.

At this point, Swift, who'd been feeling that he was in the position of a quarterback who had been ordered by the coach to throw the game, resigned his Federal job. He was immediately offered another, also especially created for him, as executive director of the National Wildlife Federation. Swift accepted eagerly, feeling certain that he could do more good as spokesman for 3 million sportsmen and conservationists than he could do in any of the top Federal jobs.

He's had the job less than 2 years now, and already it's borne fruit. As all sportsmen know, the military has always acted as if game laws didn't apply to military reservations, much as the mobsters of Swift's youth didn't think game laws applied to them. Swift, as federation director, kept sniping mercilessly at the Pentagon and a year ago last March the Pentagon ran up the white flag. Henceforth, the brass told Swift, the military will obey conservation laws and practices on its reservations.

The oil-lease giveaway battle isn't over by a long shot, as far as Swift is concerned. And he's still watchful for a return of the baiting issue, which will come back as surely as the ducks themselves. But Ernie Swift feels that he's now in the best possible position to carry out his lifelong aim—the protection of America's wildlife.

Seven Hundred and Ninety-four Country Editors Tell How They Would Vote if They Were in Their Congressman's Shoes

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 28, 1957

Mr. MACK of Washington. Mr. Speaker, the American Press, an independent magazine for hometown newspapers, recently took a poll of opinion among weekly newspaper editors of the Nation upon 20 issues of national interest.

A total of 794 editors responded. Since most of these editors live in small cities of from 2,000 to 10,000 inhabitants, and are close to the public of their communities, it seems to me they institute one of the most reliable soundingboards of present public opinion on national issues.

The poll of editorial opinion made by the American Press is therefore most interesting and informative.

Under unanimous consent I include this poll of opinion in the RECORD to provide all Members a chance to study it.

The American Press poll of editorial opinion, together with that magazine's article explaining it, follows:

SEVEN HUNDRED AND NINETY-FOUR COUNTRY EDITORS TELL HOW THEY WOULD VOTE IF THEY WERE IN THEIR CONGRESSMAN'S SHOES

Seven hundred and ninety-four country newspaper editors, at the request of the American Press, have taken time to give their views on 20 questions of outstanding national interest in order that you will have an overall picture of "grassroots" sentiment on these vital issues.

There is no doubt among most Congressmen that the country editor does reflect grassroots sentiment. Without his help, it is often difficult to know what the rural half of America is thinking.

The American Press has tabulated the "votes" of the country editors on these issues in order to give you a quick method of knowing how the editors of the North, South, East, and West would vote if they were "in your shoes."

In addition, in this issue we have included hundreds of comments which will help you to see why the editors vote as they do.

We hope this study will be helpful to you as well as to America.

Below we are giving the 22 questions included in our survey as well as the answers of the editors to them. All replies are grouped according to the section of the country in which the editors live. One hundred and thirty-five of the replies are from the Northeastern States, 207 from the South, 329 from the North Central States and 123 from the West.

MIDDLE EAST AUTHORITY

Question 1. President Eisenhower has asked Congress to authorize him to use United States forces, if he considers it necessary to stop any Communist aggression against countries in the Middle East. Do you think he should be given this authority?

[Percent]

	Northeast	South	North Central	West	Total
Yes	80	66	70	74	71
No	19	31	29	25	27
No answer	1	3	1	1	2

FOREIGN AID

Question 2: During recent years Congress has appropriated about $4 billion each year for countries in other parts of the world, to help prevent their going communistic. Do you think Congress should appropriate more, less, or the same amount for the coming year?

[Percent]

	Northeast	South	North Central	West	Total
More	7	4	7	8	6
Less	52	66	64	64	63
Same	34	24	25	24	26
No answer	7	6	4	4	5

JOHN FOSTER DULLES

Question 3: Do you want to see John Foster Dulles continue as Secretary of State?

[Percent]

	Northeast	South	North Central	West	Total
Yes	67	47	59	51	57
No	29	46	35	41	38
No answer	4	7	6	8	5

SOIL BANK

Question 4: Do you think the soil bank plan should (a) be left as is; (b) extended to cover drought relief, flood relief, or credit needs; or (c) eliminated?

[Percent]

	Northeast	South	North Central	West	Total
Left as is	45	36	42	44	42
Extended	29	31	33	36	33
Eliminated	22	25	22	15	22
No answer	4	8	1	5	3

FARM PRICE SUPPORTS

Question 5: Do you favor or oppose a bill which would return Federal price supports to a fixed 90 percent of parity for the basic crops?

[Percent]

	Northeast	South	North Central	West	Total
Favor	11	32	22	18	22
Oppose	85	63	76	78	74
No answer	4	5	2	4	4

CORPORATION TAXES

Question 6: At present, corporations taxes are 30 percent on the first $25,000 of profit and 52 percent on profits above $25,000. Unless Congress extends the legislation establishing this tax, it will drop to 25 percent and 47 percent on April 1, with a loss in revenue of around $2 billion. Which of the following actions would you advise Congress to take: (a) Extend the 30 percent and 52 percent for another year? (b) Let the tax automatically drop to 25 percent and 47 percent? Continue the 52 percent but reduce the tax on the first $25,000 to 25 percent?

[Percent]

	Northeast	South	North Central	West	Total
Extend	28	30	38	25	32
Let drop	35	40	29	38	35
Cut on $25,000	35	26	28	33	29
No answer	2	4	5	4	4

INCREASE EXEMPTION

Question 7: A bill has been offered to increase the present $600 individual income-tax exemption to $700. It is estimated that a $100 increase would cost $2.4 billion in revenue. Do you think the exemption should be increased?

[Percent]

	Northeast	South	North Central	West	Total
Yes	54	66	63	59	62
No	45	32	37	39	37
No answer	1	2		2	1

TAX ON DIVIDENDS

Question 8: Do you think corporations should be exempt from taxation on the portion of their earnings which is distributed as dividends and upon which the individual shareholders pay taxes?

[Percent]

	Northeast	South	North Central	West	Total
Yes	74	72	70	59	69
No	25	25	28	38	28
No answer	1	3	2	3	3

TAX ON COOPERATIVES

Question 9: Bills have been introduced in Congress requiring that cooperative corporations and savings and loan associations be subject to Federal income taxation in the same manner as other business corporations. Would you favor such legislation?

[Percent]

	Northeast	South	North Central	West	Total
Yes	86	82	89	84	86
No	13	16	9	11	12
No answer	1	2	2	5	2

DEBT REDUCTION

Question 10: If Congress should cut items in the budget by say $2 billion, would you

suggest that taxes be cut by that amount or that this potential surplus be used to reduce the national debt?

[Percent]

	North-east	South	North Central	West	Total
Cut taxes	24	20	23	24	25
Reduce debt	70	66	74	68	70
Both	3	2	2	3	2
No answer	3	3	1	5	3

SOCIAL SECURITY

Question 11: At present, most people over 65 cannot collect social security pensions if they earn over $1,200 a year. Would you favor eliminating this restriction?

[Percent]

	North-east	South	North Central	West	Total
Yes	66	64	57	74	63
No	30	29	39	25	33
Increase	3	3	3	1	2
No answer	1	4	1		2

SCHOOL CONSTRUCTION

Question 12: A bill has been introduced calling for an appropriation of a minimum of $600 million a year for 5 years to be used to speed school construction. Do you favor such a program?

[Percent]

	North-east	South	North Central	West	Total
Yes	55	41	43	46	45
No	45	55	57	50	53
No answer		4		4	2

SEGREGATION PROVISION

Question 13: If a school-aid bill is passed, do you think it should include a provision denying aid to areas in which schools are segregated?

[Percent]

	North-east	South	North Central	West	Total
Yes	41	17	38	45	34
No	56	78	59	49	62
No answer	3	5	3	6	4

FEDERAL SCHOLARSHIPS

Question 14: Federal scholarships, to help 100,000 students with ability, but who can't afford college, to have a college education, are expected to be proposed to Congress. Are you for or against such Federal scholarships?

[Percent]

	North-east	South	North Central	West	Total
For	49	40	38	46	42
Against	46	57	60	53	55
No answer	5	3	2	1	3

CURB ON FILIBUSTER

Question 15: In order to curb filibustering, the Senate may consider a rule change so that a simple majority, instead of a two-thirds majority, can call for an end to discussion. Do you favor such a curb on filibustering?

[Percent]

	North-east	South	North Central	West	Total
Yes	79	36	75	68	64
No	20	60	23	30	34
No answer	1	2	2	2	2

VICE-PRESIDENTIAL DUTIES

Question 16. Would you favor giving the Vice President specific executive duties and relieve him of his job of presiding over the Senate?

[Percent]

	North-east	South	North Central	West	Total
Yes	71	58	64	59	63
No	24	38	32	37	33
No answer	5	4	4	4	4

POSTAGE RATES

Question 17: Would you favor legislation to increase first-class postal rates to 5 cents, with the provision that letters would automatically be sent by airmail to localities where airmail would be faster?

[Percent]

	North-east	South	North Central	West	Total
Yes	40	34	39	48	39
No	60	64	60	50	60
No answer		2	1	2	1

POST OFFICE SUBSIDY

Question 18: Do you feel that the Post Office should set rates based on paying its own way—or continue to be subsidized by taxes?

[Percent]

	North-east	South	North Central	West	Total
Pay way	55	45	49	58	50
Subsidize	42	51	49	35	46
No answer	3	4	2	7	4

DRAFT PERIOD

Question 19: Would you favor lowering the present draft period of 2 years to 18 months?

[Percent]

	North-east	South	North Central	West	Total
Yes	40	48	51	46	48
No	50	44	42	48	45
No answer	10	8	7	6	7

PAY AS YOU SEE TV

Question 20: The Federal Communications Commission has been asked to rule on whether television stations can broadcast pay-as-you-see programs, whereby owners of TV sets would pay to see those programs if they were interested. This, of course, would be in addition to regular free programs paid for by commercial advertisers. Do you think the FCC should approve pay-as-you-see television?

[Percent]

	North-east	South	North Central	West	Total
Yes	55	41	51	55	50
No	43	50	43	36	43
No answer	2	9	6	9	7

EDITOR'S NOTE.—Commercial interests favoring "Pay as you see" television and commercial interests opposing it have both objected to the wording of the above question. Each feels that the question fails to make its case clear. Because this is a vital decision to be made by the FCC, The American Press plans to make another survey on this subject, presenting the arguments on both sides, and asking editors to vote after reading the pros and cons.

Control of Fairbanks, Morse Co.

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. ARENDS. Mr. Speaker, my attention has been drawn to the possible effect of a proxy fight for control of Fairbanks, Morse Co., one of the oldest, successful industrial companies in Illinois, headed by Robert H. Morse, Jr., a distinguished Illinois citizen whose family founded the company. This proxy fight and its possible results are of great public interest in my State. One of the company's principal operating plants and several thousand of its employees reside in Illinois and its main office is in Chicago.

In its campaign to take over control of Fairbanks, Morse Co., Penn-Texas Co., a holding company for Leopold Silberstein, has resorted to newspaper advertisements directed to officers and employees of the company. There is normally no harm in using such ads to get a message over to readers of the press, but many of the particular persons to whom these ads are directed are legally protected against improper representations as stockholders of Fairbanks, Morse Co., under its employees stock purchase plan.

The advertisements are of questionable legality, because Securities and Exchange Commission rules prohibit the solicitation of proxies through the use of advertisements or other communications containing predictions as to future market values, earnings, or dividends which may mislead stockholders into giving up their proxies.

It is also illegal under the SEC rules to make claims prior to a stockholders meeting regarding the results of solicitation of proxies. But these rules seem to have had little effect in the campaign by Penn-Texas Co. to take over the management of the long-established and conservatively managed Fairbanks, Morse Co.

The local advertising used in every State where Fairbanks, Morse plants are located has sought to reassure the officers and employees that their jobs will be secure under Penn-Texas management. The advertisements make vague references to Penn-Texas' financial condition by citing the gross 1956 sales figures for the several companies it controls, but omits even a general statement of earnings for the same period. Gross sales is no measure of a company's financial position. Mr. Silberstein has been repeatedly challenged by Mr. Morse, president of Fairbanks, Morse Co., to publish the Penn-Texas operating statement for 1956 but has thus far responded only with a promise to issue an earnings statement in the future. There is no assurance that any earnings statement will be issued before Fairbanks, Morse shareholders are asked to vote upon the management for the future. Fairbanks, Morse Co. enjoys excellent employee and stockholder relations. The only con-

celvable purpose of the advertisement used by Mr. Silberstein is to create friction and misunderstanding to the detriment of the Fairbanks, Morse Co.

What does it matter that Penn-Texas seeks to control Fairbanks, Morse and why should Congress be interested. But it does matter, and Congress should be interested.

During the twenties the acquisition of control of sound companies by large holding companies resulted in extensive losses to public securities holders and employees. The abuses of the twenties were intended to be controlled by the establishment of the Securities and Exchange Commission and arming it with various statutes, including the power to regulate the solicitation of proxies for companies listed on national exchanges.

The present Fairbanks, Morse proxy struggle for control of the company brings into question whether the various devices used by Penn-Texas disregard the Securities and Exchange Commission rules governing such contests.

It is very significant that on the same day Penn-Texas used the newspaper letter advertisements to officers and employees, Mr. Silberstein publicly claimed that control of Fairbanks, Morse had already been won by Penn-Texas and predicted the company would double its profits under new management by Penn-Texas.

One question of prime interest to Congress in this case is the effect of using foreign sources to finance the stock purchases for Penn-Texas without knowing, or being able to find out who is the real owner of the funds provided. Yesterday, George E. Sokolsky pointed out in his column in the Washington Post and Times Herald that there is a tremendous amount of money loose in the world, some of which is "hot money" going through a process of legitimization. Mr. Sokolsky points out that all of the "hot money" reaches the American borrower from an intermediate legitimate source, such as a Swiss bank or through American banks with such connections. Thus, the borrower has the advantage of an intermediate arrangement which makes it possible for him not to know who the actual beneficiary or rightful owner of the money is.

Acquisitions of shares of Fairbanks, Morse Co. by Silberstein have been arranged behind a cloak of foreign secrecy and possibly intrigue. This raises serious questions as to who may actually be behind the campaign to take over Fairbanks, Morse Co.

It is a matter of great public interest for the SEC to get all the facts as to the identity of persons who originally provided the shares and the arrangements that made them substantial profits by selling to Swiss sources. In turn, it is of prime importance to know whether there were any prior arrangements for sale or contract for sale to Silberstein or Penn-Texas.

These questions are properly subject for SEC inquiry. I am sure the Commission will make a thorough investigation of all of the questions raised in this proxy battle before it permits stockholders to choose the management for Fairbanks, Morse Co. for the next year.

Grave Risks of Fluoridation

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include an article from the New York World-Telegram of Wednesday, February 20, 1957, by Murray Davis, staff writer, entitled "Three Hundred M. D.'s Warn of Grave Risks in Fluoridation."

The article follows:

THREE HUNDRED M. D.'S WARN OF GRAVE RISKS IN FLUORIDATION

(By Murray Davis)

Fluoridation of drinking water "imposes an extraordinary risk on certain individuals," according to a report made public today by more than 300 medical men.

The report also termed fluoridation "mass medication without precedent" and with possible "mass side reactions."

The statement was directed to Mayor Robert F. Wagner's attention by a 13-member delegation of the medical-dental ad hoc committee on the evaluation of fluoridation. The delegation was headed by Dr. Jonathan Forman, Columbus, Ohio, and included 7 New York men.

The report comes just 2 weeks before the public hearings at city hall March 6 on fluoridating New York's drinking water.

NOT PROPER MEANS

It sets forth: "We, the undersigned, are opposed to the fluoridation of public water supplies. As members of the medical, dental, and related public health professions, we are as concerned as anyone over the prevalence of tooth decay, and as anxious that it be prevented; but each of us * * * believes that fluoridation of public water supplies is not a proper means of attempting such prevention."

The committee listed nine points in its rejection of fluoridation. It pointed to the lack of positive proofs of the safety of fluoridation; the proposed introduction of one part per million of fluoride in drinking water was criticized as in the toxic range. It was also stated that it is the individual's right to govern his teeth rather than that of public officials and that there is need of long-term studies to determine if fluoridation could be an insidious factor in chronic disease.

Other points cited were: The risk fluoridation imposes on some individuals; the mass medication aspect; the use of public water supply as a vehicle for drugs, and the available less hazardous and more efficient ways of obtaining the benefits ascribed to fluoridation.

EXTENSIVE INQUIRY

According to Dr. Forman and Dr. A. Allen London, D. D. S., of Boonton, N. J., the statement is a "strictly professional undertaking and represents the joint efforts of many doctors and scientists in various parts of this country who have conducted an extensive investigation of the facts and other information related to fluoridation."

Besides Drs. Forman and London, the other members of the delegation are Drs. Simon A. Beisler, chief urologist of Roosevelt Hospital; Henry W. Cave, consulting surgeon at Roosevelt and other hospitals; Edward Percy Eglee, specialist in thoracic diseases; Thomas J. Kirwin, urologist at Flower-Fifth Avenue Hospital; and William Coda Martin, geriatrician, associated with Coler Memorial Hospital.

Also Drs. Max Spencer Rhode, urologist, former chief of staff at Bellevue; William Wolf, endrocrinologist; Reuben Feltman, research dentist, Passaic General Hospital, Passaic, N. J.; Clive M. McCay, professor of animal nutrition, Cornell University; James W. Thornton, Manhattan and Mount Vernon dentist, and George L. Waldbott, allergy specialist, from Detroit.

Will the Budget Be Cut?

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I am placing in the RECORD an editorial appearing in the St. Louis Globe-Democrat entitled "Congress Heeds Cry for Economy." I hope there is a real cry for economy from the people and that the Congress will heed it. The day before yesterday I put in the RECORD an editorial from the St. Louis Post-Dispatch which intimated that the cry for economy that everybody is talking about is the same old thing, and that as soon as April 15, the deadline for paying taxes, passes Congress will go ahead and vote the same old amounts of appropriations.

Regrettably, the independent offices appropriation bill of 1958, which the editors of the Globe hail as an indication that Congress means business in its economy drive, is an example of how Congress can make itself look like it is economizing more than it really is.

First of all, the pared 1958 budget is still a bigger budget than the 1957 budget. Two items make this so. The 1957 budget contained an item of $525 million for payment into the civil service retirement fund. This item is not in the 1958 budget because under new accounting procedures payment into the civil service retirement fund is spread over all the Government agencies. Actually, to make the 1958 budget of the independent offices comparable with the 1957 budget, $564,210,000 would have to be budgeted for the payment to the civil service retirement fund.

Secondly, the 1958 budget shows a cut of $66,500,000 in compensation and pensions for veterans. These payments must be made in accordance with law and the item in the budget is an estimate of the amounts that will have to be paid. The Veterans' Administration estimated one figure and the Appropriations Committee another figure. If the Appropriations Committee is wrong in its guess, then a supplemental appropriation will be made to make up the difference. There is no saving here.

These two items add up to $630,710,000. Thus what the committee's publicity releases said was a $584,640,126 reduction over the 1957 budget becomes a $46,070,000 increase.

The proposed administration budget for 1958 thus was over one-half billion more than the 1957 budget. The alleged cuts which make up the purported 8.7

percent total $517 million. However, $206,657,700 are items in the Veterans' Administration, which, as pointed out, are not real savings; they are merely different estimates of what the Federal Government is legally liable for under the programs set by law. In other words, the real savings amount to about $300 million made up largely from two items. Ninety million seven hundred thousand dollars from the Civil Defense Administration; $111 million from the GSA strategic and critical material stockpile.

However, the committee does deserve credit for cutting the President's budget 5 percent and this is no mean achievement. I am hopeful that the editors of the St. Louis Globe-Democrat will be proven to be more right about the temper of the people and the Congress than the editors of the St. Louis Post-Dispatch, and that Congress really will cut the proposed 1958 budget substantially.

[From the St. Louis Globe-Democrat of March 18, 1957]

CONGRESS HEEDS CRY FOR ECONOMY

The American taxpayers' revolt against high Federal spending has begun to make itself felt in the Nation's Capital. This past week the Appropriations Committee of the House pared $516,993,000 from the budget requests of 18 assorted Federal agencies.

They had asked for $5,923,195,000 to spend next year. The cut in their requests came to a sizable 8.7 percent.

Of course, there is no guaranty that the House itself won't restore to them the half-billion dollars that its Appropriations Committee lopped off. But popular feeling is running so high against Washington's free spending that there is good reason to believe these cuts—and others to come—will be sustained.

One of the Federal agencies that went under the committee's knife—the Federal Housing Administration—submitted willingly to surgery. Federal Housing Chief Albert Cole took the initiative by asking that his agency's request be cut by $200 million.

That is the kind of self-sacrifice that taxpayers are not accustomed to seeing in Washington bureaus. Every empire-building impulse encourages these agencies to take on more and more duties, and spend more and more money.

Other victims of the Appropriations Committee's economy drive had to be strapped to the table.

It is worthy of note that this Democratic-controlled committee picked on one of the agencies—the Veterans' Administration—which can stir up the most vocal protest for one of the biggest cuts. The VA had $206 million deleted from its projected spending program for the year.

Since the White House has urged the drive for economy, the chances are that the House hopes to wring as much political ill will out of it for the GOP administration as it can.

In the past, Capitol Hill has often put on a pious pretense of economy by having its committee make spectacular cuts in the budget—only to restore them quietly, and piecemeal, later on.

This time, however, the public is really up in arms over the huge $72 billion Federal spending plan—and the high taxes it takes to support these Federal agencies in the style to which they have become accustomed.

One GOP Senator summed up the national mood like this:

"A few years ago, all you had to do to stir up a crowd was to mention Douglas MacArthur. Now all you have to do is start talking about the budget."

Both Democrats and Republicans alike on Capitol Hill are getting mailbags full of angry letters demanding that Washington quit spending money like a drunken sailor on shore leave. If the people mean it, and let their Senators and Representatives know they mean it, Congress' economy moves won't be just a sham this year, but the real McCoy.

A Martyr Among Taxpayers

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. HIESTAND. Mr. Speaker, the Nation has had a striking opportunity to witness an outstanding example of confiscatory taxation in the case of Mr. Charles Van Doren, recent winner on a television quiz show. Obviously, the real winner was not Mr. Van Doren, but the Treasury of the United States. The losers, as this example so aptly points out, are the people of the United States who like Mr. Van Doren are denied an opportunity to realize any substantial profit from their efforts. The Van Doren case unfortunately is repeated hundreds of times each year in business and industry. I am including in this extension of my remarks an editorial from the Los Angeles Times of March 13, 1957, which shows how Mr. Van Doren's television earnings were whittled by our confiscatory tax collection system.

The editorial follows:

[From the Los Angeles Times of March 13, 1957]

A MARTYR AMONG TAXPAYERS

So Charles Van Doren got out of the quiz show $129,000 ahead? Ah, no. He will be lucky if he winds up with $30,000 after the tax collectors have plucked him.

But what he loses in money he may gain in honor and saintliness among the oppressed taxpayers. He is their martyr and his loss may help them toward salvation through revision of the tax laws.

A POODLE CLIP

Of course, he is not the first citizen of high income to be clipped like a poodle by the Bureau of Internal Revenue, but he is the first to be shorn in public, a public of 60 million television viewers. Many of these people developed a warm personal interest in the diffident young man. Hearing how the collectors were going to cut him to pieces must have made expropriatory taxation seem personal and even painful to some of them, whereas it had only been an abstraction before.

Now let us watch as they strap Mr. Van Doren to the table to flay him:

He won $129,000 on the quiz show and earns a wage of $4,000 a year at Columbia University; his income is $133,000. The Federal tax collectors allow him $1,000 as a standard deduction and $600 as a personal exemption. That leaves him with a taxable income of $131,400. Schedule I covers his case, and it states that if the amount of income is over $100,000 but not over $150,000, the tax is $67,320 plus 89 percent of the amount in excess of $100,000. The amount in excess is $31,400, and 89 percent of it is $27,946, so the total tax is $95,266, leaving Mr. Van Doren $37,734 of his money after the Federal collectors have wrung him out.

WHAT IS LEFT

Then the State collectors have a go at him. We have no tables of New York income tax rates, but they are somewhat higher than California's. If Mr. Van Doren were a citizen of California, the $37,734 the Federal people left him would be reduced to $31,522. So let us say that in New York his take for what seems likely to be the highest earning year of his life is reduced to about $30,000, a little more than one-fifth of his actual income.

What can Mr. Van Doren do to elude the tax ogres? He can give enough of his income (up to 30 percent) to an appropriate charity, say to his university, and deduct the amount from his total income. If he gave $33,000 of the gross his income would be around $100,000 and the Federal tax on that would be $67,320, leaving him $32,680 before the New York State collectors got him; then he would go back to about $30,000. So the dollars he gave away would be worth nothing to him.

Or, if Mr. Van Doren had not been a sportsman, but was a good judge of his own form, he could have quit when he made $70,000, paid $42,120 in taxes to Uncle Sam, netted almost as much money, and saved wear and tear on his psyche.

NO NEST EGG

Most of the people who watched Mr. Van Doren sweat engagingly through his questionings must agree that it is a shame to take all that money away from a person when this seems to be his only chance to store up a little substance for the good, broad life. If he continues in university teaching he may, with luck, wind up 15 or 20 years from now as a $12,000 to $15,000 a year full professor. What the tax collectors leave him now is twice an annual wage in 1970 or the price of a fair to medium house or a 40-foot yacht, with no nest egg for upkeep on either. And as everybody knows, the money wouldn't keep a wife very long, even if Mr. Van Doren had one.

There is a broader moral, as we suggested in the first place. Taxation of the kind we have been analyzing robs many useful citizens of incentive. A superior surgeon may loaf 2 months of the year because his fees for the extra time would put him in a higher bracket and reduce his net annual income. Society loses and the benefits to a prodigal giveaway Government are slight. Why try harder or work harder, the superior professional may ask himself, if nothing comes of his effort but more aid to France or another Federal dam on the Upper Colorado?

But worst of all is the blighting of the chance of a lifetime, the case of a Van Doren, of an author who writes one great book, of an actor who plays one great part.

The soak-the-rich advocates don't realize that they are very often soaking their own kind, or worse, trying to break everybody down to mediocrity by denying superiority its rewards.

GI Home Roadblock

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. HERLONG. Mr. Speaker, the veterans of my Fifth Florida Congressional District and throughout the Nation are finding themselves stymied in getting mortgage money to build homes because of the interest rate being out of proportion these days. The veterans want homes for their growing families and

they want them now, not years from now when their children will be grown. In this connection, I would like to offer an editorial from the Orlando Sentinel, Orlando, Fla., of Sunday, March 17, 1957.

The editorial follows:

GI HOME ROADBLOCK

Some of the professional veterans' organization lobbyists are telling the Congress, "Don't raise interest rates on home loans to the boys who bled for our country."

This sort of summer patriotism doesn't mean a thing to former soldiers, sailors, and marines.

They know that if they don't pay competitive prices for money they won't get loans and without loans they won't have homes.

Actually what these paid lobbyists are saying is, "Stop building GI homes."

That isn't what the veterans want.

They want places to live and raise their families.

Congress should raise interest rates on VA loans to at least 5 percent at once. If it doesn't, a program which has built 5.5 million homes in the United States with less than 1 percent loss will die. And with it will die many a lumber yard, concrete block plant, plumbing outfit, as well as a labor payroll bigger than any other in Florida.

Correct Posture Week

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint resolution recommended by the National Chiropractic Association that the week of May 1 to 7 each year be designated as Correct Posture Week:

Joint resolution designating the period beginning May 1 and ending May 7 of each year as Correct Posture Week

Whereas clinical and statistical evidence proves conclusively that correct posture in childhood and in maturity has a great and beneficial effect on the health of the individual and thus on the collective health of the Nation; and

Whereas it is self-evident that the general welfare of the people of the United States, both in peace and war, is best served by promoting a general high level of good health in the Nation; and

Whereas it has been adequately demonstrated that habits of correct posture can be readily acquired through self-discipline of the individual when properly instructed; and

Whereas for many years the first week of May has been sponsored by the Nation's chiropractic profession and observed unofficially as Correct Posture Week, with special educational campaigns conducted through schools, social and fraternal organizations, professional groups, and other media of information: Now, therefore, be it

Resolved, etc., That the period beginning May 1 and ending May 7 of each year is hereby designated as Correct Posture Week. The President is authorized and requested to issue annually a proclamation calling upon schools, social organizations, and professional groups to cooperate in the observance of such week by conducting educational campaigns to provide instruction in the acquisition of habits of correct posture and to demonstrate the beneficial effect of correct posture on health.

Get the Government Out of Business

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. BERRY. Mr. Speaker, generally when people think of getting the Government out of competition with private industry, they think of the large plants operated by the Government during the war years and since the war. We have heard a great deal of bragging both from the Congress and the executive branch on how many businesses and how many enterprises out of which we have taken the Government.

There is no one, however, who brags about the fact that a serious effort has been made to get the Government out of competition with one of the most important of all industries, the printing industry. Everyone complains because the Post Office Department shows a tremendous deficit and yet one of the things that contributes so much to that deficit is the Post Office Department selling printed envelopes and carrying on a printing business in competition with the printing industries of America at a price that is far below the actual cost of operating that business.

As in previous years, I am today introducing a bill to remove the Post Office Department from competition with private industry with respect to the printing of names and addresses and advertising on envelopes sold by the Postal Department. It will prohibit the furnishing or sale by the Department to the public of envelopes having any printing thereon other than the simple words "return to" and the three blank lines, which can be kept in stock in each post office and sold for the convenience of those desiring to purchase such envelopes, as well as serving a purpose to the Postal Department in reminding the sender to place a return address on such envelope.

There probably was a time in the early history of this country when communities were new, when services had not caught up with the western movement and when printing facilities were not what they are today, when it may have been necessary for the Post Office Department to go into the job-printing business. That time has long since passed, that time ceased to exist with the invention of modern job-printing equipment, and with the installations of modern printing equipment in almost every job-printing shop across the land. Today the Federal Government is maintaining this outmoded monstrosity at a terrific subsidy to those who are using the service and in unfair competition to the job-printing shops across the Nation who are attempting to pay their taxes, maintain a business, and, in short, build a nation based upon individual initiative and private industry.

Under the guise of public service, the Postal Department accepts and fills orders for stamped or plain envelopes with the names and addresses of individuals, businessmen, or firms printed thereon. The actual printing is done by a single contractor, although competitive bids are invited in the letting of this contract, the last time there was a competitive bid was in 1928 when the present contractor, the International Envelope Co., received its present contract.

This printing contract which eliminates all competitors could be overlooked, were this the only abuse in this program. More serious, however, is the fact that the Department for years has been furnishing and selling the printed envelopes at a considerable loss. In one recent year when the Department handled 538,000 orders for sale of 1 billion envelopes, 26 clerks at an aggregate salary of $101,000 were required just to process the orders. This does not take into account the fact that every postmaster in every small post office across the land is required to take time out from his postal duties to take order, complete the forms, mail them into the Regional Office, and then when the shipment of printed envelopes finally arrives back in his office, he is required to notify the firm receiving the envelopes, take time that should be used in processing the mails to make delivery, make reports, collect and transmit the funds, and what not. It is not only a waste of valuable time, it is a waste of valuable effort, and another yard in the redtape of the Postal Department.

YARDSTICK

Another serious result of Government competition in printing is the fact that at present rates, the Government is printing 500 envelopes and charging $1 for such printing. The standard price for printing those envelopes in a commercial shop would be about $4 or $5, depending upon the locality in which the shop is located. There is no private shop that can pay overhead, taxes, and employment charges and compete with $1 printing. The result is that the Postal Department is thus establishing a yardstick on the price of printed envelopes, a yardstick that cannot be met by private enterprise. Discontinuance of this program is the only remedy which will permit the small job-printing businessman to come in and compete fairly for his business.

Obviously the Post Office Department with its tremendous volume of business, its thousands of outlets and vast assets can command far lower prices in obtaining printed material than any small printer coud offer. Because of this, the Department will always be in a position to have envelopes printed and sell them to the public at prices which the small printer cannot meet.

Through this program the Government has established a price yardstick, a yardstick by which prices of private industry to consumers are measured and compared with the prices of Government to the consumer. The public feels that

because the Government can do the job so much more cheaply, that the local printer is gouging the consumer, since his prices are so much higher than Government prices.

FREE PRINTING

The plant of the International Envelope Co. is located at Toledo, Ohio. Here the printing is done on envelopes at the rate of $1 per 500. Printed envelopes are delivered to a customer in Los Angeles or Spokane, Wash., at exactly the same price they are delivered to a customer in Toledo. A customer living in South Dakota ordering blank No. 8 envelopes from a paper house in Toledo would pay the Postal Department 82 cents parcel post charges in delivering those blank envelopes. If the same customer orders the envelopes printed by the postal department they are shipped to him free from Toledo, Ohio, which means that the customer is actually paying 18 cents for the printing.

A customer in Los Angeles would pay $1 parcel post charges to have 500 blank envelopes shipped to him from Toledo, whereas if they are printed by the postal department they are shipped to him free. The postal department has either lost a dollar or has had the printing done free, since the additional charge for such printing was $1.

SUMMARY

This is what Government does when it competes with private industry. You probably ask why has this monstrosity been permitted all of these years? The answer is that the Post Office Department's customers are businessmen scattered throughout the United States who like the present system, not because it is in anywise a good business venture, not because it is fair in any respect to private industry, not because it reduces Government or Government expenditures, but simply because it is convenient and cheaper for them.

Here—at a time when the Government is boasting of getting out of business, here at a time when the postal department is operating at a tremendous deficit, here at a time when there is an outcry for increased postal rates to reduce postal deficits, here, then, is the time and place to cut out a useless function costing the taxpayer millions of dollars a year, causing the postal department millions of yards of additional redtape; here is the place to use the ax.

Governor Extols Florida Horizons

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FASCELL. Mr. Speaker, under leave to extend my remarks, I include an article by Max K. Gilstrap which appeared in the Christian Science Monitor of Tuesday, March 19, 1957. The article, entitled "Governor Extols Florida Horizons," calls further national attention to the spectacular growth of the Sunshine State and to its able and respected Governor, LeRoy Collins.

Governor Collins has completed a highly successful 2-year term as Governor of Florida, and is now beginning a full 4-year term to which he was elected by an overwhelming vote last November. Last May Governor Collins made Florida history by becoming the first candidate for Democratic nomination to the governorship to win by a clear majority in the first primary without the need for a runoff election. The article follows:

GOVERNOR EXTOLS FLORIDA HORIZON

(By Max K. Gilstrap)

TALLAHASSEE, FLA.—Sweeping the floor as a young grocery clerk, Gov. LeRoy Collins, Democrat, of Florida, broke a glass container of gooseliver—a luxury item then costing $1. He bought a loaf of bread, made five sandwiches and jauntily addressed all in the store:

"I know all of you have been looking at these gooseliver jars and wondering how the stuff tastes. Here's your chance to find out for a quarter." He made a profit of 15 cents out of the incident.

This kind of bouncing ingenuity makes genial but hard-driving, rollicking but statesmanlike Governor Collins an ideal chief executive of this State of explosive energies and fast industrial and population growth. He fits in with the ingenious man down the street from his office in the white capitol building who has a sign hoisted over his place: "Oyster bar and filling station." Or with the man in central Florida who started with $1,800 and a dream and built fabulous Cypress Gardens which now welcomes 2,500,000 visitors annually.

STATE POTENTIAL TOUTED

Governor Collins is easy to see in his office if he isn't christening a shrimp boat at St. Augustine or speaking at a citrus festival at Winter Haven or down seeing about enlarging that unique national park in the Everglades.

In recent months the Governor has been roaming beyond the State's boundaries to tout Florida's sunshine, its opportunities for investment capital and new industrial growth. He has concentrated on four States—Pennsylvania, Ohio, Michigan, and Illinois—which outrank all other regions of the country in sending visitors to the Sunshine State.

The thing that has brought most recognition to the Governor personally in recent months was his forthright exposition of his views on integration in his inaugural address. His ready smile fades and his brown eyes flash in earnestness as he restates and reemphasizes his words. In the Governor's view the United States Supreme Court's decision leaves the American citizen with no other choice than to obey the law.

SUCCESS STORY FAVORED

What Governor Collins and all loyal southerners emphasize, however, is the long tradition of law abidance in the South and the impossibility of a legal ruling changing overnight the attitudes and emotions of long standing. He reminds that the Supreme Court has allowed time as it befits local situations to comply with the ruling. Meanwhile he has decried the use of boycotts, ultimatums, and peremptory demands as a hindrance rather than a help toward achieving gains for the Negro. Such gains might be better sought, he believes, through enlightenment, persuasion, and normal judicial procedures.

Given a moment of relaxation from office chores, Governor Collins enjoys talking about Florida's success story more than anything unless it's playing with his three daughters whose ages range from 6 to 18. A son recently was graduated from Annapolis. Even at the executive mansion or at the Grove, his large home on a wooded hill across from the mansion, the Governor's phone and stream of visitors offer an outlet for his espousal of the State's virtues.

GROWTH BRINGS PROBLEMS

New industry is a favorite topic as is the peacetime uses of nuclear energy he is helping promote as chairman of the Southern Regional Education Board.

Into Florida, the Governor effuses, come 500 new citizens a day—75 percent of whom move in from other States. Five years ago Florida ranked 20th in population among the States. Today Florida is pressing hard for 13th place. Based upon existing trends, Florida will be 8th in population among the States by 1960. Now the population is 3,700,000. In less than 4 years it is expected to pass 5 million.

With the flood of people has come a flood of problems. Plant expansion is urgent to take care of basic needs. More highways are needed to accommodate the highest rate of traffic increase in the Nation. Schools must be built to take care of enrollments that are increasing at the rate of 80,000 additional students a year. College enrollment is leaping ahead at a record rate.

All of this means two things, as Governor Collins realistically explains. Florida is a land of opportunity but anyone who comes here for full-time or part-time living should have a plan of action. Jobs are opening up but not as fast as people are moving in. Starting a business here takes about as much capital and experience as it does elsewhere.

Even a Florida booster as exuberant as Governor Collins advises the would-be settler to come down and look around to see what's happening to Florida before making a decision. And happiness here, the Governor reminds, depends largely, as it does elsewhere, on what the visitor brings with him in outlook as well as ability.

If There Is Fat on the Budget, the President Put It There

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. BROOKS of Texas. Mr. Speaker, there has been considerable comment here in Congress and across the country concerning the record high peacetime budget that the President has recommended. We in the Second District of Texas want a dollar's worth of good government for every dollar we pay in taxes, and I am sure most of the people of this country feel the same way.

Under the Democratic leadership here in the House of Representatives, we have sent a resolution to President Eisenhower asking him to indicate the places and amounts he thinks substantial reductions can best be made in his budget. Unfortunately this effort to eliminate nonessential spending by the Federal Government has been recklessly called politics by some people and buckpassing by others.

Personally, I do not think it is asking too much to expect the Republican administration and Mr. Eisenhower to work together with Congress in trying to save

money. People have worked for the money which is collected by the Treasury Department and every dime of it represents time used up in somebody's life. I do not believe it is either politics or buckpassing to try to trim any fat out of a budget totaling more than $70 billion.

The Beaumont Enterprise, in an editorial dated March 14, 1957, puts the case for efficiency and economy squarely before us by stating:

If there is fat on the budget, the President put it there. Now let him show Congress where it is.

I would like to include the entire editorial in today's RECORD so that all Members of the House may have an opportunity to study it:

A REASONABLE REQUEST

The National House of Representatives, through a resolution it has just adopted, seeks to put the matter of cutting President Eisenhower's mammoth budget right back in the lap of the President himself.

We don't blame them.

There may be, of course, a good bit of buck passing involved on the part of the lawmakers, but it must be remembered that the original buck passing was initiated by Mr. Eisenhower.

The resolution does not go to the Senate since it is only an expression of House opinion. The President doesn't have to sign it; in fact, doesn't have to pay any attention to it at all. But the White House cannot wisely brush it off as being insignificant.

The resolution calls on the Chief Executive to point out where "substantial reductions" can be made in his record peacetime outlay.

He certainly cannot object to congressional efforts to get some cutting done, because he has advised that very thing. But we doubt that he is pleased with the effort to give the budget back to the one who is responsible for it in the beginning.

Many have thought it a bit ridiculous to have Mr. Eisenhower and his Secretary of the Treasury, George Humphrey, calling for budget trimming when they were the top architects. A lot of Americans can't understand why the spending proposals were not worked down to basic essentials in the beginning—proposals that the executive branch would feel compelled to battle for to the last ditch.

It is unfortunate, of course, that the House action has some political overtones, it having been taken over almost solid Republican opposition. This GOP attitude would seem a little strange, since some of the loudest cries of anguish over the size of the spending outlay have come from Republican lawmakers and from industrial and business organizations that are pretty much run by Republicans.

But, in an apparent effort to offset the House action, the conference of Republican Senators approved on the same night a resolution calling on Congress to cut the President's budget "wherever possible consistent with the security of national defense."

The resolution sent the President says his budget must be cut "in the public interest" and requests him to "indicate the places and amounts where he thinks substantial reductions may best be made."

We don't think the request is unreasonable.

Mr. Eisenhower certainly should know a lot more how to go about it than does the average Member of Congress. He certainly should have a better picture of the country's spending needs than do most of the lawmakers, especially in the vital field of national defense.

If there is fat on the budget, the President put it there.

Now let him show Congress where it is.

California Taxpayers' Association Endorses Trinity River Project Partnership Development Plan

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. SCUDDER. Mr. Speaker, I am in receipt of a letter from the executive committee of the California Taxpayers' Association enclosing a resolution endorsing the proposal that private enterprise develop the hydro-electric-power facilities of the Trinity River project in California.

If Congress approves the proposal presented by the Pacific & Electric Co. to construct, operate, and maintain the powerplants on the Trinity River project, it will mean a savings in capital outlay to the taxpayers of $55.5 million.

In addition, payments by the company to the Federal Government for the purchase of falling water will result in a return to the Federal Government of $165 million over the 50-year project period. During this same period, the company will make tax payments to Federal, State, and local governments amounting to an estimated aggregate total of $145.6 million.

Those are the figures contained in the proposal submitted by the Pacific Gas & Electric Co. Secretary of the Interior Seaton on February 12, 1957, recommended to the Congress that this proposal by the private utility company be approved. The project is estimated to cost a total of $225 million. The savings to taxpayers and income to governmental agencies from tax revenues make this partnership plan a sound business venture. If we of the Congress are interested in reducing the Federal budget, here is an opportunity to save $55½ million and give to 90 percent of the power consumers of northern California the benefit of this project.

The purpose of the California Taxpayers' Association is "to aid in bringing about, through nonpartisan and nonpolitical means, the greatest possible economies consistent with efficiency in the expenditure of public moneys throughout California."

The resolution adopted by its executive committee on March 8, 1957, is as follows:

CALIFORNIA TAXPAYERS' ASSOCIATION,
Los Angeles, Calif., March 8, 1957.

TRINITY PROJECT AND PRIVATE ENTERPRISE

The executive committee of California Taxpayers' Association, at its March 6 meeting in Los Angeles, endorsed the proposal that private enterprise construct and pay for the power facilities on the Trinity project, and market the power over the private corporation's transmission lines, in the following resolution:

"Whereas the Hoover Commission has recommended that Federal Government activities which are competitive with private enterprise be eliminated; and

"Whereas with respect to the power component of new multiple-purpose waterpower projects of the Federal Government, the Hoover Commission has specifically recommended:

"'No. 15 (a) That private enterprise be offered the opportunity to provide the capital for the electrical component of multiple-purpose dams and dispose of the power through their own systems (they being subject to regulation of rates by Federal and State authorities) * * *'; and

"Whereas the President of the United States has proposed that there be a joint or 'partnership' principle with regard to development of water and power projects and this principle was endorsed by the board of directors of California Taxpayers' Association on May 12, 1955; and

"Whereas in line with these principles a private corporation has proposed to construct and pay for the power facilities on the Trinity project, including paying for the use of the falling water used to generate power, as well as to market the power over the private corporation's transmission lines throughout its service territory under rates fixed by the California Public Utilities Commission; and

"Whereas the United States Secretary of the Interior, Hon. Fred A. Seaton, on February 12, 1957, recommended to the Congress that it approve this proposal; and

"Whereas instead of a Federal subsidy or added Federal costs, a savings to taxpayers of some $55 million in the initial cost of construction, which cost would be carried by private enterprise, is evident; and

"Whereas under private ownership, over a 50-year period, it is estimated that some $145,600,000 of taxes which would otherwise have to come from other taxpayers would be paid by private enterprise for the support of Federal and local governments: Therefore be it

"*Resolved*, That the executive committee of California Taxpayers' Association endorses the proposal of private enterprise to construct and pay for the power facilities at the Trinity project and to distribute such power over its transmission lines to consumers in its service territory under rates fixed by the California Public Utilities Commission."

Thousands Greet Weaver's Champs—Connecticut Rules Again

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I think it is particularly appropriate that I include this article describing the outstanding victory scored by Weaver High School, of Hartford, Conn., in the New England schoolboy tournament. I am very proud that a team from my district has established such a truly remarkable record. In the athletic annals of Hartford, Conn., this is a historic occasion:

THOUSANDS GREET WEAVER'S CHAMPS—CONNECTICUT RULES AGAIN

(By Don Clerkin)

Weaver's heart-stopping 85–73 win Saturday over Lawrence Central Catholic in the New England schoolboy tournament proves one thing: Connecticut teams are still pretty much the cream of the crop in the post-season payoff.

Certainly none of the teams that took part in the tourney at the Boston Garden, with the exception of the Lawrence team, came anywhere near several Connecticut teams, with at least one, Springfield, Vt., on a par with B clubs.

Rhode Island, which in recent years has presented some formidable entries, had a weak sister in LaSalle Academy, first-round loser to Weaver. Assumption Prep, of Worcester, bounced by Hillhouse on the opening night, was simply outclassed, but presented a topflight performer in Jack Foley, who would be welcome on any State team.

The other two teams, Manchester, N. H., Central, and Old Town, Maine, were very similar in style and ability, plenty of running and shooting, but practically no defense. Hence the record-breaking 90–82 "circus" won by Central.

The final game, beyond a doubt, featured the best teams. Lawrence Central, well rested through easy wins over Springfield and Manchester Central, certainly won many friends in going down to the bitter loss. It could well be that no other team in New England other than Weaver could have dumped the Bay Staters.

So it's safe to assume, especially in view of Weaver's magnificent win and Hillhouse's good showing, that this State will continue to be dominant at the Garden in years to come. That is unless the other States make great strides in a short time to close the gap.

Actually, Weaver returned the title to this State. Durfee High, of Massachusetts, winning it last year. Roger Ludlowe, of Fairfield, was the last Connecticut team to hold it, 1955.

The champs, of course, will be a long time (if ever) forgetting the great win over Lawrence. And few will ever duplicate Johnny Egan's play in the final seconds of regulation time and during the overtime session when the northenders blew it open.

Immediately following the game, the team, in company with school officials, newspapermen and close followers down a huge meal while shaking off the effects of a game never to be forgotten. All agreed that it was a fine Lawrence Central team which finally folded as the Beavers won going away.

Coach Charley Horvath, proud but still humble, told the gatherers of a well wisher who reached him en route to the dressing-room.

"I'm from Maine, and I just wanted to tell you what a great job you and your team did," the man told Charley. "Yes, sir; your teams have been good for years. Nice job, Mr. Bender." What did Horvath reply? "Thank you very much."

"Mr. Bender" is the coach of the Hillhouse team that bowed in the semifinal.

Egan was asked what Don Tremblay, of Lawrence, had said to him after he shoved Egan intentionally as the Weaver star sped for the basket with four seconds remaining in the game.

"He said he was sorry," Johnny explained. Then he told me that someone had shoved him in the game the night before. Asked about his injured leg, the good-looking youngster smiled and said he had forgotten all about it.

By winning the title, Weaver gave this State its 21st in the 33 tournaments that have been played. Nutmeg State teams have won its 7 of the last 8 years. None, probably, was any tastier than the Beavers' achievement.

In Tremblay, Lawrence Central Catholic showed a great little competitor. He made his team a fine one with deft ball handling and the ability to come up with the clutch points if needed. He was equally as capable on defense. Tom Moynihan and Jack Twomey were top performers, with the former nearly pulling his team through with his rebound basket to shove the losers ahead, 64–62, with time running out.

But Weaver wasn't to be denied. Especially with a kid like Egan around to convert 2 foul shots with 4 seconds left and 12 points in the overtime session. All while about 11,000 Garden fans howled in disbelief.

And so it's over. The 1955–56 season has come to a close. But not for Weaver and its many fans. With 24 straight wins, a New England title, Connecticut championship, CDC crown and a city title—how could anyone forget?

About 700 were on hand when the winners arrived home late Sunday afternoon. Police met the team at the Charter Oak Bridge and escorted the champs to the school where enthusiastic fans besieged the team and coaches.

Egan, who was to be mobbed as the welcome wore on, led the team off the bus to the cheers of all on hand. Each player finally reached the sanctuary of the school where the gear was deposited and then everyone went home weary, but very happy.

Hillhouse of New Haven, the Connecticut runnerup, defeated Manchester (N. H.) Central, 42–38, in the consolation game for third place.

The International Geophysical Year

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. DOOLEY. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article by Victor J. Blum, S. J., on the International Geophysical Year beginning July 1, 1957, and ending on December 31, 1958. This period will be of momentous importance to the world. Not only will scientists watch with interest the development of physics in all parts of the globe, the future of our lives and those of succeeding generations may well be affected in no small measure by the experiments and observations which take place in this prescribed period. Following is a statement on the subject by Victor J. Blum, S. J., professor of geophysics and dean of the Institute of Technology, St. Louis University, which appeared in the March 16 issue of America:

THE INTERNATIONAL GEOPHYSICAL YEAR

The International Geophysical Year, which will begin on July 1, 1957, and end on December 31, 1958, is unique. Nothing in the field of scientific endeavor has ever taken place to compare, in magnitude and in the complexity of international cooperation involved, with the geophysical researches scheduled for this year.

During the International Geophysical Year (IGY) major research programs will be carried on in aurora, cosmic rays, geomagnetism, glaciology, ionospheric physics, geodesy, meteorology, oceanography, seismology, and solar activity. Problems in these areas are of such a nature that only international, simultaneous, and coordinated effort can make available the data necessary for research in these sciences.

It will be of interest to indicate briefly some phases of work in geophysical fields which will occur during the IGY.

Seemingly unrelated geophysical problems to be investigated during the IGY are linked with solar activity. In their 11-year cycle, solar disturbances will reach an anticipated maximum in 1957 and 1958. Sunspots, outbursts and flares in the sun affect, sometimes very profoundly, radio communications, radio navigation, aurora, and weather behavior.

The exact nature of the sun's influence in these matters is not clear. It is hoped that worldwide and careful correlation of solar activity with aurora, geomagnetism, and meteorology may eventually reveal ways to improve radio navigation and communications during magnetic storms and result also in improved long-range weather forecasting.

Another important geophysical study during the IGY will be meteorology. Observatories ranging along three world lines from the North to the South Pole will record weather data and measure the movements of air masses. These studies will include ample and systematic use of sounding balloons capable of reaching heights up to 100,000 feet. Such global studies should enable us to make a three-dimensional model of the structure of the world's atmosphere and its effects on weather.

Oceanography will be given much attention. Since water covers about three-fourths of the earth's surface, much remains to be learned about its influence on weather and

about its deep-seated circulation from one ocean basin to another.

Connected with the study of oceanography is that of glaciology, or of the water stored in the various icecaps and mountain glaciers throughout the world. For about 60 years there has been evidence of world warming, as shown by the melting of this ice. Climatic conditions have accordingly been changing. Work during the IGY will investigate what further climatic and other changes will be likely should warming of the earth continue for another 25 to 50 years.

One of the most dramatic events proposed for the IGY is the launching of the much-publicized earth satellite. This will, in a way, be the climax of an extensive rocket exploration program planned for the study of the upper atmosphere. The satellite will carry various instruments. Some will measure the intensity and fluctuations in intensity of cosmic and other particle radiations. While pursuing its orbit around the earth with a speed of about 18,000 miles per hour, the satellite will also provide the opportunity for making accurate measurements of the earth's equatorial radius and oblateness.

The idea of international geophysical research arose in the International Council of Scientific Unions (ICSU), and toward the end of 1952 was approved for action. The special committee for the International Geophysical Year was organized by the ICSU to act as the unifying agency through which the various nations of the world would carry on their geophysical studies. Over 50 nations have signified their intention to participate in the IGY.

In our country the United States National Committee for the IGY was established by the National Academy of Sciences-National Research Council. Cooperating and working with the national committee will be several Government agencies, universities, various observatories, private foundations, and research laboratories.

Scientists and laymen alike hope that this unique international program will result in fruitful scientific discoveries and in better human understanding between the nations of our globe.

Cutting the Budget

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. HERLONG. Mr. Speaker, we here in Congress hear a great deal these days from our constituents who are worried about the administration's enormous budget. In this connection I offer an editorial from the Orlando Sentinel, Orlando, Fla., of Sunday, March 17, 1957:

CUTTING THE BUDGET

While Congress and the President are debating whose business it is to cut the Federal budget, the national chamber of commerce has taken the initiative in pointing out where some substantial reductions can be made.

One of the best ways it can be done without eliminating public services long established is to avoid new commitments involving huge additional expenditures in the years to come.

The national chamber points out that such measures include $451 million for school construction, $500 million for additional grants to States for welfare programs and $11.4 million of the $20 million more sought by the Department of Labor.

Altogether the national chamber has found $1.8 billion in the current budget for projects of all kinds which historically have come within the province of the individual States and which represent additional burdens assumed by the Federal Government.

By prohibiting further encroachment upon the States and putting its own house in order through the practice of ordinary efficiency and economy, the Government can, the national chamber insists, save over $5 billion a year.

And this can be done without affecting national defense or eliminating Federal services now being rendered the public.

President Ramon Magsaysay

EXTENSION OF REMARKS
OF
HON. JOSEPH L. CARRIGG
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. CARRIGG. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to express to the people of the Philippines my sincere sympathy upon the passing of President Ramon Magsaysay, whose tragic death occurred within the last few days. I wish to include a letter which I have received from the Honorable John A. O'Donnell, formerly a member of the Philippine War Damage Commission, in which a tribute is paid to our devoted friend.

I am sure that the Members of the House join with both Mr. O'Donnell and myself in the prayer that Almighty God in His mercy will grant eternal rest to President Ramon Magsaysay and to the freedom-loving friends who have joined him in tragic death:

WASHINGTON, D. C., *March 19, 1957.*
The Honorable JOSEPH CARRIGG,
Old House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: As a friend of the Philippines I know that you are deeply shocked, as I am, by the tragic loss to that young Republic of its devoted patriots and public servants who were killed in Sunday's airplane crash in the outskirts of the city of Cebu. Several of these, including the President of the Philippines, were close friends of mine from my days as a member of the Philippine War Damage Commission (1946–51).

President Ramon Magsaysay, a man from and of the people, was acclaimed far and wide not only for his leadership of the people of the Philippines in times of distress but of the forces of freedom against the threat of communism in the Far East.

I knew him when he was a member of the Philippines Congress representing his neighbors in Olongapo, near Subic Bay, a locality well known to the military forces of the United States. At a time when the Philippine War Damage Commission, of which I was a member, was under pressure from innumerable groups and individuals seeking compensation of personal claims, Congressman Magsaysay introduced a refreshing note in asking only for a schoolhouse to replace the one destroyed in his native village. I shall never forget the simplicity with which he addressed his petition to me. This characteristic of impersonal devotion to his public responsibilities remained with him throughout his brief and heroic career.

Another tragic loss in the recent catastrophe in the mountains near Cebu was that of Senator Tomas Cabili, a companion of the fighter Magsaysay in the days of guerrilla operations in Mindanao which made possible the early return of General MacArthur. Cabili was a close and trusted coworker of President Magsaysay in his more recent undertakings in behalf of the Philippines.

Another loss which is very close to me is that of my friend, Secretary of Education Gregorio Hernandez. A true scholar educated in the Philippines and in the United States, he became dean of the law school of the University of Santo Tomas. While I was War Damage Commissioner, he was an able Assistant General Counsel of this agency displaying a high degree of professional skill as well as an understanding of his countrymen and a devotion to his public duties. He was a kindly man who held his responsibilities high above his personal affairs which often included attacks of illness and obstacles which would have deterred less courageous and consecrated individuals. I consider his untimely death a loss of the greatest magnitude in the recent holocaust.

Another good friend of mine who lost his life in this terrible tragedy was Mr. Jesus Paredes, Jr., executive secretary of the Catholic Schools Association, which is affiliated with the Catholic Welfare Organization of the Philippines. Mr. Paredes was a newspaperman and a radio news commentator. He was a great student of communism and never for one moment was he ever deceived by the outward change in policy or procedure of the Communists. He knew that Communist control of any country would result in the impairment or destruction of the fullness of sovereignty and of the free exercise thereof. Jesus Paredes, Jr., knew that atheistic communism was a destroyer of all liberty.

The Philippines will mourn all of the people who were lost in the ill-fated airplane which left Cebu with its precious cargo, but at the same time they may well be proud of the record of attainment of the men to whom I have paid these few words of tribute.

Sincerely yours,
JOHN A. O'DONNELL,
Attorney at Law.

Anniversary of Hungarian Independence

SPEECH
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. FASCELL. Mr. Speaker, Friday, March 15, marked the 109th anniversary of the Hungarian declaration of independence from foreign oppression by the Hapsburg dynasty. This is the traditional Hungarian anniversary of national independence.

Americans everywhere and from all walks of life have sought to express their heartfelt smpathy for the people of Hungary, now living under a new and even more brutal foreign oppressor. This year Hungary's anniversary is of special importance to both the free world and to the Communist bloc. The Hungarian revolution of last October and November began as a spontaneous outburst of pop-

ular opposition to both Communist doctrine and Russian domination. It soon developed into a tremendous mass movement which swept the countryside and dared challenge the very masters of the Kremlin. For the first time the true depth of anti-Communist sentiment within the satellite countries became obvious for all to see on both sides of the Iron Curtain.

The Hungarian freedom fighters were not able to complete their task of national liberation, but they demolished once and for all the myth of a Soviet monolith. The fighting which rocked Budapest has also had serious repercussions throughout the satellites, and even in Moscow.

The Hungarian revolution has proven many things. It has shown once again that man's yearning for freedom cannot be forever denied. It has shown that the very elements which the Soviets claim as the cornerstones of their society—the workers and the students—will be among the first to rise up against their oppressors and fight, if need be, with their bare hands. It has shown that the Soviets cannot count on the reliability of their own satellite armies. And for the benefit of any who may have forgotten or who still had doubts, it has shown to all the world the depths of brutality and treachery to which communism is committed. For these and many other reasons we are all deeply indebted to the Hungarian people for the tremendous sacrifices which they have made and are continuing to make.

I consider it an honor to be able to join with my colleagues in paying tribute to the bravery of the Hungarian people and in expressing earnest hope that the day may soon come when March 15 will be openly and happily celebrated by a free and independent Hungary.

Postal Clerks

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the Hartford Courant, dated March 14, 1957:

POSTAL CLERKS, WAGE SLAVES OF GOVERNMENT

One can hardly blame the quarter million men who operate our postal service for feeling anxious about what may happen to their needed pay raise when Congress starts paring the appropriation bill. It is an unfortunate fact that when it becomes necessary to cut appropriations of public moneys in any sphere of Government, the cuts are usually made not where the fat is thickest, but otherwise.

The truth is that, despite some small increase in recent years, postal clerks are still among the poorest paid members of the community. After 30 years of service a man can hope to make as much as $90 a week. Indeed the wage scale is so low that in labor shortage areas such as Hartford there is a constant shortage of trained workers and men are, in a sense, taken off the streets to fill out.

The present administration of the postoffice system has painted the boxes and brightened up the trucks. But the heart of a good postal service is a corps of dedicated men who enter the service as a career. These men deserve decent, clean working conditions and a wage scale that will permit them to live adequately. Now a large proportion of the men, particularly those with families, have to take outside work, or put their wives to work, to eke out an existence.

The entering wage for a postal clerk is now $3,660, or about $70 a week. In portions of the Deep South that may be a good wage, and that may account for the lassitude of southern Senators and Representatives toward postal increases. But that wage level is not high in Hartford, Detroit, or Los Angeles. Your postal clerk is a skilled workman who must possess great knowledge of routes, both local and national. Yet in the 17 years of prosperity in this country this group of workers has shared less of it than any other. Coal miners' wages have gone up 150 percent in that period, aircraft workers by 39 percent, schoolteachers by 36 percent. During that same time postal employees have enjoyed a niggardly 14-percent increase.

The present Postmaster General has, like many of his predecessors, spent a great deal of time trying to get postal increases to balance his budget. He has, to give him his due, made many improvements and modernized some equipment. He has not yet shown any signs of coming to grips with the fundamental issue that spells the difference between good and bad postal service—employees who are paid well enough and treated well enough to recapture the zeal and dedication that once were hallmarks of the postal employee.

Within the memory of man now living, the postal service was a career that men entered proudly, and carried on with unflagging devotion. But times have changed. Wages have lagged and working conditions have either deteriorated or remained static. And that once splendid morale has also begun to disappear. That is the priceless ingredient that makes the difference in postal service. The Postmaster General who first recognizes this fact will be a great one.

The Loss of a Fine American

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. OSTERTAG. Mr. Speaker, it is with a deep sense of loss that I call to the attention of the House the passing of a fine American, Chief Jesse Cornplanter, of the Tonawanda Band of the Seneca Indians.

Chief Cornplanter was an outstanding leader among his people, as his forefathers had been for many generations, but he was also a great friend of the white man. He had himself served with honor in World War I, in which he won the Purple Heart. He was a treasury of Indian lore, much of which he had set down in his own book entitled "Legends of the Long House." In addition, he collaborated with Carl Carmer in supplying material for the latter's book entitled "Listen for a Lonesome Drum." Thus, both history and literature owe a debt to him, for both were greatly enriched by his understanding of his own people and their great part in the unfolding history of our country.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD an article about Chief Cornplanter's passing from the Buffalo Evening News of Tuesday, March 19, 1957:

CHIEF JESSE CORNPLANTER DIES—DESCENDANT OF GREAT SENECA—HIS BOOK LEGENDS OF THE LONG HOUSE, ONE OF BEST HISTORIES OF SIX NATIONS—WAS WOUNDED IN WAR I

Chief Jesse J. Cornplanter, 67, a fifth-generation descendant of the great Seneca chief of the same name, died Monday (March 18, 1957) in his home on Council House Road, Tonawanda Reservation, near Akron.

Chief Jesse, who was born on the Cattaraugus Reservation, is best known for his book, Legends of the Long House, one of the best histories of the Iroquois Confederacy of Six Nations.

He became skilled in Indian handicrafts such as woodcarving and also was instrumental in keeping alive the religion, the laws and culture of his people. He knew and recorded for posterity many tribal songs.

Carl Carmer, in his best seller Listen for a Lonesome Drum, devoted much space to Chief Jesse and his Indian lore.

Chief Jesse was the son of Chief Edward Cornplanter, who served as a tribal teacher and exponent of the ancient Iroquois religion.

Chief Jesse received a serious wound while fighting in the Army in World War I and was injured again in an auto accident near Avon December 5, 1954.

He was a member of the Order of the Purple Heart, American Legion, Veterans of Foreign Wars, and Disabled American Veterans. He helped to form his reservation's Last Man Club.

He is survived by his wife; a daughter, Mrs. Beatrice Johnson; a sister, Mrs. Anna Lyons, both of the Cattaraugus Reservation, and five grandchildren.

Prayers will be said in the home at 1:30 o'clock tomorrow. Chief Corbett Sundown will conduct services in the Long House at 2.

I Met the President

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mrs. BLITCH. Mr. Speaker, during the President's recent vacation in Thomasville, Ga., a group of students from Valdosta State College, Valdosta, Ga., which is in my district, had the pleasure of meeting him.

Miss Marsha Paulk, of Valdosta, Ga., wrote an article, which appeared in the Valdosta Daily Times, describing in detail the meeting and events leading up to it.

I doubt that any news story was filed with any paper anywhere that could compare in human interest with Miss Paulk's article. Because of this, and also because the Miss Thelma Bruce mentioned in the article is from my hometown of Homerville, I insert the article in the Appendix of the RECORD so

that my colleagues may share the pleasure I derived from reading the story:

I MET THE PRESIDENT

(By Marsha Paulk)

(EDITOR'S NOTE.—Yesterday, Marsha Paulk and five other Valdosta State College students met President Eisenhower in Thomasville. Here is her reaction written expressly for the Times.)

Today, I've met the President of the United States. Five other students of Valdosta State College share that thrilling thought with me tonight—an almost unbelievable thought that will become a lifetime memory for each of us.

Years from now, six sets of grandchildren—those belonging to Lucy Henderson, Elizabeth Waltman, Thelma Bruce, Raymond Wilson, Denson Wood, and myself—will still be hearing our story of today's exciting experience, a story which begins with an invitation and a practical joke.

The invitation was extended by telegram to Mr. and Mr. Dwight D. Eisenhower in Thomasville and stated that our college would be honored to have them as guests at the annual homecoming parade. The student government association anxiously waited Monday afternoon, Tuesday and Wednesday morning for a reply from the President. At 1:15 p. m. Wednesday, however, I left school disappointed that we had received no word from Thomasville headquarters. The birth of a great practical joke took place at exactly the same time and by 1:45 this "prize sucker" had bitten. Thelma Bruce, a fellow member of the SGA, called my house and in a very excited and thoroughly convincing voice told me that Eisenhower had wired regrets that they would not be able to attend our homecoming festivities but would be happy to receive the members of the SGA for a visit at 3 o'clock. Imagine my excitement. Thelma told me to dress for the occasion and to be in front of Ashley Hall ready to leave by 2 o'clock. Growing just a little skeptical after hanging up, I hesitated only a moment to call other members of the student government for confirmation of the good news. By coincidence, the member I called, Lucy Henderson, from Ocilla, happened to be the other victim of the practical joke and she, too, was hurriedly getting ready to go. I was convinced that we really were going to see the President and dashed out the door with hat, gloves, material for autographs, and, "Tell everybody I've gone to have tea with Ike. Oh how I wished as soon as I arrived at Ashley Hall, for a deep, dark hole to use as a hiding place. Waiting in front of the building were the other members of the SGA who had planned the joke and many, many laughing spectators. The joke was on two gullible girls who were all dressed up with no place to go.

The last laugh, though, is the best laugh. I'm sure that both pranksters and victims of yesterday's episode at VSC laugh happily now because interest in our invitation and the practical joke following it started a chain reaction which eventually reached President Eisenhower and accounted for our being able to meet and talk with him.

The chain reaction began when Student Government President Bill Jackson, from Sylvester, got in touch with Mr. Jim Hagerty's secretary, and secured permission for us to attend his 9 o'clock press conference this morning.

Our first contact there was Mr. Harold Davis, Washington correspondent for the Atlanta Journal, who advised us to invite Mr. Hagerty to the homecoming festivities. Much to the amusement of other national newspaper correspondents watching from the Scott Hotel mezzanine, we stopped Mr. Hagerty as he walked into the lobby and extended the invitation, for which he graciously thanked us. After the very interesting press conference where we heard Mr. Hagerty answer or cleverly evade questions fired at him by White House correspondents representing newspapers throughout the United States, we again talked with the busy press secretary, thanking him for allowing us to sit in on the conference and answering his questions about our school and about our mission to Thomasville. Here, too, another part of the chain reaction took place, for when we gave Mr. Hagerty our names, he pulled a telegram from his pocket and much to our surprise looked at me and said, "Oh, you're the one who had a big hoax pulled on you yesterday, aren't you? Tell me about it." He then heard and laughed at the account of our joke as we marveled at his knowledge of it.

The Secret Service, we thought, was really on the job. Later, however, we learned that the telegram to Hagerty was from Charley Barnes, chairman of the Republican committee in Valdosta. Mr. Barnes had been told by my cousin, Billy "Dynamite" Goodloe, of the prank and with him planned a way to compensate for our disappointment. The telegram in Mr. Hagerty's pocket, I know now, said something about a trick pulled on Marsha Paulk and expressed a wish that he (Mr. Hagerty) could secure for the VSC delegation an introduction to the President. Then, we knew only that Mr. Hagerty was giving us a cordial reception, an invitation to the 4:30 press conference, autographed news releases, and directions to the Glen Arven Country Club, where he said we would be able to see the President from a distance. We certainly did not dream that within 2 hours we would be posing for a picture with Mr. Eisenhower.

Following the introductions and our squeaky-voiced acknowledgments, a very kind and friendly man put us completely at ease with questions about the school and about Valdosta. The biggest surprise of all came when he, too, said, "Tell me about this practical joke—who were the victims and who pulled it?" Mr. Eisenhower laughed at our story, and then said that we would probably need proof of our experience for the students at home and told the Secret Service man to arrange to have a picture made as soon as the golf game was over. It seems that Mr. Hagerty had mentioned our joke and mission to Mr. Reilley and he in turn had told his boss, Mr. Eisenhower, who agreed to the introductions. The chain reaction was complete and six Valdosta State College students were thrilled beyond words as we were flocked on return to the clubhouse by a horde of newspaper correspondents.

At the country club we stood like a group of fascinated children as the Chief Executive and the other members of his golfing foursome neared the ninth hole where also waited a gallery of correspondents and disappointed photographers. (They had just been given the word from Mr. Hagerty: "No pictures today boys.")

We had never seen the person who was to be the next link in our chain reaction today and Raymond Wilson looked mighty puzzled when a casually dressed man interrupted his concentrated gaze to ask him to bring our group over to one side saying that his boss might want to talk with us.

We had no idea who the man's boss was but assembled quickly and then watched dumbfounded as our new friend ambled over to Mr. Eisenhower and talked with him briefly. He returned and said, "Follow me, the President will see you at the 10th hole." People gasped as the same group who had amused the press correspondents earlier in the day now amazed them. We were being privately escorted by the Chief of the Secret Service, Mr. Jim Reilley, far beyond the spectators' boundary line to a spot on that beautiful course where we met and shook hands with the President of the United States.

I wish that every girl and boy in Valdosta could have shared with me our climactic thrill. When Eisenhower and his party came in on the 18th hole, they were again surrounded by the newspapermen and by people who had wanted to catch a glimpse of him. The 12 weakest knees in the world belonged to 6 students who saw the President finish his golf game and stride directly to the spot where we waited. He was followed by all those people and more cameras than I had seen in my entire life. The clicks and blaze of flashbulbs and the whirring of movie cameras began the minute Mr. Eisenhower said, "Now, let's get this picture I was talking about."

As we posed together, our Nation's leader jokingly accused us of being "a. w. o. l. for a day" and asked us the distance to Valdosta. Four girls stuttered in unison "F-f-f-orty-five miles."

Right after the pictures had been made and Eisenhower turned to walk into the clubhouse, Raymond Wilson stopped him with an unforgettable "Wait, wait Mr. President" and presented, on behalf of the student government, a complimentary ticket to the VSC homecoming dance Saturday night.

The treats of being recognized at the 4:30 press conference and of watching the Associated Press and United Press wirephotos and stories of our visit with the President being transmitted to newspapers all over the country added even more excitement to a wonderful day.

February 14—Valentine's Day? No, siree, not for these six students. From now on, we'll celebrate the date as "We Joked With Eisenhower Day."

Another River Power Issue

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. ENGLE. Mr. Speaker, as indicated in my statement to the House a few days ago, the administration's recommendation that the Pacific Gas & Electric Power Co. be permitted to develop the Trinity project power facilities is another attempt to circumvent and repudiate a half century of Federal power policy and revise the concept of reclamation projects. An excellent article by Thomas L. Stokes in the March 19 issue of the Washington Evening Star throws some light on the reason why the administration recommends acceptance of the Pacific Gas & Electric Co.'s proposal. Under leave to extend my remarks, I am including Mr. Stokes' article, which follows:

ANOTHER RIVER POWER ISSUE—UNITED STATES SEEN PLANNING TO CUT PRIVATE FIRM INTO FEDERAL DAM PROJECT IN CALIFORNIA

Every now and again the social welfare, New Deal, modern Republican cockade affected by the Eisenhower administration for sweet politics' sake will slip askew and reveal the bald head of mighty business, industrial, and financial interests which contribute so heavily to Republican campaigns and call so many tunes here these days.

How powerful they are we are learning now in the case of a river in northern California—the Trinity—which has assumed an importance far beyond its size for what it tells us of administration aims.

The Trinity River is part of the great Central Valley project, a public project like TVA in the Southeast, and the folks in California are just as proud of it as the folks in the Southeast are of TVA, for each has broadened the lives of the people. The Central Valley project, built by the Federal Government, as was TVA, embraces an integrated system of dams, reservoirs, canals, and transmission lines. Its function, as described by Representative CLAIR ENGLE, Democrat, of California, is for comprehensive development of the basin to protect the people and land from floods, to furnish a dependable water supply for agriculture and for defense purposes, and to furnish power and energy at lowest rates possible consistent with project repayment.

The Government now is building a dam on the Trinity River which is in Representative ENGLE's district.

But these days they don't get very far along with such things before someone comes along to try to mess it up. So with the Trinity River. The scheme this time, devised by Secretary of Interior Fred Seaton, is to cut the Pacific Gas & Electric Co., the Nation's second largest electric utility, into the Central Valley project by selling it the falling water from this dam paid for by the public. The company would be permitted to install a powerplant there on the public domain and rake in all the profits. In 50 years it would own the plant. This is known as partnership in the Eisenhower book, whereby the Government builds the dam and for its money and pains controls the flood regulating works, from which it gets no revenue, and controls the fish ladder, where there is one, from which there is no revenue—and the company gets what is sometimes loosely and colloquially called the gravy.

This is all too much for Republican Senator THOMAS KUCHEL, of California. He rose up, along with Representative ENGLE, to condemn this attempted disruption of the Central Valley project. In the criticism now of this latest Eisenhower partnership venture, you hear it compared with the attempt to undermine TVA with the Dixon-Yates deal that finally got so noxious with its behind-the-scene finagling that the Eisenhower administration abandoned it. The Seaton plan, says Senator KUCHEL, is fraught with many perils and he will not support it.

Both he and Representative ENGLE pointed out that it not only would disrupt a project intended throughout to be a public project, but also would violate the 51-year-old principle established by Congress in 1906, and reenacted 13 times since. This is the guaranty for preference to public agencies, municipalities, and cooperatives in the sale of electricity from such public projects.

Representative ENGLE sees it as the beginning of an attack by the Eisenhower administration on the preference principle that would be extended elsewhere. In a comprehensive analysis for the CONGRESSIONAL RECORD, he showed that, rather than being good business for the Government as Secretary Seaton claims, this Pacific Gas & Electric cut-in would be bad for the Government in the long run, bad for consumers, and a bonanza for P. G. & E.

To anybody who read carefully last November's election returns from the West and Northwest, in which champions of the Eisenhower partnership policy were mowed down right and left, it would seem foolhardy for the Eisenhower administration to try to put over this patent donation to the utilities.

But a casual peek into the big book on campaign contributions compiled recently by the Gore Senate committee offers a clue. That shows with what an authoritative voice California now speaks in the Republican Party. Contributions to the Republicans in California totaled $1,913,176, as publicly acknowledged, compared with $260,079 to various Democratic candidates, national and State, in the State.

Five officials of P. G. & E. contributed $13,950 to the Republicans. This was listed in donations from officials of the 88 corporations which participate in the Government's atomic-energy program. Of the total of such, $397,342 went to the Republicans; $34,700 to the Democrats. Most of the donors were, like P. G. & E., electric utilities.

They look to the administration to be kind to them; and it can be said that their trust is well placed.

One Hundred and One Problems of Jet Aviation

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by John G. McCullough on the multiple problems of jet aviation. This article appeared in the Philadelphia Sunday Bulletin on March 17, 1957:

ONE HUNDRED AND ONE PROBLEMS RIDE THE WINGS OF NEW SKY GIANTS, INCLUDING CONGESTION ABOVE, NOISE BELOW

(By John G. McCullough)

WASHINGTON, March 16.—In less than 2 years the skies over the United States will reverberate with the scream of jet transport planes flying at 600 miles per hour.

The planes are being built right now.

The airlines expect them in operation next year.

That looks like a bright prospect for a nation that is geared to maximum speed, but it has both the airlines and Federal aviation officials worried. What disturbs them is the fact that as matters now stand many of the airports cannot accommodate those planes, the traffic control system now in use cannot keep them from destroying each other in midair collisions, and even the problem of providing them with adequate fuel has not yet been solved.

PROBLEM FOR CONGRESS

Congress is going to have to face those problems for Congress alone can make the decisions and provide the money that is needed.

It is another must situation and requires what the military calls a crash program. More than $2 billion worth of jet-powered passenger planes are on order. By late 1958 paying passengers will be queuing up on the ramps to board these sleek giants.

Marring this picture is the fact that these faster and further planes, unless giant strides are made in the meantime, will have to fight for flying room and safety under an air traffic control system that is not only long outdated but was designed to handle airplanes flying at well under 200 miles an hour.

Even without the jets there is already an aerial traffic jam of critical proportions. The big conventional passenger planes now in use do around 400 miles an hour. There are more and more of them, and other kinds, too. The wonder is that the Government's Civil Aeronautics Administration is now able to keep the skies relatively free of accidents.

This airspace trouble, while it is by far the most serious problem facing commercial jet operation, is not the only one. The CAA, in fact, has a special force working on what it calls the 100 problems of jet aviation. And it admits that the number of problems was cut for simplicity.

BIGGER, BETTER, HEAVIER

The new jets, for example, are not only bigger and carry more passengers, but weigh much more than the present fleets of "prop" planes. This, of course, makes for a problem in both the length and strength of airport runways. The biggest of the new planes will weigh about 300,000 pounds, have a 4,000-mile range, a cruising altitude of between 30,000 and 40,000 feet, speed of between 550 and 610 miles an hour and will seat between 80 and 145 passengers.

For comparatively short hops, with lighter fuel loads, the new jets will have no trouble with the existing airport runways. But for long-range trips, some of them need 10,000 feet of takeoff space. Relatively few airports now have it.

Philadelphia's International Airport is in better condition to face the coming commercial jet age than most big airports. Philadelphia's aviation officials kept their planning fluid and are now starting construction of an additional runway which can be extended beyond 11,000 feet. The city's terminal facilities can be expanded greatly and there is plenty of space available at the airport for anything that may have to be added to handle the new jets or their passengers.

Congressional committees in some preliminary inquiries into the jet aviation problem, heard that the Nation's airports plan over a half billion dollars' worth of improvements—much of it on runways. They learned, too, that the new planes have special landing gear to distribute the weight load and ease the impact on runways.

Noise also is a problem which has been getting attention. Aircraft manufacturers and the military services have been working on the problem for years and report progress on devices to cut down the roaring shriek of the jet engines. Not long ago the Federal Housing Administration conferred with aviation industry representatives on the effect of jet noises on areas around airports and were assured the problem would be licked.

FEDERAL AIRPORT AID

About half of the money to be spent improving airports will come from the United States Treasury under airport aid legislation. This big Federal windfall, however, has not made all local officials enthusiastic about the program. Some complain that airports are in sharp competition with schools, roads, and other projects for local funds. Some say aircraft manufacturers should design planes to fit existing facilities. There are some, too, who worry about the reaction of taxpayers whose money is used to expand an airport and are then bothered by the noise of the planes.

Aviation industry leaders, however, say these matters will all be settled. They note that some of these problems actually do not result from the coming of jet planes at all, but from the great growth of commercial aviation itself. Many airport terminal buildings, for instance, are hopelessly outdated and cannot handle the passengers using present-day 40- to 60-place planes.

The fact that the new jets will carry far more riders simply brings new importance to an old condition, these leaders explain, by pointing up the fact that there is not much sense in racing a passenger across country in a matter of hours if he has to waste time waiting for baggage and ground transportation in an old-fashioned terminal.

PERIOD OF TRANSITION

These industry spokesmen say, too, that there will not be anything like a complete and sudden switchover from propeller or piston planes to the new jets. The new planes will come into service gradually and, these spokesmen insist, with but "minimum problems" for the airports which will handle them.

Actually, the use of jet-powered planes for short trips would not be a payload proposi-

tion, so the airlines also have placed orders for hundreds of piston-powered and turbo-prop planes for delivery in the next few years.

The jet-engined planes devour fuel on the ground—while waiting to take off—and while flying at low altitudes. The comparative figures most often heard are that jets, operating at 35,000 feet, roar along on 2,400 gallons of fuel an hour. At 1,000 feet they use 3 times this much. The new jets, then, are designed for long-range high-altitude flying, not for trips of a few hundred miles.

The fuel consumption by the jet planes has posed another problem for the airports. Some of the new jet passenger planes will carry over 18,000 gallons of fuel, while most conventional planes hold less than 6,000 gallons. Airport tank trucks which fuel planes at many airports now would be inadequate for the new jets and there have already been suggestions that airports install a system of pipes and hydrants for jet-age fueling.

AIRLINES OPTIMISTIC

Here again, say the airline people, this is a problem that can be overcome without much difficulty.

So are such items as the surfacing of the sides of runways and taxiways so that gravel and dirt will not be swept about by the exhausts from the jets and the building of blast fences to block the exhausts from airport buildings—and people.

All of these items, however, are minor compared to the problem of air traffic. Here it is the situation of the jet age merely emphasizing the inadequacy of obsolescence of current aviation facilities.

Recently, in discussing its air traffic control system, the CAA itself said the setup was built with the resources of yesterday and is not able to cope with the demands of traffic today.

The traffic CAA talks about runs into awesome figures. There are about 60,000 active aircraft registered with the Federal Government today. The scheduled domestic airlines account for about 1,200 of these but the great bulk falls into the classification of general aviation, the grouping CAA uses to list all civil flying except that of the scheduled airlines. This general-aviation category includes business planes. It covers personal planes, ranching planes, and aviation instruction planes. It covers the planes which do everything from aerial surveying for precious minerals to crop dusting.

STAGGERING STATISTICS

Last year, too, CAA control towers at 180 airports throughout the country handled nearly 19 million landings and takeoffs.

Much of this traffic, of course, is between big cities, and much of it is over regular routes known as the Federal airways. There is no open sky over the entire country. About 500 separate areas, totaling some 400,000 square miles, are listed on the air maps as prohibited, restricted, or warning areas because of atomic-energy installation, artillery firing, aircraft testing, or bombing and missile ranges.

To fit the planes into the available airspace with some safety buffer between, the CAA, under certain conditions, allocates a space in the air to a specific plane. This is supposed to guarantee to the pilot that he has his own private bit of airspace, with no other plane within a certain distance in front, behind, above, or below him.

BASIC SAFETY PRINCIPLE

The idea is to keep planes traveling in different directions at different altitudes. The idea, too, is to provide a separation of at least 10 minutes between planes moving in the same heading. The surprising thing, actually, is that it works as well as it does.

One need not be an engineer to see that the answer to the problem of high speed aerial traffic control is complete radar coverage and an assortment of other electronic and automatic devices to help it out.

The CAA has known it for years and has installed as much of the equipment as it could get Congress to provide. CAA controllers point out that with radar providing eyes to watch the planes in flight they will be able to reduce the buffer zone between planes. They look forward to radar identification signals to identify the planes themselves.

WEATHER BIG FACTOR

With the radio and pencil system now in use, it is estimated that only 3,000 planes can be fitted into the entire country's airspace during bad weather. With the required 10 minutes' separation between planes, flights have had to be delayed for hours at a time. The CAA learned years ago that a delay at one airport has a box-car effect across the country. Hold up activities on the ramp at New York and you soon have planes waiting for clearance at other airports in other parts of the Nation.

Radar has proved itself an invaluable aid around major airports where it is used by the CAA both to detect aircraft within a 50- to 60-mile range and to help guide pilots to the runways. The radio position report system, of course, could not function around the congested skies of the airports.

Pilots have been complaining about the inadequate protection of the present traffic control system for the past 10 years. Trained as perfectionists, they see no reason why the airlines' already good safety record cannot be made a lot better. And they tell harrowing tales of near misses not only over the crowded airports, but in remote places where there has been unlimited visibility.

RISK OF COLLISIONS

Early last year a Federal study of long-range aviation requirements warned bluntly that the risk of midair collisions had reached critical proportions, and that the danger was becoming greater as the increases in civil and military air traffic outspace the capabilities of traffic-control facilities.

This survey, conducted under the sponsorship of the Bureau of the Budget, found that much of our airspace is already overcrowded and that in many important areas the development of airports, navigation aids, and especially the air traffic-control system is lagging far behind aeronautical development.

As the result of this initial study, President Eisenhower named Edward P. Curtis, a vice president of the Eastman Kodak Co., as his special assistant for aviation facilities planning. Curtis, who has been at work on this assignment 1 year, was Chief of Staff to the Strategic Air Force in World War II.

It was the crash last June 30 of two airliners over the Grand Canyon—a crash which took 128 lives—which brought the air traffic-control problem into sharp focus.

Within days, several congressional investigations were under way. Government officials were recalling the warnings of airline pilots who estimated there were on an average of four near collisions a day. CAA witnesses found Congress a willing listener for its improvement program and the early Budget Bureau study of air congestion received new attention.

CAA PLAN COSTLY

The CAA plan for improvement of the air traffic control system—a plan disclosed before the Grand Canyon crash—carries a $246,000,000 price tag over a 5-year period. What it boils down to is the placing of enough long-range radar equipment to track planes in flight along the regular airways in all parts of the country. This, of course, would permit the CAA controllers to "see" the planes—not merely depend upon voice reports.

The CAA plans, too, to install electronic equipment of the "mechanical brain" type to do away with as much of the routine duties now handled by the controllers as possible. The idea is to have the machines, through the use of "memory drums" and key punch cards, file away and remember much of the data which CAA personnel must now record manually.

In what it described as a start toward automation the CAA has already installed some of the electronic equipment and figures on getting a great deal more. A study is under way, too, into the possibility of using the military $3 billion network of radar and electronic computers—designed for air defense—to track and guide civilian planes.

MILITARY NET

The network, known as SAGE for Semi-Automatic Ground Environment, has as its primary mission the guiding of interceptor planes to any enemy flight. But there are many in the Government who insist it can perform in a dual capacity. These people insist, in fact, that for the CAA to eventually build up anything similar would be nothing more than a waste of taxpayers' money.

This is one of the questions that will be debated back and forth before Congress during the coming year. And it will be but one of many. Another, already showing all the earmarks of a major controversy, is the question of whether or not all planes in many areas should be required to operate "on instrument," and under ground control.

This, of course, would have an immediate effect upon thousands of private pilots who are not trained for such flying and whose planes lack the equipment for it.

All in all, before the first jet airliners go into full service they and their problems will have had many hundreds of hours of "dry flying" before congressional committees.

Budget Can Be Cut

EXTENSION OF REMARKS
OF

HON. GEORGE MEADER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Adrian (Mich.) Daily Telegram of March 13, 1957:

BUDGET CAN BE CUT

Members of Congress are receiving an increasing amount of mail demanding reduction in Government spending. And the news reports about this say that while some comes from pressure groups a considerable amount is from individuals who had written personal letters. Thus the demand appears in large measure to be from grassroots sentiment and to be spontaneous. Such sentiment is highly persuasive and counts heavily with Senators and Representatives.

Congress is in position to make spending cuts. There is a disposition in some quarters to pass the buck to the President, pointing out that when he handed Congress the $72 billion budget and later said Congress could cut it he was shirking his own responsibility. But this view overlooks the point that Congress makes the laws, and in making them it determines to a large extent how much the Government shall spend.

In a Detroit speech the other day Treasury Secretary Humphrey drove this point home when he said that "substantial reductions in Government spending can come only from changes in programs * * * and by new decisions of Congress."

To be sure, the Federal budget is prepared by the executive branch. It is an estimate of how much is necessary to carry on the functions of government, many of which

have been brought on by statute. The executive branch may not be in favor of all these but since they are law they must be provided for. So the budget office asks for adequate appropriations to take care of all of them.

The other day President Eisenhower said the administration was trying to slow the speed of spending by various departments and bureaus. That means some proposed undertakings, provided for in the budget, may be postponed for the sake of immediate sayings.

But at the same time he argued emphatically against any cuts in foreign aid and added that no vital programs could be delayed or curtailed. He was not specific where savings could be made; he only suggested that some spending could de delayed for a time. That is not a great deal of help.

It is up to Congress to decide whether some kinds of Government spending can be curtailed, whether some Government services can be cut down drastically and others discarded entirely. Many of these are of long standing.

The President pointed out the other day that the Federal Government has been assuming the major responsibility for repairing flood damage and that he thought it is time for the States and communities to take on a greater share of this load. If it wishes, Congress could provide less Federal money for this purpose and stipulate that the States and local units pay more. Then there is the matter of new Federal programs, Federal aid for school building for instance. It is up to Congress to decide if such aid is essential. Programs of that sort traditionally begin modestly, but they are continued from year to year and demand more funds year to year. Land reclamation and water power projects in the West always cost a lot more than the original estimates. This shows up in succeeding appropriations.

Since Congress is the appropriating body it has the responsibility for economy. It can, and should, make cuts in the budget. But the trouble with economy moves in Congress is that they run into opposition from powerful pressure groups. Likewise a Member of Congress is perfectly willing to slash spending on some project that is benefiting some other district but he howls mightily if something in his district is threatened. Congress can reduce the budget but it is going to need help from the executive branch. But most of all any budget-cutting move must have support from the public. The public simply has to demand less from Government if it wants to pay less to Government.

Tobacco in Georgia

EXTENSION OF REMARKS

OF

HON. IRIS FAIRCLOTH BLITCH

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 19, 1957

Mrs. BLITCH. Mr. Speaker, under leave to extend my remarks, I would like to call the attention of my colleagues to a series of articles which appeared recently in the Atlanta Journal. They were written by the able and capable farm editor of that great newspaper, Harold Joiner.

Mr. Joiner discusses in great detail, with specific examples, the hardships that are being heaped on the Georgia tobacco farmer by the shortsighted policies of the present administration.

I hope that every Member of the Congress will take the time to read these articles. They point up the many injustices of our present farm program and offer a challenge that a responsible government cannot overlook. I herewith submit these articles for your study.

TOBACCO IN GEORGIA, NO. 1—STATE'S GROWERS FACE $13 MILLION LOSS

(By Harold Joiner)

(EDITOR'S NOTE.—This is the first of a series of articles on tobacco production in Georgia.)

Georgia tobacco growers face a possible loss of almost $13 million from their 1957 crop as a result of the 20 percent cut in their allotments.

The reduction in acreage by the Federal Government, brought on by a mounting surplus of tobacco in storage, will affect most of the State's 30,000 tobacco growers.

This 20-percent cut follows on the heels of a 12-percent cut in 1956 and a 5-percent reduction in 1955, for a total of 37 percent in 3 years.

Farmers have little hope of overcoming this heavy loss through increased yields. The 1956 average yields were 28 pounds less than those in 1955, but still both years place the poundage well above the 10-year average from 1946 to 1954.

All over the Tobacco Belt the growers are showing mounting concern as the season gets under way with the planting of tobacco beds. Most of them are looking for other sources of income to bolster the staggering losses that face them.

Many of the growers depend on the tobacco crop for their chief source of income. A few of the growers face possible loss of their allotments because the reduction makes the production costs prohibitive.

The relatively small allotments on the Georgia farm cause most of the growers to be concerned by such a large reduction. The average size of the allotments range around 2½ acres for the 1957 crop.

H. L. Wingate, president of the Georgia Farm Bureau Federation, said the reduction would hit most of the farmers hard, but actually is not quite so bad as it appears on the surface.

He said the reduction of the production and thereby the surpluses would enable the prices to be increased. Besides, he pointed out, the farmer can't continue to grow tobacco and let it pile up in the Government storage houses.

The farm organization president said legislation will be offered in Washington asking for an appropriations bill to pay the farmers for the acreage reduced under the 20-percent cut at the same rate as that placed in the soil bank.

This bill, if passed, would pay the grower around $225 per acre for that part of his allotment he lost over the 1956 crop. Such a bill, however, is expected to cover only the 1957 crop, Mr. Wingate said.

Some agricultural officials say the Georgia growers can partially overcome the acreage reduction through higher yields. However, the United States Department of Agriculture records show that Georgia farmers lost nearly $8 million in 1956 when the reduction figure was 12 percent.

John F. Bradley, State administrative officer of the Agricultural Stabilization Committee in Athens, said the 1957 allotment for Georgia centers around 72,000 acres. The 1956 allotment was 90,100 acres.

The soil-bank program is expected to offer some relief to the smaller allotment holders who find it impractical to plan their tobacco. Mr. Bradley said Georgia has been allotted funds to take up to 13 percent of the 1957 allotments in the soil bank.

TOBACCO IN GEORGIA, NO. 2—HOW CAN GROWER OVERCOME LOSSES?

(By Harold Joiner)

(EDITOR'S NOTE.—This is the second of a series of articles on tobacco production in Georgia.)

Some 30,000 Georgia farmers face the equivalent of a 20-percent salary cut in 1957 because of the reduction of their tobacco allotments.

Take the case of Harold Adams, of Douglas. He faces the 20-percent allotment cut the same as the other tobacco growers. Unless he does something else he will lose 20 percent of his net profits or maybe more.

He said his yields, now more than 200 pounds above the county average, are about as high as he hopes to get them. So that is the end of his drive toward overcoming the loss in that direction.

Mr. Adams bought some irrigation equipment last year to use on his tobacco crop. He didn't need it, however, because of the rains. This year he still has the equipment in case he needs to use it.

But he must pay for this and other farm equipment. The advancing prices of machinery make it difficult with the reduction in his cash tobacco crop.

Is there an alternative for Mr. Adams and the other growers who face the staggering losses?

Some of the growers have realized their problems and are turning to other sources of income. Mr. Adams grew sweet potatoes last year to supplement the 12-percent cut in tobacco allotments then.

Now he is planning to increase his sweet potato production. There are no allotment controls on this crop. He will also cure the potatoes as an extra step toward more income.

With Mr. Adams the problem is about the same as with other growers. There is a basic expense involved in the production of the leafy product and after that the additional acreage causes only a percentage increase in expenses.

"I can grow 7 or 8 acres about as easily (economically) as I can 3 or 4 acres," the Coffee County grower explained.

Some growers face the problem of too little acreage to make it practical to grow the tobacco. Unless they can have enough to fill a barn during the curing stage, the costs are prohibitive.

In Atkinson County, as in all the counties in the Tobacco Belt, the story is the same. The farmers are growing restless over the problem that faces them. In this county the two main sources of income are tobacco and turpentine.

"To cut out our tobacco profits would leave most of us behind in our debts," one grower said.

There were 431 growers in the county in 1956, but this year that number has been reduced to 416. Some of the growers have combined their allotments in an effort to have enough acreage to make it practical to grow the tobacco.

Some of the smaller growers will be putting their allotments in the soil bank.

In Tift County, William Pool county agent, said not only would the farmers suffer in his county, but the merchants would feel the effects of the reduction in tobacco dollars.

Several million dollars worth of the golden leaf tobacco was sold in the Tifton markets in 1956. To reduce this by 20 percent would certainly effect the merchants' trade, he said.

"Our farmers are facing a crisis," said County Agent Bryon Dyer, of Statesboro. "Our average allotment now is about 2 acres and it will be extremely hard for the growers to make ends meet on such a small acreage."

The loss to the 1,630 growers in Bulloch County will be nearly a million dollars, Mr. Dyer said. He has begun a promotion of hog production to aid the growers in making up the losses from their tobacco.

In Coffee County the loss will be around $1 million, too, according to County Agent Larry Torrance. The growers receive nearly $5 million from the sale of tobacco last year.

TOBACCO IN GEORGIA, NO. 3—FILTER IS GRAVE INFLUENCE ON TYPE USED IN CIGARETTE

(By Harold Joiner)

(EDITOR'S NOTE.—This is the last of a series of articles on tobacco production in Georgia.)

The entry of filter tips may have greatly influenced the type of tobacco used in cigarettes.

A few years back the tobacco companies asked the growers and research men to come up with a tobacco that was light in flavor and with a heavy sugar content.

But shortly after the development of these tobaccos the filter-tip cigarette made its debut on the scene. The filter was designed to cut down on the nicotine intake.

A problem developed, however, when the flavor of the light tobaccos would not penetrate the filter. As a result the tobacco companies turned their back on the newly developed plant varieties, known as the neutrals or paleslicks.

This year the tobacco experts are asking the tobacco growers to return to the heavy aroma type plants formerly used. The Federal Government has accepted the demand by reducing the support price on the so-called undesirable tobaccos to 50 percent.

The heavy surpluses now in Government storage houses are primarily the light aroma tobaccos that the tobacco companies refused to buy during the 1956 market season. The 3 varieties that were the subject of controversy were 139, 140, and 244 types.

Georgia producers, however, will not have to change their varieties, says J. B. Preston, extension service agronomist in charge of tobacco. More than 93 percent of the 1956 crop was of the acceptable type, he said.

The tobacco companies want the tobacco with full body, rich color and good flavor and aroma, the agronomist said. This allows the flavor to reach the smoker even through the filter.

The present consumer demand for cigarettes is about 66 percent for the nonfilter cigarette and 33 percent for the filter variety.

Since the arrival of filter-tip cigarettes, whether by coincidence or otherwise, the tobacco producers have found a better market for their lower and medium-grade tobaccos.

Last year the lower and medium grades sold above the support prices whereas much of the top-grade tobacco found its way into Government loans.

Georgia producers, because of weather conditions, usually have all grades of tobacco available for the buyers, Mr. Preston said.

Two things are certain among the tobacco growers this year. They know the tobacco companies want the heavy aroma-type tobacco and they will try to produce it.

They will not ease up on their attempts to grow top-grade tobacco, because under the Government-support program they will continue to receive top payment for this tobacco.

Florida Atomic Plant Expected by 1962

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. CRAMER. Mr. Speaker, the progress of the United States has been marked by the great free-enterprise system. There is no better demonstration of that type of economic growth in this atomic era than the active participation and program of the electric utility companies of this Nation in the development of atomic energy plants to generate electricity for public use. I am particularly proud that the Florida nuclear power group composed of the Florida Power Corp., the Tampa Electric Co., and the Florida Power & Light Co. has well advanced plans to establish an atomic energy generating plant to serve the people of my State. The Tampa Times, published in Tampa, Fla., has commented editorially upon a statement made by the chairman of the Florida nuclear power group as he appeared before the Joint Committee on Atomic Energy. This editorial ably points out the importance of atomic development to our fast-growing State, and, under unanimous consent, I include it in the RECORD for the information of this Congress:

FLORIDA ATOMIC PLANT EXPECTED BY 1962

It should be of real interest to both residents and industries in the Tampa Bay area that Tampa Electric Co., working in cooperation with Florida Power Corp. of St. Petersburg, and Florida Power & Light Co., of Miami, is letting no grass grow under its feet in efforts to secure an atomic electric plant.

William C. MacInnes, president of Tampa Electric, made this point plain late last week when he told the Joint Committee on Atomic Energy of plans to produce electric power in an atomic plant by 1962.

The Middle Eastern crisis, posing a threat to oil fields there, and the possibility of further increases in the cost of United States crude oil spell higher costs of power in Florida. This State has no natural fuel and must ship in heavy quantities of fuel oil to produce electricity in its steam generator plants. A few electric plants use coal, which also must be imported from other sections of the country.

It is important that Florida's power production be shifted to an atomic basis if the State's industrial expansion is to continue.

The growing demand for power may be judged by Mr. MacInnes' statement that demands on the three company producer groups are doubling every 5 years. Their total generating capacity is now 2 million kilowatts. By 1962, Mr. MacInnes said, 4 million kilowatts will be required to meet existing needs.

Some of the history Mr. MacInnes revealed about the Florida nuclear power group's efforts to develop an atomic plant here are interesting. This planning has been underway for the last 2 years. The group has met with staff members of the Atomic Energy Commission and such manufacturers as Babcock & Wilcox and Allis-Chalmers Manufacturing Co. for the purpose of securing information relative to the construction of a reactor plant.

Cost of the proposed plant will be higher than the conventional steam plant, but, Mr. MacInnes noted, it would eliminate the use of high cost fuel and offer a savings in operational expenses.

Planning has included a study to indicate where additional power capacity should be located to serve best the needs of the three systems. A tentative site has been selected for the atomic plant.

Mr. MacInnes said that the group expected to be in a position to ask for bids on the new facility by 1958 and that the goal of actual operation has been set for 1962.

Florida, it seems, approaches the threshold of the atomic age. Conversion of all electric production to atomic reactor plants would do much to conserve present petroleum supplies for other uses and pave the way for cheaper electricity to bolster the State's industrial progress.

Textiles Need Surgery

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the March issue of the Textile Challenger, official newspaper of the United Textile Workers of America. The editorial calls attention to the serious problems confronting the textile industry and its 1 million employees, and urges support for my bill, H. R. 2570, to rehabilitate and stabilize labor conditions in the textile industry:

TEXTILES NEED SURGERY

The pessimistic reports now current from the management of the textile industry demands some comment from the officials of unions with textile membership, and a vital interest in future employment prospects. It would seem that textiles of all major industries is the least able to manage its marketing, production, price, and wage problems. Surely an industry paying 50 cents an hour less than the average manufacturing wage is a matter of public concern and demands more than passing interest by Government and professional economists. One million textile workers should not be the victims of adventurers in monopoly and financial manipulation.

Mill closings in the North and South with severe curtailment of employment makes this a national, not a sectional problem.

The attributed reasons for this sickly condition in textiles takes on many facets. For some closings and curtailments the blame is placed on Japanese competition. Since a recent partial agreement with Japanese producers on imports, the blame has switched to a poor market and price situation, and the unwillingness to produce for inventory. Some textile employers are advocating a 4-day week, time and a half for the third shift, and, in some cases, the elimination of the third shift in accord with the textile bill now before the Congress.

BUSINESS AND FINANCE

"Textile production cutbacks deepened. Deering Milliken & Co., manufacturer of cotton fabrics, reduced operations to a 5-day week from the previous 6 days at 5 mills turning out heavy cotton cloth used in work clothing and for industrial purposes. At the same time, Bates Manufacturing Co. announced it will discontinue operations about April 1 at its Androscoggin division, Lewiston, Maine. The mill, which produces rayon goods, is currently employing 350. Scattered cutbacks have been appearing among cotton and synthetic cloth mills since early January as a result of a lull in demand for unfinished cloth which set in last November and still persists." (Wall Street Journal.)

BALANCED PRODUCTION

"It is foolhardy for the textile industry not to gear production to consumption." F. E. Grier, president of the American Cotton Manufacturers Institute, said, in an address during which he also expressed for the coming year "more optimism than I have felt in a long time." Mr. Grier injected the com-

ment on production-consumption in a departure from his text, and said further in the same vein:

"I do hope the day will come when every textile manufacturer will give very, very serious consideration to bringing the two (production and consumption) into balance." (Daily News-Record.)

CONFUSING EXAMPLES

The situation has even been described as a "war of attrition" with some textile merchants recommending a limitation of productions to 80 hours a week.

It is quite plain that many employers in the textile industry are coming nearer to the union proposal for the 35-hour workweek of two shifts, and whether we call it the "war of attrition" or the war of the jungle, we respectfully suggest to the textile industry that we utilize the machinery of the Congress to assist management and labor in working out a fair solution to the deplorable conditions in textiles.

H. R. 2570 provides the platform for a complete exposition of textile problems as stated in the principles and purposes. The textile unions have repeatedly offered to cooperate with management for our mutual benefit and in the public interest.

To quote the president of the American Cotton Manufacturers Institute, "When you reach the bottom there are only two ways to go: We can go up or we can go out."

Independent Offices Appropriation Bill Item Illustrates the False Economics of the Administration's Power Partnership Policy

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. ENGLE. Mr. Speaker, the House is today considering final action on the independent offices appropriation bill for fiscal year 1958. One of the defense research installations which is covered in this bill is the Ames Laboratory in California. This installation utilizes a rather extensive amount of electric energy. As a matter of fact, the estimated needs for fiscal year 1958 amount to 432 million kilowatt-hours. Funds are included in this bill for purchasing this amount. Now, the reason I am interested in this particular item is because of its relationship to Secretary Seaton's recent recommendation that the Pacific Gas & Electric Co. be allowed to develop the power facilities of the Trinity River project.

The Ames Laboratory purchases all the energy it can from the Federal Central Valley project because it can obtain such energy at a very low rate. The remaining needs must come from the Pacific Gas & Electric Co. For the fiscal year 1958 the testimony given the Appropriations Subcommittee indicates that half of the energy needed by the installation, or 216 million kilowatt-hours will have to be purchased from the Pacific Gas & Electric Co. Testimony given the Appropriations Subcommittee further indicates that the installation will have to pay about 13 mills per kilowatt-hour for this energy purchased from the company, as compared to 5 mills for the energy purchased from the Central Valley project, or a difference of 8 mills per kilowatt-hour. Based on these figures, 216 million kilowatt-hours would cost the Federal Government $1,728,000 more from the P. G. & E. than from the Federal project.

Now the point is this: At the same time the Federal Government is paying this excessive electric energy cost for operating one of its own installation, the administration is recommending that Central Valley project power facilities which could supply this energy be developed by the Pacific Gas & Electric Co. There is a growing indication, and this is an example, that Secretary Seaton has greatly underestimated the financial losses to Federal installations and public agencies which would result from acceptance of his Trinity project recommendation.

Tax Advantages of Giant Corporations

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. WIER. Mr. Speaker, under leave granted to extend my remarks, I desire to insert in the RECORD a letter from Mr. Bruce J. Maguire, suite M–8 Capitol Savings and Loan Building, Lansing, Mich., in which he pointedly focuses attention to the serious effects of the special tax advantages enjoyed over the common people and small businesses by the giant corporations of this country.

Mr. Maguire's letter follows:

LANSING, MICH., *February 20, 1957.*

DEAR MR. WIER: I strongly urge your consideration of the special tax advantages enjoyed over the common people and small businesses by the giant corporations of this country. Among these are the 27½-percent depletion allowance allowed the oil companies and the accelerated depreciation allowed many companies for building capital assets.

Is there any reason why our giant corporations should be in a more sheltered tax position than the average individual or the average small business?

Why should the very wealthy oil companies be granted a 27½-percent deduction against all of their profits before taxes to compensate them for the using up of their oil reserves, when practically every one of them ends up each year with more proven reserves than they started with? In addition, all of their expenditures searching for oil, such as airplanes, many people on the payroll, all drilling expenses, depreciation, charges for abandonment of leases, and so forth, are charged directly as expenses.

Is it not true that most of the items on which the Government has granted accelerated amortization are actually for capital purposes that have a life of from 20 to 30 years and that by allowing a writeoff in 5 years or less, those corporations enjoy a great tax advantage?

It seems to me that we should reverse this picture by doing everything possible for aid to the small individual and the small business. Small businesses are at a great disadvantage in competing against the giant corporations who have the finest brainpower in the land without also being subjected to unfair tax discrimination.

For over 25 years I have been a retail jobber or distributor for large oil companies. The major oil companies generally have a policy of allowing their jobber a gallonage margin rather than a percentage margin as is the general business practice; this results in the oil jobbers being forced to operate on a bare existence minimum. As a result, a large majority of the individual jobbers of 20 years ago have been absorbed by the oil giants.

An article in one of the trade papers a short time ago indicated that General Motors for the past 8 years has averaged, after taxes, 25 percent on its total invested capital. If this is true, does it not highlight a very real danger to the economy of our country by concentrating such great power in a few corporations?

Yours sincerely,

BRUCE J. MAGUIRE.

Tribute to Jimmy Durante

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column from the Chicago Sun-Times of March 19, 1957:

NEW YORK.—It was a big night for James Francis Durante, the beloved Schnozzola. It was the first time in his 50 years of show business that he permitted a testimonial dinner in his honor. And it was the first time he sat on a dais and delivered a formal speech. It was a big night, too, for Liz Taylor and her Mike Todd, two of the hundreds of celebrities who had come to pay homage to Durante. They had just learned that they had dated the stork for fall delivery.

Few testimonials, which are commonplace in New York, have been as humorous or touching as the one in honor of the Schnoz, the Cyrano of the Cellars. Largely because there is only one Durante, Toastmaster George Jessel, who was at his wittiest, summed it up succinctly when he said "Jimmy Durante never made a friend he didn't keep." And Danny Kaye expressed it still another way in describing how it feels to meet Durante for the first time: "A hand is extended and then a drop of sunshine falls on you."

This was a night rich in nostalgia as a series of speakers, each limited to a few minutes (hurrah) painted a word picture of the life and times of Jimmy Durante. Jessel pointed out that Durante was born on February 10, 1893, in the midst of a financial panic—"and he's been a panic ever since." Mayor Robert Wagner had considerable research done to find the first time Jimmy appeared in the public prints. It was a newspaper photograph showing Durante as a newsboy 55 years ago peddling a paper to the then mayor of New York. "I want to assure Durante," continued Wagner, "that the present mayor of New York is also a patron of his."

Veteran Actor Billy Gaxton recalled Durante's early days in show business as a piano player in a Coney Island joint. There Durante met a singing waiter who was instrumental in encouraging Jimmy to further his career. The singing waiter was Eddie Cantor. Together, in the Coney Island joint, they were known as the Nickel Kick-

ers. They lived for the tips the customers would fling on the floor during their performance. Most of the coins were nickels, which Eddie and/or Jimmy would kick into a corner until they had finished their number and could retrieve them.

Ted Lewis told of Jimmy's days at the long-gone Club Alamo in Brooklyn where he met the first of his two partners, Eddie Jackson, and then a girl singer, Jeanne Olson, who later was to become Mrs. Jimmy Durante. Phil Silvers brought the Durante saga to 1923, when Lou Clayton joined up to form the never-to-be-forgotten team of Clayton, Jackson, and Durante. No contract was necessary to bind the trio together. A signed document never existed for them. The only signatures they exchanged were on autographed pictures which were inscribed, "Till death do us part."

One of Jimmy's toughest decisions came when Hollywood paged him in the early thirties. MGM offered him a 5-year contract, but as a solo. Durante at first refused to leave Clayton and Jackson. But friends and advisers urged him not to forgo the golden opportunity offered by movies. Ralph Bellamy revealed that the problem was solved by Durante's partners. Clayton doffed his dancing shoes to become Jimmy's manager, and Jackson agreed to go along to be available for any night club or personal appearances Durante would accept.

The low point in Durante's career came some years later when Hollywood turned its back on him. His wife died shortly thereafter of a lingering illness. Durante, in the laugh-clown-laugh tradition, returned to night clubs. Though heavy of heart, his indomitable spirit saw him through this trying period and once again he became the "people's cherce."

The story of Jimmy Durante perhaps is best told with statistics like these: Eddie Jackson has been with him 40 years; Jack Roth, his drummer, 39 years; Lou Cohen, his business rep, 20 years; Jules Buffano, his piano player, 17 years, and Jackie Barnett, his writer, 15 years. As Jessel put it so aptly, "Durante must love people. Who else could kiss Jackson good night every night for 40 years?" Durante's 30-year association with Clayton was ended by Lou's death. But Clayton was present at the testimonial dinner. His soft-shoe dance was heard on a recording. A spotlight "picked up" his imaginary solo number on stage and Durante and Jackson went through their old act as if they were a trio once again.

The memorable evening was topped by Jimmy's speech, his first in a lifetime of public appearances. "There were offers to write a speech for me," Durante explained, "but I turned 'em down. I just want to get up here and say what's in my heart." As Durante admitted, "I got no command of the language," but it wasn't what he said that touched the audience. It was how he said it. None of the 3,000 gathered in the Waldorf-Astoria grand ballroom attempted to hide the tears that flowed. Jimmy himself reversed the tide by ending with a chuckle: "I came in here tonight 64 years old. Thanks to you, I'm leaving feeling no older than Jack Benny."

Stephen Foster Memorial at White Springs, Fla.

EXTENSION OF REMARKS
OF
HON. D. R. (BILLY) MATTHEWS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. MATTHEWS. Mr. Speaker, one of the most beautiful spots in Florida is the Stephen Foster Memorial in White Springs, in my congressional district. Here on the banks of the beautiful Suwannee River we have a most attractive building that houses many of the mementos connected with Stephen Foster. I cordially invite my colleagues and their friends to visit this beautiful site when next they go to Florida. White Springs is located on United States Highway No. 41, and it is fast becoming one of Florida's most attractive shrines.

Many interesting programs are held at the Stephen Foster Memorial throughout the year. Musical programs featuring the songs of Stephen Foster are attracting increasing attendance and interest.

I am delighted to note that Mrs. Eisenhower, Mrs. George Humphrey, Mrs. George Allen, and Mrs. Eisenhower's mother, Mrs. Dowd, visited the Stephen Foster Memorial on Friday, February 15, for about 2 hours. I appreciate the fact that these gracious ladies expressed their enjoyment of their visit.

On next July 4, we plan to dedicate the memorial tower and carillon. I know this will be a great occasion for our people in that area of the State, and I hope it is possible for many of our friends from all over the country to be with us on that occasion.

Give Surpluses to the Needy

EXTENSION OF REMARKS
OF
HON. IRIS FAIRCLOTH BLITCH
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mrs. BLITCH. Mr. Speaker, one of the great problems facing this body has to do with our huge agricultural surpluses. I have introduced legislation that will help solve this problem. I am pleased to commend to the attention of our colleagues an editorial which appeared in the Valdosta (Ga.) Daily Times. It was written by one of Georgia's outstanding journalists, Turner Rockwell, under the title "Give Surpluses to the Needy."

The editorial follows:

GIVE SURPLUSES TO THE NEEDY

Congresswoman IRIS BLITCH, of this district, for the second time has introduced a bill in Congress which she feels will answer the question of what to do with the enormous farm surpluses which have accumulated in this county and at the same time give relief to the many needy families over the country.

To set her plan in motion, Mrs. BLITCH proposes a systematic method of reducing the surpluses and at the same time keeping future surpluses from accumulating.

Mrs. BLITCH explains her proposal this way: "The program would work like this: Each person now on welfare relief would be granted an additional $10 a month in food-fiber stamps to be spent at any retail store for items which the Secretary of Agriculture might declare in surplus. The stamps would have to be spent within the month they are issued or else would be void."

Mrs. BLITCH pointed out that nearly 170,000 Georgians on public assistance would be benefited by her proposed program. "More than 16,000 of these persons are now living within the Eighth District," she said.

"These food-fiber certificates could be used to purchase cotton and wool products, such as children's clothes and other items, as well as any food that might be surplus, such as sugar, flour, citrus, cooking oil, and many other items."

Congresswoman BLITCH explained that she introduced a similar bill last session. "It didn't get very far because the idea was just too new and too far reaching for some people. Since then, the idea has received a great amount of attention. The bill has been reviewed more or less favorably by the Department of Agriculture, and much sentiment in its favor has been developed in the Senate. I don't give up easily when the good of so many people is at stake. I feel sure that we'll make a great deal of progress with this plan this year."

This proposal appears to have considerable merit. Since the Government has already advanced the money on the crops that are in surplus storage, it would not involve any considerable amount of additional spending. Of course, there would be the administrative cost and probably some other small items of spending.

There is, of course, the danger that it might tend to encourage more additions to the surplus supplies. However, it has the advantage of giving aid to the needy among our own population, rather than sending these surplus items abroad. There are a lot of our own people who are in need and they should be given consideration by the Government.

Some Members of Congress have indicated an interest in the idea and Mrs. BLITCH explains that she is hopeful that it will be given earnest consideration by both the House and Senate.

Certainly it has sufficient merit to warrant careful attention. Huge surpluses have been the cause of a lot of thought and any plan that will utilize them to the advantage of those in need is worth consideration.

The Mideast Crisis

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following letter, which appeared in the National Review of March 9, is a very interesting impression by a very brilliant woman who has been on the spot and is therefore speaking of something she has seen and experienced.

Mr. Speaker, lest the cry of anti-Semitism be raised over this letter, may I point out that Freda Utley's husband was a Jew and that he is believed to have perished in a Russian concentration camp. At least he was torn from his home and family many years ago by the NKVD and was never seen or heard of again.

We must at this time keep our heads cool and our feet on the ground and above all hear and see every side of these vexing questions. We must not indulge in epithets nor allow local politics and voting blocs to obscure our thinking and our reason.

In the words attributed to Washington, "Let only Americans be on watch tonight."

DISSENT ON EGYPT

(By Freda Utley)

Returning home at the end of December after a 7-month study tour of the Far East, southeast Asia, and the Middle East, I was dismayed to find that National Review had not supported Eisenhower's wise and politically courageous stand on Suez, which has so greatly enhanced American prestige, influence and power almost everywhere in the world.

Instead of studying and calmly appraising the evidence in the case of Egypt versus the Suez Canal Co., you have taken an ex parte stand and engaged in vituperation instead of argument. In your November 17 issue, Nasser is accused of "a ravenous ambition and unbounded unscrupulousness," of "strutting lawlessness," and of leading "primitive Arab nationalism." Permit me to give you readers a few of the indisputable facts ignored by National Review and generally unknown to Americans.

First, Nasser did not break any treaty nor contravene international law when his government took possession of the Suez Canal and started to operate it. What he actually did was to "nationalize" an Egyptian company, incorporated under Egyptian law, which had a concession to operate a canal running through Egyptian territory which had been built by Egyptian labor. Far from having expropriated the shareholders, he offered them full compensation at the price of their shares on the Paris Bourse on the day preceding the nationalization decree.

Paragraph 16 of the 1866 agreement between the Egyptian Government and the Suez Canal Co. reads: "The Suez Canal Co. is an Egyptian company subject to Egyptian laws and customs."

In 1939, in a memorandum submitted to the Mixed Courts in Egypt which pronounced judgment in its favor in February 1940, the British Government maintained that:

"The Suez Canal Co. is a legal person in accordance with Egyptian law. Its nationality and character are solely Egyptian. It is, therefore, subject to Egyptian laws."

The British memorandum further stated: "It is true that the company is given the name of 'The Universal Co. of the Maritime Suez Canal.' * * * this designation cannot deprive the company of its Egyptian nationality. The company is Egyptian in accordance with the established general principles of law and in particular with the principles of private international laws and the company's organic law."

Lastly, it should be noted that article 8 of the agreement concluded between Egypt and Britain in 1954 states specifically that the Suez Canal is an integral part of Egypt.

If the British Government had not argued in 1939–40 that the Suez Canal Co. is Egyptian, it would have been contravening international law by denying passage to Italian and German ships during the war. If Egypt, under British control, had the right to block passage to enemy ships during both world wars, one cannot deny Egypt's right to bar Israeli ships, since there is only an armistice between her and the State of Israel.

And since Egypt, after nationalizing the canal, managed to keep it operating and allowed free passage to the ships of all nations except Israel, Nasser cannot be accused of having contravened the 1888 Constantinople convention.

National Review's attempt to "subtract the role—indeed, the very existence—of Israel from the Suez question" is like staging a performance of Hamlet, not in the classic phrase "without the Prince of Denmark," but without the background of the murder of his father.

The U. N.'s partition plan had stipulated that the Arabs should retain their property and civil rights in the part of their country delivered over to Israeli rule. But Israel dispossessed most of them, and drove a million out of their homes and ancestral lands in the 60 percent of Palestine allotted to it, as well as from the half of Jerusalem that it took under its control. This action, which created the problem of the 900,000 destitute Arab refugees, was accomplished by means of such terroristic measures as the massacre of the entire male population of Dier Yasin.

In contrast, Nasser, now called an Arab Hitler by some American newspapers, as well as by the British "gutter press," displayed exemplary moderation in his treatment of the Jews following the Israeli-Anglo-French attacks on Egypt. Instead of following the precedent set by America in the treatment of our Japanese citizens following Pearl Harbor (which, as Congressman WALTER JUDD said in a speech on December 7, 1956, had now been copied by our Anglo-French allies at Port Said), the Egyptian Government left its many Jewish citizens unmolested, and expelled only enemy nationals.

ARMS FROM CZECHOSLOVAKIA

Similarly, with regard to the accusation that Nasser is an ally of the Communists or their puppet because he bought Czech arms last year, why has no such accusation ever been leveled at Israel, which, in 1948, when it defeated the Egyptian Army and the poorly armed Palestinian Arabs who vainly endeavored to defend their lands and property, was largely indebted for its victory to timely and substantial shipments of arms from behind the Iron Curtain, primarily from Czechoslovakia?

A judgment against the State of Israel, which falsely pretends to speak for all Jews, has been pronounced by Rabbi Elmer Berger in his book, Who Knows Better Should Say So; by Alfred Lilienthal in, What Price Israel; and by other courageous American Jews and gentiles alike who realize that Israeli pretensions, ambitions, and practices must eventually redound to the discredit and hurt of Jews everywhere in the world.

In the hour interview I had with Colonel Nasser on December 19 in his retreat near Cairo, he said to me:

"We do not want to see Egyptians dispossessed of their lands and property and become refugees like the Arabs of Palestine. This is the prospect we faced last month. We knew we were too weak to resist Britain's attack, but we had confidence in western moral force to defeat British power politics. For the first time, we were able to put our case to the world and consequently, western morality defeated aggression."

President Nasser denied that there was any Russo-Egyptian agreement or alliance. He had bought Czech arms and equipment after the West denied them because Israel was receiving large quantities, especially from France. "Our fear of Israel," he said, "is comparable on a smaller scale to America's fear of the atom bomb."

The favorite quotation of the sophisticated Arabs of both the Christian and Moslem faiths whom I met in Cairo and Port Said, Beirut, Jerusalem, and Bethlehem was Winston Churchill's wartime statement that he would "take the aid of the devil himself" to save England. Why, they asked, should Nasser be called a Communist agent or puppet because he bought arms from Russia, whereas Churchill at Teheran and Yalta agreed to deliver millions to Communist slavery in order to win the war against Nazi Germany?

I became convinced during my interview with President Nasser that he is not an extremist who dreams of driving Israel into the sea. He indicated that he would make peace, but only on the condition that Arab rights and national dignity be respected and that Israel be compelled to make restitution to the refugees, abandon its expansionist aims, and obey the U. N.'s resolutions concerning its borders. Unfortunately, however, just as Israeli leaders make extremist statements, such as expanding from the Nile to the Euphrates, so, too, Nasser is inclined to make fiery speeches in the fashion of a cheerleader shouting to his football team, "Rip 'em and tear 'em up."

In the Middle East climate of fear, suspicion, hatred, and exacerbated nationalism engendered by the tragic cycle of injustice, violence, retaliation, and counterretaliation, it is now practically impossible for the leaders on either side to pursue a policy of moderation leading toward reconciliation and peace. In order to retain the support and leadership of their peoples, they are compelled at the very least to make belligerent speeches. Yet the situation is not hopeless. President Eisenhower, having won the confidence of the Arab world by his courageous and principled stand against the Israeli-Franco-British attack on Egypt, could now enforce a just and enduring peace between Israel and the Arab world involving concessions by both sides. If Eisenhower is of the stuff of which great American Presidents are made, he will continue to ignore Anglo-French and Zionist pressures and save the Middle East from Communist conquest by default, by his adherence to fundamental American principles.

By some strange logic which can be understood only by acceptance of the premise that two wrongs make a right, Henry Hazlitt, in your February 9 issue, argues that Israel should not be compelled to obey the U. N. by evacuating the Egyptian territory it occupied by armed force unless there is also an immediate withdrawal of Russian troops from Hungary and from every other satellite nation where they are not wanted. How can the Arabs be expected to see any justice in the argument that they should, again and again, be called upon to pay the penalty for the crimes, follies, or fears of the western powers? In 1947 when Truman and Stalin jointly pressured the U. N. to establish the State of Israel by partitioning Palestine, the argument which won approval for this act of injustice against the Arab population was the need to make restitution to the Jews for their abominable treatment by Nazi Germany. Today, the Arabs are in effect being told, even by such good men as Senators KNOWLAND and BRIDGES, that because the West dared not risk war with the Soviet Empire by supporting the Hungarian fighters for freedom, the Arabs must be penalized, lest it be said that Israel was punished for her aggression while Soviet Russia goes unscathed.

COMPARISON WITH CHINA

History never repeats itself so exactly that its lesson is clear for all to read. Yet, there is a close and tragic similarity between the situation in the Arab Middle East today and that of the Chinese Far East a generation ago. In 1922 Sun Yat-sen turned to Moscow for help in the liberation of China after the Western Powers had refused to relinquish the imperialist privileges, rights, and powers which kept China impotent, divided, economically backward, and poverty stricken. By so doing, he unwittingly opened the door to Communist infiltration, subversion, and armed attack which, a quarter of a century later, delivered China over to Communist tyranny and converted her into Moscow's most reliable and subservient satellite.

Anyone well acquainted with the tragic drama of modern China realizes that we could have prevented the Communist conquest if we had given real backing to Chiang Kai-shek and the forces of moderate, western orientated nationalism he represented. Yet, there is a similar obtuseness with regard to the Arab world where it is not yet too late.

The great danger which confronts us, and of which there is reason to hope that President Eisenhower is aware, is that by treating Nasser as if he were a Communist agent or ally, which he is not, we shall force him to

become one, or alternatively, destroy him and make way for a Communist dictator.

Vice President NIXON has truly stated that history will give eternal credit to our President and Secretary of State for choosing the hard road of principle. If President Eisenhower were to revert under pressure to the support of Britain, France, and Israel, right or wrong, National Review, together with most of the American press, must take its share of the blame for pushing the Middle East into Moscow's welcoming arms.

New Deal a Mere Tyro at Spending

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks, I would like to insert a reproduced column by Fulton Lewis, Jr. The article appeared in the Pittsburgh Sun-Telegraph of Monday, March 18, 1957. This newspaper by the way, is owned by the Hearst interests who supported Preident Eisenhower in 1952 and 1956.

I do not happen to be an admirer of the customary journalistic gyrations of Mr. Fulton Lewis, Jr. In this instance, however, he makes some very pointed observations on "the case of the $72 billion budget." The article follows:

NEW DEAL A MERE TYRO AT SPENDING

(By Fulton Lewis, Jr.)

Thumbing back to the profligate days of the late spendthrift Franklin D. Roosevelt brings a sort of fond nostalgia.

We screamed, we protested, we castigated his administration for wanton waste and financial vandalism. Actually, we never had it so good; at least, not since.

And if Mr. Eisenhower, Bermuda-bound aboard his sunny cruiser, is wondering at the nettle bed of public opinion in which he finds himself as a result of his $72 billion budget, a casual review of the spending records of his predecessors might enlighten him.

Actually, the $72 billion covers only the budgeted spending.

The real figure is approximately $86.2 billion which is more than any President has ever spent in all history, excepting only the last 2 years of World War II, when the Nation was fighting on war fronts all over the world.

The late F. D. R. came into office on March 3, 1933. Thus, the first full year, probably chargeable to him, was the one ending June 30, 1934.

The plowing under of little pigs, leaf raking, pump priming, NRA, WPA, CCC, PWA, and assorted other alphabetics were in full swing. Total spending for that year ending June 30, 1934: $6,694,000,000.

THE NEW DEAL

The New Deal record thereafter:

1935	$6,521,000,000
1936	8,493,000,000
1937	7,756,000,000
1938	6,792,000,000
1939	8,858,000,000
1940	9,062,000,000

The following year was full time defense production:

1941	$13,262,000,000

Then the war:

1942	$34,046,000,000
1943	79,407,000,000
1944	95,059,000,000
1945	98,416,000,000

The slackoff and 2 years under the Republican-controlled 80th Congress:

1946	$60,447,000,000
1947	39,032,000,000
1948	33,068,000,000

Two Truman peacetime deficit-spending years:

1949	$33,068,000,000
1950	39,507,000,000

KOREAN WAR

Mr. Truman's Korean police action (total American casualties, 155,000):

1951	$44,058,000,000
1952	66,407,000,000
1953	74,274,000,000

Finally, Mr. Eisenhower:

1954	$67,772,000,000
1955	64,570,000,000
1956	66,386,000,000
1957 (estimated)	80,200,000,000
1958 (proposed)	86,200,000,000

The deluge of acrid mail flooding the Congress is impressive—no signs of instigated campaigns.

It is clearly the spontaneous outpouring of basic individual protest by irate, grassroots citizens.

And it is not against Congress, but the President himself. The responsibility for the budget is his, and efforts to shed that responsibility are unconvincing to the general public, as his own White House mail shows—if his palace guard would ever let him know what happens in the mailroom.

More of the Questions Asked by Congressman Doyle and Answers Thereto From Department of Defense re Military Discharges and Dismissals; Carl Vinson Appoints Special Subcommittee of Armed Services Committee re H. R. 1108

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. DOYLE. Mr. Speaker, I know that you and all the Members of this great 85th Congress will be pleased to know that Hon. CARL VINSON did on the 19th day of February 1957 name and appoint a special subcommittee of the House Armed Services Committee as follows:

The CHAIRMAN. Now, members of the committee, a very important bill has been introduced by our distinguished colleague, Mr. DOYLE, H. R. 1108, Navy discharges, a matter to which he has given considerable thought and study. And he made a statement on the floor of the House in regard to it yesterday. And I am asking that that bill be referred to a special subcommittee. I am appointing as a subcommittee to handle that bill Mr. DOYLE, chairman; Mr. HUDDLESTON, of Alabama; Mr. KITCHIN, of North Carolina; Mr. BRAY, of Indiana; and Mr. GUBSER, of California. They will take full charge of that bill and make an investigation and report back to the full committee. Speaker SAM RAYBURN has previously referred the Doyle bill to the Armed Services Committee.

The legal counsel appointed for the committee was distinguished military lawyer Russell Blandford, who when in the Military Establishment, was frequently a member of the military review boards.

You will be pleased to know that this special subcommittee has already had several informal meetings to discuss and deliberate upon the subject of the objectives of H. R. 1108 and of the procedures and processes by which the said special subcommittee would proceed. Growing out of these several informal meetings, I am able to state that it appears all members of said subcommittee are unanimous in a position that something must be done. As one result of our discussion we have asked the Department of Defense several more important questions and have also urged that all questions previously made be not only answered but hurried along for the purpose of our earliest possible consideration and study; that we may be prepared for the public hearings to be held by the committee on H. R. 1108 and the subject of military discharges when we first begin our public hearings. You will realize, Mr. Speaker, that these several informal meetings, limited to members of our special subcommittee, and our legal counsel, have been in special consideration for the public hearings that we might be able to treat this important subject promptly and thoroughly and also constructively. In this connection, I wish to say that in drafting the bill I not only had the able assistance of the House legislative counsel, but I myself recognize that it should be improved to the fullest extent by virtue of the joining of many minds in legislative content on this important subject.

So, we are already agreed on certain changes in the text of H. R. 1108, which I am very pleased to recognize as very substantially beneficial to the objectives I originally had in mind.

You will also be pleased to know that almost 30 Members of the House have adopted H. R. 1108 as their own and have filed the same under their own authorship. I am pleased that they have done so for not only did each Member file said bill in their own name but about a dozen other Members of the House have also asked to appear at the public hearings and testify for the worthy objectives sought. We now plan to begin public hearings not later than the first week in May. This certainly will give the Defense Department and all the Departments of the Military Establishments involved, more than ample time to have their specific answers to our inquiries and study back to our attention. We have asked the same to be completed on their part by April 15.

The very considerable number of comments and letters we have already received from throughout our Nation, together with expression of interest from

the national offices of the several veterans organizations, all indicate the manifest interest and concern there is from thousands of American homes where some member thereof has received less than honorable discharge for some error or violation or act which was never a crime. I will say that in preparing for and submitting H. R. 1108, I never intended to make it easy for one who had been discharged from the military with less than honorable to establish the fact before the military review boards that he had rehabilitated himself in civilian life. But I would hope and pray—and still do—that the many thousands of American boys who have been discharged with less than honorable discharges and have never been convicted of a crime in the Military Establishment, could find some reasonable procedure in the Military Establishment for the man who has rehabilitated himself in civilian life to prove that he had lived an exemplary life for at least 3 years so that the stigma attached to him can be removed and also help him to obtain dignified employment worthy of his natural ambitions and abilities.

And, Mr. Speaker, from my many years of study of this subject, which is vital to the total concern of military establishments as well as to every American home from which an American lad has already gone into the military, or may in the future go, I am convinced that just, practical, reasonable, and constructive changes can be made in the law and practices of our Defense Department in this subject without there being any degree of disciplinary problems evolving, which would reasonably overcome the greater benefits of the objectives of H. R. 1108.

Calling your attention to the fact that on the 18th day of February 1957 in our CONGRESSIONAL RECORD, at pages 1938 and A1192, I inserted a few of the 23 questions which I asked the Department of Defense about military discharges and included therein their written answers thereto, I am pleased to present further of my 23 questions and the answers thereto as given me by the Department of Defense.

DEPARTMENT OF THE NAVY (NAVY)

4. Question: Using layman's language, please give me the basis of each type of discharge or separation issued in 1945 and each type of discharge or separation issued under present regulations. Give the number of each type of discharge or separation issued in 1945, and the number of each type of discharge used under present existing regulations.

Answer: (a) The following types of discharges or separations were in effect for the Department of the Navy in fiscal year 1945:

Type	Criterion	Number issued
Honorable	Fidelity, obedience and excellent service.	
Under honorable conditions	Satisfactory conduct and performance of duty but not sufficiently deserving or meritorious to warrant honorable discharge.	[1] 177,542
Undesirable	Unfitness, desertion without trial, trial and conviction by civil authorities, or fraudulent enlistment.	4,570

Footnote at end of table.

Type	Criterion	Number issued
Bad conduct	Approved sentence of general or summary court-martial. Appropriate for offenses which warranted separation as part of punishment but which were not of sufficiently grave nature to warrant dishonorable discharge.	8,619
Dishonorable	Approved sentence of general court-martial. Appropriate for serious offenses warranting dishonorable separation as part of punishment.	283

[1] Total honorable and under honorable conditions discharges issued. Statistical information for fiscal year 1945 does not include separate figures.

DEPARTMENT OF THE ARMY

4. Question: Using layman's language, please give me the basis of each type of discharge or separation issued in 1945 and each type of discharge or separation issued under present regulations. Give the number of each type of discharge or separation issued in 1945, and the number of each type of discharge used under present existing regulations.

Answer: (a) The following types of discharges or separations were in effect for the Department of the Army (including Air Force) in fiscal year 1945:

Type	Criterion	Number issued
Honorable	Honest and faithful service.	567,814
Discharge (blue)	Administrative discharge without characterization of service awarded through board action for reasons of unfitness, undesirableness, etc.	15,085
Dishonorable	Approved sentence of a general court-martial for serious offenses warranting dishonorable separation as a part of punishment.	9,634

(b) The following types of discharges or separations were in effect for the Department of the Army in fiscal year 1955:

Type	Criterion	Number issued
Honorable	Honest and faithful service.	619,194
General	Satisfactory conduct and performance of duty but not sufficiently deserving or meritorious to warrant an honorable discharge.	18,584
Undesirable	Issued pursuant to board action for such reasons as unfitness, misconduct, disloyalty or homosexuality.	14,566
Bad conduct	Approved sentence of a general court-martial for offenses which warrant separation as part of punishment but which were not of a sufficiently grave nature to warrant a dishonorable discharge.	965

DEPARTMENT OF THE AIR FORCE

4. Question: Using laymen's language, please give me the basis of each type of discharge or separation issued in 1945 and each type of discharge or separation issued under present regulations. Give the number of each type of discharge or separation issued in 1945, and the number of each type of discharge used under present existing regulations.

Answer: (a) The following types of discharges or separations were in effect for the Department of the Air Force in fiscal year 1955:

Type	Criterion	Number issued
Honorable	Honest and faithful service.	175,400
General	Satisfactory conduct and performance of duty but not sufficiently deserving or meritorious to warrant an honorable discharge.	7,200
Undesirable	Issued by administrative action under conditions other than honorable, i. e., unfitness, misconduct or disloyalty.	6,200
Bad conduct	Issued pursuant to the sentence of a general or special court-martial as prescribed, in the Manual for Courts-Martial, United States 1951. It is a discharge under conditions other than honorable. Bad-conduct discharges are appropriate for offenses that warrant separation as included punishment but are not of a sufficiently grave nature to warrant dishonorable discharge.	2,400
Dishonorable	Issued only be approved sentences of general courts-martial and appropriate for serious offenses warranting dishonorable separation as included punishment.	1,000

(b) Appropriate information for fiscal year 1945 is reflected in paragraph 4a, Department of the Army, page 4–1. The Air Force was included in the Army at that period of time.

DEPARTMENT OF THE NAVY (MARINE CORPS)

4. Question: Using laymen's language, please give me the basis of each type discharge or separation issued in 1945 and each type of discharge or separation issued under present regulations. Give the number of each type of discharge or separation issued in 1945, and the number of each type of discharge used under present existing regulations.

Answer: (a) The types of discharges utilized by the Marine Corps in fiscal years 1945 and 1955 are the same, with the single exception noted in the answer to question 3. However, statistical data pertaining to the number of the various types of discharges issued is not available prior to fiscal year 1949.

(b) The following types of discharges or separations were in effect for the Marine Corps in fiscal years 1949 and 1955:

Type	Criterion	Number issued	
		Fiscal year 1949	Fiscal year 1955
Honorable	Excellent service; proficient in rating, industrious, and possessing good conduct record.	18,873	22,023
General	Satisfactory conduct and performance of duty but not sufficiently deserving or meritorious to warrant honorable discharge.	521	1,407
Undesirable	Pursuant to board action for unfitness or misconduct.	626	1,991
Bad conduct	Approved sentence of general or summary court-martial. Appropriate for offenses which warrant separation as part of punishment but which were not of sufficiently grave nature to warrant dishonorable discharge.	832	2,069

Type	Criterion	Number issued: Fiscal year 1949	Number issued: Fiscal year 1955
Dishonorable	Approved sentence of general court-martial. Appropriate for serious offenses warranting dishonorable separation as part of punishment.	165	127

DEPARTMENT OF DEFENSE

7. Question: How many discharges have been reviewed by each of the military services by the respective Boards of Review of Discharges and Dismissals? List each type of discharge or separation given during each of the last 5 years.

Answer:

(a) The total number of discharges reviewed by the separate Discharge Review Boards are as follows:

TO JUNE 30, 1955

Total discharges reviewed

Service:	
Army	49,399
Navy	36,968
Air Force	12,506

(b) For the results over the 5-year period ending June 30, 1955, see attached sheets immediately following.

DEPARTMENT OF DEFENSE

9. Question: Have any discharges been changed as prayed for by the Board for the Correction of Military Records or the Board for the Correction of Naval Records?

Answer: Yes; 561 discharges or separations have been changed during the 5-year period July 1, 1950, to June 30, 1955.

DEPARTMENT OF DEFENSE

17. Question: In considering the review of an adverse type of discharge upon the request of the dischargee, is any consideration given by the reviewers to exemplary behavior subsequent to the date of discharge on the part of the petitioner?

Answer: Generally speaking, the answer is "No." However, in those borderline cases where the Board considers that the dischargee, on the basis of his record of service alone, could have been properly and equitably discharged with a higher type discharge, the Board may be influenced in its decision to change or not to change the awarded discharge by his record since discharge.

Tabulation by service of type discharges and number issued for fiscal years 1945 and 1955:

	Army	Navy	Air Force	Marine Corps
Fiscal year 1945:				
Honorable	567,814	177,542	(1)	18,873
General				521
Honorable conditions				
Discharge (blue)	15,085			
Undesirable		4,570		626
Bad conduct		8,619		832
Dishonorable	9,634	283		165
Total	592,533	191,014		21,017
Fiscal year 1955:				
Honorable	619,194	173,251	175,400	22,023
General	18,684	6,675	7,200	1,407
Honorable conditions	(2)			
Discharge (blue)	(2)			
Undesirable	14,566	3,529	6,200	1,901
Bad conduct	965	3,127	2,400	2,669
Dishonorable	2,546	76	1,000	127
Total	655,955	186,658	192,200	28,127

Total	989,868	33,966			26,196	9,161	3,749

[1] Total "honorable" and "under honorable conditions" discharges issued. Statistical information for fiscal year 1945 does not include separate figures.
[2] The Air Force was included in the Army this period of time.
[3] The figures under fiscal year 1945 represent fiscal year 1949 as statistical data prior to 1949 not available.
[4] Not utilized by Department of the Army in fiscal year 1955.

DEPARTMENT OF THE ARMY

Army Board for Correction of Military Records Action. Discharges reviewed and action taken during the period July 1, 1950, to June 30, 1955:

Discharge cases reviewed	**3,423**
Dishonorable, bad-conduct discharges, and dismissals changed to better type of discharges or separations under honorable conditions	**171**
Undesirable discharges (blue), and resignations changed to better-type discharges or separations under honorable conditions	**[1] 20**
Total discharges or separations changed	**191**
Total discharges or separations denied	**3,232**

[1] An approximate figure.

DEPARTMENT OF THE NAVY

Board for Correction of Naval Records Action. Discharges reviewed and action taken during the period July 1, 1950, to June 30, 1955:

Discharge cases reviewed	3,946
Dishonorable, bad conduct discharges, and dismissals changed to better-type discharges or separations under honorable conditions	278
Undesirable discharges and resignations changed to better-type discharges or separations under honorable conditions	25
Total discharges or separations changed	303
Total discharges or separations denied	3,643

DEPARTMENT OF THE AIR FORCE

Air Force Board for Correction of Military Records Action. Discharges reviewed and action taken during the period July 1, 1950, to June 30, 1955:

Discharge cases reviewed	773
Dishonorable, bad conduct discharges, and dismissals changed to better type discharges or separations under honorable conditions	48
Undesirable discharges (blue) and resignations changed to better type discharges or separations under honorable conditions	19
Total discharges or separations changed	67
Total discharges or separations denied	706

(b) The following types of discharges or separations were in effect for the Department of the Navy in fiscal year 1955.

Type	Criterion	Number issued
Honorable	Excellent service: proficient in rating, industrious and possessing good conduct record.	173,251
General	Satisfactory conduct and performance of duty but not sufficiently deserving or meritorious to warrant honorable discharge.	6,675
Undesirable	Pursuant to Board action for unfitness or misconduct.	3,529
Bad conduct	Approved sentence of general or summary court martial. Appropriate for offenses which warrant separation as part of punishment but which were not of sufficiently grave nature to warrant dishonorable discharge.	3,127
Dishonorable	Approved sentence of general court martial. Appropriate for serious offenses warranting dishonorable separation as part of punishment.	76

Indicative of the seriousness of the subject matter of H. R. 1108 is found in the 38th National Convention of the American Legion held at Los Angeles, Calif., September 3–6, 1956, for page 55 of the report of the special committee, appointed on December 16, 1955, by the then national commander, consisting of Franklin Riter, Salt Lake City, Utah, chairman; John J. Finn, Alexandria, Va.; and Carl C. Matheny, Detroit, Mich.; Resolution 23 by said committee was unanimously adopted as follows, to wit: Provide for congressional investigation at the earliest possible time into the activities of the Boards of Review of Discharges and Dismissal and the Boards for the Correction of Military Records, for the purpose of ascertaining whether or not said Boards have been carrying out the intent of Congress in their creation.

Chief Peter Graves, Outstanding Citizen

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mrs. KNUTSON. Mr. Speaker, one of my most beloved constituents and one of the most noted and capable Indian chiefs of our lifetime, just recently passed away. I was always happy at an opportunity to talk with Peter Graves, the chief and elder statesman of the Red Lake Indian Reservation. I wish to pay tribute to this great and good man who thought with his heart.

I relied heavily on Peter Graves' advice and had the greatest respect for his opinions and his profound wisdom and judgment. He was naturally most interested in the improvement of conditions, the culture and the well-being of his people, but not to the exclusion of other considerations such as their relations with the white people in his area and the problems of the area as a whole. He worked and fought continually for his high goals and I intend to continue to promote legislation which will benefit Peter Graves' people and fulfill his dreams for them and the better world he hoped for.

An article appeared in the Bemidji Daily Pioneer on March 15 concerning this venerable man. Under leave to extend my remarks, I request permission to place this article in the RECORD.

The article follows:

PETER GRAVES, PROMINENT IN RED LAKE INDIAN AFFAIRS MANY YEARS, DIES AT AGE 84

Peter Graves, for many years a leader in Red Lake Reservation affairs, died at the Redlake Hospital about 7 p. m. Thursday. He would have been 85 on May 20. Although he was not a chief, he was popularly known by the title.

A lifetime of work among his people led Graves to judge of Indian court, various positions with the United States Indian Service at Walker and at Redlake and with the Red Lake Band of Chippewas.

At the time of his death Graves was secretary-treasurer of the Red Lake Chippewa Tribe and served as secretary of the Red Lake Fisheries Association at Redby.

Funeral services will be held at Redlake at 2 p. m. Sunday at St. John's Episcopal Church, of which he was a member. Rev. Thomas Phillips will officiate and burial, under supervision of the McKee Funeral Home, will be made in the Redlake Episcopal Cemetery.

Mr. Graves is credited with making an outstanding contribution in his efforts to preserve the heritage of the Red Lake Chippewa Indians. Without financial backing of any kind, and with only the courage of his convictions, he was a constructive force among his people and consistently fought for what he believed to be their rights and welfare. He was largely instrumental, as secretary-treasurer of the Red Lake fisheries organization, in building that business up to a revenue of $305,000 gross per year. Also, largely due to his efforts, the Red Lake Diminished Reservation was saved along with some $10 million. As an assistant clerk for the Leech Lake Agency, he opposed the claims of the Minnesota Chippewa against the Red Lake Band. He was accused of opposing the claims because of his governmental position, and he resigned rather than have his integrity impeached.

On the merits of his life as a leader, with a story of accomplishment for his people, he was awarded the 1940 Indian Achievement Medal of the Indian Council Fire at Chicago, Ill.

Peter Graves was born on May 20, 1872, at Redlake. After attending grade school, he worked on a farm. He learned carpentry and cigarmaking, and in 1889 played baseball in Hazleton, Pa., with the old Middle States League.

He attended the Lincoln Institute at Philadelphia, Pa., and graduated with the class of 1889. He was connected with the Redlake Agency at various times as interpreter, chief of police, and assistant clerk until 1919. In 1936 he was appointed judge in the Indian Court.

From 1920 until the time of his death he was secretary-treasurer of the General Council of the Redlake Band of Chippewa Indians, which he helped found in 1918, and from 1929 was secretary of the Red Lake Fisheries Association at Redby. In 1918 he was awarded the Certificate of Merit at the dedication of the Bemidji Airport.

Mr. Graves' first wife, nee Mary Fairbanks, died in 1912. In 1915 he married Susan Wright, who survives him, at Walker.

Surviving are 2 sons, Joseph, of Redlake, and Clyde, of Redby, and 8 daughters, Mrs. Isabel G. Strong, Mrs. Charles Beaulieu, Rose Graves, and Mrs. Alvin Oliver, all of Redlake; Mrs. Richard Auginash and Mrs. Carl Carlson, of Redby; Mrs. Mary G. Petite, of Duluth; and Mrs. Francis DuHaine, of Grand Marais. Fifty-one grandchildren and 76 great-grandchildren also survive.

World Famous Westminster Choir Makes Friends for America Abroad

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the Westminster Choir College of Princeton, N. J., in the Fourth New Jersey District which I have the honor to represent, has just returned from 5 months abroad during which 22 countries were visited.

Regardless of where this world famous choir appeared it was greeted enthusiastically.

The Department of State has made available to me some of the reports on this great choir which it received from its officers overseas. I give one or two of them here for the information of my colleagues.

The 84th Congress adopted important legislation—Public Law 860—making cultural exchange programs a permanent part of our foreign policy.

It is encouraging to know that this program is working out so well, especially so since I was coauthor of the legislation with Senator HUBERT H. HUM-

PHREY, of Minnesota. This legislation ranks with the Fulbright Act and the Smith-Mundt Act in the importance of the activities being carried on under its authority. These programs will undoubtedly grow in importance and value through the years.

I include here an editorial and an article from the Trenton Evening Times together with the reports on the tour furnished me by the Department of State. The State Department reports are from Karachi, Pakistan; Calcutta, India; and Naha, Okinawa.

The editorial and article follow:

[From the Trenton Evening Times of] March 12, 1957]

WESTMINSTER CHOIR, HOME FROM WORLD TOUR, REPORTS EVERYBODY LOVES MOZART

PRINCETON.—With musical groups carrying JAZZ throughout the world to unqualified raves, it seems strange to find that during a recent globe-circling singing tour, "everybody loved Mozart."

Yet, according to John Finley Williamson, founder of the Westminster Choir College of Princeton, that describes the reactions of listeners in the 22 countries visited by the Westminster Choir over the past 5 months. The tour, which was sponsored by the American National Theater and Academy, came to an end on March 1 after having carried music to 228,000 people throughout the world.

According to Williamson, who conducted the singers, the trip was the first round-the-world tour ever made by any choir. Consisting of 45 male and female singers the choir's repertory ranged from the classical through the whole realm of contemporary and folk music. It included Negro spirituals and an authentic Navaho war dance.

The bulk of the tour was in Asia where concepts of music are supposedly quite different from those of the West. Nevertheless, Williamson, describing the choir's reception recalled, "It was just wild in every country; they just kept on applauding."

Mozart's vesper programs were the favorite selections throughout the tour. The next most popular work was Testament of Freedom, by Randall Thompson, former head of Princeton University's music department and currently professor of composition at Harvard.

ANTA, the tour's sponsor, is the appointed agency of the State Department for the administration of President Eisenhower's fund for cultural relations. In Okinawa, the choir drew an audience of 20,000, the largest outdoor audience of the tour.

The singers who appeared in Japan, Cambodia, India, Ceylon, Iran, Yugoslavia, and 16 other countries, traveled 40,000 miles since the tour began on October 1 of last year. Williamson points out that "we didn't go as a choir representing any particular religion. We tried to appeal to a universal philosophy in which the love of poetry and a melodic line is basic."

Williamson, a resident of Princeton, founded the Westminster Choir in 1921 and the Westminster Choir College in 1926. The choir has sung in 122 concerts with the New York Philharmonic Orchestra over the past 18 years.

Reflecting on the warm reception that the choir received throughout the world, Williamson declared that "music is a bridge of friendship between peoples."

[From the Trenton Evening Times of March 18, 1957]

EVERYBODY LOVES MOZART

Unity of opinion and universal affection are encountered so rarely in the discordant and troubled world of today that the emotions are deserving of mention when they are expressed. The Westminster Choir College of Princeton returns from 5 months abroad, during which 22 countries were visited, with an encouraging report. Notwithstanding impressions to the contrary, it is possible to find a spirit of unity. Regardless of where the singers appeared—whether in India, Cambodia, Ceylon, Iran, Yugoslavia, or 16 other countries—everybody loved Mozart.

How could it be otherwise? The report is a tribute to the good taste and the good sense of many people in many lands. Furthermore, it stands as refutation of the somber conviction of Antony that "The evil that men do lives after them; the good is oft interred with their bones." After all, Mozart has been dead these 166 years but his power to inspire appealing emotions in men survives.

VISIT OF WESTMINSTER CHOIR TO KARACHI VERY SUCCESSFUL—FULL PROGRAM ARRANGED WITH ONE COMMERCIAL, ONE RADIO, AND NUMEROUS PUBLIC APPEARANCES

The Embassy is happy to report that the visit of the Westminster Choir to Karachi was an unqualified success. Its members arrived in two groups on February 10; the first, at 1:40 p. m., the second, at 11 p. m. As the Ambassador was leaving the following morning for East Pakistan, his reception in honor of the director and members of the choir had to be scheduled for 5: 30 p. m. on the 10th, even though half of the group was unable to be present. The reception was attended by the 40 members of the intercollegiate body, the entire membership of the American University Alumni Club and local government officials who had assisted in arranging the program. Toward the end of the reception, the choir sang two songs for the guests and was warmly applauded.

The department had authorized $60 for entertainment for the choir in the form of a tea to be given by the intercollegiate body. The tea was scheduled at the United States information center at 5 p. m. on February 11. There being no language difficulty, the members of the choir and those of the board mingled freely from the start and obviously enjoyed talking with each other. At the conclusion of the tea the choir graciously consented to sing two numbers in a specially constructed tent in the gardens. The cultural affairs section of the Embassy believes that the contact made with this group will be of continuing value in the execution of its program. The young men and women making up the board are representatives of the student organizations of all the colleges and universities of Karachi. Each is a leader in student activities and an influential member of his school. Observers report that never have Embassy relations with this group been so firm as they are at the present time.

At 8:30 p. m the choir was entertained at a reception in the home of Mr. Z. A. Bokhari, Director General of Radio Pakistan. Here was provided an opportunity to meet and listen to many of Pakistan's leading musicians.

On February 12, the director and members of the choir were guests of honor at a luncheon given by Mr. Amjad Ali, Minister of Finance and president of the Pakistan American Society.

The same evening they gave their commercial concert at the Hotel Metropole under the auspices of the Women's International Club. Approximately 600 people attended this concert, including the Prime Minister, Mr. H. S. Suhrawardy. The members of the intercollegiate body and five members of the Pakistan Industrial Fair Committee were invited guests of the Embassy.

Following the concert, Mrs. Goshi Bhappu, manager of the Hotel Metropole, entertained at a buffet supper for the performers.

On February 13, the Deputy Chief of Mission gave a small luncheon in his home in honor of Dr. and Mrs. Williamson. From 2 to 3:30 p. m the choir recorded a program at Radio Pakistan that was broadcast the following day. After the recording, they were given tea and entertained with eastern music played by the Radio Pakistan musicians.

For the first time, the Embassy planned outdoor concerts for a visiting group, and the results were spectacularly successful. On February 13, from 6:30 to 7:10 p. m., standing before a specially constructed shell on the terrace of the museum in Frere Park, a large public garden in Karachi, the choir presented 40 minutes of song to an audience of approximately 1,200 people. Announcements, before and during the performance, were given both in English and Urdu. Some member of the audience sat on the grass to listen, but the majority stood, seemingly willingly, for the entire show. One member of the intercollegiate body arrived with a group of students from his college; the principal of the New Town Girls School escorted a group of her students. The remainder of the audience ranged from workingmen in their everyday clothes to Pakistani families, obviously dressed for the occasion.

At 9 p. m. the same night, the choir, under the auspices of the Pakistan American Society, gave another half-hour performance, this time at the Pakistan Industrial Fair. The Fair's regular advertisement had listed the Westminster Choir as an added attraction to its regular program of snake charmers, sword swallowers, and grave sitters. The crowd drawn by the choir was so large that the regular acts had to be almost forcibly dissuaded from proceeding onto the platform to interject their shows between the songs of the choir. Approximately 5,000 people laughed uproariously with the Laughing Song and cowboy yells resounded through the fairgrounds to the accompaniment of Get Along Little Dogie. This audience was completely different from any the choir had reached before and appeared to be the most responsive.

At 10 p. m., Dr. and Mrs. Williamson and the students composing the choir were guests of honor at a dinner given in the residence of the Prime Minister. Mr. Suhrawardy, who had planned to leave the commercial concert at Hotel Metropole at intermission, had been so impressed with the first half of the program that he remained to the end, and played havoc with his schedule that evening. At the conclusion of the program, he came to the platform and warmly congratulated the director and the choir, thanking them for the pleasure they had given him. At that time he extended his invitation to the dinner. At his residence the choir sang again, Mr. Suhrawardy joining with them to sing Old Black Joe.

The entire group comprising the troupe was invariably courteous and cooperative. The manner and demeanor of the students made a very favorable impression on the Pakistani students with whom they came in contact. Dr. Williamson, in addition to his ability as a conductor, endeared himself to everyone meeting him. His remarks in connection with the program were, because of their sincerity and simplicity, almost as effective in achieving the cultural objectives of the United States as was the program of song itself.

All sections of the Embassy and the USIS contributed to make the visit of the Westminster Choir in Karachi a success. Only through cooperation and concerted effort could the splendid results attained have been achieved.

For the Ambassador:

ARTHUR Z. GARDINER,
Deputy Chief of Mission.

WESTMINSTER CHOIR SCORES AN UNQUALIFIED SUCCESS IN ITS 2 APPEARANCES BEFORE OVER 1,000 ENTHUSIASTIC STUDENTS AT THE NEW EMPIRE THEATER IN CALCUTTA, FEBRUARY 4, 1957

The Westminster Choir gave 2 concerts in Calcutta on Monday, February 4, 1957, at 3 p. m. and 6 p. m., and achieved what no other musical group devoted to the presentation of western music has been able to do: the evoking of enthusiastic and laudatory response from the 2 audiences composed almost entirely of college students. The program, designed to interest Indians not yet initiated into western music, aroused the interest of the audience by providing them with a stimulating musical experience. The "House full" sign which went up long before the second concert began testified to the interest of the students of Calcutta in seeing and hearing a group of their American contemporaries and to the indisputable fact that an attraction of this kind has real appeal here in Calcutta.

Miss Padmaja Naidu, Governor of West Bengal, who attended the 6 p. m. concert, was lavish in her praise of the choir's singing, and said, in a letter to the director written shortly after the performance, that she could not permit the Westminster Choir to leave India without expressing her personal thanks to them. She added that in her opinion musical programs of this kind which were directed to the young people of India were a great help in the establishment of good will and friendship.

USIS Calcutta decided to utilize the services of the choir in reaching, as far as possible, the students of the various colleges in the city. With this in mind, the usual channels of publicity were disregarded and all efforts were concentrated on the college campuses. Student secretaries of 20 colleges were personally approached, and in every case they expressed their willingness to cooperate in publicizing the concert at their own college. In order to limit the two concerts to students, identification vouchers were given to the secretaries to be distributed to those interested in obtaining tickets. These vouchers were exchanged at the New Empire Theater for tickets priced at 4 and 8 annas. By putting the price of the tickets within the range of the financially inpoverished college students we were able to attract a great many who ordinarily could not afford to attend similar programs. The supply of vouchers was soon exhausted, and secretaries continued to call into the office requesting many more.

On Sunday afternoon, February 3, at 4 p. m., USIS gave a reception for the choir members and invited to meet them about 200 student leaders and professors. Held in the USIS library, the reception proved a great success as the individual members of the choir circulated among the Indian students and talked informally with them. At the conclusion of the party the choir sang two numbers which were very well received and turned out to be excellent advance publicity (see press clipping attached as enclosure No. 1).

Both of the concerts were outstanding successes due not only to the musical talents of the members of the choir but also to the experienced and expert direction of Dr. James Williamson, the director. Dr. Williamson's informal approach made him easily understood and his friendly manner established excellent rapport with the students. Calcutta has only the highest praise for Dr. Williamson and the choir which performed so nobly under his direction. As the curtain descended and the concerts concluded to ringing applause, there was no doubt that the choir had succeeded in charming and captivating the audience (see enclosures No. 2 and 3).

Aside from the fact that the Westminster Choir musically made a hit, USIS Calcutta would like to point to the one major achievement which in effect constituted the true success of the choir in this city: the fact that over a thousand men and women of college age atended the concerts. To have reached this particular group and to have impressed them to the extent that they expressed their profound gratitude to the USIS for providing this opportunity characterizes the really effective contact of a musical event such as this.

Photographs are attached as enclosures Nos. 4, 5, 6, 7, and 8.

GORDON H. MATTISON,
American Consul General.

VISIT TO OKINAWA OF WESTMINSTER CHOIR

On November 27 and 28, 1956, the Westminster Choir, of Princeton, N. J., gave a series of three concerts on Okinawa. The response, both in attendance and in audience appreciation, was very favorable, and the consular unit feels more strongly than ever that the itineraries of all such organizations in the future should include Okinawa.

The Westminster Choir was not originally scheduled to appear on Okinawa during its tour of the Far East. Okinawa was added to the itinerary at the request of the Consul General, Naha.

On the evening of November 27 the choir gave its first concert at the Kokuei Kan, Okinawa's largest motion picture theater, which was made available free of charge for the occasion by its owner, Mr. Kotaro Kokuba. After a short introductory speech by the consul general the choir sang a varied program ranging from Bach and Mozart through Grieg to contemporary American music. The encores consisted of Negro spirituals.

The audience was composed largely of Okinawans, including Chief Executive and Mrs. Jugo Thoma and other officials. Most of the consular staff also attended this concert. Unfortunately, the demand for tickets far exceeded the supply, so that many Okinawans who wanted to attend were unable to do so.

The following afternoon, at the University of the Ryukyus in Shuri, the choir gave an outdoor concert that had been added to the schedule only a short time before the choir arrived here. It would be difficult to overstate the impact of this concert. (For the opinion of one experienced observer of Ryukyuan-American relations, see enclosure No. 1.) A huge crowd of high school and university students stood for hours listening to the music. Some of them had been brought many miles by bus to attend the concert. The Japanese language press commented most favorably in news stories, and one paper, Ryukyu Shimpo, printed an editorial welcoming "America's cultural mission." Pictures of the performance were printed in the following day's papers.

A third concert was held the same evening at Kadena Airbase for an American audience and was also very well received.

More events of this kind are needed on Okinawa owing to the lack of any indigenous threater or musical aggregation worth mentioning. People here, both American and Okinawan, have a keep appetite for cultural events like the Westminster Choir, partially, it may be assumed, because of the scarcity of entertainment of this sort. As a result, such performances have a greater impact than they might in a more cosmopolitan area.

Since tours under the aegis of the State Department should serve to further foreign relations, primary emphasis should be placed on performances before Okinawan audiences, while Americans should look to other agencies for satisfaction of their entertainment needs.

ACTION REQUESTED

It is respectfully requested that Okinawa be included in the itinerary of all musical groups to bring the Far East under State Department or other auspices, with the understanding that State Department endorsed performers will appear primarily before Okinawan audiences.

For the Consul General:

RICHARD W. BOEHM,
American Vice Consul.

Our Sacred Constitution

EXTENSION OF REMARKS
OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. BURDICK. Mr. Speaker, the following address was given at the Women's Patriotic Conference on National Defense held January 31, February 1 and 2, by Mr. Kent Courtney, editor, writer, and lecturer. It appeared in Guardians of Our American Heritage, and was sent to me by Nagene Campbell Bethune its founder-president. The address points up the reverence with which we should regard our Constitution and all patriotic Americans will find in it new inspiration, and I believe will be moved to a higher devotion to our Nation's traditions:

ADDRESS BY KENT COURTNEY

Ladies and gentlemen, I am holding aloft for all to see an old-fashioned kerosene lantern. The kind that is used around the farm.

I like to think that our Constitution is like an old-fashioned lantern. It sheds a steady light and the light glows out in all directions.

The glass, which might be called the Bill of Rights, protects the flame of liberty from the cold winds of socialism and centralized tyranny.

Now, here is a modern flashlight. It casts a bright beam. But the beam only shows in the direction which the person holding the flashlight wishes. If a Socialist and world-government man is in charge of holding the flashlight of governmental policy and we follow his leadership, we may be led down the path that turns evermore to the left, and we may end up back into a dictatorial tyranny from which our Founding Fathers rose to glorious independence.

True American patriots can pick out the best path, the safest path to the preservation of our independent Republic by that old-fashioned lantern which points out the hidden dangers of centralism and tyranny: the sacred Constitution.

Now we begin our story of the sacred Constitution:

The date is November 11, 1620.

The scene is aboard the *Mayflower* at Cape Cod. For it was in 1620, with the *Mayflower* compact, that we began a splendid history of writing important documents of self-government, of independent government, a history of written constitutions that led to the signing of the Declaration of Independence and the adoption of the United States Constitution. And all of these documents recognized the importance of our Creator. The *Mayflower* compact recognized God in these ways. It started off, "In the name of God. Amen." It continued, "Undertaken for the glory of God and the advancement of the Christian faith"; and the pledge at the end stated, "Solemnly and mutually in the presence of God and one another."

Today we find ourselves tagged with the term "conservative." We are called patriots.

These names properly describe our wish to conserve the Constitution and its guaranty of personal liberty and limited government.

But the document we wish to preserve was and is the most revolutionary document in the history of governments. As a piece of literature governing men, it is second only to the New Testament of the Bible in its far-reaching effects on the daily lives of every man on earth.

Yes; the Constitution of the United States is revolutionary. It has the most revolutionary idea in the history of man.

The spirit of this idea recognizes that the forerunner of the Constitution is the Declaration of Independence and the many other documents that were developed by the Colonies in the period from 1620 to 1776.

This spirit of the Constitution is a revolutionary one which connects the central ideas of the Declaration of Independence and the first 10 amendments of the Constitution.

This central revolutionary idea is that men derive their power directly from God, that they allocate a little of this power to the State government, that the States in turn gave some of their power to the Central Government through the written and defined limitations of the Federal Constitution, but that all powers not specifically granted to the Central Government should remain with the States or with the people.

This is the most revolutionary idea in government since the beginning of written history.

And we who believe these things are rightly called patriots.

And now I quote from one of the noblest American patriots of them all who said, "Be not deceived by strange voices heard across the land decrying this old and proven concept of patriotism. From the beginning it has been the main bulwark of our national strength and integrity."

He continues: "Seductive murmurs are arising that (patriotism) is now outmoded by some more comprehensive and all-embracing philosophy * * * that there is a higher destiny for us under another more general flag. * * *

"Listen not to these voices * * * be they from the high and mighty or the lowly. Heed them not.

"Repudiate them in the market place, on the platform and in the pulpit. * * * Be proud to be called patriots * * * or nationalists or whatever you will if it means that you love your country above all else and will place your life if need be at the service of your flag."

And ladies and gentlemen, that is a statement that all of us here can surely support. And to it I wish to add my personal pledge to support the ideals of the man I have just quoted, that greatest of American generals—Douglas MacArthur.

Van Doren's Home Run Halted at First Base

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. ROGERS of Texas. Mr. Speaker, on Sunday, March 17, 1957, there appeared in the Hereford (Tex.) Brand, one of the fine newspapers of the Southwest, an editorial which clearly and concisely points up one of the grave dangers to the individual-incentive philosophy, which is so essential to the private-enterprise system of a free government. This paper is published and edited by Mr. James M. Gillentine and has long been recognized as one of the outstanding newspapers serving our section of the country. I ask unanimous consent that the editorial referred to be made a part of the CONGRESSIONAL RECORD.

The editorial follows:

THE RULES ARE DIFFERENT THESE DAYS—VAN DOREN'S HOME RUN HALTED AT FIRST BASE

A quarter of a century ago it was sudden death to the political future of any candidate who announced for office on the Socialist Party. Today, however, the economy of the United States is based on theory far more liberal than any advocated by the Socialist group.

The case of Charles Van Doren, Columbia University professor and alltime big money winner on TV quiz programs, perhaps best illustrates the extent to which socialistic tendencies have spread through application of taxation. Van Doren won $129,000 in his 14 appearances and, unfortunately, got a $100 salary raise at the university, bringing his annual income to a level of $133,450. Of this total amount, Van Doren, according to Associated Press reports, will keep only $28,795. In addition, he has written a book and should royalties amount to a sizable sum he can expect little in monetary returns. Accountants estimated that he will realize only $3 from the recent university raise.

While Van Doren's case is an extreme one, it is definitely along the same level faced by millions of American citizens today. People who have long advocated soaking the big corporations are today paying higher utilities bills and higher retail prices as a direct result of taxation on these various companies.

Socialism, according to textbooks, curbs initiative. In other words, what incentive does Professor Van Doren have to write another book? In the face of prohibitive taxes, why should a man double his business or farming activities? Will this new type of economy, as we have been taught since childhood, sooner or later gnaw away at our national vitals until we fall apart from apathy and decay?

These are some of the things people should think about before they make up their minds how they will vote. Instead of "How much can I get?" the time has come to consider "How will my country prosper?"

It is like playing baseball under a new set of rules. The runner is not always out, although the throw beats him to first base. To assume a wrong conclusion because of the old rules can be disastrous. In Professor Van Doren's case, we would say he hit a home run, but could advance no further than first base.

Operating under the profit system, the United States has established itself as the world's leading Nation. Our farms grow more, our factories have greater production and our people maintain the world's highest standard of living. It is possible that our new form of economy may make us even more productive and happier. Only time will tell. The important thing right now is not to kid ourselves into thinking that we are still playing under the old rules.

New Republicanism

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article which appeared in the Washington Post and Times Herald today, March 20, 1957. The article entitled "Weeks, on TV, Willing To Cut Budget, Insists, at Hearing, on Keeping It All," follows:

TO PARE OR NOT TO PARE—WEEKS, ON TV, WILLING TO CUT BUDGET, INSISTS, AT HEARING, ON KEEPING IT ALL

Members of a House Appropriations Subcommittee yesterday said Commerce Secretary Sinclair Weeks backed down under questioning from his televised suggestion that Congress could cut his budget by $50 million.

"He wants us to leave it all in the bill," Representative PRINCE PRESTON, Democrat, of Georgia, told the House. PRESTON said Weeks supported every item in the new budget, including grant funds that he characterized Sunday as Federal handouts to the States.

PRESTON said his subcommittee, called Weeks for questioning after he said on a broadcast Sunday that Congress could knock $50 million out of the $804 million budget for his agency by eliminating projects it authorized last year that the Department did not request.

"They have added that on to what we asked for," Weeks said on the telecast. "And I think if they want to start economizing, they can start right there."

PRESTON said the subcommittee, which had heard from Weeks earlier, recalled him yesterday to ask where the cuts could be made.

"Upon direct questioning, he didn't want to take it out at all," PRESTON said. "So here we have a Cabinet member saying one thing to a TV audience for public consumption and another thing when he comes before a congressional committee."

According to PRESTON, Weeks told the group what he referred to was $42.5 million in airport aid and $7.5 million for construction of forest roads. Authorization for this spending was passed by Congress last year and President Eisenhower included funds to finance the work in his budget for the new fiscal year.

PRESTON accused Weeks of "trying to put the monkey on the back of Congress" in discussing possible savings in President Eisenhower's record $71,800,000,000 budget.

He pointed out that the Commerce Department is seeking 28 percent more funds than Congress allowed the agency for the current year.

A Measure of Doubt

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. MULTER. Mr. Speaker, the following article by Gerald W. Johnson, which appeared in the New Republic of March 18, 1957, is worthy of the attention of our colleagues:

THE SUPERFICIAL ASPECT—A MEASURE OF DOUBT

(By Gerald W. Johnson)

Well, Israel has been battered to her knees. She has surrendered her natural defenses and hereafter will exist at the pleasure of the United Nations and specifically that of the United States. She has been compelled to subscribe to the theory that the United Nations will defend her in the future, although it has not defended her in the past; and she had as an excuse for accepting this theory only the word of Mr. Eisenhower and Mr. Dulles. Even that is

qualified. They do not say that they will defend Israel, only that they will consider her case.

To a superficial observer this appears to be a bit rough on Israel but no doubt there are underlying motives imperceptible on the surface. As to these, one can only guess, but presumably one is the necessity of maintaining respect among foreigners for the high moral tone of Washington. Nations less elevated morally must not be allowed to get the impression that the United States will ever condone sin, except when the sinner, like Russia, is too strong to be chastised; or, like Egypt, is too tough; or, like India, is sinning only against infidels who do not believe even in the Old Testament, to say nothing of the New.

Israel comes under none of these exceptions. Israel is weak. Israel has always been polite to this country. Israel prays to the same God who receives the devotions of Mr. John Foster Dulles. Therefore Israel, like Britain and France, must be dealt with sternly, lest she begin to get ideas. After all, it is not easy in this sinful world to maintain respect for a high moral tone. The pure in heart are always being misrepresented by the morally stunted, and steps must be taken to counteract the effect.

For instance, there was the matter of the lavish hospitality we extended to the eminent slaveowner from Saudi Aradia. Some have seen in that a sign of approbation, if not of slaveowning, at least of the general attitude of the Arabians toward this country, which has been, and is, one of studied insolence. It goes without saying that a government taking pride in its elevated moral tone cannot approve of either slavery or insolence. The Arabian was anointed with goose grease for no such reason, but strictly as a matter of business. He is in position, if he were offended, to make trouble for the oil industry which considers itself entitled to the tender care, not only of Vice President NIXON since the days when he was a Senator, but also of the Texas-dominated opposition.

What the morally stunted seem incapable of understanding is the fine distinction that the administration draws between a business deal and a moral attitude. No important industry was threatened by the squashing of Israel, so the administration in that case was free to take the highest moral tone and happily availed itself of the opportunity. As touching Egypt, India, and Russia, circumstances are entirely different. Taking a high moral tone with them would upset any number of applecarts, which is not to be thought of.

There is, of course, the danger that Israel itself contains a considerable number of the morally stunted, who may take the view that they might as well be hanged for the old sheep as for the lamb, and who therefore may desert morality for business. If they are destined to be squashed in any event they may decide that they would stand a better chance under the Russans than under the Arabs, and so throw out Ben-Gurion and his pro-western government.

Recent events strongly indicate that if we, or anybody else, should supply the Israeli with, say, $100 million worth of the harrows of hell, there would shortly be no Arabian problem in the Middle East because there would be no Arabs. It has undoubtedly occurred to the Kremlin that this is a possible business deal, but the Kremlin needs cash which the Israeli do not have. Yet the record of Israel is strengthening the belief that if anyone would accept, say, 30-year, 3 percent bonds, the interest would be paid and the bonds retired when due, which would be a good investment, as international deals go. If Ben-Gurion should be thrown out, the Kremlin might stretch a point.

This creates a measure of doubt that the administration has clearly perceived the truth in this situation. Perhaps this, too, instead of being entirely a moral issue, is affected with a business interest and should be approached with the same moral elasticity we have displayed in dealing with Egypt and India, to say nothing of Russia. It would be a neat irony of history if the event should prove that an administration priding itself on the equal devotion it has exhibited to the two principles of moral elevation and business is business, had confused the two at last and applied moral principle to a business deal. The effect would be terrific; but it would not be the first time that some such irony has crept in, as for example, at Munich in 1938, to reduce the pure in heart to confusion and chagrin.

Rosy Partnership Claims Fade in Light of Facts

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I am privileged to provide for the information of the Members of this House, an excellent editorial from the March 16 edition of the Modesto (Calif.) Bee opposing the proposed partnership plan on the Trinity River project in California:

ROSY PARTNERSHIP CLAIMS FADE IN LIGHT OF FACTS

The Pacific Gas & Electric Co. has disseminated advertisements claiming the so-called power partnership at the Trinity project would save the taxpayers and water users $310 million as against what the cost would be if the Federal Government built the power facilities.

The utility contends the Government would gain $165 million net from Pacific Gas & Electric Co. payments for the use of falling water, plus $145 million in Federal, State, and local taxes which the company would pay during the 50-year amortization period.

As the late Al Smith was wont to say, let's look at the record.

The $145 million tax figure is $10 million more than is figured by the Secretary of the Interior.

But in any event it is not the company which pays the taxes. It is the customers, every time they pay their light and power bills. Taxes are allowed in rates set by the State public utilities commission and the company merely acts in fact as the tax collector. So how would the company save the people anything in taxes?

Likewise the $165 million which the company says it would pay the Government over what the Government would get from selling power also would come from the rate payers. Who else?

The customers of the Pacific Gas & Electric Co. should be mighty unhappy at the prospect of paying this huge bill which the Pacific Gas & Electric states otherwise would be paid by the Government.

The fact is the Trinity project like all reclamation undertakings will be paid for by the water and power users and not the taxpayers.

In addition the repayment schedule for the Trinity project at the end of 50 years under Government operation shows an anticipated surplus of $114 million which would be the people's money and they would own the powerhouses.

Many Federal agencies, such as the Mare Island Navy Yard, are customers of the Central Valley project. If they cannot buy Trinity power from the Government they will have to buy it from the Pacific Gas & Electric Co. at an additional cost of $71 million. Wherein is the saving here?

What the Pacific Gas & Electric Co. is striving for, of course, is to wipe out every vestige of publicly generated power in California. How this would benefit the people is illustrated in the case of the Sacramento Municipal Utility District.

Sacramento Municipal Utility District buys power from Central Valley project. Were there no Central Valley project power, Sacramento Municipal Utility District would be forced to purchase its energy from the Pacific Gas & Electric Co.

Assuming the Pacific Gas & Electric Co. charged the same wholesale rate which applies to some 10 California cities now buying power from the utility, Sacramento Municipal Utility District would have to pay $4 million more annually than it pays Central Valley project, or $200 million over the Central Valley project payoff period.

And without the competitive yardstick of public power, the outlay might be even more.

To make a saving to the people out of the proposed phony partnership would take the financial wizardry of a Ponzi.

Chairman Durham, of Joint Atomic Energy Committee, Talks About Demonstrable Facts—Commissioner Vance, of Atomic Energy Commission, Talks About Undemonstrable Opinions

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the St. Louis (Mo.) Post-Dispatch on March 17, 1957:

SUPERIORITY WE DO NOT PROVE

It is unfortunate that the grave issue of atomic power has to be argued in the unrealistic terms which have become the official line of Chairman Strauss in the Atomic Energy Commission. These terms were echoed by AEC Commissioner Vance in his dispute with the chairman of the Joint Congressional Atomic Energy Committee, Representative CARL T. DURHAM, of North Carolina.

Representative DURHAM was urging that the Federal Government spend more money to get more and bigger atomic powerplants built swiftly. Commissioner Vance countered by declaring that the United States is "definitely ahead of the rest of the world in the technological development of atomic power."

Mr. DURHAM was talking about demonstrable facts—specifically, atomic powerplants. Commissioner Vance was talking about undemonstrable opinions—specifically, his opinion that the United States could build better atomic powerplans than Russia or England if it were building them, which it isn't.

The opinion of someone else equally as well qualified to speak may be exactly the opposite of Commissioner Vance's. Many qualified authorities, indeed, do hold the opposite opinion, including AEC Commissioner Murray and several distinguished members of the Joint Committee: Senator Anderson, of New Mexico; Senator Gore, of Tennessee;

Representative Holifield, of California, and Representative Price, of East St. Louis.

Whatever the comparable merit of our technology relative to that of the Soviets and the British, it is languishing now in a static state, while theirs is flourishing in an active one. They are learning things they never expected to learn, by building life-size atomic powerplants and operating them.

There is an unearned increment of learning that comes of boldly putting one's knowledge into practice as we in this country are largely failing to do, and that is the nut of the controversy.

Some Fresh Air in the Fish and Wildlife Service

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. REUSS. Mr. Speaker, for the last 4 years conservationists have been greatly worried at the steady erosion in morale of the Fish and Wildlife Service of the Department of the Interior. This erosion has been due to the attempts by the administration to destroy the merit system in the Fish and Wildlife Service, and to replace its top career civil servants with political spoilsmen.

For more than 30 years prior to 1953, the Fish and Wildlife Service and its predecessor, the Biological Survey of the Department of Agriculture, were 100 percent career civil service agencies. Staffed with men and women of unusual skill and devotion from top to bottom, the Fish and Wildlife Service was an effective and dedicated branch of the Government.

THE SPOILS SYSTEM

Then early in 1953, shortly after President Eisenhower took office, began the degradation of the Fish and Wildlife Service. The top 4 positions in the Service—Director, Associate Director, and 2 Assistant Directors—were placed under schedule C, which meant that the career civil servants holding these positions were fired and replaced by political appointees.

The effect of this raid on the Service was utterly destructive of morale within the Service, and recruitment from without. In quick succession at least 8 top career conservationists of the Fish and Wildlife Service resigned, including Dr. Paul Hickie, Acting Chief of the Branch of Wildlife Research; Dr. Albert Day, Assistant to the Director; his assistants, Clarence Cottam and Dr. John L. Kask; Dr. Logan Bennett, Chief of the Branch of Wildlife Research; Dr. Durward Allen, Acting Branch Chief; Dr. Joseph Linduska, also Acting Branch Chief; Ernest Swift, Assistant Director.

CONGRESS RECOGNIZES THE SERVICE

The deterioration in the morale of the Service was quickly reflected in a deterioration in administration. The Service capitulated to the duck-baiting interests. It allowed an unprecedented horde of leases in the wildlife refuges. It let the program of acquiring wildlife refuges drag to a halt.

Congress last August 8, 1956, enacted into law Public Law 1024, the Fish and Wildlife Act of 1956, designed to restore the morale and effectiveness of the Fish and Wildlife Service. The act specified that the Fish and Wildlife Service should contain only two political appointments, the Assistant Secretary of Interior for Fish and Wildlife and the Commissioner of Fish and Wildlife, both to be appointed by the President with Senate confirmation. The intent of the act was that all lesser positions in the Fish and Wildlife Service should be restored to civil service.

THE NOVEMBER 27, 1956, LETTER

Hardly had the Fish and Wildlife Act of 1956 become law when the Department of the Interior moved to subvert it. Earlier, in 1953, the Department had taken the 4 top Fish and Wildlife positions from civil service and put them under the spoils system. Now, by a letter to the Civil Service Commission of November 27, 1956, signed by B. Otis Beasley, Administrative Secretary, Department of the Interior, the Department requested that 12 career positions in the Fish and Wildlife Service be taken from civil service and made political appointments. Of these 12 positions, 6 were vital line civil-service positions in the Fish and Wildlife Service—Director, Associate Director, and Assistant Director of the Bureau of Commercial Fisheries and of the Bureau of Sport Fisheries and Wildlife, respectively. This request would have increased from 4 to 6 the number of key Fish and Wildlife Service officials to be removed from civil service.

On January 24, 1957, I called to the attention of this House the Interior Department's further onslaught against the civil service. I pointed out the happy omen that on January 2, 1957, Ross Leffler, a nationally known conservationist, had been appointed Assistant Secretary for Fish and Wildlife, and expressed the hope that Mr. Leffler would, upon learning the facts, rescind the Interior Department's November 27, 1956, letter and instead fill the top positions according to the merit system.

The next day, January 25, 1957, I wrote Mr. Leffler. After referring to the November 27, 1956, request of the Interior Department, my letter stated:

If the Civil Service Commission concurs in this request, it seems to me, such action would not only deal a severe blow to the morale of the career men in the Fish and Wildlife Service and hamper future recruitment, but go counter to the intent of the last Congress when it passed Public Law 1024, approved August 8, 1956.

CIVIL SERVICE RESTORED

I have now been informed that on March 13, 1957, a second letter has gone forward signed by B. Otis Beasley, Administrative Secretary, Department of the Interior, to the Civil Service Commission, withdrawing the request of November 27, 1956, for the transfer of 12 positions, including the 6 key-line positions referred to above, from the Civil Service to political appointment. Instead, the letter asks that only three positions be placed under schedule C—special assistant and administrative assistant to the Assistant Secretary for Fish and Wildlife, and special assistant to the Commissioner of Fish and Wildlife. Since both the Assistant Secretary and the Commissioner are properly political appointments, confirmed by the Senate, the request for 3 confidential assistants to these 2 political officials, on other than a civil-service basis, is justified. The March 13, 1957, letter furthermore abolishes the 5 political appointments set up in 1953.

The net result of all this is a complete victory, for the time being at least, for the conservationist principle in the Fish and Wildlife Service. Under the March 13 letter, all key-line positions in the Fish and Wildlife Service, up to the purely political level of Assistant Secretary and Commissioner, are placed under civil service, which is where they should be. There is still a need for the enactment of H. R. 3650, a bill to prevent further tampering with these positions, but for the moment the civil-service principle has been vindicated.

I want to give full credit to Assistant Secretary Ross Leffler for redeeming the integrity of the Fish and Wildlife Service. Although he has been in office for only a few weeks, he has already gone far to restore morale in the Service. I know that Secretary Leffler will find those of us who have criticized the Fish and Wildlife Service in the bad old days now happily past will be equally quick to applaud and help him in his forward-looking administration of the reinvigorated Service.

The American Legion Has a Birthday

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. AVERY. Mr. Speaker, March 15 through 17 marks the American Legion anniversary.

For the past 38 years the American Legion has been dedicated to service for God and country. It would take many pages to list the outstanding achievements rendered by the American Legion posts and their auxiliary units throughout the Nation. The following article appeared in the March 1957 issue of the Sunflower Legionnaire, the official publication of the Kansas department of the American Legion. This article makes an excellent presentation of the beginning of this great patriotic organization. I believe that every Member of Congress can gain inspiration from this article.

The article follows:

March 15 to 17, 1957, marks another milestone in the life of the American Legion. It's the 38th anniversary, and the 39th birthday—counting 1919 as the first.

During the past 38 years, since the origin of the American Legion, in Paris, France, it has been said many ways and many times, what a great achievement has been accomplished—what a splendid contribution has

been made to America and the American way of life—what a great program of assisting those who cannot quite do it for themselves; veterans, their widows and orphans, and the youth of America.

The American Legion has been favorably editorialized, in most of the leading press of the Nation, during all these past 38 years, and it is with pleasure that we present the following editorial from the Chicago American of Chicago, Ill.:

"Observance this week of the American Legion's formation 38 years ago brings to mind the singular coincidence of its birth with the advent of an era marked since then with almost uninterrupted world crisis.

"The Legion was created opportunely, for during this period it has proved itself a factor of great strength in upholding our country's ideals and liberties.

"The years that followed 1919 tested the fortitude, loyalty, and capacity for sacrifice of Americans more deeply and sternly than the First World War.

"During the ordeals of social and economic uncertainties, of a still more devastating world conflict, the Legion has stood stanchly for America's freedom and strength.

"The Legion no longer is young. But it is just as virile, as dedicated, as before. Its patriotic action has never wavered. Its service as a rallying point of Americanism remains constant.

"Our greatest assurance of national safety and progress will always rest upon the readiness of our men to undertake the works of peace as well as the duties of war.

"The Legion has done it admirably for 38 years. America is proud of the Legion, and profoundly grateful to it."

As stated at the beginning, it's been told many ways and many times—it's an old story, which bears repeating on each anniversary, until the end of time—and here it is, in extremely brief form:

Two men lie wounded on hospital beds in Paris, France, while the shooting was still going on, during World War I. One of these gentlemen was Theodore Roosevelt, Jr., and the other a Sergeant Patterson who was later killed in action.

While convalescing, these two men often talked about what might be done to cement the friendships gained through war, after they returned home to peace.

Time went on, the armistice was signed, and Roosevelt invited a group of 20 men to have dinner with him at the Allied Officers' Club in Paris. This was on February 16, 1919, and much discussion occurred during the evening. However, the general concern was about the postwar attitude of the average soldier toward extreme political radicalism, for even then communism was making inroads in several countries, including America.

Questions and opinions flew back and forth across the table that evening of February 16. Out of the talk came the definite agreement that a veterans' organization should be started; that it must be all inclusive of those who served in the American uniform, at home as well as overseas; that it must be a civilian and not a military organization, and must be composed of man-to-man membership, devoid of rank. Also, it must formulate principles of its own. It must be democratic in form.

It was agreed that at least two organization meetings must be arranged, one in France, and one in the United States. Roosevelt was the man chosen to come to America to undertake preliminary steps toward the assembling of a meeting there.

The meeting in France was held in Paris, March 15, 1919, with Bennett Clark, of Missouri, being nominated for chairman of the caucus, and it was a somewhat hectic day as it was the first time in many a long month the delegates had been able to express their opinions without any curb of military rule.

March 16 was Sunday. The men who met on Saturday as strangers began to be acquainted. More and more delegates were arriving, and Monday saw the Cirque de Paris, a sizable amusement hall, arranged with unit banners in American convention style, to accommodate the caucus.

From there on, the caucus proceeded about as most American conventions—reports of the committee on constitution, selection of a name for the organization, etc.

The astounding item so much worth repeating, is the fact that from this meager beginning—a thought in the minds of two men—the American Legion has grown into the largest organization of its kind in the world, and in all history.

Lt. Col. Theodore Roosevelt, 26th Infantry, 1st Division, had been gassed and wounded at Soissons. However, he would live to perform many public services, to be Assistant Secretary of the Navy, to be a candidate for Governor of New York, to be Governor of Puerto Rico, and Governor General of the Philippines, and to serve once more with the First Division in World War II, and to die as a brigadier general in Normandy with the second AEF on July 12, 1944.

Although Roosevelt, more than any other, contributed enthusiasm, hard word, and persuasive inspiration, many others were highly effective in the formulation period.

In fact, the best answer to the question, "Who started the American Legion?" is "Nobody and everybody."

It simply sprang from the comradeship of arms, the strongest tie that binds men together.

At the Paris caucus, the selection of a name created much heated debate. A majority favored Legion of the Great War as first choice; Veterans of the Great War as second. Alexander Woollcott objected to the word "legion" as savoring slightly of the silk stocking. Whereupon, a 1st Division delegate remarked that he had fought alongside the Foreign Legion, "and if the fat medico thinks those babies are sissies, he is just nuts." Woollcott, a pleasingly plump medical corps sergeant in those days, subsided. The delegates adjourned for lunch, returned less stubbornly determined, and adopted the American Legion.

It was determined the next meeting would be the St. Louis caucus, to be held in the Shubert-Jefferson theater at St. Louis, May 8, 1919.

The two caucuses had avoided declarations of policy on controversial subjects. Those were held in abeyance until there should be a properly constituted convention, representative of all veterans who wished to join, selected by democratic process. The American Legion had been started, organized, chartered by Congress, and explained to the veterans and the public for what it was, an all-inclusive, voluntary, civilian organization of men who had served in uniform in World War I. It belonged to every veteran who wanted to be part of such an organization. An honorable discharge was the passport to membership.

America had seen veterans' societies before, but never before so large a group, without military rank or titles, without distinction as to length, location or circumstance of service, if it was honorable.

Thus, the American Legion had been launched on a career which would have its full share of influence on the life, the character and the history of this great Nation.

Former President Truman Says Free World Must Close Ranks To Meet New Russian Threat

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article written by former President Harry S. Truman entitled "Free World Must Close Ranks To Meet New Russian Threat." The article which appeared in the St. Louis Globe-Democrat of March 18, 1957, follows:

FREE WORLD MUST CLOSE RANKS TO MEET NEW RUSSIAN THREAT

(By Harry S. Truman)

I think the time has come for the free nations of the world to close ranks to combat resurgent Russian expansionism in the face of the brutal revival of Stalinism. We need bold and decisive moves to make more effective our grand strategy of common security. Our preoccupation with recent Middle East events has tended to obscure the existence of explosive conditions in other strategic areas of the world.

The more we deal with the Russians, the more we realize that they cannot or will not change their determination to dominate the world. It would be sheer folly for us to assume that we can look to anyone other than our alliance of free nations for our security.

The meeting this week at Bermuda between the President and the British Prime Minister I hope will bring about the restoration of British-American solidarity based on mutual understanding and closer cooperation. It is equally important that we also achieve the fullest understanding and cooperation with the French, and I was glad to see the President take the first step in that direction with Prime Minister Mollet during his recent visit here.

But it is my judgment that the meeting at Bermuda should be followed by consultations with our friends and allies everywhere. We should do this for two reasons:

First, we need to restore the machinery of continuous, close consultation so that we do not risk again the dangers of division among us.

Second, we need constantly to review and reappraise our methods and measures for dealing with international communism.

NARROW ESCAPE

I hate to think how narrow was our escape from disaster in the Middle East when we became separated from our allies. However, we have gained a little time there, and United Nations emergency forces are on patrol. The Russians have been duly warned. But, as yet, we have solved nothing fundamental, and the threat of war still remains. Until the causes that led to the recent crisis are promptly and wisely dealt with, there will be no peace in the Near East or elsewhere around the world.

The Russian Communists are skilled troublemakers and are ceaselessly engaged in fomenting and exploiting fear and trouble everywhere.

I think we have to be especially vigilant in Germany. The ruthless crushing of Hun-

gary's bid for freedom shows that Russia will not stop at mere intrigue, conspiracy, and subversion but will embark on military intervention in cynical disregard of its obligations to the United Nations and world opinion. This points up the danger that exists to the West in similar moves the Kremlin can make at any time it suits its purpose in East Germany.

If the Russians should launch a military operation in East Germany, similar to the one in Hungary, then the security of West Germany and Western Europe will be immediately threatened.

AFRICA DANGER SPOT

I think there is a second danger zone in Africa. With all Americans, I welcome the statesmanship which brought about the establishment of the independence of Ghana. For Africa, where there are many explosive situations, is a prime target for Russian penetration and exploitation. Russian intrigue with certain political adventurers in Africa is already at work trying to exploit the rising tide of nationalism and growing racial tensions there. Russia is after the vast resources of the African Continent for its own benefit.

And there is a third area in which we face immediate and serious trouble—and that is in southeast Asia and in the Far East, which are in political ferment, and where newly independent nations are being preyed upon by the Communists. There is a grave development in Indonesia where the rich natural resources and remarkable skill and aptitudes of the people have already exposed them to Communist encroachments. The hope of democratic development there is threatened, exposing at the same time the free nations of Australia, New Zealand, the Philippines, and Thailand. For Indonesia is so situated geographically that it could serve as a springboard for intrigue and subversion against this perimeter of free nations by the Communist masters of China and Russia.

In view of these great dangers, I hope the President at Bermuda will henceforth exercise personal leadership in the conduct of our foreign policy. It is impossible, under our system of government, to conduct foreign policy successfully by delegation of the President's personal powers and responsibility.

No matter how able the individuals to whom the President may attempt to delegate his powers, it usually leads to confusion and misunderstanding with foreign governments and with our own Congress and people.

When I called in Dean Acheson to name him Secretary of State, I said, half seriously, to him: "Dean, you are going to be Secretary of State, but you will not be the President. I have no intention of being my own Secretary of State at any time, but under the Constitution only the President has the power to make foreign policy. I will exercise that power. I expect you to come to me with your recommendations. I will make the final decisions which the Department is to carry out."

CARRIED OUT POLICY

This policy, faithfully carried out, helped reduce the margin of misunderstanding both with foreign governments, which were kept closely informed, and the Congress, which was always consulted and briefed in strict bipartisanship.

Therefore, beginning with Bermuda, the President has an opportunity to resume personal control which is so essential to restore to the United States its position of world leadership of the free nations.

At Bermuda, I hope the President will undertake to bring Britain back into full partnership for our mutual benefit and security. I cannot subscribe to the contention of some of our experts and self-designated prophets that Britain and France are in decline and no longer can be depended upon as major powers. These experts would have us abandon historic friendships on the ground that we must now seek out new and rising nations with which we could build more firmly for the future. If I remember my history correctly, the Duke of Wellington and Lord Russell foretold the end of Britain in the 1840's.

This was sheer nonsense in the 1840's. It is sheer nonsense now. The greatness of Britain and France call for no defense from me or anyone else. Their contributions to democracy, industry and science, apart from their culture, are so enormous as to assure their continuance as important factors in civilization for centuries to come.

They have come through two terrible wars at enormous sacrifices with their democratic institutions and their cultures standing firm. We should and will do everything in our power to give them encouragement and support, as much for our own sakes as for theirs.

HISTORIC MOVE

A historic development is now taking place in Europe—the putting into action of an age-long dream of an economically united Europe in which Britain and France would play important roles. Many of the historic trouble spots in Europe would vanish once this dream becomes a reality.

This would help us to encourage other evolving areas of the world to make use of their resources for their own benefit and the common interest of the peoples of the world.

Let no nation take advantage of the awakening of Asia and Africa for purposes of aggrandizement and exploitation, or set into motion new alignments of power and rivalry. In a world of so much undeveloped resources and riches, there is room and opportunity for all nations to thrive and for all peoples of all colors to achieve their rightful dignity and place among men.

At the Potsdam Conference in 1945, Stalin turned to Churchill in my presence, after the British Prime Minister had made some comment about the Pope, and asked cynically, "How many divisions has the Pope?"

By that one question Stalin betrayed the crassest ignorance of history, misjudging the real sources of power—the mind and the spirit of men.

Twelve years have passed since Stalin asked this question, and the threat to the free world by the Russians is still with us. History is on the side of the men who believe in the power of the spirit. But until the Russian people do something about their own freedom, we, and the free world, will have to maintain the necessary divisions. That is the only condition the Communist rulers appear to respect.

Pacific Gas & Electric Co.'s Advertising Campaign

EXTENSION OF REMARKS

OF

HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. MOSS. Mr. Speaker, under leave to extend my remarks, I should like to direct special attention to the Pacific Gas & Electric Co.'s current advertising and public-relations campaign in California, aimed at depriving the residents of my State and district of the full benefits of their vested rights in the Trinity River project authorized by the 84th Congress.

The current high-priced, high-pressure advertising campaign of the Pacific Gas & Electric Co. to sell its so-called partnership plan to the people of northern California in connection with the Trinity River development is the most brazen I have ever seen undertaken by anyone at any time. It is akin to an attempt to convince millions of people that white is really black after all.

The ads are loaded with distortions of fact, half truths, false assumptions, and outlandish juggling of figures. They are cunningly designed to justify the taking away of a most valuable public resource, and allow its resale to the people at a fat profit to the utility company.

I do not propose to sit silent while the Pacific Gas & Electric Co. attempts to sell the people of my district this partnership fairy tale about the Trinity project. Actually if the company's plan goes through, the Government would pay all but a small part of the entire project, the Pacific Gas & Electric Co. would get the lion's share of the benefits and the user would pay in full for those benefits.

The Pacific Gas & Electric Co. makes much of the claim that if it is permitted to utilize the falling waters of the Trinity for the production of power, it will pay large sums in State, local, and Federal taxes and that other water developments, such as the San Luis project, can be built in whole or in part with the benefits gained under the Pacific Gas & Electric Co. plan. This is a deliberate effort to fool and delude the power and energy users of California.

What shocks me most about the Pacific Gas & Electric Co.'s deceptive advertising campaign, however, is that it is being conducted at the expense of the power-buying public. The utility company does not actually lay out a dollar in this vast and expensive advertising campaign.

Not only does the homeowner, farmer, and businessman using electricity pay for these ads, but if the Pacific Gas & Electric Co. plan goes through, every single item of cost involved in this partnership venture will also be paid by the consumer.

I am convinced that the Pacific Gas & Electric Co.'s design on the Trinity project foreshadows something even bigger—a future attempt on the part of this utility to take over the federally owned Central Valley project power facilities from Shasta Dam in the north of California to Friant Dam in the south.

If the Pacific Gas & Electric Co. is permitted to buy the falling water of the Trinity, it will be a reversal of more than 50 years of Federal power policy. Ever since the Reclamation Act of 1902 it has been the established policy of the United States that electric power and energy be disposed of to consumers in such manner as to encourage its widespread use at the lowest possible rates consistent with sound business principles. Additionally, the policy has been to give preference for public power to public agencies, municipalities, and cooperatives.

If the Pacific Gas & Electric Co. partnership plan is approved, current preference provisions of the law could not be complied with and preference agencies would be required to pay $86 million more for power and energy over the 50-

year period of repayment than under Federal development of the project.

In the event that the San Luis unit of the CVP now proposed for authorization is constructed, preference customers would have to pay a total of $118 million more for energy.

The CVP, of which Trinity is an integral part, was not constructed for profitmaking purposes, but to meet the needs of the people of the Sacramento and San Joaquin Valleys for water, flood control, and low-cost electric power. Water rates are set by the Federal Government according to the ability of the farmers to pay. Sale of public power helps keep these rates down.

As presently operated the CVP is an integrated system of dams, reservoirs, canals, distribution systems, powerplants, and powerlines, all designed for comprehensive development of the Central Valley. Pacific Gas & Electric Co.'s so-called partnership would set apart one unit of the CVP, the Trinity project, and operate it on a different basis from all the rest.

This is neither efficient nor sensible. To permit the Pacific Gas & Electric Co. to get away with its scheme to grab Trinity power would mean the end of public power in California, and probably in the Nation.

There is another point I should like to mention. Under the P. G. & E. proposal, the project plan of operation would provide for releases of water to maximize the power and energy production. The proposed contract includes a very detailed schedule of releases designed to produce the maximum amount of power and energy for integration into the company's overall power system.

Theoretically, the water needs of the project would retain priority. However, any time the Federal Government could not meet the schedule of releases for power because of interference with water consumptive use requirements, the Federal Government would have to pay the company penalties for such noncompliance with the schedule.

I have strongly urged the citizens of the Third Congressional District not to be deluded by the specious promises of the P. G. & E., but to ascertain for themselves the facts in the Trinity River controversy before it is too late to preserve their rights.

Irish Heritage: Its Contribution to Civilization and Its Future

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent address delivered by James A. McGravey, director of public relations, assistant professor, Merrimack College, North Andover, Mass., at the annual St. Patrick's banquet and dance conducted by division 8, Ancient Order of Hibernians, and the Rev. James T. O'Reilley, auxiliary, on March 16, 1957, at the Central Catholic Auditorium at Lawrence, Mass., entitled "Irish Heritage: Its Contribution to Civilization and Its Future."

Dr. McGravey, in conjunction with his many other duties as a professor at the college, has been a student of Irish history and is well qualified to talk on this interesting subject:

No civilization will be long remembered that has not a tradition, and tradition is the handing down of ideals, of a culture, of a heritage. It cannot be denied that heritage is what gives the lifeblood to the pride of a nation.

Today, western civilization as we know it, and which we in America, and especially in our colleges and universities, are trying to protect, is that which has been contributed by the Greeks and the Romans, and crowned with the greatest contribution of all—Christianity.

Unless we protect this Greco-Roman civilization, increased by the classical contributions of a free world throughout the centuries, and which is now being threatened by materialism and secularism within our own country, and by communism from without, a civilized world, as we know it today, may not long exist.

And it is essentially this tradition that has made Ireland, and those in whose veins flows Irish blood, a living symbol of a heritage, that was begun in the past, is being carried on in the present, and must now be handed down to the future by the young Irish who have taken up the task. It is this tradition that makes each one of us here tonight, Irish-born or descendents of Irish forebears, inwardly proud. Each one of us boasts that he is directly, or indirectly, from the "land of saints and scholars." And I suppose if any one of us were called upon to fight because he were Irish, he would probably stand up, get knocked down, and like any real Irishman, get back up again, and knock his opponent's brains out. The ancient rhymer put it well when he said:

"With my staff and my club,
The harp I can clout,
But, be gorrah, how much I lay on,
I can never knock him out."

But I wonder why each one of us is proud that he is Irish. I wonder how many of us know what a wonderful privilege it is to be Irish.

Sure we claim to be Irish and yet sometimes we are not aware of the great heritage that is ours. To be Irish is a noble gift, but to know what being Irish is means more. For being Irish is a part of a history as old as the world itself, and part of a history still to be fulfilled.

Truly the history of Ireland, and especially here in America, remains to be written; for the purpose of Irishmen remains yet to be achieved.

The struggle for national realization, begun so many centuries ago, is not ended; and if the long story of Erin offers a so frequent record of failure, it offers a continuous appeal to the highest motives and a constant show of a most sorrowful patriotism linked with the sternest courage.

Irish wars, throughout all time, have been only against one enemy, the invader; and ending so often in material disaster, they have conferred always a moral gain. Ireland has never warred against anyone; and yet she has fought the wars of everyone. For the Irish heart is filled with the one hope to help others: that has always been the Irish creed.

The memory of Irish warriors in Irish wars, of Brian Boru, of Malachi, of MacMorrough, of Fitzgerald, of O'Neil; in the American Revolutionary War, of O'Brien, of John Sullivan at Bunker Hill, of Stephen Moylan, and of the father of the American Navy, Commodore John Barry; in the War of 1812, Andrew Jackson, later President of the United States, proud of his Irish father; William Carroll, later twice Governor of Tennessee; the great Commodore Perry, son of an Irish mother; Adm. Charles L. Stewart, commander of *Old Ironsides;* in our Civil War, a Sheridan, a Meade, a Logan, a Mulligan, a Boyle, a Cahill, on the North; a Cleburne, a Brennan, a Garry, on the South; in World Wars I and II, the fighting Irish again, the O'Briens, the Sullivans, the McAuliffes, all uplift the Irish heart; for no nation, no people can reproach Ireland with having wronged them; but every nation on the face of the earth, the white, the yellow, and even the black, can point to Ireland as a nation that somehow or other, or at some time or another, has helped it. On the pages of history Ireland can only be pictured as the nation that righted the wrongs of others—and always of the underdog, and of the oppressed.

This love of freedom and of the desire to help the oppressed goes back even beyond the dawn of recorded history. When at the beginning of the Christian era, we first hear of Ireland from outside sources, we learn of it as an island harboring freemen, whose only love and hope was to live as men endowed by God with the attributes of justice, liberty, and equality.

And so in the romance of Irish history, for it is a romantic one, it is clear that when the Irish went forth to war abroad it was not to impose their yoke upon other peoples, or to found an empire, but to battle against the empire of the world in the threatened cause they held so dear at home.

It was this struggle that Ireland sought to maintain against every form of attack down through Danish, Norman, Tudor, Stuart, and Cromwellian assaults, to the imperialism of the 19th century, to the today, when she has total freedom in mind—the freedom that was born when Rome was young and Ireland was old. For long before the Roman legions came to Ireland the land of saints and scholars was already very old.

But if the romantic history of Ireland as a fighting race, and more especially as the defenders of others be great, it is more in the field of learning that Ireland is greater. She has been termed the "isle of scholars," and surely it is a deserving title.

We name St. Patrick as our great saint and scholar, and feel that Irish learning began with him; yet when he went to Ireland schools had already been established at Wicklow, Down Patrick, and at Meath.

In the sixth century schools had been established in Ireland by St. Finnian, Clonmacnois on the Shannon, St. Comgall, St. Kevin, St. Bridget, St. Ita, and by St. Columkill.

And if we be honest with history, education cannot live without the Irish; for it was the Irish scholars of the past and of today, who related education with God, as they did 15 centuries ago when Ireland was the land of saints and scholars.

Sure, to talk of the Irish would take ages, for their achievements are so great. In astronomy long before a Galileo was known, Augustin, an Irish monk, had accurately charted the stars in the heavens. In 785 Fergil O'Farrell taught that the earth was round, approximately 700 years before Columbus proved that it was. Six hundred years before the discovery of America, Dicuil, an Irish monk, wrote of Iceland and mapped the eastern coast of the United States. Where Lief Ericson and his bold Norsemen sailed into Greenland, St. Brendan of Ireland had left footprints more than two centuries before.

In music, who could leave out the Irish, for Balfe and his melodious Bohemian Girl

is there. In poetry, who could leave out the Irish, when Thomas Moore is the first. In drama, we have a William Boyle, Padriac Colum, O'Kelly, and Synge; in medicine we have a Corrigan, one of the greatest authorities on heart disease. Name any field, name any phase of history, name even a sport, and there you have a John L. Sullivan, who ruled the heavyweight division until he was knocked out by another Irishman, Jim Corbett. Today we have a Delaney (and we at Merrimack are proud of him since he is an alumnus of our sister school, Villanova), who may one day turn the present-day unbelievable 4-minute mile into an Irish 2½-minute mile.

Legend even has it that when Moses came down from Mount Sinai with the Ten Commandments the first man he met asked him: "Did Michael O. K. them? If he didn't then no Irishman on earth will pay any attention to them." But, as we all know, he did and every Irishman has obeyed them ever since.

This is the heritage that belongs to the Irish, who have lived it and who have handed it on; but more important it is the heritage that the young Irish must take up and give to the future. And it is especially upon the young Irish, coming out of our colleges and universities, that the heritage of the past depends. They must take their rightful place in government, in education, and in social progress. It is now the young Irish in America who must carry on the traditions of the past. It is in America that Irish heritage has its most fertile soil; it is here that it must be specifically carried on.

It is the traditional Ireland overseas that looks to the Irish here to carry on. It is to the young Irish that the trust has been given. Just as the old Irish, as my own forebears came here and planted the seed, it is now the new young who must make the most of Irish pride and heritage. Just as in 1776, as in 1812, in 1865, in 1918, in World War II, and in Korea, it is still America asking the young Irish to write again the pages of history. And we may be sure they will not fail; for the Irish, be they old or young, are proud; and being proud, can act only as real Irishmen have acted in the past.

And it is this pride and faith in a tradition that must be blended with the old and the new here in America. It is this honest, sincere love of being Irish, mixed with the realization that Americanism and Irishism (if we may term it such) must go hand-in-hand in a modern nationalism that will continue to write Irish history on the pages of civilization.

It's no wonder then that Irishmen are proud; they have so much to be proud of. It's no wonder Ireland has a permanent place in history; she has written so many pages of history itself. It's no wonder Ireland is blessed, for on either side of her at the throne of heaven stands a Bridget and a Patrick.

Is it any wonder then that every Irishman, worthy of the name, either born in the land of the shamrock itself, or here in America, the home of the new Irish, can on the eve of another St. Patrick's Day feel his eyes sparkle, his pulse quicken, his blood tingle, when he says to himself: "I'm part of a great tradition—treasurer of a greater heritage—and recipient of the greatest baptism of all. I'm Irish."

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Nasser Problem

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. JOHNSON of Texas. Mr. President, Walter Lippmann, one of the most profound thinkers of our times, this morning addressed himself to the disturbing implications of the problems in the Middle East.

Mr. Lippmann's analysis should be read by all thinking Americans. He outlines some fundamental questions to which thus far no one has produced any really satisfactory answers.

I ask unanimous consent that his column be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

TODAY AND TOMORROW
(By Walter Lippmann)
THE NASSER PROBLEM

Having taken off a bit of time before starting on a short trip abroad, I have spent quite a little of it wondering about the Middle East and the turn in our affairs. We have had forced upon us vast but undefined responsibilities in another great region of the globe. There are some who think that by the role we have played in the United Nations since the Egyptian crisis last autumn we have won the esteem and the confidence of the Afro-Asian nations, and that they will now accept us as being uncontaminated with colonialism. Our optimists think we have achieved a position in the uncommitted world of Asia and Africa which is at once anti-Communist and purged of historic grievances and suspicions against Europe. I do not share this view. It seems to me naive and wishful thinking. Our connections with the West are inseperable. The Communist competition is very strong. And a new accommodation between the East and the West will not come easily. It is perhaps the greatest and most difficult task which lies before us.

I think rather that the events of the past few months have made this difficult task much more difficult. For we have fallen into what may prove to have been an irreparable error in the way we took our stand on the Anglo-French-Israeli intervention. Instead of insisting from the outset that their attack was provoked by Nasser, and that the intervention and the provocations must be cured together, we have insisted that the intervention must be liquidated first before the causes which provoked it are dealt with. We put all our pressure on Britain, France, and Israel. We put no pressure on Nasser, and we have cleared Egypt without obtaining any serious assurances from anybody—from Nasser, from Krishna Menon or from the Soviet—that this would not bring about a return to the status quo ante from which the explosion erupted. The result is that on the great issues of the regime of the Suez Canal and on the pacification of Palestine, our policy has meant that before negotiations are to begin, we have restored and in fact aggrandized Nasser's bargaining power. We have provided him with the big trumps before the diplomatic game is played.

Unless we make it our business, which we could do if we were resolute and resourceful, to restore the greatly diminished bargaining power of the United States and of the western nations, we shall be negotiating from weakness. The Soviets are against us. China is against us. Nasser and the Arabs are against us. India is under the influence of their combined pressure. So, in fact, also is the United Nations.

Since the Second World War we have entered a new epoch in the relations between East and West. We are at the end of the centuries which began with the great European voyages and were followed by the imperial conquest of so much of Asia and of Africa. Though there are pockets of diehard imperialism, it is no longer debatable whether imperialism and colonialism are to be liquidated. They are to be liquidated. The questions everywhere, be it in Cyprus, Algeria, or Goa, are how the imperialism is to be liquidated and how soon.

What is not yet in sight is anything that could be called an understanding of the new international order which is to follow the imperial and colonial epoch. For national independence and the disestablishment of the old imperial regimes will not alone produce a new order in which East and West can live peaceably together. Neither the new nations nor the old nations can live in isolation from one another, and they must, therefore, work out an order of relationship which they can accept. They are interdependent, as we can see clearly in the case of the Suez Canal and of the oil of the Middle East. Europe needs access to the oil, and the Arab countries would be sorely stricken if they could not dispose of their oil to the West. They cannot dispose of it to the Soviet Union. But if this East-West interdependence is to be stable and durable, there must be a reasonable equality of bargaining power in working out the principles and the details of the new relationship.

Since Nasser's seizure of the canal, since the miscalculations of the London conferences, since the fiasco of the intervention, and since our own mistaken policy in the United Nations, the balance of bargaining power has turned drastically against the West. This is reflected in the fact that the United Nations and the United States are not negotiating with Nasser. They have been appeasing him, finding themselves so short of negotiating power.

In Nasser, both as a political figure and as a symbol, we are bound to recognize, it seems to me, a radical opponent of an accommodation between East and West. Nasser's rebellion against the West has a momentum and a direction which, if it is not contained and restrained will carry him beyond any negotiated settlement which the West can accept. There is every reason to believe that Nasser will not voluntarily agree to any kind of international regime for the canal which guarantees to the users rights that they can count upon. It is plain that he means to use the strategic importance of the canal as an instrument of his anti-western and pan-Arab movement. And it is quite evident that he intends against Israel to keep on waging war, as hot a war as appears to him a safely calculated military risk.

The crux of the Nasser problem is that his position in Egypt and his influence in the Arab world would soon collapse if he agreed to negotiate and to abide by settlements with the western nations. He must remain in rebellion against them, never for long allowing the conflict to subside. He needs the tension of international, indeed of interracial, struggle. He needs it to maintain among the Arab masses the image of himself as their champion. He needs the tension also for his political survival at home, to divert his rivals who conspire against him, and as a distraction for the people.

The effect of Nasser's movement extends far beyond Egypt, the canal and Palestine. By his example, through his agents and his propagandists, he is making it very dangerous, perhaps impossible, for moderate leaders of the Afro-Asian peoples to arrive at settlements with the West. He is identifying moderation with treason and settlement with betrayal. This makes it for all practical purposes impossible for any other leader in north Africa and south Asia to come to terms with the West. This applies even to India where, unhappily, Nehru is now declining the role in which he had cast himself, the role of mediator. For many months past it has been apparent that India does not feel strong enough to differ with Nasser.

In fact it is an open question whether India is now able to put through an independent policy, what with Nasser on one side of it, with red China on the other, and with the Soviet Union behind both Nasser and Chou En-Lai. It is certain that we have no right to expect India to redress the balance which has turned against the West as long as our policy, or at least our practice, is to acquiesce in our weakness and to accept appeasement.

The enlightened leaders of the western nations have hoped and believed that the old imperial system could be liquidated in peace and goodwill by a wise and friendly acceptance of eastern nationalism, by education and technical assistance, and by generous contributions of capital for the development of the new nations. But as things stand at the moment, there is no ground for thinking that Nasser, who is astride the strategic center of East-West relations, believes in or wants or will permit such a peaceable evolution to take place. It is not easy to make peace when only one side wants it.

Nasser thinks he has the upper hand, having obtained control of the access of the Western nations to the oil of the Middle East. He thinks it has been proved at the British-French failure last autumn that his paramountcy cannot be challenged. He thinks that the United States will not only refuse to coerce him but will in fact appease him.

All this will now be put to the test. It will be put to the test over the regime of the canal, over whether Gaza becomes again the base of a guerilla war, and over the right of innocent passage in the Gulf of Aqaba. The United States has been heavily committed by the President, and if he cannot or does not carry out the commitments, the prestige of the United States will be gravely impaired in the whole Afro-Asian world. If Nasser is not effectively checked, it will be idle to suppose that American influence can

then be maintained by the Eisenhower doctrine, by arms deliveries, by some economic aid, and by resounding declarations against the menace of communism.

The Middle East Problem

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. SALTONSTALL. Mr. President, I have read with interest an article by Walter Lippmann in this morning's Washington Post, which was inserted in the RECORD by the majority leader. It was an excellent discussion of the problems facing us in the Middle East. I ask unanimous request to have printed in the Appendix of the RECORD a brief part of a talk I gave in Everett, Mass., last Sunday evening, March 17, which summarizes my own thinking on this important problem.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

As Americans, we believe in keeping our word to each other. We believe that the United States, as a Nation, should keep its word to other nations. We stand for this not only because we want our country to deal with the rest of the world in an honorable manner of which we can be proud, but also because it is the only way in which progress can be made toward the friendly relationships between nations which are essential to world peace.

We joined in the United Nations. Under its charter we agreed not to join in military aggression. That is the reason we refused to join with or support England, France, and Israel last fall when those nations attacked Egypt. We had given our word to the United Nations that we would not support armed aggression, and we considered the attack on Egypt to be armed aggression.

When the United Nations called upon England, France, and Israel to withdraw from Egyptian territory, they did so. This was honorable and commendable.

We are still faced with the problem of making the armistice stick until a final peace settlement can be worked out for the Middle East. That's going to take time. We all know it. Now today we are under obligation to the community of free nations to see that Egypt lives up to her responsibilities. We must be as firm with Egypt as we were with England, France, and Israel. It is my personal belief that the Suez Canal should be opened to the ships of all nations, including Israel; that Israel and all other nations should have the right to use the Gulf of Aqaba; and that the Gaza strip must not be used as a base for attacks on Israel.

We must progress toward these objectives by persuasive and diplomatic action and by any other legitimate means available to us.

The real enemy in the Middle East is Soviet Russia. We want to make clear to Russia, and those who may be inclined to turn toward Russia, that we intend to do our utmost to gain a permanent peace in the world, and that we are trying as hard as we can to turn the faces of many nations, whose people want freedom, toward the West.

Relief for Southern Farmers

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. HILL. Mr. President, on Tuesday last I had the privilege of appearing befort the Johnston subcommittee of the Senate Agriculture Committee, along with a group of farmers and agricultural leaders from Alabama. We endeavored to emphasize the fact that Alabama and the rest of the South are presently in the grips of a farm depression of far-reaching proportions, and that it is absolutely necessary to provide relief for our farmers, who are so hard hit by depressed farm prices and reduced cotton acreage allotments. I ask unanimous consent to have printed in the Appendix of the RECORD the statement I made before the subcommittee.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF SENATOR HILL BEFORE THE SENATE AGRICULTURE COMMITTEE, MARCH 12, 1957

Mr. Chairman, I deeply appreciate the opportunity afforded me and my fellow Alabamians to appear before you in support of pending measures to relieve the hardships suffered by so many of our farmers as a result of inequities in our existing acreage-allotment program for cotton. We are fortunate in having with us today agricultural leaders from Alabama who, because they have worked and lived with the problem, are intimately acquainted with the tragic circumstances confronting the Alabama cotton farmer. These outstanding leaders will give you a firsthand account of the effects on the Alabama cotton farmer and our agricultural communities of the acreage-allotment program as it is being administered under existing law.

It is appalling to me that our farm people, whose prosperity is basic to the prosperity of the Nation and constitute 13.2 percent of the national population receive only 6.3 percent of the national income—less than one-half their proportionate share. While corporate and personal income, take-home pay and buying power of other segments of the population continue to rise to new peaks, the standard of living of our farmers grows steadily worse. While corporation profits in 1956 jumped 47 percent over the annual average for 1947–49, while dividends increased 69 percent and interest 93 percent in the same period, the farmers' total net income fell 25 percent.

These unhappy facts cannot be regarded as mere statistical data, for they can be translated into the practical realities of stark tragedy for thousands of men, women, and children whose hopes and aspirations for a decent standard of living are inseparably tied to the soil. I am sure that our friends who are here today can graphically portray the disheartening and desolate prospects the future promises, if we do not improve our farm program, particularly the administration of acreage allotments under present law.

In many States, as in my home State of Alabama, cotton is still the No. 1 cash crop. The sharp reduction in acreage allotments over the past few years adversely affects all cotton farmers but most gravely jeopardizes the economic position of two groups.

The first group consists of those farmers who followed the advice of farm leaders and the policy of Congress and diversified and voluntarily reduced their cotton acreage. With the decline in the prices of livestock and other crops to which they have diverted they are now being penalized and in many instances driven off their farms for carrying out the very agricultural reforms Congress declared were necessary to strengthen their economic position and that of the Nation.

The second group is composed of small farmers whose cotton acreage has been reduced to the point of virtually destroying their ability to get credit to carry on their farming operations. Many such farmers in Alabama and throughout the South are being forced to leave their farms, only to swell the rolls of the unemployed in our towns and cities.

The situation presents a most serious national problem that must be dealt with by Congress immediately. We are forced to realize that when one large economic group—such as the cotton farmer—suffers, all of us suffer. The depressed income and the reduced purchasing power of our farm people are inevitably passed along to industry and business in the form of reduced demand for consumer goods and loss of sales. The results are curtailed production, unemployment and a weakening of the Nation's economy. Great depressions have had their beginning in depressed farm prices.

The measures Senator SPARKMAN and I are sponsoring do not propose a permanent solution to the farm problem. They are in the nature of stopgap measures pending enactment of long-range remedies, but they will provide emergency relief for our cotton farmer by preventing a decrease in the acreage allotment of his main cash crop and by removing the penalties now imposed on an individual farmer because of the failure of his fellow farmers to plant their allotted quota of cotton.

If America is to continue to build her strength and her greatness, we must make the fruits of our labors available to all. The American farmer still continues to do his job courageously and to sustain us by providing us, at great sacrifice to himself, with the food and fiber necessary to life itself, and yet during the years between 1947–49 and 1956, 900,000 farm families were forced to leave their farms and their homes.

Despite the heroic efforts of our farmers to provide for the Nation, its welfare and its strength, and despite their love for their soil and their way of life, their love of living close to nature and nature's God, today we behold the sad spectacle of millions of our finest and best citizens driven by the specter of poverty and economic oppression from their land and their heritage.

The annals of human history record indelibly the rise, the degeneration and internal decay, and eventual fall of nations and civilizations. Let us not forget that the farm homes of America have given us the great reservoir of the manners and the spirit and of the moral and spiritual values that have preserved the vigor of our Nation and the foundations of our freedom and our enterprise. Indeed, America's greatness has been builded not alone upon material wealth, but far more importantly upon the initiative, the independence, and the love of God that have flown from the farm homes of America into the warp and woof of the Nation's life. To forsake our farmers now is to forsake our priceless legacy, the fountainhead of our strength and of our continued greatness.

We must extend to the American farmer understanding, not indifference; faith, not

cynicism; action, not promises. The question is: Can we afford not to come to his rescue? For if we fail him we shall fail our America.

Address by Hon. Wayne Morse, of Oregon, Before Methodist Leaders in Social Action

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me on March 19, 1957, before the national meeting of Methodist Leaders in Social Action.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR WAYNE MORSE BEFORE NATIONAL MEETING OF METHODIST LEADERS IN SOCIAL ACTION, MARCH 19, 1957

My friends, it is a notable and memorable experience for me to address the social action leaders of the Methodist Church, and I have accepted your invitation to come here today with pleasure, but also with some trepidation.

It is more to be expected, and is perhaps more natural, for social action leaders of a church to speak to practicing politicians about their obligations to the moral standards of Christianity, and to social welfare, than for a politician to speak to churchmen about the obligations of the church to political life.

Yet it is well to keep in mind that the foundation of American government is essentially a religious one, and that its basis and its objective are as well known, and sometimes better known, to the practitioners of government as to the clergy. The Declaration of Independence, the Constitution, and the Bill of Rights are religious documents. They are grounded in the doctrine of natural rights, a doctrine which holds that freedom of thought and conscience are inherent in all people wherever born, regardless of the form of government under which they live. It is the heritage of Americans that our Government was founded and organized for the explicit purpose of protecting and furthering these natural rights.

Few who enter American political life, and particularly the Congress of the United States, can fail to gain a greater appreciation of the purposes of the framers of the Constitution as a result of their political participation. The general-welfare clause, which empowers Congress to legislate to promote the general welfare, is the heart and soul of the Constitution, and of the American system of government. It was put best by Lincoln when he described it as the legitimate object of government "to do for the people what needs to be done, but which they cannot by individual effort do at all, or do so well, for themselves." This definition has been attacked even today by many in the party of Lincoln who have not even caught up to the Great Emancipator, much less with modern Republicanism. But the people, in election after election, have fulfilled the definition of Lincoln's, because they know that it is the means whereby the true wealth and value of America can be realized. And that true wealth is our human wealth. It is the wealth we have in the hearts, minds, and talents of nearly 170 million people. In our Declaration of Independence it is written that governments are instituted among men to obtain the objectives of life, liberty, and pursuit of happiness. These are objectives of the mind and spirit and not of material wealth only, and it is to their realization that our best efforts must be dedicated, relying on the superb instrument of the American Constitution and its general-welfare clause to do it.

I have dwelt at some length on the philosophic foundation of American Government because it is an important preface to what I want to say about the obligation and responsibility of the individual who seeks to carry out the objective of government by entering politics.

THE OBLIGATION OF AN ELECTED OFFICIAL

The historic writings of most of our constitutional fathers, such as Thomas Jefferson, George Washington, Benjamin Franklin, John Adams, John Dickinson, Robert Morris, and James Madison, all show that they did not believe that the elected representatives of free people serve as hired men of political parties and political machines, but held their offices as the servants of a free people.

Our Founding Fathers set up a representative republican form of government which placed the ethical duty upon the shoulders of the representatives of a free people in a parliamentary body to act on the basis of the facts, to keep faith with the truth, and to stand up against a temporary wave of public opinion that is characterized by an emotional reaction to propaganda, misrepresentations, and unsound public policy.

Edmund Burke put this principle of representation in eloquent language when he said in his great speech to the electors of Bristol on November 3, 1774: "It ought to be the happiness and glory of a representative to live in the strictest union, the closest correspondence, and the most unreserved communication with his constituents. But his unbiased opinion, his mature judgment, his enlightened conscience, he ought not to sacrifice to you, to any man, or to any set of men living. These he does not derive from your pleasure; no, nor from the law and the constitution. They are a trust from providence, for the abuse of which he is deeply answerable. Your representative owes you, not his industry only, but his judgment; and he betrays, instead of serving you, if he sacrifices it to your opinion. To deliver an opinion is the right of all men; that of constituents is a weighty and respectable opinion, which a representative ought always most seriously to consider. But authoritative instructions; mandates issued, which the member is bound blindly and implicitly to obey, to vote, and to argue for, though contrary to the clearest conviction of his judgment and conscience • • • these are things utterly unknown to the laws of this land, and which arise from a fundamental mistake of the whole order and tenor of our constitution."

Let me assure you that keeping faith with that basic principle of representative government many times is not the best way to make political friends and influence your political party. Yet I hold to the view that unless one keeps faith with that principle he will, time and time again, sell his constituents short in the matter of standards and values. Why do I say that? I say it because frequently public opinion is wrong, frequently public opinion is based upon misrepresentation, misinformation, and misunderstanding of the facts. One of the obligations of statesmanship, as I see the problem, is to sit in the Congress of the United States and exercise an honest independence of judgment on the merits of issues in accordance with the facts as one sees them and vote accordingly, even though at the time a wave of public opinion in one's State and throughout the country seems to hold a contrary point of view.

However, if one is right on the facts and will keep faith with his duty of political leadership, he need have no fear as to what the final decision of the people will be once they come to understand the facts which form the basis of their representative's vote and action.

To you churchmen, let me urge you to remember to watch out for the officeholder who is afraid to be defeated. Watch out for the politician who thinks that his reelection is more important than the public interest. Watch out for the politician who scratches your back, tells you he agrees with you on every controversial issue. I say watch out for him because he has ceased to be your true representative. It is this type of representation in public office that is weakening standards of government because it constitutes placing politics above principle. It makes a virtue out of political expediency and a liability out of intellectual honesty.

THE ROLE OF THE CHURCH AND RELIGIOUS LEADERS IN AMERICAN POLITICS

Having discussed the role of government as an instrument of the natural aspirations of man, and the role of the politician, as I see it, in a government established to promote those aspirations, I would like to talk a little about the role of the church and of religious leaders in American politics.

The pulpit has many uses. It can be used to exhort the individual listener to mend his ways in order to gain salvation; or to explain the word of God; or to relate the Judeo-Christian ethic to our political and social lives.

I am principally concerned here with the latter use of the pulpit, and I take it that you are met here primarily to examine this relationship.

As I see it, the greatest contribution that the clergy, particularly those individuals concerned with the social-welfare challenge of Christianity, can make to American politics is to view with a critical and even ruthless judgment the two elements I have discussed—the extent to which a program or policy of a party or an administration furthers the general welfare of the American people, and the extent to which our representatives at all levels of government fulfill their responsibility to providence and to the people they represent to be guided by the dictates of conscience and not by the pressures of expediency.

As a student of history, I am obliged to say that in all American history we have seldom had an era when so little of that kind of judgment was being used. Today, the press, the political commentators in all mediums of communication, the intellectual leadership of most walks of life, have virtually rolled over and played dead for the most colossal publicity campaign of all time.

A conscientious, critical, constructive discussion of Government policies, both foreign and domestic, is almost absent from the Nation's press. The voice that calls for deliberation and analysis of a life or death issue such as confronts us in the Middle East is shouted down on grounds that a terrible emergency exists, one that will not permit the elected Representatives of the people to find out the purposes and possible consequences of the policy, though one that apparently does not preclude a Bermuda cruise on the part of the Chief Executive who has asked for and received an abdication by Congress of its responsibility to participate in decisions involving war or peace.

The Eisenhower administration, and the President himself, have enjoyed an immunity from critical appraisal almost unknown in American history. I fear for the consequences of this renunciation of responsibility on the part of American intellectual and

spiritual leaders. I fear for it because we are no longer in an age when a wrong or mistaken policy can be reversed and what was lost reclaimed. Today, when a foreign policy goes awry, we wake up one morning faced with the awful prospect of annihilation, as we were last October when a situation in the Suez area that we were told never looked brighter, suddenly erupted into war. We got off easy that time. The price we paid for allowing the administration to run our foreign affairs for 4 years without a searching debate from the press—and from Congress—was a small one, compared to what it could have been, and to what it may well be the next time.

At home, a natural resources policy that puts a premium on private profit instead of on the full development of the common heritage of the people in their river basins means a permanent loss of that heritage, to ourselves and to future generations.

A failure of government to provide the money needed for good schools means a future generation of American citizens whose needs and abilities are underdeveloped, and that is a far more serious social loss than even the economic loss of an underdeveloped river basin. I would even submit that the clergy of America who have traditionally been the custodians of the principle that education of the common people is the first obligation of a Christian community, have no more compelling duty than to demand that out of the great material wealth of the country, we provide for the common education. We are not doing it now. We are shortchanging our boys and girls with half-day classes, with a shortage of qualified teachers that deprives our children of the attention to their individual problems which they deserve. Right now, there are at least 840,000 children attending school part time because we have not provided them with enough teachers and with adequate school facilities.

This school situation is a disgrace to America—a disgrace to the Nation that founded compulsory public education as the best means of achieving the moral and spiritual improvement of its people. It is a disgrace to any society of our material means and our professed beliefs in education. Yet we have tolerated it for nearly 10 years, and we have accepted excuses and delays in the place of action.

When the first ordinance for compulsory education at public expense was issued in Massachusetts in 1649, it was expressly for the purpose of thwarting the lures of "Ye olde Deluder, Satan." Our language today would be more sophisticated, but our belief in education as the sine qua non of democracy and of the betterment of the individual remains the same.

Yet I have found little disposition on the part of the clergy generally to draw the issue with those who are responsible for our failure in the field of education. I have found little disposition on the part of the clergy, or of American spiritual and intellectual leadership as a whole, to insist that the present administration return to the fundamental objective of our Government, namely, the promotion of the general welfare.

What I do see is a blind, uncritical acceptance of the trappings of spirituality in place of the substance of moral responsibility in high office. The personal activities of the President and his associates are of no concern to me, but what is of concern to me is what I regard as their failure to promote the interest of the American people of today and tomorrow, and their policy of giving to the public ostentation and display instead of concrete performance of public duty. The clergy has, I believe, been as ready as any other group—and I regret to say this—to accept this unworthy substitute. It has, generally speaking, accepted the form without demanding the substance of ethical behavior in public office.

It has done this with regard to the programs and policies of government, and it has done so with regard to the obligation of individuals who hold public office.

The duty of the elected representative of the people as it was visualized by Burke and by the framers of the Constitution is on the defensive. The candidate or officeholder who defies the steamroller of the publicity campaign because his mind and conscience tell him that the public interest lies in another direction finds himself regarded not a hero in the cause of duty to his conscience but as an obstructor who must be silenced or removed as soon as possible. Like the simple man of the fairy tale who tried to point out that the emperor really had on no clothes at all, he becomes a pariah to a domineering political leadership and to its idolatrous followers. The test of a candidate for public office today, and of the fitness of an incumbent, is too often the measure of his kinship to the current political administration, rather than the measure of his kinship to his conscience.

More so than any other social group, excepting possibly only the press, the religious leadership of America has an obligation to serve the political truth. Not just the truth that is found by application of the mind to a problem, but to the truth which holds that the mind of man is responsible to God. Truth is the hardest of all masters. It requires ceaseless mental activity, and perhaps that is the principal reason why it has attracted few disciples. But, it also requires that the individual mind be honored for devotion to principle and to conscience, even when that devotion leads to another conclusion from our own.

In September of 1862, President Lincoln was wrestling with one of the most momentous decisions of American history, the issue of emancipation, when a delegation representing the religious denominations of Chicago called on him to ask that he proclaim emancipation. His reply was as follows: "I am approached with the most opposite opinions and advice, and that by religious men who are equally certain that they represent the divine will. I am sure that either the one or the other class is mistaken in that belief, and perhaps in some respects both. I hope it will not be irreverent for me to say that if it is probable that God would reveal His will to others on a point so connected with my duty it might be supposed he would reveal it directly to me; for, unless I am more deceived in myself than I often am, it is my earnest desire to know the will of providence in this matter."

I know of no test for a political candidate more in keeping with the Christian ethic than the test of his adherence to his own conviction and conscience and his refusal to accept another's judgment in place of his own. The church, and its religious leaders, ought to insist upon that adherence, just as it ought to insist upon political platforms and policies that will promote the general public interest. Its role in political life ought to be to expose cant and hypocrisy, no matter in what area of government it is found or by whom practiced. Its contribution must be to hold before the American people the moral objectives of our society, and to measure political programs against those objectives. It must not hesitate to speak out against policies that are a denial of the general welfare, nor to advocate those that expand human freedom and activity.

It must also demand that our officeholders keep themselves free from political dictation by economic pressures or political bosses. It must awaken voters to the fundamental concept of representative government which requires that an elected official keep faith with his own judgment and conscience.

A social action group of a church must constantly turn a searching light upon governmental affairs at all levels. More so than even our media of political expression and information, the church must give a standard and a direction to governmental policy. Without the guidance of spiritual and moral leadership, any government—regardless of its form—will founder, our own no less than any other. If the church does not perform this function, I know of no other institution that will.

The American Nation must continue to be guided by the spiritual and moral values of Christianity, no less now than when it was founded. Your group has made a notable contribution in that direction, one that I hope will be expanded and developed in the future, for without the fundamental principle of the brotherhood of man and the fatherhood of God as our guide, the forms of government lose all meaning and vitality.

To hold this guide before us is what I regard as your mission in political life. It has been indigenous to American politics in varying degrees since colonial days, but today it is in eclipse. The future of America and of the American people depends upon the extent to which it can be brought back as the focal point of our Government and politics.

Department of Labor and the Department of Health, Education, and Welfare Appropriation Bill

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. TABER. Mr. Speaker, pursuant to the unanimous consent request that I received, I am submitting an extension of my remarks in the RECORD with reference to the bill for making appropriations for the Department of Labor and for the Department of Health, Education, and Welfare. I hope that this might have the earnest consideration of all the Members of the House.

We had a great to-do here last week over a resolution submitted by my esteemed colleague and friend, Chairman CANNON of the House Appropriations Committee.

At the same time that this Cannon resolution recognized that this House "must, in the public interest, make substantial reductions in the President's budget for the fiscal year 1958," it asked our President to show us how to do our work.

And the President, quite properly, tossed the Cannon resolution back in our laps.

Now that we have disposed of it, I think it is about time that we stopped fussing and finagling and settled down to our job of examining this budget. It is only fair to point out that so far this year this House has demonstrated that it does know how to cut an executive budget in a great bipartisan effort.

If we do not do it this year and we approve the executive budget as submitted, we will have increased the spending authority of the Federal Government by $16 billion in the last 3 years.

All of us are familiar with the way Federal spending grows. Every year the appropriations for the departments,

agencies, and bureaus of the vast Federal establishment are upped—most of them a little, and some by large amounts. And when we are dealing with billions, increases of hundreds of thousands or a million dollars are not too striking.

But I submit, gentlemen, that the overall impact is shocking if we look at the items percentagewise. I have been making some comparisons of the spending proposals in this new budget we are considering with actual expenditure authorizations in fiscal 1955.

The percentage increases gave me a jolt. I think they will startle you, too. For that reason I am submitting some tables that should prove helpful to all of us in cutting these appropriations.

It is not too much to ask that we not only refuse to increase 1958 appropriations over last year but also cut them back to the actual expenditures in 1955.

Public Health Service, funds for research

Remedy for the Corn Situation

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. HARRISON of Nebraska. Mr. Speaker, on March 11, 1957, the gentleman from Ohio [Mr. POLK] and I joined in transmitting to Members of the House of Representatives a statement of reasons why our companion bills, H. R. 4555 and H. R. 4589, should be passed. The bills were designed to permit corn farmers to use either 1 of the 2 options on which they voted last December to bring supply into balance with demand. The letter of transmittal and the statement follow:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 11, 1957.

DEAR CONGRESSMAN: Attached is a brief statement on the corn situation. It urges you to support this Tuesday, March 12, a bipartisan compromise introduced by Mr. HARRISON, Republican, of Nebraska, and Mr. POLK, Democrat, of Ohio (H. R. 4555 and H. R. 4589).

It permits corn farmers to use either of the two options voted on last December to help adjust corn production.

It does not increase costs over the options offered corn farmers by the 1956 act.

It provides a 1957 minimum national base acreage for corn similar to the minimums now in effect for cotton, wheat, rice, peanuts, and some types of tobacco.

It can be put into effect with a minimum of administrative difficulty since it uses the same notices to farmers that were used last December in the referendum.

It is only for 1 year—1957.

It will substantially increase participation in adjustment programs to reduce corn production.

It will help stabilize livestock, dairy, and poultry product prices.

Sincerely yours,

ROBERT D. HARRISON.
JAMES G. POLK.

H. R. 4555 by Mr. HARRISON, Republican, Nebraska, and H. R. 4589, by Mr. POLK, Democrat, Ohio, companion bills, should be passed.

1. They permit corn farmers to use either 1 of the 2 options on which they voted last December to bring supply into balance with demand. This gives the farmers the option of (1) staying within the 37.3 million corn allotment with price support of at least $1.36 per bushel or (2) staying within the 51 million acre soil bank base with price support of $1.31 per bushel with the requirement that an acreage of cropland equal to 15 percent of the base be put into the soil bank. This soil bank acreage cannot be harvested or grazed. This is exactly what the corn farmers were offered in the December 1956 corn referendum for the 1957 program. Sixty-one and five-tenths percent said they preferred the 51-million-acre-soil-bank base with lower supports; 38.5 percent said they preferred the 37-million-acre-corn allotments with higher supports. The law required a 66⅔ majority vote to put the soil bank base approach into effect. Since only 61.5 percent favored this, the present law forces the program back to the old discredited allotment program favored by the minority (38.5 percent). The effect is to allow the minority to deprive the majority of the kind of a program they prefer. The program favored by the majority will get more adjustment for the money spent. A combination of the old and new approach, which these bills provide, authorizes a program to obtain more participation in adjusting corn production in 1957.

2. They do not increase the cost in 1957 of the price-support and soil-bank programs over the options which were offered to corn farmers by the Agricultural Act of 1956.

3. This is not special privilege for corn in relation to other basic commodities since cotton, wheat, rice, peanuts, and some types of tobacco have minimum allotments. Corn does not have a minimum. These minimums permit payments to farmers for price-support and soil-bank participation which otherwise would not be made. Wheat farmers this year would be cut from 55 million acres to 12.4 million acres except for the minimum national allotment. Likewise cotton would be cut from 17.6 to 3.9 million acres this year. It is unreasonable for the law to deny corn a similar minimum and require an acreage cut from 56 million to 37 million in 1 year. In the past, acreage taken out of basic crops has been devoted to the production of feed grains which has substantially contributed to the lower acreage allotment for corn which is holding down on corn participation in the production-adjustment programs. This will help correct the situation without giving special privileges to corn farmers.

4. Farmers have their allotment notices under these programs so that administrative actions to put the programs into effect would be the very smallest possible. This would be the quickest way to put a workable program into effect.

5. They are for 1 year only.

6. This legislation would result in a substantial reduction in corn production in 1957. This will help stabilize livestock, dairy, and poultry product prices.

7. This will help solve the corn problem this year and as soon as the legislation passes we can get to work this year on the bigger problem of balancing feed supplies of all kinds with demands. This latter problem is too big to attempt to solve before corn-planting time. It involves not only corn, grain sorghums, oats, barley, and rye, but also hay, protein feed, byproduct feed, synthetic feed, and pasture. Likewise it involves the whole theory and application of the price-support and adjustment programs for the so-called basic commodities.

8. It permits both the majority and minority of the corn farmers to have the kind of programs they believe are most desirable.

9. Attached is a list of how each State voted in the referendum.

State	Percent favoring soil-bank program	Percent favoring acreage allotment program
Alabama	83.6	16.4
Arkansas	59.6	40.4
Delaware	88.4	11.6
Georgia	85.9	14.1
Illinois	80.8	19.2
Indiana	74.6	25.4
Iowa	59.5	40.5
Kansas	51.7	48.3
Kentucky	87.2	12.8
Maryland	67.2	32.8
Michigan	75.0	25.0
Minnesota	23.6	76.4
Missouri	47.8	53.2
Nebraska	50.0	50.0
New Jersey	80.7	19.3
North Carolina	78.8	21.2
North Dakota	28.5	71.5
Ohio	71.3	28.7
Pennsylvania	73.9	26.1
South Dakota	27.0	73.0
Tennessee	86.9	13.1
Virginia	50.9	49.1
West Virginia	94.6	5.4
Wisconsin	55.0	45.0
Total	61.5	38.5

Federal Budget Questionnaire

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. HENDERSON. Mr. Speaker, once again I have found it helpful to contact the people of the 15th District of Ohio, with regard to vital issues which are before the Congress. Through the medium of a questionnaire I am asking my constituents to give me the benefit of their thinking on several issues. Their responses will be helpful to me and my colleagues in guiding us to a decision on these important subjects.

The current budget is a subject which has received widespread publicity throughout the Nation. Many of my constituents are becoming more aware of the magnitude of our expensive Government. As an added feature of my questionnaire I have included a breakdown of the current budget and have asked that my constituents express themselves on any part of it, whether they feel that the individual items be retained, reduced, or eliminated.

The questionnaire is as follows:

FEDERAL BUDGET QUESTIONNAIRE

Much dissatisfaction with high Federal expenditures has been expressed since the budget recommendations for fiscal year 1958 (July 1, 1957–June 30, 1958) were presented to Congress in January. On this page is a brief outline of approximate expenditures recommended. If you care to comment, please indicate your feeling about these programs.

	Yes	Reduce	Eliminate
I. Major national security items ($43,335,000,000—60.3 percent):			
Purchase of aircraft, ships, guided missiles, and other military equipment ($12,273,000,000)			
Pay and support of military personnel ($10,524,000,000)			
Operation and maintenance of military equipment and facilities ($9,598,000,000)			
Military public works, research, reserves ($5,605,000,000)			
Military assistance to foreign nations ($2,600,000,000)			
Atomic energy programs ($2,340,000,000)			
Stockpiling of minerals and defense production ($395,000,000)			
II. International affairs and finance items ($2,444,000,000—3.4 percent):			
Foreign aid (economic and technical development) ($1,833,000,000)			
Export-Import Bank loans to assist United States industries in foreign markets ($243,000,000)			
Conduct of foreign affairs ($194,000,000)			
Foreign information and exchange activities ($174,000,000)			
III. Commerce and housing ($1,748,000,000—2.4 percent):			
Aviation ($465,000,000)			
Housing and community development ($438,000,000)			
Water transportation ($420,000,000)			
Civil defense and disaster aids ($168,000,000)			
Postal Service ($58,000,000)			
Highways ($42,000,000)			
General aids to business and other ($157,000,000)			
IV. Agriculture and agricultural resources ($4,965,000,000—6.9 percent):			
Farm price supports and related programs ($2,490,000,000)			
Soil bank ($1,293,000,000)			
Agricultural land and water resources ($366,000,000)			
Farm ownership and operation loans ($271,000,000)			
Rural electrification and rural telephone loans ($265,000,000)			
Research and other agricultural services ($280,000,000)			
V. Natural resources ($1,538,000,000—2.1 percent)			
River basin development and public power ($992,000,000)			
Forests, public lands, and Indian lands ($263,000,000)			
National parks and fish and wildlife ($137,000,000)			
Minerals ($99,000,000)			
General resource surveys and other ($47,000,000)			
VI. Labor and welfare ($3,538,000,000—4.9 percent)			
Public assistance (payments to States to aidneedy persons) ($1,664,000,000)			
Promotion of public health $606,000,000)			
Promotionof education ($534,000,000)			
Labor and manpower services ($400,000,000)			
General p urpose research, libraries and museums ($111,000,000)			
School-lunch program, vocational rehabilitation and others ($203,000,000)			
VII. Veterans services and benefits ($5,027,000,000—7 percent)			
Compensation and pensions ($3,103,000,000)			
Hospitals and medical care ($836,000,000)			
Education and training ($757,000,000)			
Veterans unemployment and loan guarantee benefits ($110,000,000)			
Insurance and indemnities ($42,000,000)			
Other services and administrative costs ($179,000,000)			
VIII. General government ($1,451,000,000—2 percent)			
Financial management ($519,000,000)			
Property and records management ($307,000,000)			
FBI, alien control and related programs ($196,000,000)			
Legislative and judicial functions ($152,000,000)			
Central personnel costs ($104,000,000)			
District of Columbia, U. S. Territories ($103,000,000)			
Weather Bureau and other ($70,000,000)			
XI. Interest on our national debt ($7,360,000,000—10.2 percent) This figure represents a fixed debt and is not subject to change except through the retirement of the principal.			

The Nasser Problem

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. JAVITS. Mr. President, I am looking very carefully into the economic cost in money and into other possibilities of bypassing the Suez Canal, which I think is the only way, by peaceful means, to bring Colonel Nasser to some terms with the free world and its necessities.

In aid of that effort, I had intended to ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Today and Tomorrow—the Nasser Problem," written by Walter Lippmann, but I am informed that the distinguished majority leader, the Senator from Texas [Mr. JOHNSON] has already presented it for the RECORD.

I do ask unanimous consent that an address I delivered last night to the National Council of Jewish Women here in Washington be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR JACOB K. JAVITS, OF NEW YORK, DELIVERED BEFORE THE NATIONAL COUNCIL OF JEWISH WOMEN, SHOREHAM HOTEL, WASHINGTON, D. C., MARCH 20, 1957

The time for a showdown with Colonel Nasser in the Middle East is now. The war of nerves with him is on, and the prestige of the United States and the United Nations is on the line.

In his letter to Prime Minister Ben-Gurion President Eisenhower assured him that "Israel will have no cause to regret" its withdrawal of troops. Now that Israel has withdrawn, I am deeply convinced that she has the full support of the American people on the moral justification of her position.

I believe that the United States and the U. N. have undertaken serious moral commitments involving their good faith and the judgment of the world will be based upon the effort to perform these moral commitments more than on strict legal construction. In this connection, I do not see why it should be taken for granted that Egypt belongs in the Gaza strip under the armistice agreement of 1949. On the contrary, a very good case may be made out for the proposition that, having violated the armistice by its fedayeen raids, Egypt may not use this agreement now to assert civil jurisdiction, and the area should revert to U. N. disposition as before the armistice agreement.

I think we must understand that in the Mideast crisis the U. N. is facing one of its greatest tests as an agency to maintain the peace and could be seriously damaged for future effectiveness in this area if it fails here.

Expressions about hopes and expectations regarding a settlement of a conflict between Israel and Egypt contained in a joint declaration by United States Secretary of State Dulles and Israel Foreign Minister Meier cannot obscure that hard fact.

Let us never forget that Nasser needs the U. N. far more than the U. N. needs Nasser. Nasser needs U. N. funds to clear the canal and feed the Arab refugees in the Gaza strip. In dealing with him we should lead from strength; strength that comes from the realization that our position regarding the Gaza strip, the Suez Canal, and the Gulf of Aqaba is morally right and that Nasser depends on the Suez Canal monetarily in a big way. I sincerely hope that the challenge of Nasserism will be felt in Bermuda, where President Eisenhower, the free world leader for peace, is meeting with Prime Minister Macmillan, of Great Britain, our greatest ally.

If necessary to bring Nasser to terms, I believe we should lead the free world in bypassing the canal. We should assure Great Britain, France, and other large users of the canal that we intend to help them financially to bypass the canal, thereby in effect invoking economic sanctions on Egypt, without U. N. action, if it does not cooperate in maintaining Mideast peace.

Bypassing the canal presents an analogy with our problems with Iran during the rule of Mossadegh who found that the free world could not be defied indefinitely when it refused to submit to his injustice or exactions. Our country, in the interest of peace, should back the same kind of treatment for Colonel Nasser.

I recognize the budget implications of such a declaration as it probably would involve an estimated underwriting of $250 million a year, but the very reason for budget reduction in other respects is to be able to meet just such emergencies in the maintenance of peace.

The moral commitments of the United States and the U. N. respecting the Middle East are: That the U. N. Emergency Force will remain deployed to separate Egypt and Israel land and sea forces at the Strait of Tiran and the Gaza strip "until it is clear that the nonexercise of any claimed belligerent rights has established, in practice, peaceful conditions." These are the words of United States Ambassador to the United Nations Henry Cabot Lodge on January 28, in the U. N. General Assembly. Also, that "the United States believes that the gulf [of Aqaba] comprehends international waters and that no nation has the right to prevent free and innocent passage in the gulf and through the straits giving access thereto." These are the words of the United States memorandum to Israel dated February 11. Also, in the words of President Eisenhower in his address of February 20, when he said, "the United States as a member of the United Nations would seek such disposition of the United Nations emergency force as would assure that the Gaza strip could no longer be a source of armed infiltration and reprisals." The three points upon which Israel has always insisted and which were the basis for the "grave and repeated provocations" which brought on the hostilities of October 1956 are: Cessation of guerilla (fedayeen) raids from the Gaza strip into Israel; freedom of transit through the Gulf of Aqaba to Israel's port of Elath; and transit on the same basis as other nations for Israel's shipping through the Suez Canal.

It is now clear that Colonel Nasser will not allow, if he can help it, Israel's shipping to move through the Gulf of Aqaba or the Suez Canal, thereby invoking belligerent rights, the nonexercise of which is one part of a moral commitment of the U. N. and the United States. He has already ousted the U. N. from civil administration in the Gaza strip and is clearly getting ready to oust the UNEF from military responsibilities there, in this way not waiting until peaceful conditions are established, but on the contrary giving every indication of renewal of the Fedayeen raids.

The grave question facing the free world is: What will the United States do? What will we do within and what will we do outside the United Nations to keep the peace in the Mideast. We are dealing now not with form or verbal assertions but with acts. The U. N., because of the tenuous legal position it has taken that it has a right to be in the Gaza strip through the UNEF only by the consent of Egypt, is yielding one position after another. Colonel Nasser will obviously persist in pressing every possible opening, and so long as he so persists and if he is successful, the free world must expect the danger of war, vast Communist influence in the Mideast, the denial of the area to peaceful commerce and ultimately either being held up for the oil resources of the Mideast which it needs or else having them denied.

Within the U. N., the United States should call for a special emergency session of the U. N. General Assembly to deal with: (1) Backing up the UNEF in its stated mission "to help maintain quiet during and after the withdrawal of non-Egyptian forces" over "an area extending roughly from the Suez Canal to the armistice demarcation lines"; and (2) serve notice on Egypt that if it should attempt to send troops into the Gaza strip or assert belligerent rights and deny to Israel's shipping transit through the Gulf of Aqaba or the Suez Canal, we should consider that an imminent threat to peace and demand sanctions against Egypt.

Acting outside the U. N. we should also send our own shipping through the Gulf of Aqaba, demonstrating its character as international waters.

We should take the initiative in this situation because the prestige of our country and our own self-interest in maintaining the peace in the Middle East are at stake.

The Soil Bank and Northwest Wheat

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two separate articles from the Christian Science Monitor of March 14, 1957, dealing with the wheat problem which confronts us annually. The first article is entitled "Northwest Wheat Men Shun Soil Bank," and is written by Alice Myers Winther.

The second is an article by Malcolm Bauer, one of the most able writers in Oregon, and a great newspaperman. The article is entitled "Joe Meek Tries Self-Help."

These two articles will form the basis of reference for future discussions on my part on the floor of the Senate when the Senate comes to consider wheat legislation.

There being no objections, the articles were ordered to be printed in the RECORD, as follows:

NORTHWEST WHEAT MEN SHUN SOIL BANK

(By Alice Myers Winther)

SEATTLE.—Many wheat farmers in the State which has 3 of the top 4 wheat-producing counties in the Nation take a dim view of the soil-bank program. According to the State Department of Agriculture, the present acreage signed up for 1957 for the acreage reserve part of the program is only about 10 percent of the wheat land of the State. This indicates that only a small percentage of Washington's 8,000 wheat farmers are participating.

This may be due in part to the fact that 85 percent of Washington wheat is fall wheat, and participation for 1957 would have had to be decided upon last October. At that time the program was still so new farmers had had little time to figure out what they wanted to do. More likely, however, it is due to general dissatisfaction with the program itself.

John Stephenson, retiring vice president of the National Association of Wheat Growers and himself operator of a wheat farm in Adams County, explains it this way:

"The program defeats its own purpose of an overall reduction in grain supplies. In the heavier production areas, where a cutback in acreage would really make some dent on surpluses, the payments are not high enough to enable the farmer to participate. In the lighter production areas, the soil bank serves as a crop-insurance program for the continuance of uneconomical wheat farms.

"In the intermediate production areas the compensation that the participating farmer receives comes in two parts: an acreage reserve payment for leaving acreage out of wheat production, and the payment he gets for the sale of alternate crops produced on the same acreage that would normally have been sown to wheat. These alternate crops—generally barley or alfalfa—in turn glut the market the soil bank was established to help in the first place, since wheat has to compete with other grains in the feed market."

INEQUITIES SEEN

There is even less participation in the conservation reserve part of the soil bank program. Soil conservation district leaders meeting in Seattle not long ago expressed both confusion and disillusionment. Some said they thought at first it was going to be a good program, but now they doubt if it can attain its objectives. There are too many inequities, they said, and the provisions are not flexible enough to make it fit conditions that vary from county to county.

"It doesn't cut down surpluses and all we get is conservation. It's a terribly high price to pay for conservation," was one comment.

Others termed the program a "slap in the face" for the conservation farmer. "I'm sick and tired of Washington coming out and penalizing the farmer who has been doing a good job for a long time," groused another.

The Washington Association of Wheat Growers, according to Mr. Stephenson, who

was its first president, believes the only sound program for wheat is one which will return to wheatgrowers their historic right to compete fairly in the markets of the world without having to sacrifice a fair return on that portion of the wheat which is consumed domestically for food.

In its opinion, reiterated at its convention last December, the only effective means of accomplishing this objective is what is called the domestic parity plan. This plan has had not only the vigorous support of the National Association of Wheat Growers but also the blessing of the National Grange. The Oregon Wheat Growers League also recently reaffirmed support of the plan as offering a long-range solution to the wheat problem.

DOMESTIC PARITY EXPLAINED

Under domestic parity, Mr. Stephenson explained, all wheat would be sold in the market at the going market prices. The prices would be established freely by competition and not by Government edict. Consumers of bread and other wheat food products would continue to pay in the market place, as they do now, only what he called a fair price.

But, unlike the present program, there would no longer be a necessity for consumers as taxpayers making a second payment in the form of taxes for export subsidies, storage costs, or losses because of spoilage.

The operation of the plan, about which there has been much misunderstanding, would be this, as explained by Mr. Stephenson."

At the beginning of each marketing year, the Secretary of Agriculture would determine the portion of the wheat crop which would go into consumption for human food. This domestic food quota would be allotted among wheat farms substantially on the same basis as acreage allotments are now made, except that the acreage would be translated into bushels and the share of each farm would be in bushels.

Each farmer would receive a certificate stating in bushels his share of the estimated domestic consumption of wheat for food. This certificate would have a dollar value representing the difference between the average market price (as estimated in advance by the Secretary of Agriculture) and 100 percent of parity.

The value of the certificate plus the price received in the market place would return to a grower the equivalent of full parity on that portion of his crop consumed domestically as food. For the portion of his crop used for feed or export, he would receive whatever the wheat sold for in the market place.

These marketing certificates would be negotiable drafts on the Commodity Credit Corporation. They could be issued to farmers ahead of harvesting time, thus helping them to finance farm operations during the high-expense season.

[Proponents of the plan generally pass lightly over the fact that the dollars represented by the certificates would, one way or another, have to come from the farmer's fellow citizens who buy what the farm produces. Either as taxpayers or consumers, Mr. and Mrs. America have to foot the bill, as they do for other necessities.

[Critics argue, too, that the plan would be complicated to administer. Nevertheless, it has won substantial support, although not sufficient to put it through Congress.]

In 1953 Washington ranked third in total bushels of wheat produced. The fact that the State now ranks only sixth among the States is attributed by local growers to what they consider the unfair treatment accorded them in the national allotment program.

JOE MEEK TRIES SELF-HELP

(By Malcolm Bauer)

PORTLAND, OREG.—Joe Meek is an Oregon wheat farmer. He has worked his 640-acre farm in Gilliam County, on the State's central plateau, for more than 20 years. In all that time his best year was 1951, when he had a total gross farm income of $19,044 and a net of $11,695. But, in 1955, with his gross reduced to $11,638, he was able to earn, above costs, only $3,953, the return for his management, labor, and capital investment.

Joe Meek is not the farmer's real name. But his farm is real, and the record is real; and it is, according to the Department of Agricultural Economics of Oregon State College, a record typical of Oregon wheat farms. Joe Meek's production has increased steadily, and the price received per bushel is still at a high level. But his income, largely due to skyrocketing costs, has been reduced to a level comparable only to that of the prewar years.

The predicament in which Joe and his fellow Oregon wheatgrowers find themselves was the reason for the assembly here recently of the Oregon Wheat Industry Conference, the first such all-industry gathering since 1926.

Represented were growers, handlers, processors, transporters, millers, bakers, livestock feeders, consumers, labor, restaurant operators, retailers, and exporters—all the long line of those concerned with the production and marketing of this basic grain crop. Sponsors were Oregon State College and the Oregon Wheat Growers League, an organization created for the specific purpose of solving wheat growers' problems through self-help.

INITIATIVE REPORTED

The conference heard encouraging reports of Oregon initiative in solving many producing and marketing problems. Oregon State College experimental stations have made many discoveries contributing to increased yield per acre. The Oregon Wheat Growers League and the Oregon Wheat Commission, a State agency, have taken aggressive and imaginative steps to promote wheat consumption, not only domestic but worldwide.

The latter program has gained national attention. A few months ago, for example, spokesmen for Oregon wheat handed out 100,000 sweet rolls at an international trade fair in Osaka, Japan, to stimulate the growing Japanese appetite for wheat foods. The Japanese market, in the past few years, has absorbed a considerable part of Pacific Northwest wheat exports.

The Oregon wheat-promotion campaign is responsible for the appearance on United States grocery shelves of the wheat food, bulgor, a modern adaptation of an ancient oriental dish made by boiling and drying soft wheat, rubbing off part of the bran and then cracking the kernels. The result is a substitute for rice and has much the same qualities of taste and appearance.

The bulgor development is a direct result of Oregon wheat industry's investigation and sampling of native opinion in Japan, India, and other Asian nations. Asia is by far the greatest potential market for Oregon wheat, only about 25 percent of which can be consumed within the State. The bulk of the remainder must be sold outside the United States, or stored.

The conference resolved to increase such promotional activity and to work especially for a wider consumption of wheat as livestock feed. Wheat could be economically fed by cattlemen if priced about the same as corn, a conference subcommittee reported. [While this development can help wheat farmers, it means competition—and new problems—for corngrowers.]

A surprise was the conference's majority report on Government wheat programs. The report, prepared in advance by a study committee and distributed in mimeographed form at the meeting, criticized present and proposed Government price-support programs, including the domestic parity, or two-price, plan recommended by the Oregon Wheat Growers League. Instead, the committee suggested a direct income payment to farmers—like the Brannan plan proposed during the Truman administration—such as is in effect with respect to wool. This, the report said, is a program of abundance, not scarcity, with no Government manipulation or control.

In present scarcity programs, the committee said, "taxpayers pay the costs of making the food scarce, so they in turn have the privilege of buying at higher prices."

There is good reason, however, to doubt that this is an expression of the sentiment of the Oregon wheat farmer. Some farmer delegates to the conference suggested that the committee's majority report was a reflection of the views of city-based representatives of the industry—such as bakers and millers—rather than of Joe Meek and his fellows.

As a result of such criticism, the final report of the conference was rewritten in compromise form, giving more prominence to committee minority reports recommending: (1) The domestic parity system, which has been once rejected by Congress; and (2) greater reliance on wheat industry self-help.

The marked success of the latter—including experimentation with wheat types and promotion in foreign markets—was one of the most encouraging revelations of the 2-day conference.

The Small Business Administration

EXTENSION OF REMARKS

OF

HON. CHARLES E. POTTER

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by Philip McCallum, general counsel of the Small Business Administration, before the Association Executives of Michigan, at the Bancroft Hotel in Saginaw, Mich., on March 2, 1957.

I am informed by the Public Printer that the address is estimated to make 2¼ pages of the RECORD, at a cost of $173.25.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY PHILIP MCCALLUM, GENERAL COUNSEL, SMALL BUSINESS ADMINISTRATION, BEFORE ASSOCIATION EXECUTIVES OF MICHIGAN, BANCROFT HOTEL, SAGINAW, MICH., MARCH 2, 1957

It is a real pleasure and indeed an honor to be afforded the opportunity to address the Association Executives of Michigan today here in the Thumb area.

At the outset I want to emphasize how greatly the Small Business Administration values the work of your organization and similar groups throughout the country. We feel close to you because we have found that it is not difficult for you to grasp and endorse the significance and benefits of the

services which the Small Business Administration is making available on an increasing scale to small-business owners of the Nation.

As you doubtless know, we are a young and small agency. We are only a little more than 3½ years old. The 83d Congress, upon the recommendation of President Eisenhower, recognized that there was a great need for an agency that could effectively meet the individual needs of the small business concerns of the country. There are more than four million such concerns.

We believe that the decision—to establish this agency—has been more than justified. In fact, the Congress and President Eisenhower have given us wide responsibilities and solid encouragement continuously and in increasing measure since the Small Business Act established our agency in 1953.

Trade associations have helped tremendously to spread the word about what we do to assist, promote, and encourage the small-business man in meeting the increasing competition which confronts him today.

We welcome your continued support and interest and I know that our Administrator, Wendell B. Barnes, joins me in urging you to help us even further in channeling the availability of our services to the thousands of small-business enterprises of this great Wolverine State of ours—in the advancement of their growth and economic well-being.

We welcome your help, your advice, but most of all your encouragement.

Members of the Congress from Michigan have been helpful to us and alert to the needs of this State. Senator POTTER is frequently in contact with us and Congressmen ALVIN BENTLEY and ELFORD CEDERBERG from this area have also demonstrated their interest in assisting small businesses.

Your association deserves great credit for its efforts to advance the widespread interests and usefulness of its membership.

Nothing seems to stand still in this jet-propelled age of technological ferment. One of the most important functions of management is to make new discoveries, produce new methods, creating improved products and services. I think you will agree that the businessman who ignores the necessity of constant stocktaking does so at the grave risk of being left behind in today's fast-stepping parade of progress.

Concern over the welfare of small business is not new; it goes back to colonial times. Benjamin Franklin and other leaders often expressed the view that economic power should be distributed among many proprietors.

The concern that the United States Congress has for the welfare of small business is nowhere better expressed, I believe, than in the opening sentences of the Small Business Act of 1953.

Let me cite for a moment what the Small Business Act says:

"The essence of the American economic system of private enterprise is free competition. Only through full and free competition can free markets, free entry into business, and opportunities for the expression and growth of personal initiative and individual judgment be assured. The preservation and expansion of such competition is basic not only to the economic well-being but to the security of this Nation.

"Such security and well-being cannot be realized unless the actual and potential capacity of small business is encouraged and developed. It is the declared policy of the Congress that the Government should aid, counsel, assist, and protect insofar as is possible, the interests of small-business concerns in order to preserve free competitive enterprise, to insure that a fair proportion of the total purchases and contracts for supplies and services for the Government be placed with small-business enterprises, and to maintain and strengthen the overall economy of the Nation."

To discharge the great responsibilities outlined in this congressional policy, the Small Business Administration carries on four major activities:

1. We help small firms gain access to adequate credit at reasonable terms;

2. We help small firms obtain a fair share of the Government's contracts;

3. We help small firms with their management and technical production problems;

4. We make disaster loans at 3 percent interest to owners of homes and businesses damaged or destroyed in natural catastrophes.

Now I would like to explain how the Small Business Administration is ready to aid or advise you and others, individually and collectively, in meeting the day-to-day challenges of our enormously developing and changing economy.

The Small Business Administration is a 100-percent service organization. We have only one objective—that of helping the Nation's small-business concerns in every way possible.

To make it easy for small firms to take advantage of our services, so they need not spend their time and money coming to Washington, all of our services are available through our nationwide network of field offices.

Many of you doubtless know that we have a regional office in Detroit. The address there is 211 West Congress Street. Mr. Frederick W. Pritchard is our regional director. Do not hesitate to call upon Fred Pritchard at any time. He has a courteous and expert working staff of specialists. Refer businessmen to them.

How do we determine whether a firm is a small-business concern?

For financial-assistance purposes in the act which created the Small Business Administration, the Small Business Act of 1953, as amended, a "small business" is defined as one which is independently owned and operated and which is not dominant in its field. The act also authorized the SBA, in making a more detailed definition of small business, to use such criteria as number of employees and dollar volume of business.

In general, the Agency's criteria for determining whether a firm is small, for loan purposes, are as follows:

A manufacturing concern is considered small if it employs 250 or fewer persons, including employees of affiliates, and large if it employs more than 1,000 persons; if it employs more than 250, but not more than 1,000 persons, it may be considered either small or large, depending on the employment size standard which the SBA has developed for its particular industry.

Most wholesale concerns are classified as small if their yearly sales are $5 million or less.

Most retail and service trades firms are considered small if their yearly sales or receipts are $1 million or less.

For purposes of Government procurement, a manufacturing concern is a small business if (a) it is not dominant in its field of operations and, with its affiliates, employs fewer than 500 employees, or (b) it is certified as a small business by the Small Business Administration.

To be classified as a small business concern, a nonmanufacturing firm bidding on Government purchases (dealer, distributor, wholesaler, jobber, or agent) must meet the same criteria as a manufacturer, plus two additional requirements: (1) It must be defined as a regular dealer under the Walsh-Healey Public Contracts Act, and (2) in the case of a Government purchase reserved for award to small business, or in appropriate cases involving equal bids, it must furnish the product of a small manufacturer or producer in the performance of the contract.

Now let us turn to the four major objectives which I referred to a few moments ago.

One of these major objectives is to help small firms overcome their financial problems by increasing the flow of credit to them, at reasonable rates.

In this program, we counsel with small firms on their financial problems, assist them in obtaining credit from private sources; and, if private credit is not available at reasonable rates, we will ourselves make the loans to the small firms.

Under the Small Business Act, we are authorized to make direct loans to small firms, or loans in participation with private lenders. However, we cannot make a direct loan if a participation loan is available.

By law, there is a $250,000 limitation on the Agency's direct loans, as well as on the Agency's share of a participation loan.

We have the authority to make loans larger than $250,000 to corporations formed by small business concerns for the purpose of producing or securing raw materials or supplies. In these cases, the maximum Agency loan is $250,000 multiplied by the number of small businesses which have formed the corporations.

Let me describe briefly what might be called a typical Small Business Administration loan, say, to a manufacturer. Usually the manufacturer applying for a loan wants to add to his capacity, enlarge his plant, acquire more machinery, improve his manufacturing process.

Or perhaps his business has been expanding so rapidly that he is urgently in need of additional working capital to provide sufficient inventories of the raw products he must have for efficient operation.

In a typical loan situation, the borrower has a good record. His management has been competent, and he is able to show that the loan should result in increased earnings so he can repay it on schedule. Usually a local bank is helping this manufacturer with some of his credit needs, and is willing to continue with short-term financing. But the applicant needs help in financing the new construction and in consolidating his obligations so they can be repaid over a longer period. Perhaps his bank is willing to provide part of the long-term financing and share the loan with Small Business Administration. If not, then we will consider making the entire loan ourselves.

In our lending program, we seek the cooperation, the participation by banks and other private lending institutions. We feel we are receiving their cooperation, as shown by the fact that about two-thirds of our loans have been in participation with banks.

Since the start of the agency's financial-assistance program in 1953, the Small Business Administration has approved 5,421 business loans totaling $247,551,000 to aid small firms, and 4,862 disaster loans, totaling $56,200,000.

In the past month of January the agency approved 261 business loans totaling $11,801,000 and 32 disaster loans totaling $552,000, a record increase in our loan activities.

Thus, in the majority of our loans, we do more than help provide for the long-term credit needs of worthy small firms. At the same time, we help small concerns establish a line of credit, with a private bank, in their own city or town. Then, in the future, when they need financing, they should be able to obtain it without difficulty from their local bank.

Just about 1 year ago we put into operation a new type of loan program designed to provide term credit for the very small wholesaler, the retail shop, and the small service establishment. We call this type of loan our limited-loan participation plan, and it is meeting with a tremendous response on the part of both the banks and the very small establishments.

These are all bank-participation loans—a bank must take at least a 25-percent share. The loans may run as long as 5 years, and

the interest cannot exceed 6 percent—it may be even lower if the bank agrees to it.

The Government's share of these loans is limited to $15,000 or 75 percent of the total, whichever is smaller—so you can see most of these loans are in the $10,000, $15,000, or $20,000 category.

They are providing the small firms, the really small fellow, with a ready source of credit for expansion, for working capital, for fixing up his place—and he is building up an established line of credit with his local bank at the same time.

Our second major program of assistance to small firms is that of helping them obtain a fair share of the Government's contracts.

The most impotrant activity in this area is small business set-asides program with other Government agencies.

Under this program, we have assigned representatives to the principal United States Government purchasing centers to review proposed purchases and to determine, in cooperation with contracting officers, which orders should be set aside entirely or in part for award to small business.

Since the Small Business Administration began its operations on August 1, 1953, more than $1,400,000,000 in Government purchases have been set aside for exclusive award to small firms.

The Small Business Administration's third major activity is assistance to small business concerns with their management and production problems.

Our program in this field is largely an educational one, designed to help a businessman fill in the gaps in his knowledge and experience, and acquire a better grasp of overall business administration—in short, to become a more capable executive.

As one part of this program we are sponsoring small business administrative management courses in cooperation with leading educational institutions in all parts of the country.

Since starting this program in the spring of 1956, we have cosponsored 196 courses in 82 educational institutions. More than 5,000 small business owners and managers have attended the courses. The University of Michigan and Wayne University are participating in this program.

In addition, we provide small firms with four series of publications dealing with important management, technical production, and marketing subjects. These are practical, clearly written publications prepared largely by management consultants, university teachers and other recognized experts in private indstry.

The four series cover a wide range of subjects, such as market analysis; budgeting, business insurance; employee selection; appeal procedure for income tax cases; records management; and sales forecasting.

Three of these series are distributed free by our Agency, while the fourth is sold at nominal prices. More than 3 million copies of these publications have been obtained by businessmen and others from our Agency, or purchased from the Government Printing Office.

Let me cite just a few of the titles of our Management and Small Marketers Aids, which are distributed free upon request. I think you will find them interesting. "How to Build Your Sales Volume," "How to Analyze Your Own Business," "Sales Forecasting for Small Business," "How to Reduce Your Operating Costs," "Planning Your Working Capital Requirements," "Attracting Customers to Your Small Store," "Basic Stock Control for Small Stores."

Another series of publications, which we call our Management booklets are available from the United States Government Printing Office at nominal prices. Here are a few titles you may find interesting: "Human Relations in Small Industry," "Making Your Sales Figures Talk," "A Handbook of Small Business Finance," and "New Product Introduction for Small Business Owners."

The Small Business Administration also makes loans to assist in the rehabilitation of businesses and homes which have been damaged or destroyed by natural disasters, such as storms and floods. This humanitarian function is a very important part of the work of the agency.

When natural catastrophes occur, we quickly open temporary loan offices in the stricken areas and offer 3 percent loans to help in the rebuilding of homes and businesses. Our disaster loans may run as long as 20 years.

We also make drought disaster loans to small firms in areas where prolonged drought has caused serious losses to the businesses.

In addition to these four major programs, we are active in many other ways to help small firms.

Our agency is helping small firms keep abreast of the times. This is important in this technological age in which new products and new processes appear on the business scene daily. Research and development on new products and processes represent insurance of future profits of a business. The management of many business concerns say their firms would be out of business in a few years if they discontinued their research and product development programs.

At the same time, large numbers of small business concerns are unable to conduct effective or continuous research on new process and product development.

Our products assistance program is designed to supply this need by providing small businesses with information and data on product research, including but not limited to assistance in these areas: Product development, product marketing, possible new and improved products, inventive ideas, patentable ideas, Government-owned patents, privately owned patents, product redesign, and new processes.

Information of this type is contained in a products list circular which we issue every month and mail without charge to firms requesting it.

The Administrator, Wendell Barnes, is a member of the Attorney General's National Committee To Study the Antitrust Laws. Protection for small business has been a determining consideration in making recommendations designed to preserve competition and freedom of entry into the market.

The recent increase in merger activity has resulted in the absorption of many small businesses, intensifying the competitive problem for the small businesses which have not been merged. But the problem has many facets, and generalization is difficult. In many cases mergers of small firms have been beneficial to the members.

One of the ways in which small businesses may suffer the greatest injury through mergers is by the invasion of a giant corporation into a field which has been characteristically dominated by small concerns and which is not germane to the larger concern's main line of activity. It is in cases like this that a watchdog attitude on the part of our agency may be clearly justified. We are concerned with the effect on the competitive strength of small business that this type of merger may have.

I should make it clear at this point that, although the Small Business Administration is the one agency of our Federal Government that is exclusively concerned with the welfare of small business, there are many other United States Government agencies which also have small-business programs.

The Department of Defense, for example, has small-business specialists in all three branches of the armed services. They not only assist our agency in earmarking contracts for small-business award but also advise and assist small firms with special problems relating to specifications and other procurement matters.

The Department of Commerce has a special unit for small business in its Business and Defense Services Administration for the purpose of making the vast reservoir of business information compiled by the Department more readily available to small firms. This unit also cooperates with our agency in obtaining basic raw materials and equipment for small firms when they have difficulty in finding a supplier.

A Small Business Unit has been established in the Antitrust Division of the Department of Justice to which complaints from small business firms, unrelated to pending investigations or cases, are initially channeled. There such complaints are reviewed to determine whether substantial questions of antitrust violation may exist.

The Federal Trade Commission, the General Services Administration, International Cooperation Administration, and other branches of our Federal Government, also have small business units working actively in behalf of small business.

In addition, both Houses of our Congress have special Small Business Committees which deal only with the problems of small business and legislation affecting the small business community.

Now, let us look for a moment into the future to get some idea of the business potential in the years ahead.

For one thing, our population is expanding by leaps and bounds. We are increasing our population at a rate of more than 3 million each year. Our population is now past the 170 million mark. Every 8 seconds a new American baby is born, adding 8,500 new mouths to be fed every day.

To give you a more graphic idea of what this means, the increase in population adds the equivalent of a new city about twice the size of Saginaw each month. It adds every year half the population of the State of Michigan. Babies are our greatest treasure—the biggest impetus to increased business volume.

This means more and more business for the milkman, the laundry, the doctor, the clothier, and the food distributors. As long as prospects are promising and prosperity becomes ever more universal and permanent, young Americans will have the confidence to marry, have children, and multiply the demand for mountains of food, goods, and facilities.

There is another powerful force which is being exerted steadily to increase our economic growth—our rising standard of living.

The electrical manufacturing industry is now planning to build the vast amount of equipment that will be required to double the present electric service in less than 10 years. And it is estimated that the electrical industry will be called upon to quadruple its output in the next 16 years.

One of our leading business magazines not so very long ago predicted that the average American family will double its purchasing power in the next 25 years. Think what this increase will mean to all industry.

Closely coupled with this steadily rising standard of living is our rapidly developing technology. The peacetime developments of atomic energy are only beginning, but already they are opening up fields so vast that the imagination can scarcely comprehend them. Color television and automation are here. Space satellites will soon be launched.

Incidentally, a small firm was recently awarded the contract to build the third or final booster stage of the earth satellite—and all of its subcontractors are small firms. It is gratifying to us that small businesses are going to give the earth satellite the final nudge that will take it into outer space.

We are entering the age of commercial jet aviation, and solar energy is now being harnessed on an experimental basis to power a telephone line.

The commercial applications of new developments are endless. We hear of new ex-

amples every day—portable radios that will fit wrist or pocket; and household appliances that turn on and off at the brush of a hand.

All of these things are persuasive evidence, it seems to me, that this Nation's economy is now poised for the greatest, most wonderful period of expansion and development we have ever known.

In closing, I should like to call to your attention something that happened in Washington recently that is of great importance to the future welfare of small business.

I refer to the appointment by President Eisenhower of a Cabinet Committee on Small Business, and more particularly to the Commitee's first progress report issued last fall.

The Chairman of the Cabinet Committee on Small Business is Dr. Raymond J. Saulnier, chairman of the President's Council of Economic Advisers. Other members are the Administrators of the Small Business Administration and the Housing and Home Finance Agency, the Director of the Office of Defense Mobilization, and the Secretaries of the Departments of Defense, Commerce, and Labor.

Here are some of the recommendations the Committee has made:

1. Several forms of tax adjustment for small business;

2. A broadened program for increasing small business participation in Government purchasing;

3. Legislation to enable closer Federal scrutiny of mergers;

4. Procedural changes in the antitrust laws to facilitate their enforcement; and

5. Measures to reduce the amount of paperwork required in operating a small business.

In commenting upon the Committee's report and recommendations, the President said:

"I want to assure you that I shall give the recommendations of the Committee the prompt and favorable consideration they deserve—both in preparing for executive action and in drawing up the administration's legislative program for the new Congress."

The programs and actions I have discussed clearly indicate the continued interest there is today in the welfare of small business. But the businessman of today must be alert and ready to seize new opportunities as they develop. He must keep constantly in mind the long-term effects of the changes that are now occurring—our rapidly growing population, rising standard of living, and rapidly advancing technology.

John Ruskin has said: "Every human action gains in honor, in grace, in all true magnificence, by its regard to things that are to come. It is the far sight, the quiet, confident patience, that, above all other attributes, separates man from man."

For those businessmen who hold steadily to the far sight, and have a true regard for exercising sound judgment and constructive business principles to the things that are to come, the opportunities for the future are indeed promising.

VA Home Loan Interest Rates—Johnson Bill

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. JAVITS. Mr. President, the article by economist Sylvia Porter, which I ask unanimous consent to have printed in the Appendix of the RECORD, is evidence of the mounting testimony that second thought should be given to raising the interest rates on GI home loans. There is real hope that the present tight-money market can be expected to ease within the foreseeable future and that the supply of funds available for housing will increase without any further rise in interest rates. Earlier this week, for example, the press reported that 91-day Treasury notes had dropped to 3.041 percent, the lowest point since November—except for a special tax anticipation loan in December.

But the anticipated easing of the money market apparently will not be sufficient to provide for the 1.5 million housing starts this year, which our country requires, if we are to provide housing for new family formations and replacements for outdated and run-down structures. Early passage by the Congress of S. 726, which would authorize the use of some $1.3 billion in NSLI funds for direct veterans' home loans at the present statutory rate of interest, 4½ percent, would go far in helping to make available this vitally needed housing and in easing up the demand for VA home loans and to facilitate the supply. The most optimistic predictions of new housing starts for 1957 has been the same as for 1956, 1.1 million. The preponderance of thought is there will be a sharp drop. The present rates is at about 910,000 starts for 1957, and this is a crisis figure. This is far short of what our Nation requires and far short of what we should be able to produce during a period of unprecedented prosperity.

The PRESIDENT pro tempore. Is there objection to the unanimous-consent request?

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of March 20, 1957]

YOUR MONEY'S WORTH

(By Sylvia Porter)

PEAK OF TIGHTNESS

We are seeing the tightest phase of the tight money cycle which has dominated most of the Eisenhower administration right now.

Unless the economy takes off soon again into a new boom, the level of interest rates will not go higher, obtaining a loan will not become harder, the money squeeze of 1956–57 will not get rougher.

Few experts believe that we're in for another exuberant business upsurge in the months ahead, even though today's lull well may give way to a moderate advance later. Assuming the experts' judgment is correct, the above statement about money also will turn out correct.

And that will be of the most practical bread-and-butter significance to millions of Americans, home builders and home buyers, big businessmen and small, ordinary buyers of goods on the installment plans, and officials of cities and States the Nation over.

For it means that getting a mortgage to build or buy a home will be less difficult as 1957 rolls on.

It means that the interest rate you have to pay for a home loan won't get higher and it may go lower.

Easier downpayments

It means that downpayment terms on house purchases won't get stiffer and they could become easier.

It means that you'll have a better chance to obtain the credit you want and need to expand your business, modernize your shop, improve your home.

It means that the cash officials of your local or State government must raise to build schools, roads, hospitals, and to follow through on other public projects will be more readily available.

And it means that you're now getting as fat an interest return as you are likely to get on savings in your local bank or savings institution, on the soon-to-be-sweetened United States savings bonds, on other highest-grade Government, corporation, and municipal bonds.

We're not back into a cycle of easy, cheap money—far, far from it.

But the pressures of demand for money are easing.

Big sales anticipated

Businessmen are anticipating big sales this year. But they are not jamming their warehouses as eagerly as they were, and so the pace of their borrowing to stock their shelves with goods is milder, too.

Building of homes is sharply down, and as a result demands for mortgage money are sharply down as well. This is cutting the pressure.

Although the Federal Government is still spending at a rising rate, State and local government borrowing has been curtailed by the very unreceptiveness of the money markets.

And now the Federal Reserve Board is shifting from a policy of aggressive restraint on credit to a more passive attitude (to use the words of the authorities themselves).

For the first time since 1955, there are signs that the worst of the tightening is over. And there even is a faint glimmer of easier money ahead.

Agricultural Price-Support Programs

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. HUMPHREY. Mr. President, more and more people are demanding that the agriculture program be carefully reexamined with the objective in mind of making it more effective, both for the producer and the consumer.

Recently, Prof. L. H. Simerl, professor of agricultural economics at the University of Illinois, delivered an address at the 19th Annual National Farm Institute at Des Moines, Iowa, which deals directly with the price support program and on alternatives to the present system.

Mr. Simerl is considered one of the Midwest's leading agricultural economists. His recommendations are worthy of the careful and thoughtful consideration of every Member of Congress. His remarkable address, entitled "Income Payments, an Alternative to Price Supports," affords an opportunity for the Senate to undertake a review and study of our present agricultural price support programs. There needs to be some rethinking and new thinking. Surpluses continue to mount while the Government seeks to stifle production. Farmers are being driven from the land, by low prices, and processors find their

business interfered with by Government; grain dealers are frequently at the mercy of the Department of Agriculture in both its domestic and export programs.

How much longer do we have to wait before we seek a better way to do what every fairminded American would expect us to do to provide equality of opportunity for American agriculture?

I ask unanimous consent that the address of Professor Simerl be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INCOME PAYMENTS, AN ALTERNATIVE TO PRICE SUPPORTS

(By L. H. Simerl)

Our Federal Government has tried many plans to raise the prices of farm products and farm incomes. For example, the Federal Government has supplied easy credit. It has set up tariffs and other barriers to the import of agricultural products. It has subsidized the export of farm products. It has regulated charges and services by railroads and other public utilities. It has regulated market practices. It has exempted farmers from various legal restrictions applying to most other industries.

Our Federal Government has fixed prices of farm products through marketing orders and agreements. It has supported prices through direct purchases and through price-support loans. It has made direct payments to producers of some products in order to get them to produce more. It has made direct payments to producers of some products in order to get them to produce less. It has offered voluntary production control programs for some crops like corn. It has imposed compulsory production control programs for important crops like wheat, cotton, and tobacco.

Our present collection of farm programs includes all of the above types of procedures, and others as well. The collection is the accumulation of 40, and more, years of talk, resolutions, legislation, trial, and error.

At the present time the Federal Government annually takes about $5 billion from taxpayers for the support of farm prices and farm incomes. Neither the farmers nor the taxpayers are satisfied with this situation. In fact, I have never found a single individual who approves of it. Some people want more and higher price supports. Most, but not all, of these would also impose tighter production controls. Some people want to reduce price supports. Still others would eliminate them entirely.

A substantial number of people recommend the replacement of price supports with an extensive system of direct payments to producers of the crops and animal products.

We have such a program now in effect for wool. Somewhat similar payment programs were used for milk during World War II. They were much more widely used during the years 1934 and 1939. In those years the payments were called rental payments, parity payments, benefit payments, production adjustment payments, agricultural conservation payments, Government payments, Agricultural Adjustment Administration payments, price-adjustment payments, dairy-production payments, etc. More recently we have added a new name—soil-bank payments.

It is not my purpose to discuss the advantages and disadvantages of such direct payments as a substitute for price supports. Rather my assignment is to discuss a completely different type of income support program for agriculture.

I am not the originator of this proposal. Rather I am a reporter of it. The idea first appeared in print back in 1945 in an article by Dr. R. L. Froker, of the University of Wisconsin, in the Journal of Farm Economics. At about the same time two other men, L. J. Norton and E. J. Working, both of the University of Illinois, were developing a similar plan which was published in a publication of the university called Illinois Farm Economics, January 1946. Prof. Goeffrey Shepherd, of Iowa State College, also proposed a similar plan for supporting farm income. His article appeared in the August 1946 number of the Journal of Farm Economics. All four of these men are professional agricultural economists of the highest standing. Professor Froker now is dean of the College of Agriculture at the University of Wisconsin. He spoke from this platform in the 1956 National Farm Institute. Prof. L. J. Norton was also scheduled to speak here last year, but was fatally stricken shortly before the institute was held. At the time of his passing he was head of the Department of Agricultural Economics at the University of Illinois. Professor Working now is head of the Department of Agricultural Economics at Washington State College. Professor Shepherd, of Iowa State College, is well known to this audience.

Most direct payment plans call for payments to individual producers of a few crops or products. A separate program is or would be required for each product. The Froker-Norton-Working proposals would eliminate all the separate and special commodity programs and provide a single uniform program for all farmers.

In the words of Dr. Froker, "Agriculture as a whole should be guaranteed a minimum share of the national income as a floor below which total farm income will not be permitted to fall. If total net farm income from normal operations is below the prescribed minimum then it should be supplemented with parity income payments direct to individual farmers in proportion to the market value of the products which they produce and sell." (R. K. Froker, J. F. E., November 1945, page 848.)

Notice that there are only three simple steps in this program: (1) Congress would specify some proportion of the national income which would be guaranteed to farmers; (2) whenever farm income fell short of this proportion, the Government would make payments to farmers to make up the deficit; (3) the payments to individual farmers would be in proportion to the value of the products produced and sold by each one.

The chief limitation of the method is that it would afford least protection to the producers whose products have fallen more in price than others. However, it must be recognized that these relatively low prices, which develop in prosperous times as well as in depressions, usually indicate a need for production shifts. In such cases the single-payment program would stimulate needed changes rather than retard them as present plans do.

Our present program is particularly deficient in aiding farmers who need it most. For example, anyone who knows American agriculture knows that the pork and beef producers were hardest hit a year ago. Yet our program of price supports did nothing for them, except to make their feed costs higher.

This single overall farm-income support program would have several important advantages over the many and varied programs now in effect, and also over a system of separate payments for each of several products. A few of these advantages will be listed here:

1. The plan would avoid interfering with the function of prices in directing the production and consumption of farm products.

2. It would avoid the production controls that are necessary to prevent a greater production than can be sold at support prices.

3. The single-program plan would eliminate the determination of the incomes of producers of each of several farm products by congressional action and administrative rulings.

4. It would permit full production and freedom of action for each farmer.

5. It would give farmers a direct interest in promoting the national economy, since they would be assured of a stated proportionate share of that income.

6. The single-payment program would encourage the production of the farm products that consumers want, rather than those that are already in oversupply, as is the case with present programs, and as would be the case with commodity production payments.

7. The exact cost of the program would be readily apparent each year, not hidden or disguised as under present, and many proposed programs.

8. The exact payment and benefit to each producer would be also readily available. The consumer-taxpayer-citizen has a right to know who gets his money and why. This is a generally accepted principle in American government, whether it be local, State, or national.

9. This would be the simplest of all programs to administer, since all of the information required for the calculation of payments to individual farmers would be available from the farm records that are required for income tax and social-security tax returns.

10. The single-payment program would give the consumer-taxpayer something valuable for his money, whereas under price supports, and probably commodity payments, too, he pays more taxes, pays more for food, and gets less to eat.

11. The outstanding advantage of making payments to farmers in proportion to cash farm receipts (less feed and livestock purchased) is that additional distortions among prices of individual farm commodities would not be created.

12. Finally, the single-income-payment program would avoid setting farmer against farmer. It would avoid granting benefits to some farmers at the expense of their neighbors, and to some regions at the expense of others as is the case with individual commodity price support-production control programs, and as must also be the case with any program of payments based on the production or nonproduction of individual commodities.

Tribute to President Magsaysay

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the Concord Daily Monitor of Concord, N. H., on Monday, March 18, 1957, written by James M. Langley, editor and publisher.

Mr. Langley, representing the United States, was in charge of the United States trade negotiations with the Philippines. He did an excellent job as negotiator, commanding the respect of both our country and the people of the Philippines.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TRAGEDY

Four weeks ago tonight we boarded the *President Cleveland* in Manila Harbor to end the most extraordinary 3 weeks of our life. Our host during that time, the President of the Philippines, Ramon Magsaysay, came aboard that evening to bid us goodbye. So did the man who now succeeds him in office, Vice President Garcia. And so did other prominent Filipinos, some of whom today lie dead beside their President in the wreckage of his personal plane upon the side of a mountain on the island of Cebu.

It is hard for us to believe the words we have just written. We had flown in that plane, to Baguio, the famous Philippine summer capital and resort town; to Negros, principal sugar island of the nation; to Mindanao, island of fabulous untapped wealth; to Jolo, capital of the Sulu islands, where Captain Jack Pershing had defeated the Muslim Moros. It was a new plane, less than a month in service, and it was manned by the best Philippine Air Force pilots.

We had gone to the Philippines as a tourist. We had hoped we might meet President Magsaysay. We never had to ask. Instead, while we were still at sea, there came his invitation to be his guest at Malacanyang, the Philippine White House. A great delegation of Filipino friends we had made in 1954 during the trade agreement negotiations we had conducted for the United States met us as our ship sailed into Manila Harbor. Upon landing they conducted us to the palace, and there the President and his lovely first lady welcomed us as "our friends."

We lived at Malacanyang for 4 days, then transferred to the presidential suite at the Manila Hotel as a base for touring the islands. We ate with the Magsaysays several times, and saw them formally and informally on other occasions. The President could not have done more for anyone, and we were just plain American citizens without title. All the other hundreds of Filipinos, great and small, whom we met, were equally gracious and we made many new friends besides the members of the first family. As we write this we are not yet certain just how many and which of these friends have been killed in the tragedy which has befallen the Philippines and the free world.

The people of the United States never had a more loyal friend than President Magsaysay. He would have been reelected this year by his own people, but now the course of Filipino politics is made obscure again.

Magsaysay had faith in his people, and so do we. They have met great tragedy before and there is that within them, as it was within their late, great President, which will show them the right.

The Filipinos are friends of the people of the United States. Either way there are occasional irritating incidents. There is, at times, excessive nationalism on either side, or displays of intolerance. But fundamentally no two peoples on earth hold more closely to identical concepts of human liberty than do Americans and Filipinos. In the days ahead this should never be forgotten.

It was Ramon Magsaysay's great talent that he recognized this true brotherhood of freedom between the two peoples and that he could interpret it into valid actions. But he was not alone in this. There are other great Filipinos who think as straight and act as morally as did this greatest of their recent leaders and they will not let his memory down nor witness the destruction of his inspiration.

On our side we must realize that this is so or we will betray the faith President Magsaysay had in us no less than in his own countrymen.

Significance of Hungarian Revolution

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Scores Inaction in Hungary Issue," written by the Most Reverend Robert J. Dwyer, bishop of Reno, Nev., and published in the Brooklyn Tablet of January 12, 1957. The article states brilliantly the significance of the Hungarian revolution to the American conscience.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SCORES INACTION IN HUNGARY ISSUE—RENO PRELATE DECLARES AMERICANS ARE LAZY AND INDIFFERENT

(By Most Rev. Robert J. Dwyer)

Shakespeare's phrase for it would be the "expense of spirit in a waste of shame." It exactly describes the magnificence of Hungary and the ignominy of the rest of us.

Here, for anyone who cares about such things, is the supreme example of heroism in our age, the test case of the meaning of Christendom, the most glorious vindication of the human spirit we have known.

The classic instances, Thermopylae, Pickett at Gettysburg, the defense of the Alcazar, fade as the stars before the mounting sun. Here is an expense of spirit so lavish as to enrich all history.

But then, by contrast, our wasteland of shame. We have cited all the prudential reasons why we should work "through channels"; we have marshaled all the arguments for avoiding a world conflict of incalculable risks and dangers; we have even called upon the moral theologians to assure us that no revolution, however just, should be undertaken without reasonable hope of success; but the fact remains that while we have been talking a nation has been murdered.

NOTHING BUT TALK

Our shame is that we have been able to do nothing but talk. But it goes deeper than that. It lies in the fact that we have allowed ourselves to be maneuvered into our present embarrassment, and that we did so pretty well with our eyes open.

It might have been foretold by anyone with a glimpse of vision that the precise concatenation of circumstances we accepted would produce the precise results we now so grievously deplore.

There would have been no need for a prophet; a mathematician would have done as well. William Lloyd Garrison's burning words, "a covenant with death and an agreement with hell," may have been Abolitionist rhetoric, but they could well serve as a plain unvarnished statement of what we let ourselves in for when we signed on the dotted line at Yalta.

BLAME SHARED BY ALL

There is not much point now in trying to foist the total blame for the great sellout on certain individuals, living and dead. If we were to assess it completely we might have to go back much farther than the hypothetical rivet in grandfather's neck. Blame Karl Marx for Stalin, blame Mr. Secretary Cecil for Winston Churchill, blame Wilson James for F. D. R.

It is a line of reasoning which obviously gets nowhere, for the simple reason that it ignores the blunt fact of personal responsibility.

If there is blame to be assessed it is to be shared by all of us. We consented to the fact. We were too lazy or too indifferent or too occupied with making money to bother our heads about it.

We consented to a world half free and half slave, and we entered into a compact with the slave power which literally bound us to the maintenance of that peculiar institution over one-quarter of the habitable globe.

We dressed it up with pious phraseology, of course, to placate the ghost of Father Abraham, and we even—God forgive us—talked about the new types of collective democracy. We knew what we were doing. Now we are paying the price.

IDEALS BLASPHEMED

Not that we are suffering physically. Our gas supply is not rationed, our cities are intact, our holiday crowds are not being machine-gunned. All these things are happening in Hungary, and Hungary is a long way off.

But we are suffering in our conscience. It comes home to us that this is actually the result of our doing. We have blasphemed the ideals that are the most sacred inheritance of America, and now they rise us like bloodstained furies to haunt us.

We open our gates to 25,000 Hungarian refugees, and every one of them is a living reproach to the criminal stupidity that ruined them.

In a few more days we will celebrate the Christmas of 1956. We will sing the old carols, recalling the eternal hope of peace on earth to men of good will. We will salve our conscience with the reflection that if there is precious little peace and even less of good will; we at least are not wholly to blame, and even if we were, there is nothing we can do about it. Which is, precisely, to miss the entire meaning of Christmas.

For the whole point of Christ's coming is that we are to blame for our sins and that we are responsible for the world we live in. The nativity was not a sentimental gesture for our comfort but the divine answer to our absolute need for salvation. Christ came not as a gentle visionary but as the supreme realist to change the face of the earth.

Christianity is actually far less theory than it is the stern practice which places the burden of justice and charity exactly where it belongs, in the hands of each individual. Our Christmas joy would necessarily be incomplete were even one human soul denied its God-given liberty. With Hungary in agony and half of Christendom enslaved this is a Christmas more of hope than of joy. May that hope come quickly, as the day star from on high.

Speaking Awards to Mary Winter and Estrid Baldwin, of Minnesota

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. HUMPHREY. Mr. President, on Saturday night, March 9, I had the honor of attending the banquet of the 15th annual 4-H Radio Public Speaking Contest in Minneapolis This banquet honored

the 17 district winners and Minnesota State champions, who for 2 months have been competing with over 800 young people in Minnesota from the ages of 14 to 21

During these 2 months, almost every radio station in Minnesota carried talks from this group on "How the International Farm Youth Exchange Program Builds Better World Understanding." The first place winner this year was Mary Winter, of Redwood Falls, Redwood County, Minn. I ask unanimous consent, Mr. President, that the text of her talk which won the 1957 radio speaking State championship be printed in the Appendix of the RECORD.

The second place State winner this year was Miss Estrid Baldwin, of McGregor, Aitken, Minn. I also ask unanimous consent, Mr. President, that the text of her talk be printed in the Appendix of the RECORD.

I know of nothing more heartening, Mr. President, more encouraging for the future and vitality of American democracy, than the continuation and expansion of activities like these speaking contests.

There being no objection, the orations were ordered to be printed in the RECORD, as follows:

HOW THE IFYE PROGRAM BUILDS BETTER WORLD UNDERSTANDING

(By Mary Winter, Redwood Falls, Redwood County, Minn., 1957 radio speaking contest State champion)

There was Mary, from England, with a neatly clipped accent, throwing American slang around like a veteran; Carlos, a dark-eyed teen-ager from Uruguay, getting his feet tangled up in a 4–H square dance, "Allemand left with your left hand, and a right and left grand." Fred, the Australian fellow, whose lonely look vanished in the glow of admiration over pretty American girls; and Anders, the tall, blond, very reserved Swedish farmer, who blushed as 100 American teen-agers sang "Happy Birthday" to him—these were 4 IFYE's from many lands that I met in 1956—4 I met personally and with whom I enjoyed many jokes, proving that an effective bridge between language difficulties is laughter. These four, plus the American IFYE's I've heard and whose slides I've viewed, were those who taught me that the way to peace is through basic understanding of people. The IFYE program blazes the trail toward accomplishing this because, through this program, young farm people develop a sympathetic grasp of the problems of the farmer of another land, and a keener appreciation of the universality of human traits. The IFYE participates in an international exchange of ideas and methods, besides sharing the best, and worst, in another country's daily life.

All of these rural young people in this wise exchange are helping build world understanding through their part in the International Farm Youth Exchange, or IFYE, as it is less formally called. The IFYE delegate works toward world peace through two intersecting avenues—the roads "why" and "individual." The whys determine the actions of many countries which are derived from the people of those countries as individuals.

The foreign farmer whose American IFYE works by his side as he picks grapes, harvests wheat, plants potatoes, herds sheep, or milks cows gains a much different idea of America from this grassroots ambassador, whose interest in farming equals his own, than the farmer would ordinarily get from his only contact with America—its movies, depicting gangsters, cowboys, and Indians, and its tourists, who are more relaxed than they would usually be because they are taking a well-earned vacation. To the foreign mother whose American IFYE daughter helps her do the family washing by hand, prepare a simple meal, or weave cloth for the wearing apparel of the entire family, America becomes a friendly people, not just a vast country whose large enterprise and hurried pace does not concern itself with the individual. The American youth takes many steps toward world peace when he learns that the Scottish people don't wear kilts every day; that Greece isn't only ancient ruins; that Switzerland isn't all high peaks, inhabited by yodelers and mountain climbers; that Iran's horizon isn't composed entirely of oil derricks—the list of changing concepts is endless, and it is a two-way process, duplicated by American and foreign IFYE's alike.

To understand an individual's problems is to enlarge the compass of one's world understanding, for to understand individuals is to understand the composition of nations, and their reasons for actions in world relations. Perhaps, for example, France's reluctance to permit West Germany's entry into the North Atlantic Treaty Organization stems from the total destruction of his land wrought by the German war machine, as seen twice through a French farmer's eyes—his answer, multiplied by several million, gives an important reason for French hesitance, and one not to be taken lightly. For a brief while, a foreigner's problems become his own, and who can gainsay the fact that a more sympathetic understanding comes with sharing a problem. As IFYE delegates at the person-to-person level, American youths learn these reasons for world crises from the individuals concerned, and acquire broader understanding of the world situation as a whole. In like manner, the IFYE delegate to America hears from the American farmer, whose earnings are near the bottom of our national wage scale, his version of America's hostility toward the influx of foreign farm products on American markets.

Probably the most important way the IFYE program builds world understanding is not only through actual contacts with people, which are, of course, still comparatively few in number, but also through the reports these IFYE's from America and from abroad bring to the "folks back home," helping them gain the same understanding of world problems as the IFYE himself has. All parts of our globe, as seen through an IFYE's slides, talks, conversation, and attitudes, become real, with people's hopes, dreams, joys, and sorrows not so different from the listener's own.

From its beginnings in 1947, when 6 young British farmers journeyed to America, to its present proportions, when the foreign IFYE's I met were only 4 of over 100 delegates from 50 different nations, the International Farm Youth Exchange has grown to a prominent place in the quest for world understanding and hence, world peace. One American IFYE summed it up in these words, employing the four letters, I-F-Y-E in its beginning:

"If ye understand each other,
Ye shall have world peace."

HOW THE IFYE PROGRAM BUILDS BETTER WORLD UNDERSTANDING

(By Estrid Baldwin, McGregor, Aitkin County, Minn., 1957 radio speaking contest reserve State champion)

An idea is born. Formed in the minds of young men and women all over the United States, the idea came out of a desire to promote better understanding between the peoples of the world in a more realistic way than food and clothing.

Countries that are desperately in need of these things appreciate our help, but there the contact grows cold and the feeling is lost. We can feed the empty stomach and clothe the body, but when understanding between people about their culture and social customs is left out, the message is lost.

Ed Aiton, the originator of the International Farm Youth Exchange program, worked with former 4–H and rural youth members in a program that would aid the search for world understanding. They decided that this search should begin on the grassroots level of society, the home.

In 1947, the program of International Farm Youth Exchange was begun, and their idea became a reality. The first letters of each word were used to spell IFYE, which applies to the program itself and the participants.

Let us follow John Smith, a typical American tourist visiting Europe. We find him visiting all the important places, seeing all the important things—by a split-second timetable of events. Occasionally, he hears vague detached reports of conditions in the country; but he is so busy rushing from place to place, country to country, trying to see everything, he sees nothing of true importance. Back in America he feels adequately prepared to solve the whole foreign situation because he has seen the situation. But has he really seen it? His knowledge stops at the size of the grapes used in his favorite wine and stays there. However, he is not the only one who may lose the meaning of his trip. To many tourists in America, the farm is pictured as a completely automatic pushbutton machine that takes all the work out of farming and puts TV sets and Cadillacs in its place.

IFYE's go to Europe, and come to America, for a different reason than these tourists. It is the aim of the IFYE program and each of its participants to develop an appreciation of these problems and the resulting misunderstandings.

It is said that a picture may instantly present what a book can set forth only in a hundred pages. An IFYE is the picture of a nation and its people. In his host country an IFYE lives with farm families sharing the work, fun, and ideas with his new mom and dad and brothers and sisters as he would in his own home. He experiences the thrill of doing new things, like driving an American tractor for the first time, or the ache of newly discovered muscles after a day in the vineyards on the steep mountain slopes of Italy. The hardships, happiness, customs, and personality of these families become a part of the IFYE because he becomes a part of them.

An IFYE from Finland noticed the extreme complexity of the American farming system on a large dairy farm. He later said, "Farmers in America work very hard, for they use both their brains and their hands." His understanding of the situation carried more meaning to him than a walk through the barns and a look at the grazing herd, while on a 3-week tour of the United States.

The social differences have an important influence on the relationship between nations. In Europe, for example, a woman out of respect for her husband, opens the door for him. American culture teaches the young male citizens to extend the same courtesy to the girl, and both nations disagree as to which is right. Perhaps there is no one answer, and the comparison may seem trite, but each exchangee finds it very hard to become accustomed to the opposite procedure in his host country. He realizes, however, that because the custom has become an integral part of their society, individuals have learned to accept it as a truth and other ways as wrong.

Call it diplomacy, call it tact, call it brotherhood. It is because someone has gone beyond the boundary of placid observation and projected himself into an environment to

find out how and why a people think and feel as they do.

When an IFYE returns to his homeland, whether it be Ireland, Germany, America, or any of the 48 participating countries in the exchange, he devotes several months to the sharing of his experiences with others. His stories and observations, reported by movies, slides, or talks, spread the purpose of the IFYE program to others.

One person can observe and learn, but when he shares his feelings with others the circle of understanding grows. When it reaches the corners of the earth, and each man realizes his fellow man has the same hopes, dreams, and feelings he has, world peace can be achieved.

Disappearance of Aviator Gerald Murphy—Tribute to Representative Charles O. Porter

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. NEUBERGER. Mr. President, once again America's most thorough and famous daily newspaper, the New York Times, has recognized the courageous leadership of Congressman CHARLES O. PORTER, of the Fourth Oregon District, in seeking a solution of the disappearance in the Dominican Republic of the American aviator, Gerald Murphy.

This grave matter is most properly a concern of CHARLES O. PORTER, for Gerald Murphy is from Mr. PORTER's home city of Eugene, Oreg.

The New York Times gives full credit for the State Department's new interest in the case to Congressman PORTER. I ask unanimous consent that the editorial from the New York Times of March 19, 1957, entitled "The Murphy Case," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MURPHY CASE

It was heartening news that the State Department has at last decided to challenge the Dominican dictatorship on behalf of an American citizen. On Saturday it was announced that Generalissimo Trujillo has been asked urgently to reopen the case of Gerald Murphy, the American aviator who disappeared from his apartment in Ciudad Trujillo last December.

The case is especially interesting and important because it has been linked to the even more mysterious disappearance of Jesús de Galíndez, the Columbia University teacher, a Spanish Basque. Dr. Galíndez disappeared from the heart of New York City more than a year ago after having written an exposé of the Trujillo dictatorship in the form of a doctoral thesis.

The evidence bringing together these two sensational cases is circumstantial. Mr. Murphy piloted a hired plane from Long Island on the day Señor Galíndez disappeared and it is known the American flew to Ciudad Trujillo. Other details also pointed to a connection with the Galíndez case. The story given out by the Dominican authorities concerning Mr. Murphy's disappearance and the supposed suicide of his companion, the Dominican aviator Antonio de la Maza, was so fantastic that it would have been disgraceful if the Washington administration had accepted it without challenge. One has to suppose that we might have done so, for our policy toward Generalissimo Trujillo has been exceptionally friendly.

It certainly looks as if credit for the State Department's move must go to Representative CHARLES O. PORTER, of Oregon, who spoke up boldly and well in the House for his constituents, the parents of Gerald Murphy. On that day no Congressman came to Mr. PORTER's support. On the contrary, he was abused in unworthy fashion. His justification has now come.

It is to be hoped that the State Department will insist on a satisfactory answer from the Dominican Republic and its dictator, Generalissimo Trujillo.

The Foreign Student Exchange Program

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. THYE. Mr. President, within the next few weeks a group of students from Sweden and Denmark will be arriving in my home State of Minnesota. Their coming is a part of the foreign student exchange program under which they will attend the University of Minnesota for about 6 months and live and work on Minnesota farms for an equal period of time.

The people of Minnesota will benefit from the presence of 11 Swedish and 6 Danish students. They are all 21 to 27 years of age and were selected from among the outstanding young agricultural students in the two countries. While they are here, an equal number of students will be studying and working in Sweden and Denmark.

Mr. President, the importance of this type of program in the development of international understanding and the spreading of cultural understanding can hardly be measured, but I am sure that the families in my State of Minnesota who take these young Scandinavians into their homes will have their lives greatly enriched and, as a result, their communities and their State will be enriched.

I ask unanimous consent that an article which appeared in the Minneapolis Tribune announcing this plan may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Minneapolis Tribune of March 17, 1957]

DOWN ON THE FARM—17 SWEDES, DANES TO LIVE ON FARMS IN STATE

(By Axel Hansen)

In a few more weeks Minnesota is going to be richer by 11 Swedish and 6 Danish young farmers.

By a year from now we'll be richer by a great deal of increased understanding of our American ways and traditions on their part.

Also we'll be richer by the same kind of understanding on the part of six Minnesota farm youth who right now are on their way to Sweden.

As I see it, everybody gains by this type of foreign student exchange program. If anybody loses, I don't know who it is unless it's the spirit of narrow thinking and provincialism.

Seven of the Sweds already have arrived. The others, plus the six Danes, will arrive in early April.

They all are 21 to 27 years in age. They were selected from outstanding young farm students in the two countries.

They'll study for about 6 months at the University of Minnesota and live and work on Minnesota farms for an equal period. The American students do the same in Sweden.

There are a lot of names involved. I want to mention those of the visiting students, and where they are staying. There may be some Minnesotans acquainted with the visitors' hometowns who would like to drop them a note or to drop by for a chat.

The Swedish students and the host farmer with whom they will stay in Minnesota are:

Bertil Gunnar Fleming Riise, Stockholm, who will visit the farm of Selmer Foss, Kenyon, Minn.; Sven-Erik Malte Backgarden, Vasterlosa, visiting Mr. and Mrs. Raymond Thompson, Route 4, Waseca, Minn.; Hans Inge Larsson, Langebro, visiting Porter Olstad, Hanska, Minn.

Nils Goran Evert Mattisson, Vanga, visiting Philip Pahan, Underwood, Minn.; Sven Gunnar Arne Erlandsson, Skoghult, visiting Mr. and Mrs. David Zimmerman, Weseca, Minn.

Bo Ingemar Larsson, Ljungbyhed, visiting Einar M. Jensen, Tyler, Minn.; Arne Bertil Andersson, Klagstrop, visiting W. C. Drysdale, Wabasha, Minn.; Lars Gustaf Akesson, Skelleftea, visiting at our farm at Battle Lake, Minn.; Ake Philipsson, Norrkoping, visiting, Henning Clemedtson, Moorhead, Minn.

Carl-Wilhelm Ottergren, Kopingebro, visiting Duane Pearson, Ogilvie, Minn.; and Jorgen Rockler Vaderstad, visiting Mr. and Mrs. Harry Youngdahl, Russell, Minn.

The Danes and their host farmers are:

Svend Poulsen, Olgod, visiting with us at Battle Lake; Frits Lundager Sorensen, Nykoping, visiting Harold K. Shaffer, Route 1, Pipestone, Minn.; Paul Andersen, Tryggelew, visiting Glenn Holmberg, Vesta, Minn.

Georg Nielsen, Gandrup, visiting David Woodward, Hawley, Minn.; Jens Herluf Druebjerg Jensen, Klippinge, visiting Samuel Bigalk, Harmony, Minn., and Arne Gudmund Bjerre, Esberg, visiting W. H. Neumann, Watertown, Minn.

Proposed Experimental Farm in Southwest Missouri

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. HENNINGS. Mr. President, I read in the March 12, 1957, edition of the Joplin, Mo., Globe an excellent editorial entitled "For an Experimental Farm." Although the editorial deals specifically with a proposal for the creation of an experimental farm in southwest Missouri, it contains also a number of well-expressed ideas which are of universal applicability. I commend it to the attention of my colleagues in the Senate, and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR AN EXPERIMENTAL FARM

Widespread interest is displayed in proposed creation of an experimental farm in southwest Missouri, and for good reason. Such a project would be an advancement in the development of agriculture in the 22-county area and a contribution to the vitality of the area's economy.

Understandably a few people might question the validity and timeliness of the research center because one of the products of research, but only one, is furnishing know-how for the purpose of increasing productivity. Therefore, certain objections are natural in view of the fact that we are now living in an era of surplus, and surplus in farm economics inject a depressing influence.

However, immediate troubles and contrary situations of the moment must not be allowed to jeopardize the future. Population is growing at a much faster rate than was predicted by the experts 10 to 15 years ago. Productive capabilities of farmers in the future must accelerate to meet the approaching enlarged demand. Research has many functions to perform from the standpoint of commodity output and plays its biggest part in the preparatory stages.

The country today enjoys unparalleled abundance because yesterday there were industrious men and women who studied and learned, then taught. It should not be forgotten that the practice of research more often than not is judged in terms of years, even decades, in the attainment of measurable success or final fruition from studies.

Without an experimental farm in southwest Missouri, the College of Agriculture of the University of Missouri in past years has contributed to many facets of agriculture in this part of the State, notably in diversified farming, animal husbandry, and dairying. With an experimental station there is no doubt that it could make a much greater contribution through new knowledge to be gained and imparted to the farmers.

Carrol M. Shanks, President of the Prudential Insurance Company of America

---

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. THYE. Mr. President, it is appropriate, I think, for me to bring to the attention of this body the contributions to our Nation's life being made by an American business firm with a Minnesota-born man at its helm. Minnesotans are aware, of course, of that firm's contribution to our State's commerce, its participation in the construction of the great Southdale Center, its beautiful regional home office in Minneapolis, but I wish at this time to point up especially the clear, basic humanitarian philosophy he and his company have established for not only a gigantic industry but for big business generally in our country today.

I ask unanimous consent that a condensation from the Minneapolis Sunday Tribune of March 17, 1957, of a recent story in Time magazine surrounding Carrol M. Shanks, president of the Prudential Insurance Company of America, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THIS IS CARROL SHANKS—MAN WHO DEALS WITH BILLIONS

(EDITOR'S NOTE.—The subject of this week's cover story in Time magazine is Carrol M. Shanks, president of the Prudential Insurance Company of America, who lived during much of his boyhood in Fairmont, Minn., where his father was postmaster. The following is a condensation of the Time story on Shanks and Prudential.)

How long will you live?

Today everybody expects to live longer. But the man who can give the best longevity estimate, at least for 1 out of every 5 Americans, is Carrol Meteer Shanks, president of the Prudential Insurance Company of America, which has 33,200,000 carefully analyzed policyholders.

By charting a man's age, background, diseases, job, habits, even his morals, the Prudential can chart the odds on the death age down to the last decimal.

Prudential's tables show that a male policyholder 21 will probably live to be 73, one 30 will live to 74, one 45 can expect to live to 75.

It also knows that its women policyholders live 3 years longer than the men it insures.

Prudential, of course, also knows what odds to expect on its president, who turns out to be the perfect risk.

At 58, with a trim 175 pounds spread over his 5-foot 10-inch frame, Shanks is lean and rosily healthy.

He likes to get 8 hours' rest most nights—10 p. m. to 6 a. m. He does an hour's calisthenics before eating a sensibly big breakfast.

His other meals are light; he tries to keep lunch within 300 calories and dinner within 700. He does not smoke, rarely drinks, and has few financial worries.

His salary is $250,000 a year—more than any other life insurance executive. He is a family man, a Methodist, and thriftily drives a well-weathered 1948 Cadillac.

When he dies, he will have the satisfaction of leaving his family secure. At a cost of $27,000 in premiums annually, something that keeps him "insurance poor," Shanks will leave his heirs policies totaling $450,000.

By dint of his ideas and exertions, Shanks has not only become one of the most respected spokesmen for United States life insurance, but also has made the Prudential, whose head offices are in Newark, N. J., the fastest-growing company in a rapidly expanding industry.

Last week, with 1956 figures all in, President Shanks announced Prudential had passed its biggest rival, Metropolitan Life, as the world's No. 1 seller of life insurance.

In 1956 Prudential sold $8.2 billion worth of new insurance, now has a total of $58 billion worth of insurance in force. With assets of $13.3 billion, it ranks as the world's third largest company of any kind.

In 10 years as boss of Prudential, Shanks has taken some giant steps along the road to insurance for all, has boosted the company's sales 165 percent, its assets 95 percent.

He is a great believer in group insurance by which entire companies can insure their work force for far less per capita than the cost of insurance for an individual, and will insure groups as small as four.

Last year Shanks launched his biggest innovation: Family insurance for as little as $10.90 a month. It covers the lives of an entire family—father, mother, children—under the same policy.

In the first 4 months after the plan started, 190,000 families signed up for $1.5 billion worth of the new insurance and made it by far Prudential's best-selling policy.

Last year some $10 billion of life insurance funds was invested in the United States economy, $1.6 billion of it by Prudential.

Almost anyone, big businessman or little, farmer or factory hand, can qualify for a Prudential loan or mortgage. At the top of Prudential's list of borrowers is a Who's Who of United States industry: International Business Machines, General Motors, Chrysler Corp., Union Carbide & Carbon Corp., International Harvester, Goodyear Tire & Rubber.

Prudential is the world's biggest private holder of home mortgages (500,000), one of the biggest financers of huge skyscrapers (Manhattan's Empire State Building, Chicago's Merchandise Mart, Cincinnati's Terrace Hilton Hotel), a strong backer of the new shopping-center boom.

It supplied $8 million for Minneapolis' new Southdale center and $100 million for Los Angeles' Lakewood shopping center and for more than 7,500 houses in a new development surrounding the center.

Nor does Prudential stop there. The apple of Shanks' eye is a new commercial and industrial loan department, set up to make funds available to small-business men who ordinarily cannot get long-term loans through normal bank channels.

"What we're looking for," says one Prudential executive, "is the nice little company making a nice little product in Bucyrus, Ohio."

To do a better job selling insurance—and spreading loans evenly throughout the economy—Shanks kicked off the biggest decentralisation program in the history of United States insurance.

Since 1946 Prudential has opened 6 regional offices spread across the United States and Canada. Shanks laid out more than $10 million for a towering Los Angeles home office, another $10 million for a 21-story Houston home office to back Prudential's faith in Texas' booming economy, still another $40 million for a 41-story Chicago home office that was the first new skycraper to rise over the lake front in 20 years.

Millions more went into Minneapolis, Jacksonville, Fla., and Toronto, Canada, for modern regional home offices with air conditioning, restaurants (free lunches for employees), and auditoriums.

As Prudential's seventh president in 81 years, Carrol Shanks sits behind a huge mahogany desk in a suite of offices in Newark, built in the days when insurance men spent heavily for purposes of prestige.

Hand-carved Honduras mahogany frames the president's doors and windows; the walls are covered with silver-filigreed blue paper, the ceiling fringed with gold leaf; deep-piled rugs smother the floor. Shanks sometimes works in his shirtsleeves, dials his own phone.

Shanks hates memos, delegates responsibility, passes out assignments with the informality of a man offering a stick of gum.

When tapping the man to head the Prudential's $5 billion midwestern operation, all he asked was: "How would you like to go to Chicago?"

Yet Shanks can be a flinty chip off the old rock with anyone who attempts to balk his overall policies.

"I hate to be frustrated," he says. Last year, when a bitter disagreement came up over his idea of pushing small loans, Shanks stood it as long as he could, then shook up his bond department from top to bottom. Two executives were fired, six others quit.

At least 25 percent of the time, Shanks is out on the road and the trips are mankillers. Says the boss of the Toronto regional head office:

"We brought him here one Sunday afternoon to do some work; he went to Winnipeg, where he gave 2 or 3 speeches, met every single Prudential employee, met the mayor, the

Premier, went on TV and radio twice in 1 day.

"The same thing happened in Edmondton, Calgary, Vancouver. The rest of us were all 'pooped out.' But he just thrives. If he's at a dinner party one night, he's perfectly willing to have the press in for breakfast—every morning."

Shanks, a resolute homebody, is almost unknown in suburban Montclair, N. J., where he lives with his wife Martha. Their 3 children—Wallace 31, Margaret 28, Meteer 25—are married and living away from home.

His main relaxation is the piano. He practices 1½ hours each day, takes a weekly lesson from the same teacher he has had for nearly 20 years, and once every year sits down to a duet with her at a local recital.

Since he became president, he has read innumerable books on how to be a successful executive, and has yet to find one, he says, "that indicates that I have a chance."

His father was the postmaster at Fairmont, Minn.—a firm-handed Methodist who looked on liquor as the root of all evil. From the start, young Carrol was smart in school.

Following an elder brother, he went to the University of Washington, made straight A's, Phi Beta Kappa, the presidency of Beta Theta Pi, courted his future wife, and clerked afternoons and Saturdays in a downtown Seattle, Wash., shoestore.

Married in 1921, he headed east to Columbia Law School, where he made a reputation for himself both as a bright young lawyer and a boxer with a Sunday punch.

Once, when a cocky student dared Shanks to hit him on the chin, Carrol obliged—and knocked him cold.

Shanks took a job teaching law at Yale, wrote four legal books with a Columbia classmate and lifelong friend, Supreme Court Jutsice William O. Douglas.

But teaching was not for him. "I wanted something to happen, wanted to hear the telephone ring."

Moving on in 1931, he took a job with Root, Clark, Buckner & Ballantine, one of the big Manhattan law firms, and again was disappointed.

"Law is bookish," says Shanks. "I like the action, the battle, the campaigns."

Finally in 1932 he found just what he wanted. Over in Newark, the Prudential Insurance Company of America, with millions invested in railroad bonds, asked Root, Clark for someone to help with their portfolio. Shanks was the man. Overnight he started a rise punctuated by enough battles to satisfy any warrior.

Shanks rose swiftly, first as an adviser to Prudential's brass on their railroad securities, later as general solicitor for the company, finally in 1939 as a vice president.

By 1944 he was Prudential's executive vice president, second only to President Franklin D'Olier.

With D'Olier away much of the time working for the Government on the war effort, Shanks gradually became the company's acting president.

Typically, one of his first moves was to call his vice presidents together and ask: "All right, now what is our biggest problem?"

Everyone had the same complaint: New Jersey taxes. They were levied on Prudential at an annual rate of $5.50 for every $100 surplus in its treasury, for more than New York (where some of its biggest competitors were) and other States charged their companies. It put Prudential in the worst possible competitive position.

Quietly and inflexibly, Shanks laid it on the line to State officials; either taxes come down or Prudential, one of the State's biggest taxpayers, would move out.

The fight that followed was so rough that more than one vice president got sick and had to retire. Finally Shanks won: New Jersey reduced the taxes. Says Shanks: "I'd hate to think what would have happened if I'd failed."

Two years later, at 47, Shanks was Prudential's boss. Franklin D'Olier opened a board meeting by announcing he wanted to move up to chairman. "And here," said he, pointing to Shanks, "is your new president."

Shanks is convinced that insurance men must change their thinking if they hope to serve the expanding United States population successfully.

They must find new and exciting approaches to spur mass insurance sales, and ways of cutting the costs of insurance.

The price of failure, says Shanks, is the specter of Government encroachment on the industry.

Says Shanks, with a rock-ribbed finality worthy of Gibraltar itself: "The stakes are high, and the greatest stake of all is the preservation of our free capitalistic system.

"Capitalism makes it possible for us—alone among all the countries of the world—to feed ourselves, finance ourselves, transport ourselves, and produce what is necessary.

"But we must face the fact that capitalism cannot be static. Our capitalism must continue to evolve and develop if it is to meet the ever-changing needs of our expanding society."

School Aid

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. HUMPHREY. Mr. President, among our smaller Minnesota newspapers, the Park Region Echo, of Alexandria, Minn., as achieved a special reputation for independent and constructive editorial writing. In the March 14 issue of the Echo an editorial appears entitled "United States Chamber Roasted on School Aid." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES CHAMBER ROASTED ON SCHOOL AID

The editorial department of the Echo is in receipt of a communication from John R. Miles, manager of the education department of the United States Chamber of Commerce. Among the statements he makes are the following: "While I am sure that you did not intend to do so, your editorial only deepens the misunderstanding both about the problems of school finances and the attitude of businessmen generally toward education. Let me assure you that business leaders know even better than you do the critical role which education is playing in the development of this country and the importance of full manpower development to both our expansion and our national security."

The writer of the Echo editorial has been a teacher for several years and he has taken an active part in attempting to bring about the kind of schools and education which is needed in our country. Not only need we depend upon our own knowledge of the needs of education but we know what the National Conference on Education in Washington a year ago brought out on the needs of the proper education and what were the remedies. Also we have read a great deal of what the National Education Association officials have stated about the needs for education on the national scene.

And these statements are opposite in every respect from the statements issued by the United States Chamber of Commerce in regard to the situation, especially on school finances. We did not say the members of the United States chamber did not know about the needs. We are sure they know it all too well. But the thing is that they are opposed to national aid toward the building of schoolrooms, and in that respect the United States chamber has actually misconstrued the facts. There is need for more schools, not as the chamber circular asserted and that there is less need now and the situation is not serious in any sense. A circular from the Washington offices of the United States chamber contains the following statement "Is there a school emergency? National figures don't indicate it. If there is it hasn't been identified." Such a statement defies the facts as pronounced by most of the Nation's educators.

Mr. Folsom, President Eisenhower's Secretary of Welfare, told Congress Tuesday, "the very serious classroom shortage will not be erased by statistical legerdemain of pretending that it does not exist." Mr. Folsom, hitting back at opponents of Federal aid for schools, said in a statement to the General Education Subcommittee of the House that the group committee has recently been given statements that have been "seriously misleading, and some have been clearly inaccurate." What Mr. Folsom had in mind was the statements sent out by the United States Chamber of Commerce, as we have quoted.

The Welfare Secretary continued: "Those who deny the existence of a serious shortage offer no new or additional information of their own. They have accepted bits and pieces of data from the Office of Education, and various other sources. They have used these data out of context, or only in part, to try to prove their theory."

We believe we are fully substantiated by Mr. Folsom's statement. The letter of Mr. Miles verifies Folsom's statement about distortion, and we want to add innuendoes. The thing is that the wealthy—which will include most of the members of the United States Chamber of Commerce—are not willing to take their moral obligations regarding the education of our youth nor for our national security.

The Eisenhower Doctrine

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Eisenhower Doctrine—How It Was Born and What It Can Do," from Time magazine of March 18, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE EISENHOWER DOCTRINE—HOW IT WAS BORN AND WHAT IT CAN DO

(EDITORS' NOTE.—In the long weeks of political debate, the Eisenhower doctrine was wrenched into so many debatable pieces that

the United States all but lost sight of the remarkable meaning of the whole. From Washington Time's Diplomatic Correspondent John Beal this week explained this meaning in the first story of how the doctrine evolved from scratchpad to policy.)

In Key West, Fla., last December, Secretary of State John Foster Dulles was convalescing from his operation for intestinal cancer. It was some convalescence. Each day at 10 a. m. he was on the phone to the President and the State Department, keeping abreast of the Suez crisis and the United States efforts to keep the Russian volunteers out of the Middle East. At 11 o'clock he would knock off to lie on the beach or go fishing; after lunch he would take a nap or go fishing some more. Each evening before dinner Dulles would invite his one Key West assistant, John Hanes, Jr., 32, and his wife Lucy, and perhaps his doctor, to his quarters for cocktails (a rye on the rocks for the Secretary), and there the Middle East would dominate the conversation. One day Dulles got out his yellow scratchpad and pencil and wrote out a draft of what he called "A United States Declaration on the Middle East." But his thoughts had not jelled, and he tore up the declaration without having it typed.

THE ADVANCING CONCEPTS

After 4 postoperative weeks Dulles returned from Key West, flew a few days later to the December 11 meeting of the NATO Council in Paris. There, separately, the British and French Foreign Minister told him that the United States principal job was to make its presence felt in the Middle East. Dulles assured them both that a way would be found to do it. The objective: developing a long-range United States initiative to fill the post-Suez power deficit and to work toward an enduring stability.

Back in Washington, he reviewed several alternative plans prepared by the State Department's policy-planning staff. Three of these alternatives were: (1) United States adherence to the Baghdad Pact, which links the northern tier nations of Pakistan, Iraq, Iran, and Turkey, to Britain; (2) United States proposal of a Middle East Charter that would invite the area nations to subscribe to a statement of social and economic betterment for their peoples, with no reference to military considerations; (3) bilateral treaties between the United States and individual Arab States. Out of these policy papers Dulles borrowed some ideas, junked a great many more, then evolved with the President what the United States press—not Eisenhower, not Dulles—at once began to call the Eisenhower doctrine.

One complicating factor for the State Department was Eisenhower's post-Korea policy, expressed during the 1955 Formosa crisis, of getting prior congressional approval for the use of United States forces. Once again Ike was adamant: it was essential to get congressional approval in advance for the use, if necessary, of the United States deterrent power in the Middle East. So after Ike and Dulles won a National Security Council O. K. for the doctrine, Ike went before a joint session of Congress to (1) request standing authority to use United States Armed Forces to help protect any Middle Eastern nation requesting help against aggression from any nation controlled by international communism, and (2) spend $200 million in the area in stability-making foreign economic aid.

THE PROJECTION OF POWER

The Eisenhower doctrine was old and also new. It was old in the sense that it hewed (as the Truman doctrine for Greece did) to the sustained United States objective of seeking an areawide, indigenous capability of self-defense and an insulation of the area's disputes against embroiling the rest of the world. It was new in that it projected the factor of United States power into a defense of the area. It was also new in its attempt to provide economic flexibility in achieving another sustained United States objective for the area—the raising of its economic level.

The features which recommended this policy to the administration were:

It is bilateral (a point advocated strongly by Deputy Under Secretary of State Robert Murphy); it extends the United States offer of protection to individual Mideast nations, but only at their request; it does not require organization of the whole region to be effective.

Although it is designed principally to preserve the vast stretches of Arab territory from communism, it also applies to the Arabs' sworn enemy, tiny Israel, without taking sides.

It is informal; neither the requesting nation nor the United States has to sign a new pact, and sensitive nationalists are not required to line up on the United States side.

It is exclusively American and noncolonial. The United States is no longer coupled rigidly or identified in the Middle East with Britain and France—and yet the doctrine in no way excludes them, but, in fact, helps to preserve a western influence behind which the British and French may rebuild.

The Task Before Delegate Burns

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. O'MAHONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Task Before Delegate BURNS," having to do with conditions in Hawaii. The article is written by Hon. Oren E. Long, former Governor of Hawaii.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Honolulu Advertiser of January 6, 1957]

THE TASK BEFORE DELEGATE BURNS

(By Oren E. Long)

Delegate JACK BURNS has his work cut out for him. Only the most courageous would wish to assume his task. In relation to the more routine legislation everything will tend to fall into place. Appropriation items for Federal projects in Hawaii and grants-in-aid are generally handled by the Bureau of the Budget. The same is true, in the main, for appropriations for the Territory—roads, health, public schools, the university, and all the public services that are financed through Federal funds. Special financial items will be initiated by the Delegate and carried through by his personal efforts.

There are legislative projects that rest squarely on the shoulders of the Delegate. Statehood is such an issue. True, the program to make Hawaii a State has a long history. The effort has been cumulative. Determined workers in the community and in Congress are still enthusiastic. There is a rather general feeling, however, that prospects of success are more remote now than they have been in a decade. This poses a problem that will test the ingenuity of the Delegate.

The leaders who now are against statehood always have been opposed to it. Two of the 28 Senators who voted against the bill in 1953 have been replaced by supporters. Of the 57 who voted for it, not a single one has publicly announced that he has changed his position. The probabilities are that the support is about what it was 4 years ago.

There are grounds for believing that support from the Democrats will be stronger than it has been in the past, particularly in the Senate. If this proves to be true, it will be due in part to the strong Democratic trends in both Territories in the 1954 and 1956 elections. The attitude of Republicans will doubtless be influenced by the type of support which President Eisenhower gives to statehood in his message to Congress on January 10.

The issue of communism will continue to be stressed by the opponents of statehood. For a period of time they questioned the loyalty of a large segment of the population. World War II made that position untenable.

Whether the admitted presence in Hawaii of a limited number of Communists, under a California leadership, will be a determining factor in the statehood issue remains to be seen. Although leading witnesses in the recent Senate hearings in Hawaii challenged the loyalty of top officials of the ILWU, they were agreed that the people of this Territory, including the rank and file membership of the ILWU, are good loyal citizens of the United States.

For example, when one of the Senators questioned Senator Ben Dillingham on this point, the reply was: "Senator, I have known many of these members personally, and I can say that they are just as good Americans as I am." Similar statements were made by others. There was a strong criticism of the judgment of the members in following the leadership in noneconomic actions such as the demonstrations staged when the Eastland committee began its sessions. The most significant thing about these demonstrations was the extent to which they were condemned by union members—even to the extent of nonparticipation by entire local units.

It is this situation with which Delegate BURNS will have to come to grips. Fortunately, he has only to refer to the CONGRESSIONAL RECORD to prove how aware he has been of the problem and that he has been working to meet it. The report of the House Un-American Activities Committee, July 6, 1951, records the testimony of Jack Kawano before that committee in Washington. When the question came up as to why he had left the Communist Party and had decided to appear as a witness for the Government, he stated frankly it was due in part to the influence of JACK BURNS, the present Delegate.

Also, during the trial of the 7 in Honolulu in 1953, Mr. Kawano, who was the principal witness for the Government, in reply to a question as to whether local people had influenced him to change his outlook, he said that they had and that "one of those, in fact, the most vigorous in expressing opinions and impressing me along that line, was Mr. BURNS—Mr. JACK BURNS—who was then one of the leaders of the Democratic Party of Hawaii."

This testimony and four other documents bearing on the future Delegate's personal efforts to change the thinking of people in Hawaii were inserted in the CONGRESSIONAL RECORD by Senator RUSSELL LONG of Louisiana—March 15, 1954, volume 100, No. 48, page 3022. These records are known to the Members of Congress with whom the Delegate will work on the issue of statehood. They also indicate that there is more than one way of combating the evils of communism.

Within the next few weeks, we will probably know whether Hawaii and Alaska are to attain statehood or continue as stepdaughters in the sisterhood of States. The issue is clearly drawn. All those who believe in the people of Hawaii will wish to join Delegate BURNS in pressing our claim for statehood now.

Services of Chester J. Olsen, Regional Forester for the Intermountain Area

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. WATKINS. Mr. President, recently Chester J. Olsen, regional forester for the intermountain area, was given an award as Utah's outstanding Federal employee of 1956. This award is the first to be presented by the Federal Business Association of Utah.

Mr. Olsen next month will retire, after 37 years of activity with the Forest Service. For the valuable services that Chet has rendered not only to his native State of Utah but to the Nation generally, this award is most heartily deserved. As one of the editorial writers of Utah noted, "Chet Olsen's genius has not been confined to the Forest Service. His civic and community accomplishments are legend."

So that we all may have the inspiration of reading of Chet Olsen's career in public service, I ask unanimous consent that there be printed in the Appendix of the RECORD a news report and two editorials from some of Utah's leading newspapers. They tell much of the appreciation in which Chet Olsen is held by the people of Utah.

There being no objection, the article and editorials were ordered to be printed in the RECORD, as follows:

[From the Ogden (Utah) Standard-Examiner of March 13, 1957]

RETIRING FORESTER IS "TOP FEDERAL EMPLOYEE"

SALT LAKE CITY.—An Ogden Forest Service administrator has been chosen as Utah's "outstanding Federal employee of 1956."

The award was presented yesterday to Chester J. Olsen, regional forester for the intermountain area. He received the award at a luncheon meeting of the Federal Business Association of Utah.

Mr. Olsen, who will retire April 1, after 37 years with the Forest Service, was honored "for outstanding contributions to community welfare during 1956."

The award is the first to be presented by the association, which said it plans similar presentations annually in the future.

Forester Olsen is a native of Utah. He is a graduate of Utah State Agricultural College and joined the Forest Service in Humboldt National Forest in Nevada in 1919.

He has served on the Fishlake, Toiyabe, and Wasatch Forests and became regional forester in 1950. His region includes southern Idaho, Utah, Nevada, Wyoming, and eastern California.

[From the Deseret (Utah) News of March 11, 1957]

CHET OLSEN RETIRES

Back through its history, the United States Forest Service has been built into perhaps the most respected of Government agencies primarily by westerners. Something seems to be in the fiber and experience of men reared in these western valleys that the protection of the Nation's forests, water, and soil resource demands.

So it has been with C. J. Olsen. When he retires at the end of this month, he will have completed 37 years of distinguished service in conservation. Never in that time has he served outside the Intermountain region, the area of his birth. He has come up through virtually every rank, in Utah, Nevada, Arizona, and since 1950 has been in charge of all Forest Service activities in the 19 national forests of 4 States.

It is no small tribute to the man to say that to a large extent, he has been responsible for changing what used to be an attitude of suspicion and dislike between stockmen and Forest officers to one of trust and cooperation.

"Chet" has, moreover, been a remarkable and excellent influence in civic and church affairs wherever he has been stationed. The chamber of commerce, Kiwanis, scouting, and a dozen other organizations have been better because of his association with them. It is fitting that during the past 2 years, at the close of his career, he should have received such coveted awards as a merit citation from the National Civil Service League, a distinguished service award from Utah State Agricultural College, and a superior service award from the Department of Agriculture.

As we pay tribute to "Chet" and wish him well in the new activities his retirement will bring, it is also a pleasure to welcome another westerner as chief of the Intermountain Region. Floyd Iverson is a Californian by birth and has spent his Forest Service career in the mountains and forests of California, Oregon, Washington, Montana and Idaho. He has been stationed at Intermountain Region headquarters at Ogden for the past 2 years, as head of range and wildlife management.

Mr. Iverson already knows, we hope, that he will have a grand group of men under his direction in the forests and ranger districts of this region. We wish him and his associates as much success and happiness as the region has enjoyed under "Chet" Olsen.

[From the Salt Lake Tribune of March 11, 1957]

ABLE, PERSUASIVE CONSERVATIONIST RETIRES

Tremendous changes in the use of the remaining wild lands of the country and the public attitude toward their administration have taken place in recent years, particularly in the intermountain region.

Last year, for instance, the recreational visits to the 19 national forests for the intermountain region totaled more than 6.5 million, and in addition that many more persons drove through or went sightseeing in the forests. These figures contrast with a few thousand visitors of a quarter of a century ago.

Increased demands for all kinds of use, plus some dramatic lessons presented by nature in the form of disastrous floods and other forms of erosion, have served to win solid public support for the sustained-yield and multiple-use principles of the United States Forest Service.

Old attitudes of special privilege persist, of course, but many communities and farming areas have learned the hard way the heavy price we must pay for abusing the ground cover or failing to adjust our activities to nature's hard laws.

There is another potent element in the gradual persuasion of the public that the plant cover and topsoil must be kept healthy if man is to prosper. This has been a patient, persistent program of public education. At the forefront of this program of demonstration and persuasion is C. J. "Chet" Olsen, regional forester for the last 6 years and a forest officer in the region for 37 years.

The announcement of Mr. Olsen's plans for retirement April 1 will be received with mixed feelings in all walks of life throughout the intermountain West, where this amiable crusader is as well known, respected, and loved as any figure in public life. Tempering the feeling of loss and regret is the knowledge that Mr. Olsen will now have time to enjoy more fully the outdoors he loves so well and that a topflight man, Floyd Iverson, now assistant regional forester in charge of range and wildlife, will succeed him.

Mr. Olsen's record as an administrator in a sensitive and demanding governmental service is matched by his ability to mix with people and convert them to the cause of conservation. He has devoted his adult years with unusual zeal and ability to promoting conservation of natural resources, meanwhile working for long-term rural life betterment.

Reared on a small ranch at Mayfield, Utah, he later herded sheep on the Manti National Forest near the Great Basin Experiment Station. There he became acquainted with forest scientists engaged in water research and learned first-handedly and dramatically the results of unwise grazing, indiscriminate timber cutting, fires, and other forms of mismanagement. He entered the Forest Service as a young man, became a ranger in 1919 and steadily climbed through the years to his present position.

Friendly, warm, and articulate, his natural liking for people wins friendship and confidence and his vast understanding and qualities of leadership have gone far to make the conservation movement in the intermountain West the great force that it is. True, much remains to be done, but a solid foundation has been laid for future programs.

"Chet" Olsen's genius has not been confined to the Forest Service. His civic and community accomplishments are legend. Among his many honors have been distinguished service awards from the Department of Agriculture in 1955 and from the National Civil Service League and the Utah State Agricultural College, last year. He has served on many scores of important local and national committees and action groups.

The many improvements in region 4 since 1950, too numerous to list, reflect in part Mr. Olsen's ability, leadership, indomitability and tireless work. He is giving up his arduous day-to-day duties, but we have no doubt that his persuasive voice and typewriter will continue the splendid crusade.

Proceedings in Tribute to the Western Maryland Railroad

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. BEALL. Mr. President, last night I had the extremely great pleasure of attending an event which can best be described by a phrase borrowed from the rich terminology which is associated with Maryland's noble racing traditions. Without a doubt, the affair was a three-winner parlay.

In the first place, the event itself was the 74th annual banquet of the Old Town Merchants and Manufacturers Association, in Baltimore, and that alone is enough of a comment for those who have ever had the privilege of attending these yearly events to indicate that it was truly a memorable occasion.

Then, to add to the festivities, the night had been set aside as a special tribute to the Western Maryland Rail-

road. This railroad has long offered faithful service to millions of Marylanders, but because of the business before us, I will not attempt at this time to eulogize it as extensively as I would like.

The third winner of the night took the form of an address by Gov. Theodore R. McKeldin, of Maryland. Governor McKeldin's oratorical ability and well-chosen comments consistently make the affairs he attends extra enjoyable, but last night he was, if possible, even better than usual.

Therefore, I now ask unanimous consent that his address be included in the Appendix of today's RECORD immediately after the names of those who made last night's banquet so outstanding.

There being no objection, the names and the address by Governor McKeldin were ordered to be printed in the RECORD, as follows:

Program: Bernard L. Glazer, president; Robert V. Dallmus, chairman, banquet committee; Claude B. Hellmann, toastmaster, Secretary of State of Maryland; Hon. Theodore R. McKeldin, Governor of Maryland.

Officers: Mr. Glazer, president; Gerald Jaffein, vice president; Russell Loock, vice president; Alfred Sundheim, vice president; John C. Sponsel, vice president; Robert V. Dallmus, secretary; Wilmer T. Jones, financial secretary and treasurer; William Saxon, counsel.

Banquet committee: Mr. Dallmus, chairman; Charles W. Pohlman, cochairman; Charles E. Clough, Irvin Greenbaum, William Hoyer, Gerald Jaffein, Wilmer T. Jones, Jerome Kahn, John C. Sponsel, Ernest Zimmerer, Ned H. Strauss.

Past presidents: Theodore F. Wilcox (deceased), J. George Gehring, Jr. (deceased), Col. Jacob W. Hook (deceased), Herman H. Gettemuller (deceased), Wilmer C. Carter, Jerome Kahn, Walter I. Seif, Joseph R. Schneider.

Guests of honor: Rev. John Hoetzelein, St. James Church of Oldtown; Eugene S. Williams, chairman of the board, Western Maryland Railway Co.; W. Arthur Grotz, president, Western Maryland Railway Co.; Hon. Thomas D'Alesandro, Jr., mayor of Baltimore; Hon. J. Glenn Beall, United States Senator; Hon. John M. Butler, United States Senator; Hon. Edward A. Garmatz, Member of Congress; Hon. Samuel N. Friedel, Member of Congress; Hon. Simon E. Sobeloff, United States Circuit Judge, Court of Appeals; Hon. C. Ferdinand Sybert, Attorney General of Maryland; Hon. R. Walter Graham, Jr., comptroller, city of Baltimore; Hon. George L. Radcliffe, former United States Senator; Hon. Howard W. Jackson, former mayor of Baltimore; C. R. Zarfoss, vice president, Western Maryland Railway Co.; Charles W. Pohlman, secretary to the Governor; Wilmer C. Carter, past president, Old Town Merchants; Jerome Kahn, past president, Old Town Merchants; Walter I. Seif, past president, Old Town Merchants; Joseph R. Schneider, past president, Old Town Merchants; J. Stephen Becker, business manager, Baltimore News-Post; W. Spaulding Albert, advertising director, the Sunpapers; Hugh F. Kiernan, advertising director, Baltimore News-Post; George T. Bertsch, business manager, the Sunpapers.

ADDRESS OF GOV. THEODORE R. MCKELDIN, OLD TOWN MERCHANTS AND MANUFACTURERS ASSOCIATION 74TH ANNUAL BANQUET

On this 74th anniversary of the founding of the Old Town Merchants and Manufacturers Association it is a pleasure and a privilege to pay tribute to it, and to the Western Maryland Railroad, which it honors tonight and with which it has been associated for so many years. The contribution of these two organizations to the upbuilding of Baltimore and the State can never be computed, but it is very great; so the rest of Baltimore and Maryland have good reasons to wish for the association and the railroad at least 74 years more of prosperity and usefulness.

In glancing over an outline of the history of this association, I was interested to note the evidence of its very broad views from the beginning. The affairs of Old Town were its immediate concern, but that did not mean that it shut itself off from the rest of the world. So we find it raising funds for the victims of the Charleston earthquake in 1887 and for victims of the Johnstown flood in 1889; urging a better transit service to enable residents of Old Town to reach the concert halls and other cultural institutions; traveling by special excursion to points as far as Gettysburg, in one direction, and the eastern shore, in another, and urging the building of a viaduct over Jones Falls as early as 1886.

I note with special pleasure one other intimate contact with the history of Baltimore on the western side of the falls. In 1884 one member was elected who is still a member and who had much to do with the history not of Old Town alone, but with the whole city. I refer to the man who, at the age of 101, may fairly be described as the honored patriarch of commercial Baltimore as well as the senior member of this association—Mr. Max Hochschild.

But I did not come tonight merely to review the accomplishments of the association in the past. There are others more fit to do that and in any case my interest is less in the past record of the association than in its future prospect; less in what it has done for Old Town than in its relation to the rest of the city and State.

An association such as this, when it is really a lively and active organization as this one has been and is, does a great deal more than secure a certain number of neighborhood improvements. It offers a means whereby the private individual may find a place in the community and may really play a part in the conduct of civic affairs.

Do not dismiss that as unimportant. It is extremely important. In some ways it is more important than all the pavements and parks and schoolhouses and other physical improvements your efforts may secure. For experience in working for the common good tends to make good citizens; and we need good citizens far more than we need anything that the architects and engineers can provide.

"It is more blessed to give than to receive," says Scripture, and moralists long ago discovered that the person you love most is not the one from whom you have received most, but the one for whom you have done most. This goes beyond personal relations. The man who loves Baltimore City most is not the one who has made millions out of the city, but the one who has given time and thought and labor to building up the city. The man who joins an association of this kind, even though he plays a very minor part in it, at least learns something about the city's problems, and he is a better citizen for knowing. If he works hard to forward the program of the association, he is a much better citizen.

In addition to that, he is likely to be a happier man. One of the curses of living in a great center of population is the danger of getting lost in the crowd. In a small village where everybody knows everybody else, each man has his place and knows it. Even if he doesn't like his place, he has a sense of belonging, of being somebody. But when the population rises to a million and a half it is terribly easy to lose the sense of having any place at all, of belonging to anything. If you don't belong anywhere, of course, you have no attachment to any place and feel no responsibility for anything.

We are accustomed to thinking of responsibility as a burden, which it certainly is. And yet a man who is responsible for nothing whatever is seldom a happy man. There is something within us that tells us that the man responsible for nothing is not good for anything. Therefore he cannot have the self-respect that comes to the man who has duties and does them.

You don't have to be a psychologist to know that if you are living in a city for which you feel no responsibility, for which you have done nothing, not even one hand's turn, you aren't going to like that city much. You may be raking in money, and stick to it on that account, but you don't really like it because you are simply taking and never giving; and it is the place to which you have given that you like.

But in a large center of population personal contacts all over the place are impossible to make and maintain. The most active mixer cannot possibly know everybody in all parts of Baltimore; and people who are poor mixers are likely to know nobody at all. This is the great value of the neighborhood association. Its merit is not that it divides the city, but that it divides civic problems and civic interests into pieces small enough for an ordinary man to understand. But as he comes to understand his neighborhood problems, and goes to work to solve them, he immediately becomes part of the greater whole. He has found a place. He belongs. And he is not only a better citizen, but by the very fact of having taken on some burden of responsibility, he is a happier man.

This I regard as the supreme value of an association of this kind, but, of course, it is not the most conspicuous value. The conspicuous value appears when all such groups can be linked together in a joint effort for the good of the whole community—and you can extend the word "community" to cover the city, the metropolitan district, the State, or the Nation.

Politicians understand this well enough. Organization at the precinct level is the aim of every party. But it goes beyond party politics; it applies to every phase of citizenship. If you want to become master of the problems of a great city, the way to start is to take note of what is wrong in your own block, figure what can be done about it, and find out why it isn't being done. Do that, and it will surprise you how readily the larger problems, one by one, will fall into a pattern that you can unedrstand.

The enormous change that has come over American life since the turn of the century is the shift to urban living. Only 23 percent of our people now live on the farm, and of the 77 percent in the cities vast numbers have moved into town without any acquaintance with the necessities of urban life. Even those who were born and brought up in small cities find themselves bewildered by the problems that arise in huge concentrations. So all of us have a great deal to learn, and it is small wonder that our big cities are in a state of confusion that gives rise to waste, not merely economic waste, but the waste of human lives. We have not yet mastered the art of metropolitan living.

In my opinion, the best hope of mastering it is by the process I have described—the process of persuading our citizens that they do belong, if not to the great city, then certainly to the neighborhood, and if not to the neighborhood, at least to the block. Yet if a man can develop a genuine interest in doing everything he can to improve the conditions of life in a section of 1 street 400 feet long, he is a valuable influence in creating better living conditions for a million and a half people.

If you doubt this, examine the history of the Old Town Merchants and Manufacturers Association. It started shouting for

a viaduct over Jones Falls 71 years ago. No doubt it started shouting for the benefit of Old Town and it shouted in vain for a matter of 50 years; but eventually it came, and with it came benefits not to Old Town only, but to Catonsville and Sparrows Point, as well.

Every intelligent project of civic improvement that this association has fostered has inured to the benefit of every resident of Baltimore. This is enough to persuade all others to cheer you on and wish you well.

But I repeat, underneath this, and largely unperceived, there is a greater thing. The existence of this association has contributed to the training of good citizens, who will remain good citizens wherever they may go. Perhaps you are even this year training in civic responsibility another like Max Hochschild, who may remove to Howard Street, or may remove to the ends of the earth, but wherever he goes will be a great citizen; and I know you are training many to be good citizens. And in so doing you are engaging in work as honorable as it is given to men to perform.

List of Countries in Which Artists Have Been Assisted by International Exchange Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, March 21, 1957

Mr. WILEY. Mr. President, the problem of United States relations with Egypt is very much to the fore today.

We are closely watching, as well, the latest developments in troubled Syria, where, up until now, there have been many disturbing occasions concerning Soviet infiltration.

Whenever I note one of these countries with which we are currently experiencing serious problems the thought naturally occurs to me:

"What have been our recent American contacts with these countries?"

"What assistance have we given, for example, to the United States Information Agency so that it can help transmit the truth concerning America's good wishes to the people of Egypt and the people of Syria?"

I have asked in my own mind, too, "What have been our cultural relations with these countries? To what extent have we tried to reach, let us say, the people of Egypt, or the people of Syria, or of some other country, through the medium of common interest in the various performing arts?"

If we cannot speak the same language, then at least we can communicate through arts which all men can understand and appreciate; through the international language of music and the international language of the dance.

The problem is no less important in relation to countries which are not crisis areas, but countries which are allied with us. Here, too, we want to improve our two-way communication.

Here, too, we want to answer the charge which is often raised against us to the effect that we are only materialist minded, and that we are not interested in culture.

As I stated the other day in the Senate, one of the vital media through which we can answer this false charge is through the international exchange program. Hearings are now underway in the House Appropriations Committee on next year's appropriations for this program.

I believe that it will be of interest to my colleagues to see a listing of the actual countries where funds have enabled artists to perform.

I believe it will be of interest to them, for example, to know that the great company of the noted folk opera, Porgy and Bess, has visited Egypt; that the fine artist, William Warfield, visited the newest of all nations, the Gold Coast; that a host of splendid artists have toured the subcontinent of India; that Marian Anderson has visited Indonesia, and so on down the line.

The responses to these visits have been outstanding. In countless newspapers—newspapers in lands full of anti-American propaganda—the visits have been followed by favorable editorials saying, in effect, "We did not realize that the Americans were so interested in great music, in great song, in great dancing."

We must remember, Mr. President, that we are a young Nation; we must remember that there are many nations throughout the world which have only just gained their independence, but which have cultures going back 2,500 and more years. It is only natural, therefore, that they should look to see to what extent we are genuinely interested in culture ourselves.

I send to the desk the country-by-country list showing how a great many artists have been assisted under the international exchange program as operated through the American National Theater and Academy, a congressionally chartered organization. I ask unanimous consent that the list be printed in the Appendix of the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

COUNTRIES IN WHICH ARTISTS HAVE BEEN ASSISTED BY THE INTERNATIONAL EXCHANGE PROGRAM

Algeria: Betty Allen, 1955 and 1956; New Music Quartet, 1956; Minneapolis Symphony, 1957.

Afghanistan: John Sebastian, 1956–57; Edward Vito and Paul Renzi, 1957.

Argentina: Philippa Schuyler, 1955; Porgy and Bess, 1955; Teahouse of the August Moon, 1956; Ballet Theater, 1955; Dizzy Gillespie, 1956; Jubilee Singers, 1956; New York Woodwind Quintet, 1956; Leonard Rose, 1957; Joseph Fuchs, 1957.

Austria: William Warfield, 1955; Philadelphia Orchestra, 1955; New York Philharmonic, 1955; Robert Shaw Chorale, 1956; Boston Symphony, 1956; New York City Ballet, 1956; Cleveland Orchestra, 1957; Jose Limon, 1957.

Belgium: Philadelphia Orchestra, 1955; New York Philharmonic, 1955; New York City Ballet, 1956; Ballet Theater, 1957; Cleveland Orchestra, 1957; Jose Limon, 1957.

Brazil: Jose Limon, 1954; Philippa Schuyler, 1955; Joyce Flissler, 1955; Porgy and Bess, 1955; Ballet Theater, 1955; Tallchief and Eglevsky, 1955; Teahouse of the August Moon, 1956; Dizzy Gillespie, 1956; New York Woodwind Quintet, 1956; Blanche Thebom, 1957; Joseph Fuchs, 1957.

Burma: Martha Graham, 1956; Tom Two Arrows, 1956 (twice); Westminster Choir, 1956; John Sebastian, 1956; San Francisco Ballet, 1956; Benny Goodman Band, 1957; Edward Vito and Paul Renzi, 1957.

Cambodia: Tom Two Arrows, 1956; Westminister Choir, 1956; John Sebastian, 1956; Benny Goodman, 1956; San Francisco Ballet, 1956; Marian Anderson, 1957.

Czechoslovakia: Cleveland Orchestra, 1957; Boston Symphony, 1956.

Ceylon: Symphony of the Air, 1955; Jubilee Singers, 1955; Martha Graham, 1956; Eugene Istomin, 1956; Westminister Choir, 1956; Eleanor Steber, 1956; Richard Tucker, 1957.

Chile: Porgy and Bess, 1955; Ballet Theater, 1955; Jubilee Singers, 1956; New York Woodwind Quintet, 1956; Leonard Rose, 1957.

Colombia: Porgy and Bess, 1955; Ballet Theater, 1955; New Orleans Symphony, 1956; New York Woodwind Quintet, 1956; Blanche Thebom, 1957; Leonard Rose, 1957; Joseph Fuchs, 1957.

Costa Rico: Ballet Theater, 1956; New Orleans Symphony, 1956; Joseph Fuchs, 1957.

Cuba: New Orleans Symphony, 1956; Teahouse August Moon, 1956.

Curacao: New Orleans Symphony, 1956.

Denmark: Robert Shaw; Chorale, 1955; New York City Ballet, 1956; Cleveland Orchestra, 1957.

Dominican Republic: New Orleans Symphony, 1956.

Ecuador: Ballet Theater, 1955; New Orleans Symphony, 1956; Dizzy Gillespie, 1956; Joseph Fuchs, 1957; Leonard Rose, 1957.

Egypt: Porgy and Bess, 1955; Erwin Lazo, 1955; Robert Shaw Chorale, 1956; Westminster Choir, 1956; Jose Limon, 1957.

England: New York Philharmonic, 1955; Robert Shaw Chorale, 1956; Boston Symphony, 1956; Cleveland Orchestra, 1957; Jose Limon Co., 1957.

Ethiopia: Philippa Schuyler, 1956; William Warfield, 1956.

Finland: Philadelphia Orchestra, 1955; Robert Shaw Chorale, 1956; Boston Symphony, 1956.

France: Philadelphia Orchestra, 1955; Medea, 1955; Skin of Our Teeth, 1955; New New York Ballet, 1955; Oklahoma, 1955; New York Philharmonic, 1955; Betty Allen, 1956; New Music Quartet, 1956; Robert Shaw Chorale, 1956; Boston Symphony, 1956; New York City Ballet, 1956; Cleveland Orchestra, 1957; Jose Limon, 1957; Long Day's Journey Into Night, 1957.

French Morocco: Porgy and Bess, 1955.

French Equatorial Africa: William Warfield, 1956.

Germany: William Warfield, 1955; Philadelphia Orchestra, 1955; New York City Ballet, 1955; Beal Twins, 1955; New York Philharmonic, 1955; John Sebastian, 1955; New Music Quartet, 1956; Robert Shaw Chorale, 1956; Boston Symphony, 1956; Marian Anderson, 1956; New York City Ballet, 1956; Jose Limon, 1957; Cleveland Orchestra, 1957.

Gold Coast: William Warfield, 1956.

United States Mortgage Debt Exceeds $100 Billion

EXTENSION OF REMARKS
OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 21, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Mortgage Debt Exceeds $100 Billion," from the Lafayette (Ind.) Journal and Courier of March 19, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES MORTGAGE DEBT EXCEEDS $100 BILLION

(By Hugh L. Morris)

WASHINGTON.—Mortgage debt on American homes has just topped $100 billion, but foreclosures—a word that calls up depression memories—are few and far between.

Year-end reports on 1956 show that the Nation's housing loans are being retired on schedule and that Americans are well on the way to free-and-clear home ownership.

Despite record-breaking construction of 10 million homes in 10 years, the proportion of mortgages which have gone sour averages only 2 for every 1,000 homes bought on credit.

The record on Government-insured mortgages compares favorably with that of conventionally financed mortgages.

Further lowering of downpayment required on FHA-insured mortgages has been challenged in hearings before Congress on the ground that less equity in homes will encourage defaults.

DISPUTE VIEW

Government spokesmen dispute this view, however, and point to the record of GI home mortgages on which even less down payment is required.

A delinquency survey by the Mortgage Bankers Association shows that in 1956 its proportion of defaults—no payments in 3

months or more—was 0.14 percent on conventional, 0.11 on FHA, and 0.22 on GI mortgages.

Government reports on its insured mortgages in default, as a proportion of the total number outstanding, run higher—nearly 1 percent for GI and more than one-half of 1 percent on FHA.

Neither of the Government insuring agencies expresses concern about the rate. Over the years their net loss after resale of the property has amounted to no more than $50 million.

FEW DEFAULTS

The low rate of defaults is brought into sharper focus when foreclosures of the past decade are compared with the flood of home losses in the late 1920's and 1930's.

About 30,000 mortgages were called in for lack of payment last year, bringing the total in 10 years to some 200,000.

The low point was in flush, postwar 1946, when only 10,453 homes were lost through foreclosure. The alltime high was 252,400 in 1933. The total between 1926 and 1935 come to 1,713,963.

In recent years, with Americans buying homes in ever-increasing volume, the number of foreclosures has been rising gradually and the 1956 total was nearly three times that of 1946.

The proportion of foreclosures, however, has shown no significant change, because of the simultaneous jump in the number of outstanding mortgages.

Although there are nearly 50 million residential units in the country, no one knows exactly how many mortgages the $100 billion value represents. The lack of information is on conventional mortgages; there are 2,229,599 FHA and 3,759,784 GI mortgages in force.

American Aid for the People of Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of March 7, 1957, which comments on the aid program of the Polish American Congress of Northeastern Pennsylvania to the people of Poland as well as the aid which is currently being discussed concerning American economic aid to the people of Poland:

AID FOR POLISH PEOPLE

Decision of the Polish American Congress of Northeastern Pennsylvania to send food and clothing to Poland for distribution among Poles, returning to their native land from Siberia where they were exiled for years, should strike a responsive chord in this community.

For years, local residents have been supplying these essentials as well as medicines to relatives in Poland, directly and through organizations. In many instances, recipients of packages have shared them with needy neighbors.

The program of the Polish American Congress fits in with the policy of the administration in Washington which has indicated a strong desire to aid the people of Poland, as distinguished from the government, the intent being to drive a further wedge between Poland and Russia in the former's struggle for independence. It is felt that anything that will make the Polish people less dependent on Moscow will contribute to the cause of liberty.

Apart from political considerations, there are, of course, the humanitarian aspects of the situation. The lot of the Poles has not been an easy one for two decades of war and enslavement. An opportunity to ease their plight will have widespread appeal.

Court Decongestion

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. PHILBIN. Mr. Speaker, under leave to address the House and revise and extend my remarks, I desire to comment briefly upon a very impressive article recently appearing in the Journal of the American Judicature Society by the Honorable Irving R. Kaufman, able and learned judge of the United States District Court for the Southern District of New York on the subject of Calendar Decongestion in the Southern District of New York. This fine article elaborating on the encouraging results achieved in relieving court calendars in New York is timely indeed.

It will be generally agreed, I believe, Mr. Speaker, by lawyers and all those interested in our great judical system that the most important function of our courts is to dispense prompt and speedy justice.

Of late years, we have witnessed throughout the Nation the unpalatable spectacle in many of our courts of litigants who are forced by calendar congestion to wait for several years for the trial of their cases.

From time to time the Congress has recognized these undesirable conditions by providing additional judges for the hard pressed Federal judiciary. We have also taken action to provide additional facilities and personnel and make other improvements in the administration of the Federal courts.

It can be agreed, however, that congestion and delay in the trial of legal causes is not confined to Federal courts alone, but is present in many of our State and district courts.

Judge Kaufman's article outlines with considerable particularity effective measures which have been pursued by the judges and the bar of the southern district court in New York to combat court delays and congestion. The striking thing about these measures enumerated in Judge Kaufman's elucidation is that they have apparently been so successful and effective in clearing the court calendar of deadwood and expediting early trials in probably the busiest judicial district in the country.

The results achieved by the learned judges and the bar of this district would seem clearly to indicate that there is an available, practicable remedy for stultifying court congestion. If this remedy has been so successful in one district, there is no reason why it cannot be equally successful elsewhere. I think that the judges of this court are to be particularly congratulated upon their resourcefulness and the ingenuity which they displayed in conceiving and carrying out this ameliorative program, as well as for the ability, tenacity, and persistency which characterized their action.

To be sure, in principle most of the techniques employed are not novel. They have been suggested and tried before in some places. But the particular organization and timing and application of these techniques, coupled with the vigor, intensity, and drive manifested by the judges, as well as the splendid cooperation of members of the bar, present a pattern in the field of efficient court administration which may well be emulated.

I can wholeheartedly commend to every jurist, lawyer, student, and person interested in our American system of justice the reading of this excellent article. It contains much food for thought for the legal profession and for the courts everywhere, as well as for harrassed litigants, and is a definite contribution to the solution of one of our most vexing problems of legal administration. I hope that other States and districts will benefit from this salutary program and thus bring nearer our ideal of speedy justice in the courts.

Modern Republicanism—Commerce Secretary Weeks "Maybe" Budget

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Mr. Weeks Shows How" which appeared in the March 21, 1957, issue of the Washington Post and Times Herald:

MR. WEEKS SHOWS HOW

Secretary Humphrey invented the new style "maybe" budget, the great virtue of which, if it works, is that the administration can take credit for the benefits and the Congress for the costs. It has remained for Secretary Weeks to demonstrate the proper use of the "maybe" budget in action. First you make a speech in New York defending the budget as merely the cost of the promised GOP peace and prosperity. Then you hint darkly that if the taxpayers would look about them, however, they'd find plenty of specific places to start saving. Next you get on television and complain about all the programs Congress forces on the administration and suggest that here is an excellent place to start cutting. But finally, when Congress calls your hand, you defend the budget once again to the last dime.

All of this, if it does not enlighten the taxpayers, at least amuses them and rather neatly leaves the hot potato still in the hands of Congress. Congresmen know there is nothing to do but eat this spud and be done with it. But there was more than a little

gravel in the remark heard in a Capitol corridor yesterday that one good way to save some money at Commerce would be to eliminate the office of the Secretary.

Address by Dr. Bower Aly in Observance of the Alexander Hamilton Bicentennial

EXTENSION OF REMARKS
OF
HON. B. CARROLL REECE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. REECE of Tennessee. Mr. Speaker, Dr. Bower Aly, professor of speech, University of Missouri, delivered an address at the Sam Houston State Teachers College, Huntsville, Tex., in observance of the Alexander Hamilton bicentennial on March 14, 1957, which I think holds sufficient interest to justify making it available to the Members and the public through the CONGRESSIONAL RECORD:

From December 15, 1774, when Alexander Hamilton's first pamphlet in defense of the American Revolution was published, until February 17, 1801, when his efforts on behalf of Thomas Jefferson were rewarded by Jefferson's election to the presidency, Alexander Hamilton was energetically engaged in the service of his country. During the remarkable quarter century that witnessed the revolution of the American colonies from their mother country, the Declaration of Independence from Britain, the harrowing war of revolution, the period of indecision under the Articles of Confederation, the drafting and the ratification of the Constitution and the establishment of a nation under the administrations of George Washington and John Adams, Hamilton was either officially or unofficially and almost continuously involved in public enterprises, earth-shaking in their significance for the men of that day and in their consequence for posterity. During the latter 20 years of the period, Hamilton was never far from the epicenter. His remarkable achievements in the center of the storm have caused President Eisenhower to proclaim and the Congress to provide for the observance in 1957 of the 200th anniversary of his birth.

As a teacher speaking to teachers—present and prospective—I think it appropriate here and now to consider with you what the life experience of Alexander Hamilton has to offer to us. What can we learn, what can we teach of Hamilton that will be serviceable today?

I

The first lesson taught us by this remarkable man is one of special interest to all young people: It is the power of youth. Since we do not know for certain when Hamilton was born, we cannot know how old he was when he was killed by Aaron Burr, but according to the current way of reckoning he must still have been a young man—not yet 50—when he died in 1804. By his own account, he was only 19 when, in 1776, he became captain of artillery; and he would thus have been aide-de-camp to Gen. George Washington before he was 21. Throughout his life, he showed an amazing precocity and demonstrated beyond peradventure the fact that young men can accomplish, if they will, outstanding deeds not only of valor but of prudential judgment. Not merely in his chronology, however, but also in the vigor of his actions he exemplifies those spirit-stirring qualities that have made him for posterity a symbol of brilliant and audacious youth—preternaturally wise, perhaps, but young still in his hopes, in his expectations and in his enthusiasms. Too often nowadays, forgetting the lessons of American history, we discount the power of youth. Hearing great clamors about juvenile delinquency—which more often than not is simply youthful energy gone to waste—we forget the strong potentialities of our young people in America. Yet our Nation in the past was built and defended by young men and women. My great-grandmother was only 16 when she bore the first of her 11 children in the wilderness that Missouri then was: Her husband was but a few years older. I dare say that many of you here would not need to go far in your family tree to find among the pioneers a boy-girl family who struck out for themselves and surmounted the dangers and privations of the frontier.

We forget, too, that although our old men have declared our wars, our young men have usually fought them. The actual fighting in the Civil War, the bleeding and the dying, was chiefly done by boys—boys in blue and boys in gray. Even today, some of the most vital units of our air defense are manned by men so young that they consider 25 to be an old and 30 to be an ancient age.

To our young people today, Alexander Hamilton—rightly understood—could well serve as a symbol of youth, a source of inspiration. And I will state as my considered judgment that in the war in which we are now engaged—a war in which the future of our Nation and our people is at stake—no more urgent task confronts us than the complete and effective mobilization of all our youth, not as unwilling draftees but as eager volunteers in the mastery of the sciences, the humanities and the languages necessary to our survival and to theirs. The hour is late, the time is short; yet a way must be found to cultivate the aspirations and to use the energies of young Americans. Youth responds to youth. Even today, 200 years after his birth, Alexander Hamilton may still serve his country if our young people will learn of him that they may be both young and useful to themselves and to their fellowmen.

II

What can we learn, what can we teach of Hamilton that will be serviceable today? Hamilton can teach us the power of integrity. For Hamilton's usefulness as a man and a leader depended not only on his brilliance and his audacity but also on his incorruptibility. During the decade when he was one of the leading architects and the chief builder of our Federal Union, Hamilton had almost unparalleled opportunities to advance his private fortunes at the public cost; but the most searching inquiries by his enemies in his own time and since have only illuminated the sense of honor that made his responsibility a public trust. Sometimes imposed upon by friends and acquaintances, sometimes despairing of the capacity of men to govern themselves without corruption, he nevertheless maintained for himself a code that permitted him no private profit from his public office. Indeed, even in private life, when he held no office, he declined to enter into a money-making scheme lest it should reflect upon the confidential relationship he was known to have to the administration. It is touching yet heartening to observe Hamilton, as Secretary of the Treasury with millions of dollars in his charge, seeking a loan of $20 from a personal friend. It is reassuring to hear the cynical Talleyrand exclaim, "I have just come from viewing a man who had made the fortune for this country but now is working all night to support his family."

Need I dwell on the relevancy of Hamilton's example for us today? In our times, we have witnessed the shameful selfishness of little men of both political parties, men who, far from protecting their honor as persons and as officers of government, have contrived devious illegal or perhaps legal ways of advancing their private interest from the public funds. In so doing they may have profited personally—but at what enormous cost to the body politic. For by their example they have tended to teach many of our young people falsely to believe that our Government is a racket and that our officers are plunderers. This, my fellow teachers, is the real subversion of our times: to teach young Americans, from whom our strength must be drawn, to distrust their country and their Government; to believe that dishonesty is the expedient way of life; to assume that the only honor is that proverbial among thieves. Against such subversion Alexander Hamilton stands as a confident witness to the personal satisfaction to be gained from an honorable career as well as to the power of integrity in public life.

III

What can we learn, what can we teach of Hamilton that will be serviceable today? Hamilton can teach us the value of applied energy. A prodigious and systematic worker, Hamilton developed within himself the faculty of sustained and powerful effort toward a prudential goal. Time and again one reads in amazement of his feats of sheer labor—of physical, of mental endurance. Whether he was negotiating with Gates to obtain soldiers for Washington's army or writing a Federalist paper or constructing for Washington an opinion on the constitutionality of the National Bank, Hamilton pushed himself hard and purposefully. As we contemplate the millions of hours that men dissipate nowadays in those time-killers that indulge the wish to be suspended—half-waking, half-sleeping—in a world of make believe, we must view with even greater admiration the approach of life and labor examplified by Alexander Hamilton. Usually genial, sometimes even merry, Hamilton was primarily a man at work. As Fisher Ames observed, "It is rare that a man who owes so much to nature descends to seek more from industry. But he (Hamilton) seemed to depend on industry, as if nature had done nothing for him."

Hamilton's means to the life adjustment that seems to be the goal of modern educators was to work without ceasing to make himself the master of whatever problem confronted him at the moment. Could we do a better service to our young people today than to recommend to them this kind of life adjustment to the problems of the present day?

IV

What can we learn, what can we teach of Hamilton that will be serviceable today? Hamilton can teach us the primary need for responsibility. Able in the fullness of his powers to delegate and to assign tasks, Hamilton was never, either in a lowly situation or in an exalted one, the least inclined to shirk or to shift responsibility for his own actions. On the contrary, he was front and center in every enterprise in which he was engaged. His eagerness to be in the forces attacking the British redoubts at Yorktown symbolizes his approach to problems civil as well as military. Even when most oppressed by the personal problems of earning a living, of caring for his family, he was unwilling to transfer to other persons those tasks that, under his conception of his public responsibility, fitly belonged to him.

In modern times we have witnessed the proliferation of what has been called public relations. Doubtless in a highly complicated society, some systematic and continuous means of relating great enterprises to the public must be found; but if pub-

lic relations becomes a mere substitute for the active and vital interest that men of the first rank should have in public questions, then our country is indeed in danger. For the times require nothing less than the best efforts of our best men in and out of Government. Our enemies abroad will not be appeased by even the highest paid publicity agents nor by the slickest of all public-relations counselors. One of the gravest dangers in our present society is the inability of conservative men to speak for themselves. The inarticulate conservative, the leader of judgment and of experience who cannot form a policy and defend it before his colleagues and the public may have limited usefulness, but he has not learned the lesson that could be learned of Hamilton: A leader should be responsible for explaining and defending his own policies.

▼

What can we learn, what can we teach of Hamilton that will be serviceable today? Perhaps the greatest of all lessons that Hamilton has to teach us is the lesson of realism. Highly imaginative, Hamilton channeled his ideas so as to envision fact rather than fantasy, to predict what should and could and would be rather than to sigh for beauteous but unrealizable dreams. Hamilton's ideas were his servants rather than his masters. His contributions to the concept of federalism—surely one of the greatest offerings ever given by the new world to mankind—was thus derived not only from reflection, from thought resulting from reading and study, but also from experience; and the whole was heated in the crucible of immediate and compelling need. The central idea of sovereignty—of two governments operating within defined limits upon a single citizen—is obvious as to be touched with the simplicity that often marks true genius.

Hamilton's characteristic mode of thought was that of problem solving: how can a given purpose be accomplished with the means at hand or in prospect? In this approach to life, he thus somewhat more nearly resembled the modern American man of affairs than he did the men of his own time. If his preferred solutions to problems were not always realistic, he endeavored to accommodate his preferences to the facts existing and to proceed toward his major objective "* * * to promote the increasing respectability of the American name; to answer the calls of justice; to restore landed property to its due value; to furnish new resources both to agriculture and commerce; to cement more closely the union of the States; to add to their security against foreign attack; to establish public order on the basis of an upright and liberal policy."

In his realistic approach to problem solving, Alexander Hamilton was almost unique among American statesmen in understanding and using all of the three great forms of power, the military, the fiscal, and the persuasive. Trained in the hard school of the War of the Revolution, he knew both the necessities and the limitations of war. Perhaps one of the greatest services he ever performed for his country was his insistence on keeping the peace with Britain at the time of the Jay treaty. Yet when force seemed to be necessary to the exigencies of the union, he did not hesitate to use it. His theory and practice of finance was also realistic. The measures for funding and assumption were designed, above all, to provide a powerful interest favorable to the new Nation-state and to offset the agrarian devotion to the State government. The Federalist Papers, the Continentalist, in fact, nearly all of his writings should be viewed, like his use of military force and fiscal policy, as means to an end, the end that he envisioned during the whole of his mature life: to establish "a great federal republic, closely linked in the pursuit of a common interest, tranquil and prosperous at home, respectable abroad."

Hamilton was realistic also in his assessment of human nature. It is simply not true, as has been alleged against him, that his measures were inspired either by a love for the rich or by a hatred for the poor. The fact, which would be simple were it not obscured by the fogs of partisan politics, is that Hamilton was completely engaged in building a nation which, as he thought, had to be constructed of the materials at hand. All men, not simply the rich and well born, had virtues. All men, not simply the poor and weak, had vices. As a precaution, Hamilton accepted the Biblical doctrine that "the heart [of man] is desperately wicked and deceitful above all things," and he did not find in the doctrine any exemption of farmers as a class. As a realist in politics, he did not believe that the voice of the people is necessarily the voice of God. He wished to protect all of us against that bit of the knave in each of us, and he wished so to order events that even men's vices and their more unlovely virtues might be made to work for the common good. Aristotle, keen student of men and nature, observed long since that to praise the Athenians in Athens is not difficult. One might construct a corollary—to be realistic about Americans is not politically expedient in America. A politician is on much safer ground at election time if he sings the ancient hymns of praise; but is not the Nation more likely to prosper in the long run if the realist has his say?

Hamilton was a realist also in his conception of our true policy toward foreign nations. In his contribution to Washington's Farewell Address, as in the Camillus letters, he sets forth clearly the obligation of the statesman not to think more highly of other nations than he ought to think. Hamilton's prime devotion was to his own country and to its welfare as he and George Washington conceived it.

CONCLUSION

Many men have attempted to account for Hamilton's ardor in the pursuit of his vision of American nationhood. He has been charged variously with corruption, with ambition, with desire for power, and with the need to sublimate the sense of inferiority growing out of his illegitimate birth. It has even been charged that, as a servant of the rich, he was dazzled by plutocracy. A wiser reading of the sources would suggest rather that the plutocracy was dazzled by Hamilton.

The simplest explanation is the best. It seems to ring true and to fit the facts we know about Hamilton: The power that motivated Hamilton, whatever its source, was that which moves the artist in any field. As Beethoven expressed himself in composing the Moonlight Sonata or as Michelangelo satisfied his creative urge by working on the Last Judgment of the Sistine Chapel, so Alexander Hamilton, the artist in statecraft, gained profoundest satisfaction from moving forces military, financial, and persuasive toward the creation of a Federal republic.

Seldom has any Nation owed so large a debt to any man. To Alexander Hamilton and to George Washington jointly we owe the nationhood we have achieved. If our country could not have been born without the aid of George Washington, it would not have developed without the genius of Alexander Hamilton. As a Nation we owe to this waif, this boy, this young man, this statesman more than we can ever hope to recognize. It is gratifying to know that in the Nation's high schools this year we are at least acknowledging our debt by an observance planned in every one of the 55 States, Territories, and possessions of the United States of America that Hamilton helped to plan and to build. It is satisfying to reflect that if we can but learn and teach of Hamilton the lessons of youth, integrity, energy, responsibility, and realism, his life may serve now as heretofore to bless his countrymen.

The "Papa Knows Best" Attitude

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. HERLONG. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which originally appeared in the Miami, Fla., Herald and was reprinted in the Daytona Beach, Fla., Morning Journal of March 18, 1957:

THE "PAPA KNOWS BEST" ATTITUDE

The watchdog committee of the people's right to know what the Federal Government is doing with their business has submitted its second report to Congress. Over all it is encouraging.

The special subcommittee on Government information has titled its report: "Availability of Information from Federal Departments and Agencies." Representative DANTE FASCELL, of Miami, is a member of the committee.

The study, which covers the period from July to December 1956, shows progress in tearing down the curtains of secrecy that have shut off information from the people about the little kingdoms and principalities that make up official Washington.

However, the report leaves the very distinct impression that there is a long way to go before the bureaucrats and other Capital officials recognize that the people have a right to know what is being done with their business.

Some executive and independent agencies have taken positive steps to remove unnecessary restrictions on information. But the special subcommittee was quick to assure Congress that its work has not been a pathway of quick acceptance even by the bureaucrats who recognized the people's rights.

"Following contacts by the Special Subcommittee on Government Information, other agencies have moved part way toward a freer flow of information.

"Still other agencies have taken no action to improve their information practices."

The report is quite explicit in naming those that would and those that would not come out from behind the secrecy curtain.

Among those agencies which have removed information restrictions in certain specific areas are:

The General Services Administration, the Civil Service Commission, Post Office Department, Treasury Department, the Federal National Mortgage Association, the Interstate Commerce Commission and the Rural Electrification Administration.

Information practices also have been improved in certain lines by the Civil Service Commission, the United States Coast Guard, the Treasury, the Federal Trade Commission, the Agriculture Department, the Veterans' Administration and the General Services Administration.

These groups show at least a willingness to inform the people to a greater or less degree.

The subcommittee, however, found that the Office of Strategic Information has "continued to operate, even though no apparent justification was found for the agency from the viewpoint of efficiency and economy of the Government."

Despite its releasing of certain data, the Treasury Department "continues its refusal to make public applications for tax exemption from organizations which claim nonprofit nonpolitical status."

The report concludes that the maze of Federal restrictions on the people's right to know is becoming a little less complicated

as clear policies are developed to spell out the basic right.

But the House group still stands by its original conviction that the attitude of Federal agencies is one "which says that we, the officials, not you, the people, will determine how much you are to be told about your own Government."

It is this "papa knows best" attitude that bars the people from information to which they are entitled. It is an attitude that is contrary to every principle of democracy.

The watchdog committee is serving the public welfare in trying to end this anti-public attitude by fingerpointing.

Silberstein's Penn-Texas Compromising National Security?

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. ALLEN of Illinois. Mr. Speaker, during the last few weeks national attention has been focused on the activities of one Leopold Silberstein and his Penn-Texas Co.'s efforts to take over one of America's fine old companies and one of our most important national-defense producers. Through the use of squads of high-priced lobbyists working at every level of our Government, and the financial backing of unnamed principals buying through Swiss banks, Silberstein claims he has achieved his goal of taking over the Fairbanks, Morse & Co. What deals he has made with the Swiss banks and the foreign principals we do not know, and the Securities and Exchange Commission has been unable to find out. Even the firms of the New York Stock Exchange which made the purchases for the Swiss banks do not know who the real purchasers are. I am informed that the charges of violations of proxy-solicitation rules against Silberstein and his Penn-Texas Co. at the Securities and Exchange Commission include evasion of disclosure regulations, charges of failure to comply with the information-reporting requirements, charges of failure to disclose who his associates are and what are their true interests, as well as illegal proxy solicitations.

I am also advised that the Securities and Exchange Commission has been investigating these charges for some time but, as of now, has done nothing.

In the meantime, the annual meeting of the Fairbanks, Morse & Co. will be held on March 27 and Mr. Silberstein tells the public in paid advertisements that he is set to take over. If Silberstein ousts the Fairbanks, Morse management and takes over with his undisclosed associates who operate through Swiss banks, it will be too late for any effective action to rectify any violations of law that may have occurred.

Fairbanks, Morse & Co., as the builder of components so vital to the national-security program that they cannot be mentioned, will be in the hands of Penn-Texas whose interests have always been in overnight profits. The interests of Silberstein's associates who act anonymously through Swiss banks are not known.

Should the Congress and the Securities and Exchange Commission stand on the sidewalk while this sinister parade marches by or should we not be doing something now, before it is too late, so that our vital national interests are not being compromised?

Booze on the Bowery

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. SILER. Mr. Speaker, I wish to call to the attention of my colleagues the following Associated Press news item that appeared in the Washington Post on March 19, 1957, and which provides an eloquent argument against the continuance of booze broadcasting or telecasting or advertising in any channel of interstate commerce:

HE'S RESIGNED TO HIS FATE: BOWERY ADDICT SPURNS $40,000 OFFER; PREFERS SOUP, BOOZE TO FILM CAREER

NEW YORK, March 18.—A jug of wine, a can of soup and his own introspections are paradise enough for Ray Salyer, a Bowery alcoholic. So today he turned down a $40,000 movie contract.

"I don't want the $40,000," he was quoted in a copyrighted story in the World-Telegram and Sun. "I don't ever want to come back. I just want the Bowery and to be left alone."

The 42-year-old Salyer was 1 of 3 Bowery alcoholics who were central figures in a documentary movie, "On the Bowery." The other two since have died of drink.

Producer Lionel Rogosin said a preview of the movie led Hollywood to offer Salyer a $40,000 acting contract. Salyer was quoted as replying:

"There isn't a man living who can drink all day alone and spend more than $10. I'm a loner, see? I've got my little room on the Bowery. I lock myself in with my half gallons of wine and I go on a week's bender. Now and then I eat a can of beef soup. Now and then I bum a day's work to get money for the booze.

"There came a day in my life when I knew what I was doing, but I was no longer capable of doing what was right. Maybe you don't know what I mean. Or what it does to a man who starts to drink. It has nothing to do with morals. It has to do with certain tensions, like some awful disease, and these tensions come and you say—'the hell with life. The hell with hope. The hell with all meaning.'"

Salyer said he once was married, with children. But he turned to the Bowery when he came out of the Army after World War II.

"It's the only place in the world where they're really tolerant of the drunk," he continued. "But I've been in jail here.

"They've tried to straighten me out. But I don't want to be straightened out. I'm not the typical alcoholic, not the compulsive alcoholic, who wants to snap out of it. He lives through hell. So does the compulsive fighting to stay off the stuff. I'm the recreational alcoholic, see? I like to drink because there's nothing else in life but the booze.

"We're all like that on the Bowery, lost and no one will find us. We don't have the will to struggle for comfort. We don't want love. We don't ask for money. We don't complain against fate. We don't even hope for salvation. We only seek oblivion so that we can forget all the things we don't even remember.

"Just see that I have a few bucks for the wine, eh? Spend that $40,000 on somebody who can really use it."

South Sees High Court Inconsistency

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a newspaper article which appeared in the Washington Evening Star of yesterday.

The article follows:

SOUTH SEES HIGH COURT INCONSISTENCY—PRO FOOTBALL DECISION SURE TO PLAGUE JUSTICES ON ISSUE OF SEGREGATION

(By David Lawrence)

Maybe the Supreme Court of the United States will be surprised to learn about it, but down South they are having a field day over the recent decision of the Court on professional football which seems to knock the props from under the reasons given by the same Court for its ruling on segregation.

Newspapers in the South in a number of editorials are pointing to the inconsistency, if not the hypocrisy, of the judges who have just overturned a longstanding interpretation of the "law of the land" on baseball and substituted for it a new law on football that never has been enacted by Congress.

The language of the Supreme Court in this case, if written into the decision on mixing the schools, would have upheld the "law of the land" as it had been set forth during a period of nearly 60 years. The Supreme Court, in the latest case declaring that professional football comes under the antitrust laws but professional baseball doesn't, has this to say:

"In Toolson—the 1953 case on baseball—we continued to hold the umbrella over baseball that was placed there some 31 years earlier by Federal baseball—a previous case. The court did this because it was concluded that more harm would be done in overruling Federal baseball than in upholding a ruling which at best was of dubious validity.

"Vast efforts had gone into the development and organization of baseball since that decision, and enormous capital had been invested in reliance on its permanence. Congress has chosen to make no change.

"All this, combined with the flood of litigation that would follow its repudiation, the harassment that would ensue, and the retroactive effect of such a decision, led the Court to the practical result that it should sustain the unequivocal line of authority reaching over many years. * * *

"We, therefore, conclude that the orderly way to eliminate error or discrimination, if any there be, is by legislation and not by court decision."

Yet, ever since 1896, when the Supreme Court of the United States upheld the right of the States to carry on "separate but equal" school facilities, enormous amounts of money have been invested by the States in separate schools, and a whole system of education has been established over the years based on that decision. In 1954, however, the Supreme Court overturned the decision and gave not a single reason based on any precedent or historic principle of law, offering instead a vague discourse in the realm of sociology.

Certainly there has been a flood of litigation since, and the Supreme Court has endeavored through court orders to enforce the ruling, while many eminent lawyers, including former Justice Byrnes of the Supreme Court, insist that only Congress can enact the legislation necessary to enforce the 14th amendment and the interpretation given it by the Court.

Congress had ample opportunity between 1896 and 1954 to enact laws forbidding segregation in the schools, but did not do so. The 14th amendment, unlike other parts of the Constitution, is not self-executing. The 14th amendment says specifically that "the Congress shall have power to enforce by appropriate legislation the provisions of this article."

Borrowing the language of the football case decision, it could be said that from 1896 to this day, "Congress had chosen to make no change" in the matter of desegregation. It could be argued, too, that the orderly way is "by legislation and not by court decision."

But it will be noted that, in the latest case, Justices Frankfurter, Harlan, and Brennan insisted that what the Supreme Court had previously decided should stand. In his dissent, in which Justice Brennan joined, Justice Harlan said:

"If the situation * * * is to be changed, I think it far better to leave it to be dealt with by Congress than for this court to becloud the situation further, either by making untenable distinctions * * * or by discriminatory fiat."

Justice Frankfurter, in his dissent, stressed the importance of upholding a rule once decided. He wrote:

"But considerations pertaining to 'stare decisis' (let stand what has been decided) do raise a serious question for me. That principle is a vital ingredient of law, for it 'embodies an important social policy'. * * * It would disregard the principle for a judge stubbornly to persist in his views on a particular issue after the contrary had become a part of the tissue of the law."

The "separate but equal" doctrine in relation to schools for different races certainly became a vital part of "the tissue of the law," but nine justices, relying on some writings of sociologists, disregarded the principles and precedents of law and made a decision based on personal philosophy. Indeed, many lawyers who really favor desegregation have hailed the Supreme Court's ruling as "the right decision for the wrong reasons."

The way the justices have expressed themselves in the latest football case will rise to plague them hereafter when they are confronted with enforcement orders from the lower courts on the desegregation issue. Already, for example, the Supreme Court of the State of Florida has raised a pertinent question by insisting that a State court is itself the sole judge of when any order shall be put into effect relating to State laws declared invalid. It holds that this "discretionary process" has to take into account harassment and mischief or violence that may result from any immediate enforcement measures.

Farm Program Figures

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. McGOVERN. Mr. Speaker, one of the most widely held political myths of recent years is the totally false notion that Secretary of Agriculture Benson has been cutting the cost of our farm program and at the same time reducing farm surpluses. It would be more accurate to give Mr. Benson credit for piling up more farm surpluses and wasting more of the taxpayers' money than all the previous Secretaries of Agriculture combined.

The editor of the Mitchell (S. Dak.) Daily Republic in an editorial dated March 13, 1957, has commented as follows on the statistics pertaining to Mr. Benson's operations to date:

FARM PROGRAM FIGURES

Because of the skilled and intensive propaganda campaign that has emanated from the Republican National Committee and the Department of Agriculture in the past few years, many persons no doubt have the impression that the farmer's financial status has begun to show some improvement and that Secretary of Agriculture Benson has been highly successful in reducing the surpluses of farm products.

That being the case, it should come as more than a slight shock to those persons to read some statistics cited in Representative GEORGE MCGOVERN'S Washington Report.

"Since Mr. Benson took over our farm program in 1953, net farm income has dropped from $15.1 billion in 1952 to $11.7 billion in 1956," MCGOVERN revealed. "Government held surpluses have increased from $3.5 billion as of June 30, 1953, to $8.2 billion as of December 31, 1956. Federal costs for supporting farm crops during the past 4 years are 3 times higher than the cost of the entire previous 20-year period."

These are shocking and sensational statistics and certainly would appear to bear the Congressman out in his conclusion that "obviously the Benson farm program has benefited no one with the possible exception of the processors. We can only hope that Congress will support the efforts some of us are making to restore farm income."

The Passing of Elmer E. Edwards, of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News commenting on the passing of Elmer E. Edwards, a member of a prominent Wilkes-Barre family:

ELMER E. EDWARDS

Member of an old and respected Parsons family, Elmer E. Edwards served with fidelity his native borough and, subsequently, the city of Wilkes-Barre, into which the municipality was incorporated, as well as Luzerne County.

Mr. Edwards had a flair for public service as 16 years on the board of education, 10 years on the central poor board, and a tour of duty in the assessor's office testified. Associates, who included many of the town's leading citizens, paid him an impressive tribute by elevating him to the presidency of the board of education and the treasurership of the central poor board, posts of considerable responsibility.

Mr. Edwards' service extended into other fields. He was active in the YMCA for many years and also served as commander and adjutant of Parsons Post of the American Legion.

His business background and varied experience enhanced his value as a public official. A quarter century ago, he was an outstanding figure on the local scene. His passing will recall not only his own career, but the activities of his wife and brother, both deceased.

Dr. Harry Cohen, Jr.

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. BROOMFIELD. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include therein a transcript of the ceremonies which took place on March 14, 1957, on the occasion of the introduction into the Order of Vasco Nuñez de Balboa and the presentation of a medallion and diploma to Dr. Harry Cohen, Jr., and his response thereto.

This honor was conferred on Dr. Harry Cohen, Jr., by Ambassador Westerman of the United Nations in the delegates lounge of the United Nations.

Dr. Cohen's response embraces the story of Panama; includes the history of Panamá and of the canal as compared to the Suez:

INTRODUCTION INTO THE ORDER OF VASCO NUÑEZ DE BALBOA OF DR. HARRY COHEN, MARCH 14, 1957, AT THE U. N., BY AMBASSADOR GEORGE W. WESTERMAN

No more pleasing assignment could have been given me by my Government than that of inducting Dr. Harry Cohen, of New York, into the Order of Vasco Nuñez de Balboa, in the name of President Ernesto de la Guardia, Jr., Grand Master of the Order. This pleasure derives not from the fact that Dr. Cohen is a distinguished surgeon, writer, civic leader, philanthropist, historian and humanitarian but more so because he is a sincere friend of the Republic of Panama; a friend who sympathizes with that country's just aspirations and a friend who tries to interpret the culture of the Panamanian people to the people of his country. This, to the mind of any Panamanian, is as heartwarming as it is significant.

In the academic fellowship of New York city as well as at Cornell University, Dr. Cohen achieved the highest ratings and ever since he received his State board license "with honor" he has been honoring his profession and his society. He has crowded his lifetime with accomplishments that eloquently speak of his greatness in a number of specialized fields, and is attested to by the citations and honors that have been bestowed upon him nationally as well as internationally.

As inventor of several surgical instruments, author of numerous articles, most of which described for the first time the surgical subjects treated, as head of various medical organizations, and to the many scientific bodies with which he is associated, the contribution of Dr. Cohen always has been unique. His eminence as a surgeon has transcended Columbus Hospital, Manhattan General Hospital and Wickersham Hospital with which he has been identified over the years and he now enjoys a well earned international status.

The world travels of Dr. Cohen have taken him to Europe, Canada, South America, parts of Asia, China, India, Japan, Alaska, and all through Palestine. He has visited a world suffering from chronically depressed living standards and each time he has returned to the United States more determined to help organize succor for less fortunate peoples. Thus his humanitarian work has had wonderful effect both at home and abroad.

Scientific literature and research have been greatly enriched by his creative mind from which has issued a stream of solid literary essays and historical writings. The ardors of Dr. Cohen's youth are by no way cooled as he continues, after threescore and ten years to channel his energies into many useful services on behalf of mankind. This he does gallantly and enthusiastically.

His belief in the principles of equity and equality have induced him to sponsor many philanthropic acts without regard to religions, racial or national status. That he has had a major impact on continental understanding is not surprising as he has studied the lives of Latin American leaders since the time of Simon Bolivar, and must be considered a true exponent of Pan-American cooperation and solidarity. Most, if not all the American republics, have honored him in some form or other.

Today, Panama joins in this Pan-American tribute to a worthy son of the United States who has become a living and working symbol of the good neighbor and who is only happy when those next door to him also enjoy a measure of happiness.

The ideas and personality of Dr. Cohen have had a profound effect on the scientific, educational, social, and professional entities with which he has immediate contact. His qualities of loftiness of purpose and breadth of character have enabled him to gain recognition in all parts of the world as a scholar, a gentleman, and a friend of mankind. Such is the individual to whom the Republic of Panama pays tribute on this occasion.

AWARD OF VASCO NUÑEZ DE BALBOA MEDAL, MARCH 14, 1957

Your Excellencies, ladies and gentlemen, tonight I am being awarded the very great honor of the Vasco Nuñez de Balboa Order, to me one of the highest orders in the world, and for this I am humbly grateful. I do not know whether I rate this or deserve it, but I do know that I am very acquainted with the history of Panama, with the history of Latin America; and that for years I have exerted my influence for whatever it was worth, in behalf of Latin America, and its history, and this included Panama in particular. Many of you know that I have written a book entitled "Simon Bolivar and the Conquest and Liberation of South America. That, of necessity, shows that I have familiarized myself with its history. I have made five trips to Latin America, was an honorary president of one of the medical congresses in Mexico, have visited Panama on several occasions, and the canal by boat, train, and plane. During one of the plane flights over the canal the pilot confessed to us, that he was half drugged by escaping gas fumes but he felt certain he could complete the flight, for which statement we felt greatly relieved. I mention these facts to show that Panama is not very unknown to me, quite the contrary, I am very partial to it.

Let us review very briefly the pertinent facts of Panama and Balboa. Following the discovery of America by Columbus, there was a veritable wave of discoveries. Shall I say for reasons of new lands to be discovered, or shall I tell the truth, for the great amount of loot, especially gold and silver that was waiting for them? In fact, it has been stated that the Spanish kings then suffered with an incurable disease, which could only be alleviated by gold and silver. Among these discoverers was Vasco Nuñez de Balboa, the discoverer of the Pacific Ocean, which he did in 1501, then calling it the Great South Sea and claiming it in the name of the Spanish monarch. As was usual with almost all of the then great discoverers of America, they eventually met the same fate, they were arrested and executed, and Balboa was no exception. He was executed in 1517. During Balboa's period of discoveries and exploration he had earned the reputation of being brave, courteous, kind at heart, and of just dealing. That was the character of this man and I am proud and humble to be the recipient of this great honor bearing his name.

I remarked before that I wrote a book about Simon Bolivar, my hero, as he is the hero of so many. I mention him here because of the inumerable accomplishments associated with his name and to me the three most outstanding are: (1) The liberation of South America; (2) the appointment of a committee to study the feasibility of building the Panama Canal; (3) the formation of a Congress of Latin American countries, for a Pan American Union to settle all disputes arising in the course of human events. This last is growing in power and importance year after year and had its most dramatic demonstration recently when President Eisenhower met in Panama with most of the Presidents of Latin America. In other words Panama, though perhaps small in geography occupies a most exalted place in the hearts of the entire Western Hemisphere, a position of influence shared by few other countries on this side of the world. Let me digress a bit and tell of another great hero of Latin America, this time in Ecuador. I wish to make a few remarks about Eloy Alfaro. His name too, is intimately associated with Panama, as we shall see. He was President of Ecuador from 1895–1901 and again from 1907–11. He was regarded as the greatest of Ecuador's liberal champions; he introduced tremendous material and especially constitutional reforms. The constitution he gave his country lasted 22 years, the longest in the history of his Ecuador. He forbad the immediate reelection of a President, build the first railroad from Guayaquil to Quito. He was pilloried by the opposition and eventually murdered by a mob in 1911, and we next meet his son, and my very dear friend, the Honorable Captain Colon Eloy Alfaro, who has honored Panama; yes, I know he would object to my saying so; he would say he is honored by Panama. Undoubtedly both statements are correct. His is one of the most remarkable histories of achievements. There are not many to equal his. America is proud of him because he is a graduate of our West Point Military Academy, and to make the bond stronger, his three wonderful sons likewise are graduates of West Point. Capt. Colon Alfaro has represented his Panama as its Ambassador, with outstanding ability in many countries, including of course, our own United States. In our United States, he has brought glory to his Panama. He is truly the very great son of one of the great leaders of Latin America. His name, like that of his illustrious father, will live forever and for me personally, it will always be one of the great privileges of my life to have been counted among his friends. Even though he visits the United States infrequently, his influence is greatly felt and carries great weight because of his goodness of heart, his noble character and his great achievements. I know Panama is fortunate in having Colon Alfaro's three wonderful sons because I know they will carry on like their father and grandfather and will help make Panama an outstanding country.

We next come to the relationships of the Republic of Panama, the Canal Zone, and the United States. Before I do so let me first describe another canal, in many respects similar to Panama; I, of course, refer to the Suez Canal. There is more than one bond of similarity between the two canals. I refer to Ferdinand De Lesseps who built the Suez Canal and who initiated the building of the Panama Canal. The Suez Canal has been and is in the public eye daily for months. The entire world is now aware of its importance, its value, its great influence on the economy of the whole world. The canal was opened November 16, 1869, and took 10 years to build. England, through Prime Minister Benjamin Disraeli, bought a controlling stock, 44 percent, from Khedive Ismail of Egypt, and together with France gained financial control of the canal till very recently. During this entire time all ships were allowed to go through freely without any hindrance or obstacle placed in their path. Tolls were equitably priced and collected. Recently there has been a rise in nationalism all over the world and Egypt was no exception. It rid itself of Farouk, of Naguib, and is now ruled by Nasser. He has developed a megalomania with Hitlerian ideas. There is always a slight justification at the start but this can be enlarged way out of proportion till it becomes a serious menace. He decided that the canal belonged to Egypt, forgetting that it is really a waterway belonging to the whole world and of its being built by the money, brains, ingenuity, know-how, and engineering skill of France. The only part Egypt played in its construction was to furnish the site and the labor for both of which it was paid. If the financial part was inequitable, I feel certain that that could have been adjusted but it was more nationalistic than financial. "It belongs to Egypt and Egypt only, and Egypt can do with it as it pleases," he said. He did just that, dictating who could and who could not use the canal. Eventually interfering with England and France, we know what ensued. Let me here state another fact, having visited Egypt before World Wars I and II, and seen firsthand what I now state. There is abject poverty of the masses, disease, underdevelopment in every sense of the word, illiteracy, a truly backward country. This was in time of peace. If the income of the canal were tripled or even quadrupled, I doubt if the masses would get any of its benefits.

Where the money goes we must guess. Now the canal was closed 4 months with no income and that increases the sad lot of the masses, and what the future holds for them only God knows. Nasser could have been a hero had he turned his talents toward a democratic and benevolent world. I have spoken thus lengthily about the Suez Canal because of the parallel to Panama and the Panama Canal. Let us compare the two. Panama had been part of other neighboring countries. Wars, especially about boundaries, were constant. In November 1903 Panama revolted from Colombia and declared itself free and independent. One month later the new Government granted the United States a strip of land 10 miles wide for the purpose of the canal. The financial considerations and the purchase of the French company stock were quickly completed, and were quickly ratified by the Governments of Panama and the United States. Preparations for building the canal were begun at once, and took 10 years. It was opened on August 15, 1914, but officially in 1920. Three American names will always be associated with it. President Theodore Roosevelt, Lt. Col. George W. Goethals, the engineer; and Col. William Gorgas, the Army surgeon. Now let us compare the two countries adjacent to the canals—Egypt and Panama. Egypt we have already described. Panama we have mentioned. It is prosperous, not prosperous enough, it has peace, the health of the populace has been tremendously improved. Whereas previous to the canal, it had been fever ridden with malaria, yellow fever, etc. Our own Walter Reed

Hospital will forever remain a monument to the work of ridding that part of the country from the ravages of yellow fever. It will be recalled that the cause of this yellow fever was a small mosquito stegomyia fasciata, which for years prevented the building of the canal. The Government of Panama and that of the United States are on very friendly terms and if at times we seem to neglect Panama, as we do some of our other Latin American brothers, I feel certain there exists no cause for friction or worse, I feel certain time will cure all misunderstandings. America seeks no colonies, does not seek to exploit anyone, and delights and encourages good neighborliness and as time marches on our friendship will rally, be brotherly, as though one family. Even in families there are petty quarrels but we hope they never will be serious. The canal is for the use of the whole world without any exceptions, and that is how it should be. The upkeep of the canal is terrific and, knowing my Uncle Sam, I doubt if there are any profits, and if there are these are at a minimum.

I now would like to say a few words about Panama's Ambassadors here, that I have met. The greatest and most important and most valuable diplomat has been Capt. Colon Eloy Alfaro. About him I have already spoken and will add I never can say enough about him. There was Eusebeo Morales, a gentleman of the first order, an honor to any country. Recently we met Edurardo Ritter-Aislan, and he too is a gentleman and a diplomat in every way and a credit to Panama. I have had more relationships with Ambassador George W. Westerman. A true gentleman and a diplomat but in addition he can be described as dynamic. He is in my estimation, one of the best salesmen for Panama. He has spoken to many groups with me, in my office at the National Council of Business and Professional Men, in Washington, D. C., and to my knowledge in many parts of the United States, always selling Panama. He never loses an opportunity to speak for and about Panama. He has spoken of Panama as the distribution center of Latin America, especially South America. He has mentioned a large number of important United States firms who already have made investments in Panama. He has emphasized that Panama's money, the balboa, has the same value as the American dollar and is interchangeable. That is only a brief sample of the opportunities for investors that Ambassador Westerman has been selling to Americans. His parents must have loved America because they named him not George W., but George Washington Westerman. In fact, they even arranged to have him born on February 22. That has been the pleasure I have had in knowing him.

I now come to my final remarks and these concern the gentleman who has so greatly honored me today with this Order of Vasco Nunez de Balboa. I, of course, refer to the President of the Republic of Panama. We are most happy that you received your education in America, at Dartmouth University. That gave you a thorough knowledge of America, her ideals and character, the main object of which is to make friends. With all nations, wishing harm to none, your country has prospered considerably under your guidance and leadership, the health of your people is excellent, you are using every human endeavor to obtain employment for your people, you are encouraging industry, and trade, and commerce. You are encouraging education; you are building new roads. You are a friend of the United States and you had evidence not so long ago of the esteem we hold for you by the visit of President Eisenhower to your country. I do not want to add any sour note before closing but please compare your country and the Panama Canal and Egypt and Nasser and the Suez Canal. Truly on opposite ends of the pole. One nation, progressive, healthy, peace-loving, friendly, and beloved, the other, truly a sad one. Mr. President Ernesto de la Guardia, your very name means "on guard" always on watch for your country's welfare and interest. May you have a long and healthy and prosperous life and continue to see your country prosper and take a leading role in the affairs of nations.

Annapolis, Md., High-School Students Do Something To Improve Foreign Relations

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. LANKFORD. Mr. Speaker, at times I have felt that in our efforts to improve relations with other countries we are too much concerned with governments and not enough with people. Sometimes we forget that it is vitally important to our foreign relations that peoples of other nations as well as governments understand us, how we live, our hopes and aspirations, among other things. It is easy to talk about how we can foster understanding between peoples of the United States and peoples of foreign countries. Frequently, somebody does something concrete about it. I am proud to say that the student body at Annapolis High School in my district are doing something concrete about it. The students are working on a project that will help build understanding and friendship for the United States overseas, and I understand they are doing a good job of it.

The other day I received this letter:

I thought you might like to have a look at the attached special issue of a student newspaper published at the Annapolis High School in your district.

The idea for this project came to me as a result of the Agency's experience and success in suggesting similar publications in American colleges and universities. I wondered whether or not this could also be achieved at the secondary school level. As you can see, the Annapolis High School has done a very creditable job. The issue is designed specifically for high-school students in the city of Karachi, Pakistan, and I am now awaiting comment from our Embassy regarding its impact among the Pakistani students.

You may also, I think, take some pride in knowing that this is the first high school in the country, to our knowledge, which has engaged in precisely this type of project. The headmaster of the school has just written my office requesting guidance for the next issue for Pakistan. They plan to publish at least four separate issues each year.

Sincerely yours,

JOHN M. BEGG,
Deputy Director, Office of Private Cooperation, United States Information Agency

Since I received this letter, the students have published their second special edition and this is now on its way to Pakistan.

In these newspapers, our Annapolis students tell about life in America—in school and elsewhere. In the first issue in December, for example, there were articles about classes, about the subjects studied, and how the young people dressed. Other articles told about how our courts work in a democracy, the meaning of freedom of the press, and brief history of school sports.

The February issue continues to give background about American life including articles about family life, recreational activities of teenagers, and historical facts about Maryland and Annapolis.

Both papers carry friendly greetings to students in Pakistan. It is hoped that the high schools of Karachi will be able to prepare a counterpart newspaper which will provide our youngsters with similar information regarding life and work in Pakistan.

It is with pride that I tell about this accomplishment of our students at Annapolis and the leadership they are giving to young people in building friendship overseas. I hope Members of the Congress will bring this kind of activity to the attention of schools in their districts so that their students may also join in this worthy endeavor.

Ex-Presidents Should Have Pensions

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. BOLLING. Mr. Speaker, the following editorial from the March 19, 1957, Kansas City Times, Kansas City, Mo., is self-explanatory and deserves the thoughtful attention of every Member of Congress:

EX-PRESIDENTS SHOULD HAVE PENSIONS

We notice from Washington dispatches that an effort is being made to block a bill to provide pensions and clerical staff for former Presidents of the United States. The real reason is animosity toward Harry Truman. This strikes us as just cheap politics and we are for economy, too.

The bill should pass. In fact, it should have been a law long ago. This isn't a question of whether Mr. Hoover or Mr. Truman may or may not need or desire such action or whether President Eisenhower will or will not need such retirement provisions. It is just a matter of plain commonsense.

We have provided pensions and retirements for just about everybody in Government service. Goodness knows, we have no particular reason for enthusiasm over judges at this particular time, but financially they were treated miserably until the last few years. The Presidency of the United States is the biggest job in the world. Upon finishing his term a President simply can't slip back into the niche of an ordinary citizen. He carries, or should carry, influence in public thinking. The demands upon him necessarily are heavy. They should be.

Having occupied the most powerful position in the world, no former President should be put in a position where even remotely he was forced to capitalize on his former prestige in order to make a living. We can think back over the years of two instances, at least, where a former President faced such an

alternative. The Presidency isn't a job just for rich men but for any American, rich or poor, who may attain it.

We are in entire sympathy with the present surge for economy in Washington. It is healthy. But in this case the opposition has nothing to do with the issue of economy.

Frankly, we believe greater use should be made of the experience of former occupants of the White House. Even in the opposition a former President has an opportunity for real service. Failure to recognize the value of such service is outrageous.

President Ramon Magsaysay

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. LECOMPTE. Mr. Speaker, the free nations of the world were shocked and saddened to learn of the tragic airplane accident that took the life of President Magsaysay on Sunday, March 17.

While I did not know President Magsaysay personally, I have a warm regard for his country and have watched his career with great interest. In 1946, our Government sent a delegation of some 15 members to Manila to assist in the launching of the new Republic of the Philippines and to witness this important historical event. Of the congressional group, there are only three remaining in Congress, the gentleman from California [Mr. MILLER], Senator ELLENDER, of Louisiana, and myself. While the first President of the Philippines was President Roxas, Ramon Magsaysay was already making a name for himself, and his phenomenal and dedicated career will always be an inspiration to the youth of his country. He was a great hero and his untimely death cut short a brilliant career as a national and world leader.

Under unanimous consent I extend my remarks and include brief tributes from the March 19 issues of the Des Moines Register and the Chicago Daily Tribune:

[From the Des Moines Register of March 19, 1957]

A GREAT LEADER OF NEW ASIA

The death of President Ramon Magsaysay of the Philippines in an airplane crash Sunday is a tragedy for the young republic and for the world.

Magsaysay was a truly great man. As Philippine secretary of national defense 1950–53 and as president 1953 on, he broke the back of the long-drawn-out Huk rebellion in central Luzon. What's more, he made an excellent beginning toward removing the grievances which made a rebellion possible. Instead of shooting rebels, whenever possible he paroled and resettled them, opening up new lands and buying up old to soothe the land hunger of Luzon villagers.

Political corruption, long a problem in the Philippines, was tackled boldly by Magsaysay also. For example, he started a practice of public declarations of private assets by incoming functionaries, and did not exempt himself. His net assets on becoming president were $13,179.17.

A fighter much of his life, Magsaysay managed to avoid bitterness. He fought the Japanese and the Huks with arms. With speeches and ballots he fought first one major Philippine political party and then (switching parties) fought the other. But his old chief whom he beat for the presidency in 1953 spoke highly of him. The Huk leader, Luis Taruc, at Taruc's trial for rebellion, murder, robbery, arson and kidnaping, pleaded guilty to these charges, made an impassioned plea for social justice—and said a good word for Magsaysay's reforms.

Magsaysay's career was meteoric. The second of 8 children of a blacksmith-farmer, Ramon himself started engineering school but did not finish. He was an auto mechanic, a truck driver, then manager of a trucking firm, then guerrilla captain against the Japanese invaders in World War II before he went into politics.

He was only 46 when he became president, and 49 when he died.

[From the Chicago Daily Tribune of March 19, 1957]

PRESIDENT MAGSAYSAY

President Magsaysay of the Philippines was an outstanding figure among the public men of our times, not only in his own country but in the world. He had many of the virtues of a George Washington: integrity, good judgment, an instinct for command, self-control, and selfless patriotism. His country was fortunate beyond reckoning in having him at its head in a formative period. His countrymen may find consolation in the knowledge that his example will remain as an inspiration to his successors and serve as a standard by which to measure their characters and achievements in the generations to come.

Fifty Percent Pensions After 30 Years

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

FIFTY PERCENT PENSIONS AFTER 30 YEARS: THE NEED AND THE POSSIBILITY

(A report of the Railroad Pension Conference, New Haven, Conn., March 1957)

SUMMARY

A. The Railroad Pension Conference calls for full retirement after 30 years of service regardless of age as provided by H. R. 2165. Annuities to be one-half of taxable earnings based on the 5 years of highest earnings, maximum annuity $200 a month. Taxes would be collected on the first $400 of each month's earnings, instead of first $350 as now provided.

However, compromise bill H. R. 3545 would be acceptable at this time. It provides full annuity at age 60 after 30 years service, and a reduced annuity of one one-hundred-and-eightieth for each calendar month that he or she is under age 60 when annuity began to accrue. Annuity to be one-half of taxable earnings based on 5 years of highest earnings. There would be no increase, or decrease, in present maximum annuity now about $184 a month. However, the average annuity would be increased, and could rise to $175 a month.

Higher benefits are needed because the present annuities have not kept up a proper relationship with the earnings of employed railroad workers. Instead of 50 percent, they amount to approximately 26.4 percent, or including the spouses' supplementary benefits, to 29.8 percent of earnings of employed workers.

Higher benefits are needed because annuities have not kept up with living costs, falling behind at least 20 percent since 1940. Full-age annuities now average $119.87 a month, less than $28 a week. But in terms of the prewar dollar, the purchasing power of this average monthly sum is roughly equal to approximately $59.94 a month, or only $14.97 a week.

Railroad workers are getting lower annuities, in comparison with the taxes they pay, than workers under the Federal Old Age and Survivors Insurance System. One railroad worker pays more than the combined tax paid by three industrial workers, under OASI, who, along with their spouses may receive a total of $488 a month. (The maximum amount a retired railroad worker and his spouse can receive under railroad retirement is approximately $239 a month). (However, the average amount received is roughly $163 a month for the retired worker and his spouse.)

Even more discrepant is the length of service required by both systems. To receive the current maximum railroad retirement benefits the employee must have earned $300 a month from 1926 through June 1954, and $350 a month thereafter for a total service of 30 years.

The industrial worker under OASI retiring at age 65, to receive the present total maximum benefit needs only 18-month coverage if he earned $350 a month since January 1, 1955, regardless of prior earnings less than $350 a month.

The annuities of the railroad workers are in sharp contrast with the luxurious pensions set up by the railroads for company executives.

Legislators in other countries provide their senior citizens with retirement at age 50, 55, and 60 upon completion of 20–25 or 30 years of service, many at half pay, others even a higher amount.

The railroad retirement fund can provide the benefits proposed by the railroad pension conference were the railroad retirement board actuaries less conservative and more realistic in their actuarial valuations and assumptions.

B. The railroad retirement fund can pay the higher pensions proposed. The actuarial calculations used to keep benefits low follow the principles of private insurance companies, seeking profit and accumulation of financial power. The public railroad retirement fund should be guided by a different motive, that of providing maximum security to railroad workers.

The actuarial valuations of the railroad retirement board do not allow for future increases in payrolls, therefore departing from realism, and grossly exaggerating the estimated costs of pensions as a percentage of payrolls. In other ways also, the actuarial valuations adopt unduly conservative assumptions, which have the effect of artificially raising costs.

Even so, the actuarial valuation shows that the fund could afford to increase pensions 60 percent for all employees entering the industry since 1947. The so-called unfunded liability for pensions to earlier employees should be a social obligation, and not one of the newer employees.

C. Reasonable assumptions show that the proposals of the railroad pension conference could in fact be financed with a 10 percent tax, rather than the 12¼ percent tax now in effect, for all employees entering the industry since 1947. The extra taxes collected from these employees, together with the reserves in the fund, can be used to complete pension liabilities to older employees.

THE FUND CAN AFFORD THE HIGHER BENEFITS PROPOSED

Hon. PAUL H. DOUGLAS, chairman of the Joint Committee on Railroad Retirement and Senator from Illinois, is a known expert in his own right and the author of the constructive 1951 amendments. Speaking be-

fore the Senate on August 3, 1953, Senator DOUGLAS said:

"I believe substantially better benefits are possible by means of more profitable investment of the railroad retirement reserve and other methods. Increasing tax rates will not be necessary."

He listed a series of eight possible improvements that had been recommended, and expressed the opinion that a sound program of improvement could be enacted, although this could not include all the items on the list. This position is consistent with that of the railroad pension conference, because the Senator, in addition to listing most of the conference's recommendations, had certain additional ones, such as a minimum annuity of $100 monthly; and did not suggest any raise in taxes, whereas the railroad pension conference does not object to limited tax increases, if necessary to finance the improvements.

However, Congress, in 1954, while markedly liberalizing benefits under the OASI system, made only certain fringe liberalizations in railroad retirement, the total amount of which is less than the increase in taxes which was enacted at the same time.

COST OF THE PENSION CONFERENCE PROPOSALS

The Railroad Retirement Board advised the 83d Congress that the proposals of the Railroad Pension Conference would increase costs by over $175 million annually. This estimate is likely to be high, as the Railroad Retirement Board tends to be unduly conservative in its financial evaluations. However, even if the estimate of $175 million is accurate the facts show that the system can afford to pay it. The amendments enacted in 1954 have had the immediate effect of increasing employee annuities by roughly $15 million yearly (in addition to the increases in survivor annuities.) Over the long run, it will add another $25 million to railroad employee annuities, owing to the higher wage base. Thus the total long run gain may be figured at roughly $40 million. Presumably the Board's $175 million estimate exceeds its estimate of immediate cost, and refers to its actuarial, long range estimate. Therefore the entire $40 million should be subtracted to obtain the net cost in comparison with the present situation. This indicates a net cost of $135 million per year.

(It must be noted that our present bill H. R. 2165 increases the tax base from $350 to $400 a month. And compromise bill H. R. 3545 is less costly than H. R. 2165 inasmuch as full annuities are paid from age 60 upward, and reduced annuities are paid to those who retire before age 60.) Our previous bills did not raise the tax base.

WHAT IS WRONG WITH THE CALCULATIONS OF THE ACTUARIES?

Railroad workers are told that higher benefits are impossible because the actuaries show that they would bankrupt the fund.

The cost calculations of the Railroad Retirement Board are based on actuarial valuations which are made every 3 years. These calculations are made by skilled actuaries, masters of complicated mathematical formulas. However, the calculations depend not only on knowledge of mathematics, but on what actuaries think will happen for many decades in the future. These opinions, or assumptions, of the actuaries, concern a wide variety of happenings—how many railroad workers will be employed and at what wages, how many railroad workers will leave the industry after a short period, how many will die in service, how many will remain employed until retirement age, at what ages will they choose to retire, how long will they live after retirement; and so on.

None of these happenings can be predicted exactly by mathematical formulas. Some of them—such as how many railroad workers will die in service—can be predicted more or less accurately on the basis of past experience. Others, such as wages of railroad workers, involve economic and political judgments on which actuaries have no special competence. Wrong guesses, or assumptions, on such matters can render the calculations of the actuaries valueless and misleading, for all their technical skill in handling mathematical formulas.

Their assumptions are usually conservative. That is, their guesses are such as to indicate high expenses and low receipts. Therefore, their calculations end up by showing a need for comparatively high taxes and the possibility of paying only comparatively low benefits.

PRIVATE INSURANCE COMPANIES AND THE RAILROAD RETIREMENT BOARD

The whole tradition and training of the actuaries make it inevitable that their methods be of this character. The actuarial profession developed as an adjunct to the insurance companies. The insurance companies were organized or taken over by the most powerful financiers, with the object of deriving profit, especially from the accumulation of huge supplies of capital. That they have succeeded in this is evident from the fact that the assets of life insurance companies alone are now well over $80 billion, and are increasing at the rate of over $5 billion a year.

These funds are piled up by charging high premiums and paying low benefits. Each year the life insurance companies collect more than twice as much in premiums as they pay out in benefits. This is justified by the formulas of the actuaries.

The catch is that the actuaries use a mortality table that is hopelessly out of date, so that most policy holders live longer than the actuaries figure. The insurance companies collect the premium and the interest for all the extra years of life. If the premiums were based on actual death rates, they would be much lower.

Now let us suppose the policyholder wishes to get around this, and secure his money's worth by buying an annuity. Then the longer he lives, the more money he collects from the insurance company. But the insurance companies are a step ahead of him. For annuities, they use a different mortality table than for regular insurance, one which says that people will live much longer than they actually do. The premiums for annuities are calculated on this mortality table, and again are much higher than they would have to be to pay the actual cost of annuities.

This, and other devices with similar effect, constitute the conservative framework of actuarial technique. And the actuaries, trained for a lifetime in this approach, carry it over to the calculation of benefits and tax rates for the Railroad Retirement System.

But the Railroad Retirement System is not a private money-making proposition. Its main function is to supply adequate pensions to retired railroad workers and their dependents and survivors. Conceivable it could be financed out of ordinary Federal revenues, without the establishment of any special fund. The fund merely exists to give an additional guaranty to the railroad workers, to assure them a proprietary interest in their pensions. There is no need to build it up to the monstrous proportions of the private insurance funds.

Yet there is this following comparison. At the end of 1953 there were 90 million policyholders in private insurance (life) companies. Some $78 billion of assets existed to guarantee their future claims, or roughly $870 per policyholder. In June 1954 there were some 2.5 million workers who had either paid taxes for railroad insurance during this past year, or were receiving (including their survivors) benefits under the system, A fund of $3.4 billion had been set up to guarantee their future claims, or roughly $1,360 per railroad worker. (In 1990 the railroad retirement fund is expected to reach $7.5 billion.) Of course this is not exact or scientific.

It doesn't take account of differences in benefits provided by the average private insurance policy and the average railroad retirement "policy." But it does show how, in general, the railroad retirement fund has been built up by the principles comparable to the funding of profit-making private insurance companies.

LEVEL COSTS AND THE HISTORY OF CONSERVATIVE FORECASTS

The actuarial evaluations are expressed in terms of "level costs." This is what level costs mean. If payrolls are taxed at a fixed rate, and the interest at 3 percent accumulated on the taxes until benefits are due, the fund will either grow enormously, or become bankrupt, depending on the tax rate and the scale of benefits. If the tax rate is set "just right," at a certain time in the future, tax collections and interest income will exactly match benefit payments, and will continue to do so indefinitely.

Experience has invariably shown the estimated level costs of the actuarial valuations to be too high. In each case the actuaries have been forced to cut their previous level-cost estimates, but because of changes in benefits, they have remained just as far as ever out of touch with reality. This is illustrated by the following table:

Level costs under:

Actuarial valuation	1937 act	Amendments		
		1946	1948	1951
1st	10.80			
2d	10.21			
3d	8.99	12.63		
4th		10.24	12.72	
5th				13.41

Source: Compiled from Retirement Policies and the Railroad Retirement System, Report of the Joint Committee on Railroad Retirement Legislation, pt. 1, 83d Cong., 1st sess., S. Rept. No. 6, pt. 1, pp. 309-315. Omits preliminary estimates presented other than by the regular actuarial valuations.

Between the first and the third valuations, the estimated costs under the original act were cut 17 percent. In just 3 years, between the third and fourth valuation, the level costs under the 1946 liberalizing amendments were cut 19 percent. The estimated costs under the much more liberal 1948 amendments were put by the fourth valuation at hardly any more than the third valuation placed the level costs under the 1946 amendments. The 1951 amendments increased overall benefits by perhaps 25 percent. Yet the fifth valuation showed an increase of level costs of only 6 percent over the fourth valuation. If the actuaries had used the same tables and assumptions as in the previous valuation, they would have shown a level cost of 15 to 16 percent, but were forced by outside pressure to make slightly less conservative assumptions. This is more or less conceded by the actuaries themselves, in the introductory statement to the fifth valuation of the actuarial advisory committee:

"The committee was advised that various interested groups had challenged the use of the old tables on the ground that they did not reflect actual experience. The advisory committee had favored the use of the old tables on the ground that current experience could be greatly changed by a deflationary shift in the economic cycle. However, the committee feels that rather than remain in the position of having the basic assumptions used considered too conservative, it would be preferable to use the new tables which are closer to current experience."

However, even reluctantly revised tables are still far from experience. Even they set a conservative standard which exaggerates likely percentage costs, and covers up the possibilities for greatly expanded benefits.

WRONG ASSUMPTIONS ABOUT PAYROLLS

The most important wrong assumption of the actuaries is that taxable payrolls will be frozen forever at $5 billion per year, slightly less than payrolls in 1951 and 1952. This, also, has been the main wrong assumptions of the actuaries in the earlier valuations. Here is why this is important. The railroad retirement system provides pension rights for the future to employees based in part on earnings before any taxes were collected, and also for many years when taxes were lower than they are now. Because taxes were not collected against that part of the pension rights, they are called unfunded liabilities. If payrolls are doubled, the same amount is needed to meet the unfunded liabilities, but as a percentage of payroll, the cost is cut in half. If not for these unfunded liabilities, the benefits could admittedly be sharply increased with present taxes.

To estimate frozen future payrolls, the actuaries made two other assumptions which do not stand up. Their estimate of future payrolls consisted of four steps:

1. Estimate of future industrial production.

2. Estimate of amount of railroad traffic for a given level of production.

3. Estimate of increased labor productivity and hence, of man-hours of employment for a given level of traffic.

4. Estimate of hourly wage rates.

The second and third steps are not at issue. But the assumptions concerning industrial production and hourly wages are. According to "high estimate," industrial production was to rise 16 percent in 9 years, and per capita industrial production only 4 percent. According to "low estimates," industrial production was to not rise at all in 9 years, and fall 10 percent on a per capita basis. The final valuation involved rough averaging of these two assumptions. In other words, the actuaries assumed virtual economic stagnation.

Averaging the high and low estimates, the actuaries expected industrial production in 1954 to be 5 percent below 1951. But actually, despite the slump in 1954, it was 5 percent above 1951. For 1953, the difference between the actuaries assumption and the actual level was even more marked.

The President's Economic Report to Congress of January 1955 set forth a perspective of a 39 percent growth in national production in the next decade. This may be right or it may be wrong. But the point is that it is the minimum necessary to conform with the national policy as expressed in the Employment Act of 1946. Whether its measures are adequate, or in the right direction, is a matter of political opinion. But it is reasonable that policies should look toward the perspective of an expanding economy. For example, in the case of taxes, the latest budget assumes a steady rise in prosperity. If a slump were assumed, it would be necessary to raise the rate of taxes, say on corporations, in order to meet Government expenditure requirements. However, it is claimed by the administration, lower corporate taxes help to realize the prediction of a higher level of output, and higher revenues from current rates.

The assumption of the retirement system actuaries are not in accord with this principle. Their assumptions of industrial stagnation may prove accurate. If so, they will have contributed to that result by pauperizing the increasing number of retired railroad workers, and hence reducing consumer markets. Assumptions in accord with a general policy of high-level employment and rising production, which would show the possibility of paying more liberal retirement benefits, would at the same time contribute toward that end.

The actuaries also assume that railway wage rates will be frozen forever at the level of January 1955. But experience has proven otherwise. And to think that railroad workers will not continue in the future, as in the past 20 years, to achieve steady improvements in wages is to underestimate the railway labor unions, and the general power of the trade union movement in the United States.

The actuaries deal with taxable wages, and assumed in the fifth valuation continuation of the $300 per month ceiling. Already this has been raised to $350, and bills are now before Congress to raise it to $400 including the railroad pension conference bill, H. R. 2165.

Clearly, if realistic assumptions were made about future payrolls, allowing for continuation of historical upward trends, the retirement system would be shown to have a capacity to pay much higher benefits than at present.

THE RAW DEAL FOR NEW RAILROAD WORKERS

This whole question is brought out best by considering the special situation of workers entering the system now, or in the future. These workers will have a tax of 12½ percent levied on their wages from the start of their employment. In the language of the actuaries, their pensions are "fully funded"—taxes on their wages fully pay for their benefits. Workers who entered the industry any time beginning with 1947 are much in the same situation.

The fifth valuation showed that the "normal cost" of benefits provided by the Railroad Retirement Act for these new entrants is 7.66 percent of their payroll. Adding 0.15 percent for administrative expenses brings this to 7.81 percent. That is, the benefits paid to those workers should be increased 60 percent in order to return to them the full value of the 12.5 percent taxes paid from their payrolls. Or, in other words, they are getting benefits amounting to only 62.5 percent of what they pay for and the railroads pay on their account.

The justification offered for this scandalous state of affairs is that the extra taxes collected are needed to pay the interest on the unfunded benefits payable to workers who were in the system prior to 1947.

Like the debt of the feudal usurer, this unfunded liability will go on and collect interest forever, to be borne by all future generations of railroad workers, according to the calculations of the actuaries.

It is our contention that this approach is wholly inequitable to the vast majority of railroad workers. Benefits should be paid on the full scale covered by present taxes. That is, the new worker should get benefits at a normal rate of 12.35 percent, representing the taxes he pays less than administrative costs. If in fact, rather than theoretical calculations, the drain of funds to pay benefits to employees who were not fully funded begins to reduce the fund, the Government should appropriate from general revenues a sufficient sum to fully fund the remaining potential unfunded benefits.

When the Congress enacted the Railroad Retirement Act, it recognized the existence of a social obligation to pay adequate pensions to retired railroad workers. The fact that today's railroad workers pay taxes into the system to buy their proprietary rights to it, does not imply that they as individuals should take over the social obligation of all the people to pay annuities to the retired workers of the previous generation.

The Railroad Retirement Board, unfortunately, has attempted to obscure the significance of this low cost of present benefits for workers. At the 1954 hearings, Mr. Thomas Stack, president of the National Railroad Pension Forum, Inc., brought out the fact of the low "normal cost" figure. The Railroad Retirement Board, in its report "rebutting" Stack's testimony, wrote:

"Mr. Stack is evidently talking about the 7.66 percent that appears in Table A–48, page 213 of the 1952 Annual Report. The cost of benefits for new entrants who will, as career railroad employees become eligible for benefits under the Railroad Retirement Act is 10.83 percent—rather than 7.66 percent—to compare with the 12½ percent tax."

This is an evasion of the issue. Of course, the 7.66 percent is an average of the situation of different workers, who will get benefits in varying ratio to their original contribution. Many workers, who do not stay in the industry for 10 years, will get no benefits. The proper cost figure for the workers who get the full benefits, as apparently referred to in the Railroad Retirement Board answer.

Similarly, the actuarial valuation adds to the 7.66 percent an adjustment of 3.41 percent, to a total of 11.07 percent, representing the net balance of adjustments with the OASI on account of "new entrants." But this addition is a fictitious bookkeeping entry, which is more-than counterbalanced by an opposite bookkeeping entry elsewhere in the accounting.

In actuarial terms, the valuation shows the "level cost" of future benefits to workers already employed at 23.96 percent. A weighted average of the 7.66 percent for future workers, the 23.96 percent for present workers, and comparatively minor adjustments for retired workers and funds on hand, produces the overall "level cost" figure of 14 percent, which is then reduced to 13.41 percent by taking account of the transactions with the OASI.

The more total payrolls increase in the future, the more weight is given to 7.66 percent for future workers, and the less to the 23.96 percent for present workers. If it were assumed that payrolls in the future increase by 3 percent per year or more all the weight would have to be given to the 7.66 percent, and this would become the level cost figure. An increase of 3 percent per year would mean that railroad payrolls would double every 24 years. Actual experience shows a faster rise than this. Between the years ending June 30, 1895 and calendar year 1952, that is over 57½ year interval, compensation of railroad employees increased slightly more than 12 times. This is equivalent to a compound annual rate of increase approximately 4.4 percent.

Since a sizable continued rate of increase in railroad payrolls is a reasonable assumption for the future, it is appropriate and fair to all, the railroad workers to base calculations on such assumption ,and to place benefits at the rate now being collected in taxes—12.50 percent less 0.15 percent for administration.

OTHER WAYS IN WHICH ACTUARIAL VALUATION EXAGGERATES COSTS

Besides the basic error, concerning payroll assumption, the actuarial valuation involves a number of other conservative assumptions which have the effect of exaggerating the cost of benefits. Some are exaggerating the length of time an employee will receive an annuity; exaggerating the number of employees who will retire, instead of working until their death or final illness; exaggerating the number of employees who will stay in the industry long enough to receive retirement benefits.

1. Exaggeration of duration of annuity: The valuation uses a mortality table which gives the retired railroad worker a longer span of life than he really enjoys.

The following figures show the percentage ratio of deaths among retired railroad workers receiving annuities to expected deaths according to the fifth valuation formula:

Policy year 1947–48	103.4
Policy year 1948–49	160.2
Policy year 1949–50	104.4
Calendar year 1950	107.0

(Source: 1952 Annual Report, tables A–1 and A–3 pp. 146 and 148.)

For those workers on full annuities—that is, retiring at 65 or later—the excess of deaths is somewhat more marked. In addition, the assumed retirement ages are a little lower than those which have actually prevailed.

How much does the conservative assumption exaggerate costs?

The valuation amounts to assuming that the life expectation of a newly retired railroad worker on full-age annuity is about 11.8 years. (See appendix (a).) The actual experience to date has been a life expectancy of about 11 years. (See appendix (b).) Thus the valuation assumes that payments will be made for almost a year longer than experience indicates, and that the total cash outlay for annuities will exceed that indicated by experience by roughtly 7 percent.

Use of a conservative mortality estimate might be justified if there were evidence that annuitants are living longer and longer. But no such evidence exists. A special calculation made in connection with the valuation showed "that there is no discernible secular trend as yet toward lower mortality rates after retirement" (Annual Report, 1952, p. 149). The rationalization for using a more conservative mortality table is as follows:

"While it is true that relatively little improvement has been shown in mortality among our age retirements in recent years, considerable improvement has been noted below that age in various mortality experiences over the last 20 years. It is therefore possible that in the not-too-distant future the same trend may also be evident above age 65 as advances in medicine and social conditions also begin to reflect themselves at the higher ages" (R. R. B. 1952 Annual Report, pp. 157–158).

This is a substitution of wishful thinking, or speculation, for fact. It would be more to the point to increase the annuities of retired railroad workers, which by improving their economic conditions would help to increase their longevity.

The mortality tables used for actuarial valuations of disability retirements are, if anything, more conservative. The same applies to reduced age retirements—that is, to workers who retire on a reduced pension at age 60–64.

2. Exaggeration of the number of employees who will retire: Not every employee who reaches retirement age elects to do so. Partly because of the low level of retirement benefits, many of the railroad workers keep on working until they die. In 1950, for example, only 30.2 percent of the railroad workers retired during the year after they reached 65; and roughly one-third of those who had reached 65, 5 years earlier, were still working at the end of the year. The third and fourth actuarial valuations had used retirement rates based on prewar experience. But for the 1948–50 period actual retirement totaled only 73 percent of the number expected according to the old formula. This was too much of a discrepancy even for the conservative standards of the valuation. A compromise was made between actual postwar experience and the obsolete formula; but the compromise formula is such that actual retirements during 1948–50 were 16 percent fewer than according to the revised formula (R. R. B. 1952 Annual Report, p. 157).

The rationale for retaining such a wide discrepancy is that retirement rates might increase in bad times. This possibility has already been disproved by the experience of 1954, when the severe slump hit the railroad industry, involving heavy and prolonged unemployment.

The number of applications received during the fiscal year 1953–54 was only 4.2 percent more than during the previous fiscal year of comparatively low employment (R. R. B. Monthly Review, August 1954).

Obviously, an exaggeration of the number of railroad workers retiring leads to an exaggeration of the net cost of the system. Railroad workers who keep on working until their deaths or final illnesses pay more taxes into the system; and the benefits ultimately going to their survivors are generally one-half or less the benefits they would have received if they had retired.

Approximately the same distortion is involved in the estimation of disability retirements.

3. Exaggeration of number of workers who remain to qualify for retirement: This is accomplished in the valuation by underestimating the number of workers who withdraw from the industry. Over half the workers who obtain jobs in the railroad industry do not last out the calendar year in which they began. Forty percent of those who do finish the year are dropped from the industry during the following year. One-quarter of those who finish the second year do not get through the third—and so on (1952 Annual Report, R. R. B., table A–17, p. 165).

The reasons are clear enough. A large part of railroad employment is seasonal in character. Because of the difficulty in getting steady work, many workers who take a seasonal job do not return in following years, or cannot get railroad jobs in the following years. Moreover, in the event of layoffs, workers with the least seniority are laid off first. In 1952, for example, approximately 300,000 workers were more or less permanently separated from the railroad industry, other than by death and retirement. In the overwhelming majority of cases, taxes have been collected from these workers for a few months up to several years; with no retirement benefits accruing as a result of the 10-year-service requirement. The railroad retirement fund obtains a windfall which has to be taken into account in estimating the net cost of the system.

The acturial valuation used a system which grossly underestimated these withdrawals, and therefore underestimated the windfall tax receipts. Because of the effect of the 1951 amendments requiring 10 years of service for rights to vest in an employee, the fifth valuation recognized that the effect on this was greatly increased. Therefore, it modified its formula so as to underestimate withdrawals a little less sharply than in the fourth valuation. But the remaining underestimate is still extreme, especially in the ranges having the maximum effect on costs. Again, the justification is that withdrawals were much less during the years 1938–41, affected by the depression conditions; and that another depression might again lead to low withdrawal rates (1952 Annual Report, R. R. B., p. 167).

This argument is invalid. The low withdrawal rates in most of the period 1938–41 were at least partly due to the fact that employment was rising during that period, so there were very few layoffs. Moreover, unemployment generally was still marked, so that workers kept jobs when they could get them. The valuation itself shows a much higher withdrawal rate in the slump year 1949, than in either 1947 or 1948. It is not likely that the 1954 experience will show still higher withdrawal rates.

Approximate calculations give an idea of how much is involved in this. On the basis of the difference between actual withdrawals during the first 5 calendar years of work, and expected withdrawals according to the fifth valuation estimates, the retirement system collects each year approximately $19 million more in taxes on payrolls of $152 million, representing taxes for which the retirement system inherits no liability because of the withdrawal of the workers over and above the corresponding allowance in the fifth valuation. (See appendix (c).)

This amounts to 3.04 percent of total theoretical taxable payroll and a savings of 0.41 percent in the level cost actuarial calculation. Of this $19 million tax difference, $11 million accrues because of extra withdrawals during the fifth calendar year. Unfortunately, the annual report does not contain statistics on withdrawals year 6–10, but indicates that they are also considerably above the expected rates allowed in the actuarial valuation. Thus the total effect is probably several times the $19 million shown for the first 5 years.

Another side of this is the reduction through withdrawals of persons who might otherwise ultimately be eligible for pensions. The difference between the actual experience and the assumptions of the actuarial valuation are as follows:

Consider a group of 1,000 workers first taking jobs in the railroad industry. At the end of the fifth calendar year, according to the actuarial valuation, 185 of these are still working in the railroad industry. According to the actual experience of 1947–49, only 143 of these are still working at the end of 5 years. (See appendix (d).) That is 22.7 percent fewer workers actually liable to receive pensions in the future. This can make an enormous difference in the actual cost picture; although precise calculations are impossible because of the intermingling of this factor with others concerning which the assumptions of the actuarial valuation cannot be tested so readily.

FINANCING THE PENSION CONFERENCE PROPOSALS

Ability of system to pay 50 percent benefits after 30 years with present tax rate

The following calculation, while using actuarial formulas, is not a precise estimate, but a rough indication which demonstrates the ability of the system to pay the retirement benefits proposed by the Railroad Pension Conference.

The following assumptions are made:

1. The typical worker who retires enters the industry at age 28, earns $350 per month, and retires at the age of 60 after 32 years' service; receiving a pension of $175 per month.

2. He lives for 15.88 years after retirement, in accordance with the 1944 railroad annuitants mortality table.

3. For every dollar of taxes collected, 64.6 cents is from workers who ultimately retire, 35.4 cents is from workers who die or leave the industry before retirement. (See appendix (e).)

4. For every $1 of benefits paid, 74.4 cents consists of retirement benefits, and 25.6 cents of spouses' annuities and survivors' insurance benefits, these being the proportions estimated for present employees in the fifth valuation (1952 annual report, Railroad Retirement Board, table A–44, p. 208).

These assumptions are far from presenting the situation in the most favorable light. We believe that, even with the 50 percent retirement annuities, most workers will choose to work beyond the age 60. As shown in the appendix, the ratio of taxes collected from workers who never retire on a pension is assumed at a minimum level. The improvement of retirement opportunities will probably reduce the proportion of spouses' and survivors' benefits in the total paid.

However, proceeding from these assumptions, the results are:

1. Yearly wages of worker, $4,200.

2. Yearly taxes collected (12½ percent of line 1), $525.

3. Amount of taxes after 32 years (at 3 percent annual interest compounded monthly), $28,149.

4. Total taxes collected and interest compounded, including allowance for taxes against which no retirement benefit will be paid (line 3 divided by .646), $43,574.

5. Annual annuity collected by the retired worker, $2,100.

6. Total annuity collected in dollars before he dies (15.88 times 5), $33,348.

7. Value at time of retirement of that annuity, allowing for interest at 3 percent compounded monthly on sum not yet paid out (a 13/50 or 11.9331 times line 5), $25,080.

8. Value at time of retirement of total benefits, including spouses' and survivors' insurance, including same for workers who never retire (line 7 divided by .744), 0.773.

9. Ratio of total bentfits to total taxes, valued at time of retirement (line 8 divided by line 4), 9.66 percent.

10. Indicated necessary rate of tax to provide specified benefits (line 9 multiplied by 12.5 percent), 9.66 percent.

11. Normal rate for new entrants including allowance of 15 percent for administration, 9.81 percent.

This, then shows that a tax of 5 percent on the employers and the workers would be enough to provide the pensions called for by the Railroad Pension Conference, so far as workers paying the tax throughout their employment is concerned—that is, essentially workers first employed since 1947. The result would have to be modified for some factors which cannot be estimated closely. It would have to be reduced to allow for the fact that the assumptions specified, while more liberal than those of the actuaries, are still conservative.

It would have to be increased to allow for the extent to which the 5 highest years' earnings, up to $400, exceed the average earnings for the entire period.

The margin between the needed tax and the actual tax of 12.5 percent would continue, as at present, to help pay for the benefits of those workers who have retired without having been in the system long enough to have paid fully for their own benefits through taxes. In reality, this problem of unfunded benefits is diminishing. The average worker who retires in 1955 is about 50 percent funded in theory, and in practice much more than that, because of the inadequate level of benefits.

APPENDIX

(a) Calculated for immediate age retirements from table A–9 and A–11, pages 156 and 159 of the 1952 annual report; this indicates a calculated average immediate retirement of 67.9. Using the 1944 railroad annuitants mortality table with 1-year rate back, as in the fifth valuation, this is equivalent to a life expectancy of 11.58 years. The valuation assumed that deferred retirements took place at 66. This is equivalent, with a 1-year rate back, to a life expectancy of 12.62 years, according to the valuation standard. The valuation does not make clear the assumption used in estimating the proportion of immediate and deferred retirements. For this calculation, an assumption of 4 immediate to 1 deferred retirement was made, roughly corresponding to the average of recent years' experience. This yields an average life expectancy of 11.8 years.

(b) Calculated from table B–8, 1953 annual report, page 101, for full age annuities. This shows the percentages of annuities awarded in each year still in effect at the end of 1952. The differences between these percentages indicate the proportion of annuitants dying in each ordinal number of years after 16.5 years (awarded in 1936) the life expectancy of the 1944 railroad annuitants mortality table (with no rate back) was applied to the average age at the end of 1952 of these annuitants. This calculation indicates a life expectancy for full-age annuitants of 11.02 years. Corresponding figures as of the end of earlier years were, 1948, 10.64; 1949, 10.74; 1950, 10.86; 1951, 11.03. The increasing trend does not represent greater longevity, but the diminishing effect of the usual number of high-age persons among those retiring in 1936–37. This effect is largely exhausted by the 1952 calculation. What is left of it is probably offset by an opposite effect, the concentration of 1936 and 1937 awards in the latter parts of those years, not allowed for in the calculation.

(c) Calculated approximately on the basis of data contained in the 1952 annual report, tables A–17, page 165, and unnumbered table of percentage increases were adjusted from a service year to a calendar year basis, so that they could be used in conjunction with table A–17, as follows:

Calendar year (duration year in parentheses)	Percentage increase	
	Service year	Calendar year
1 (0)	30	31
3 (1)	25	27
3 (2)	20	21
4 (3)	16	17
5 (4)	13	14

The difference between actual withdrawals and expected withdrawals was calculated on an average for the period 1947–49, and converted into dollars on the following assumed average annual earnings of workers according to duration of their railroad employment:

Calendar years in railroad employment	Years for which wages received	Average annual wage
1	½	$1,200
2	1½	1,400
3	2½	1,600
4	3½	1,800
5	4½	2,000

(d) Obtained by cumulative application of withdrawal percentages, actual for average of 1947–49, as calculated from table A–17, and expected by actuarial valuation calculated as indicated in previous note.

(e) This assumption is derived as follows: The average retiring employee to date has had about 27 years' experience. Therefore, if every single employee worked until retirement, and actually did retire, on the average there would be 1 new retirement for every 27 employees. The number of retirements would equal one twenty-seventh, or 3.70 percent, of the average number of workers employed during the year. Actually, over the 17 years, 1938–54, retirements have averaged 1.98 percent of average employment. (Compiled from 1953 annual report Railroad Retirement Board, table D–1, page 164; table B–18, page 116; 1953 and 1954 data, partly preliminary, estimated from issues of the Railroad Retirement Board Monthly Review and the Bureau of Labor Statistics Monthly Labor Review.)

This means that so far, only 53.5 percent of the employment taxed have been reflected in ultimate payment of retirement benefits; or that for every dollar of tax collected, roughly 46.5 cents has been a windfall, save for possible payment of survivor benefits, which are much lower than retirement benefits.

In 1947 disability retirements were eased and the rate of retirement has been higher since 1947. In the 7 years, 1948–54 (1947 is left out because there were so many delayed disability retirements, exaggerating the total, in that year) retirements averaged 2.39 percent of average employment. This may prove more representative of the future situation, with liberalized disability requirements. During that period, then, 64.6 percent of employment taxes has been reflected in ultimate payment of retirement benefits; for every dollar of tax collected, 35.4 has been a comparative windfall. This was used as an assumption for the future in the calculations.

Modern Republicanism—Antilabor Laws

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. PRICE. Mr. Speaker, businessmen in Illinois as well as in other States are being plagued with solicitations for money by a group that calls itself the National Right to Work Committee. The purpose of this committee is to promote so-called right-to-work laws in every State in the Union.

There are several facts to be noticed.

The first is that a great many businessmen have no sympathy whatever with so-called right-to-work laws. They know that the whole purpose of such laws is to break down union security through outlawing the union shop or even a simple 1-year maintenance-of-membership clause in a collective-bargaining contract.

Enlightened businessmen with a tradition of getting along with their workers, with bargaining fairly, are not the ones who join in movements to disrupt collective bargaining and disrupt unions.

The second fact to observe is that this right-to-work approach of 1957 is merely the modern expression of a now outmoded resistance to unions.

Fifty years ago the more reactionary industrial barons denied the right of workers to form unions and bargain collectively. They ran a campaign for the so-called open shop, wherein union members could be compelled to work side by side with nonunion members. They tried to force workers to sign "yellow dog" contracts, agreeing as a condition of employment not to join a union.

The same type of employer who argued half a century ago for a yellow-dog contract is the one now claiming that his interest in State right-to-work laws is solely to protect the worker.

He is not interested, really, in protecting the worker. He just does not want to pay union wage scales. He does not want unions to be secure, so that they can devote themselves to their proper business. In the guise of safeguarding the freedom of his employees, he seeks to force unions on the defensive.

In my neighboring State of Indiana recently a right-to-work law was passed by an overwhelming majority of the Republican members of the State legislature, pushed on through a campaign that was announced in advance to be financed by a fund of $360,000.

Now businessmen in my home State of Illinois are being solicited and harassed by demands from mislabeled right-to-work committees for financial contributions to their work.

Is this the new Republicanism of which we have heard so much? Secretary of Agriculture Benson devotes his time to blaming workers' wages for his own failures with farm policy. The Small Business Administration of this self-labeled dynamic, progressive ad-

ministration blames the troubles of little-business men on union wage scales.

Mr. Speaker, I venture a word of warning to the new Republicans. American workers have seldom believed that those who tried to hold down their wages and weaken their unions were true friends. They do not believe that the businessmen on the National Right To Work Committee are true friends.

Every time a State legislature passes a so-called right law against unions, workers are given a new sense of grievance and a determination to use their political rights as citizens to redress the grievance.

It is extremely interesting that most States passing mislabeled "right to work" laws in recent years are States controlled by what President Eisenhower wishes to make the party of the "new Republicanism." It is interesting that in Kansas a "new Republican" Governor who vetoed a right-to-work bill was repudiated by his own party and denied renomination.

It is interesting that Secretary of Labor Mitchell has made a lot of speeches against so-called right-to-work laws—but that he cannot get support from his own President and is being ignored by not-so-new Republican State legislatures.

Mr. Speaker, under permission to revise and extend my remarks, I offer for the RECORD the following story from the Machinist, weekly paper of the International Association of Machinists, AFL-CIO:

NEW REPUBLICANISM IN INDIANA

(By Peter E. Terzick, editor of the Carpenter)

(EDITOR'S NOTE.—Mr. Terzick is one of the Nation's outstanding labor editors and a vice president of the International Labor Press Association. His report was written for the Machinist from Indianapolis.)

New Republicanism and a $360,000 slush fund added up to a "right to wreck" law for the workers of Indiana. The Indiana Senate, by a vote of 27 to 23, has placed its stamp of approval on a measure to prohibit all forms of union security. The measure had already cleared the house by a 12-vote margin.

Governor Handley, a prime example of the New Republicanism which talks like Eugene Debs but votes like Calvin Coolidge, refused to veto the bill.

Indiana thus achieved the dubious distinction of becoming the first highly industrialized State in the Nation to include such a law on its statute books.

The wreck law was actually passed 2 weeks ago, but the groundwork was laid in the elections of 1954 and 1956. Last November, Indiana voted overwhelmingly for New Republicanism, and New Republicanism repaid the State by passing the right-to-work measure.

Two new Republicans, George Diener, speaker of the house, and Crawford Parker, Lieutenant Governor and chairman of the senate, personally engineered the measure through the Indiana General Assembly.

In the senate, 25 Republicans voted for the measure. Eight voted against it. Two Democrats O. K.'d the measure while 15 voted against it.

The vote in the house was equally partisan. Fifty-one Republicans backed the measure; 22 opposed it. Three Democrats favored the bill; 20 voted against it.

Whether you use algebra, calculus, or plain third-grade arithmetic, what it adds up to is this:

New Republicans in the senate voted better than 4 to 1 for the measure while Democrats voted better than 7 to 1 against it. In the house, new Republicans backed the bill by about 2 to 1 while Democrats lined up better than 7 to 1 against it.

However, the measure did not spring up spontaneously in the legislature. Rather it was conceived, engineered, and pushed by an Indiana right-to-work committee which has been active in the State ever since the 1954 elections. Last summer Steve Nolan, executive secretary of the committee, announced in Indianapolis newspapers that the committee was raising $360,000 to promote right-to-work legislation.

How much money the committee raised, of course, is not known, but indications are that it was plenty. Long before the legislature met, the committee was propagandizing and beating the drums for right-to-work legislation. For all the valiant opposition that Indiana labor could muster, the law was railroaded through the general assembly.

Now that right-to-wreck forces have succeeded in Indiana, there is little doubt but that many other highly industrialized States will become targets in the near future. It is too early to completely assess the Indiana situation, but in order that unions in other States may get some idea of what they may be up against, a few lessons from the Indiana battle are herewith presented:

"Right to wreck" laws are promoted or discouraged at the ballot box. The political complexion of any legislative body is determined on election day. If too many of the wrong people are elected, no amount of lobbying during legislative sessions can change things very much.

"Right to wreck" propaganda is subtle and deceptive. Every bit of literature and every bit of propaganda put out by the "right to wreck" backers exuded love for organized labor. They pretend they were all for organized labor. The only aim of their bill, they claimed, was to strengthen unions. Such ballyhoo is very effective with the general public.

Indiana newspaper were virtually 100 percent in the "right to wreck" camp. In 1 week, 4 editorials praising "right to wreck" appeared in Indianapolis newspapers. In addition there were 4 vicious cartoons, 21 stories besmirching all labor for the sins of a few evildoers in scattered parts of the country, plus numerous references to labor czars, bosses, etc.

Although no one knows to this day who the culprit was, the shooting of a baby during an IAM strike near Princeton was linked, by inference at least, to the union. The sob sisters pulled out all stops. Within 3 hours of the time the news broke, the House Labor Committee voted the "right to wreck" bill out favorably. To this day no one knows whether the shot was fired by a company stooge, a unionman, or a personal enemy.

Educating rank-and-file members to the dangers of "right to wreck" is a tremendous job. For all the fine work done by labor leaders in Indiana, too many rank-and-file members still failed to realize all the implications contained in the wreck law. States which hope to keep out wreck laws must educate their members before bills reach the life-or-death stage in the legislature.

The impact of new Republicanism on wreck laws transcends State boundaries. United States Representative MADDEN, of Indiana, recently charged Secretary of Agriculture Benson had been using his Indiana employees to promote the "right to wreck" legislation in the State. Whether or not Representative MADDEN'S charges are correct, the fact remains that someone somehow thoroughly organized the farm organizations of Indiana solidly for "right to wreck." Only the Farmers' Union was not behind the bill.

Employers, too, were somehow or other intimidated. Many of them who privately expressed themselves as opposed to the wreck measure quickly backed away from any suggestion they go on record as so stating.

If there is any moral implicit in the Indiana situation, is it a two-pronged one: First, the best place to really beat the "right to wreck" legislation is at the ballot box; second, the time for all unions to start educating both their own members and the general public is right now.

Celebration of 50th Anniversary of Tivoli Hotel

EXTENSION OF REMARKS

OF

HON. JOHN M. ROBSION, JR.

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. ROBSION of Kentucky. Mr. Speaker, last November one of my distinguished predecessors in this body, Hon. Maurice H. Thatcher, who represented the Louisville, Ky., District for 5 terms—1923–33—was the recipient of a very pleasing and honorable recognition. He is the only surviving member of the Isthmian Canal Commission—1910–13—during which period he also served as civil governor of the Canal Zone. There are some who are yet serving their constitutencies in the House who recall his services here with respect and esteem. From time to time since his retirement from Congress, statements of the high character of his public service and of his continuing activities for the public welfare have been voiced here, in one or another form, and gone into the permanency of the CONGRESSIONAL RECORD. All of us who know him are very much gratified that he is yet active and effective in various fields of usefulness.

Just now I have in mind the fact that in November 1956 in response to the invitation of the Governor of the Canal Zone, Gen. William E. Potter, he and Mrs. Thatcher voyaged to the Isthmus of Panama and there spent several days as the guests of the Canal Zone Government. The ship that carried them was the *Cristobal*, whose master was Capt. Charles L. Foley, a most capable navigator and a fellow Kentuckian of the Thatchers.

On the Isthmus Governor Thatcher participated in the celebration of the 50th anniversary of the world-famous Tivoli Hotel, located in Ancon, C. Z., immediately adjacent to the city of Panama. On that occasion he was the guest of honor and principal speaker at the celebration, and both he and Mrs. Thatcher were warmly received—not only at the celebration itself, but, as well, everywhere they went in the Canal Zone and Panama.

Those in charge of the celebration provided a very interesting program, featured by talks by oldtimer Fred de V. Sill, who introduced Governor Potter; Governor Potter, who offered a word of welcome to the assemblage and pre-

sented Governor Thatcher; and the latter, whose subject was Reminiscences.

The Tivoli Hotel has played a very important part in the construction, operation, and maintenance of the Panama Canal. It was erected in 1905–6 because of a most urgent situation. Chief engineer of the canal project, John F. Stevens, in his characteristically vigorous manner, under due authorization undertook in August 1905 the building of a hotel at Ancon. It is recorded that the name selected for the structure, "Tivoli," was derived from the famous Tivoli Hill—one of the seven in Rome. The work was speeded, not only because of the general need involved, but also for the very special reason that President Theodore Roosevelt in the latter part of June 1906 had indicated he would visit the isthmus in November of that year. When President Roosevelt arrived on the isthmus in November, he and Mrs. Roosevelt—who accompanied him—were assigned to quarters in the uncompleted hotel; which quarters ever since have been known as the presidential suite. Henceforward, for a half century the Tivoli Hotel—more recently known as the Tivoli Guest House—has furnished most satisfactory accommodations for the thousands of its patrons, including some of the most famous people in the world. Throughout the years the Tivoli Hotel has been, indeed, one of the most famous hostelries of the Western Hemisphere. As a guest house, the Tivoli no longer is operated for commercial purposes but is maintained for the direct use of canal officials and employees, and others visiting the isthmus in formal capacities. The newly constructed and ultramodern hotel, El Panama, in Panama City, now furnishes accommodations for the general public.

Following the talks by Mr. Sill, Governor Potter, and Governor Thatcher, the program dealt with well-acted skits of interesting historic events occurring during the life of the hotel, in which the actors were chiefly young people of the Canal Zone. A splendid musical program was rendered by the Balboa High School Concert Band and the chorus of Canal Zone boys and girls of the Balboa High School Glee Club.

The President of the Republic of Panama, the Honorable Ernesto de la Guardia, and Senorita de la Guardia, were among the large number present. The assemblage—made up of the residents of the Canal Zone and the Republic of Panama, the armed services and members of the diplomatic corps—was most impressive. The following is quoted from the printed program:

Maurice H. Thatcher, member of the Isthmian Canal Commision from 1910 to 1913, is loved and respected by the people on both sides of the Panama Canal Zone border.

Although his direct connections with the Panama Canal were severed over 40 years ago, his interest in its affairs have been as keen over these years as that of the most enthusiastic employee.

His present visit to the isthmus to participate in this significant anniversary program is one of several trips to his second home he and Mrs. Thatcher have made since 1913.

Mr. Thatcher served 10 years, 1923–33, in the United States House of Representatives from Kentucky. During this time he devoted much attention to Panama Canal affairs, sponsoring legislation for the ferry and highway to the interior of the Republic which bear his name.

An author and poet, Mr. Thatcher has written many well-known poems dealing with the canal and its people.

Regarding the celebration and the visit of the Thatchers, the following news story was carried in the December 7, 1956, issue of the Panama Canal Review, official organ of the Panama Canal Company and Canal Zone Government:

It was a real nice party, and the Tivoli would be the first to say so, if it only could. After all, 50th birthdays are something special, even if the celebrant is a hotel.

On hand to help with the celebration was one of the oldest oldtimers of them all—Maurice H. Thatcher, of Washington, D. C., the only member of the Isthmian Canal Commission still living. He and Mrs. Thatcher, who were given the Roosevelt suite for their stay here, enchanted young and old with their spryness and interest in the isthmus.

Also on hand was the Canal Zone's top-ranking good neighbor, President Ernesto de la Guardia, Jr., of Panama, who came accompanied by his wife and some of his official family and who seemed to enjoy thoroughly every minute of the birthday party.

The printed program furnished the following interesting text about the Tivoli Hotel:

Now the oldest public building in the Canal Zone in use, the Tivoli Guest House observes its 50th birthday in the grand manner which the anniversary and the institution deserves—with a salute and a toast from its friends, old and new, far and near.

The Tivoli—its name, the building, and its guests—has been intimately connected with the stirring events of the history of the Panama Canal. Its broad verandas, its spacious public rooms, and its commodious living quarters all echo the sounds of exploding dynamite, of rattling dirt trains rolling out of Culebra Cut, and of a quarter million ship whistles which have followed the dirt trains.

There is little of the prosaic about the Tivoli and these facts are little needed on this festive occasion.

Let us savor the memories that its corridors hold. Let us salute an old friend on a significant birthday.

Governor Thatcher, in his address, after thanking Governor Potter and his family for the invitation to Mrs. Thatcher and himself for the courtesies being accorded them, spoke of the gratification he felt because of the popularity Governor Potter and his family had achieved in so short a time following his selection for the post. Thereupon, he spoke in a reminiscential mood, with respect to the Tivoli Hotel and the canal construction era; and took occasion to address directly President de la Guardia and Governor Potter with regard to the many problems arising between Panama and the United States through the administration of the canal, and ventured to emphasize the importance of careful consideration and mutual understandings necessary for the solution of any differences which might arise. This, it may be added, is the spirit in which these two distinguished officials are acting.

An interesting article in regard to the celebration appeared on the following day, November 16, in the Panama American, the afternoon Spanish-English daily of Panama City, as follows:

NO ROOM ON FRONT PORCH AS CROWD PACKS TIVOLI

Almost everybody was to be seen at the Tivoli last night. So much so that regular residents could hardly find a seat out on the big front porch.

The President and his lady came early.

Already on hand to welcome them were the Governor and his lady, and their daughter.

Maurice H. Thatcher, who served on the Isthmian Canal Commission when the waterway and the Tivoli were young, was the chief speaker for the hostelry's 50th birthday party.

Mrs. Thatcher, who accompanied her husband from Washington, was also an honored guest.

Frederick De V. Sill, a distinguished hero of World War I and a retired employee of the canal made the introductory remarks. Hundreds of people had worked to make the Tivoli celebration the roaring success it was. Among them was Phil Thornton, who served as a general coordinator.

Playing seven stirring marches and songs that were first played on the isthmus at Isthmian Canal Commission band concerts, the Balboa High School Band set the fast pace for the party. They wore costumes reminiscent of the pre-1911 era.

Gov. William E. Potter welcomed the guests, speaking in the role of President Theodore Roosevelt, whose impending arrival at the Tivoli in 1906 caused it to be rushed into readiness.

Still speaking as Roosevelt, Potter greeted "President Manuel Amador Guerrero," Panama's first President, in the person of President Ernesto de la Guardia, Jr.

Thatcher struck an international chord in his address. Voicing his delight at being back on the isthmus, he said to President de la Guardia:

"I am sure, Mr. President, that you will find in Governor Potter and he in you that desire to cooperate and work in mutual regard toward the relationship which distiny has brought in our two countries."

This morning Thatcher and Mrs. Thatcher paid a call on the President and the First Lady at the Presidencia.

Last night's crowd gave an enthusiastic reception to the musical narrative, "Out on the Big Front Porch," written and produced by Donald E. Musselman and Victor A. Herr.

• • • • •

The crowd at the Tivoli was estimated at more than 1,200. Seats had been arranged for slightly over 600 in the ballroom; several hundred more persons were sitting or standing in the lobby, bar and grille.

One estimator said: "If the Tivoli stood up under that crowd, it ought to last another 50 years."

H. J. Chase, manager of the Tivoli Guest House, reported that light refreshments were served to about 1,000 in the dining room after the formal program.

• • • • •

Zonians were delighted by familiar references in the script for "Out on the Big Front Porch." Frequent laughter greeted well-known names, and one woman who had lived here for many years was heard to say, repeatedly, "That's right; that's exactly how it happened."

A good many of those who attended the program took the trouble to tell members of the committee how much they had enjoyed it. One of the nicest compliments: "There was more friendliness and more neighborliness at the Tivoli party than there has been at anything held here for years."

Also, on November 16, the Star and Herald of Panama carried the following story of the celebration:

THATCHER STRESSES REPUBLIC OF PANAMA-UNITED STATES COOPERATION AT TIVOLI FETE

The old walls of the Tivoli Hotel echoed last night to the voice of time, speaking 50

years ago through the sons and daughters of the generations who saw the world go by, out on its big front porch.

There was one voice with the authentic ring of an oldtimer. It was that of Maurice H. Thatcher, only surviving member of the Isthmian Canal Commission, and special guest at the celebration of the 50th anniversary of the world-famed hostelry.

"If these venerated walls could speak," he told an audience of Isthmians—young and old—who packed the Tivoli ballroom, "what stories they might tell and what inspiration they would bring to those who might listen."

And some of the stories were told—and sung—last night. A superb 50-minute musical narrative, Out on the Big Front Porch, written and produced by Donald E. Musselman and Victor A. Herr, inspired the audience—the oldtimers who helped make the heyday of the Tivoli, the present generation which still enjoys its quiet atmosphere, and the new generation that looks upon it as a storied landmark.

The reminiscent mood was set from the start by Fred De V. Sill, himself an oldtimer, who acted as master of ceremonies. It began with his story about the carometta driver who was asked to drive to the casa loco (the old insane asylum at San Juan Place) and replied, "Oh, yes, the Administration Building."

And it continued as Gov. W. E. Potter welcomed the guests—he speaking as President Theodore Roosevelt, whose visit to the Tivoli on November 15, 1906, marked the official opening of the hotel, and greeting President Manuel Amador Guerrero, then Panama's Chief Executive, in the person of President Ernesto de la Guardia, Jr.

The reminiscent mood heightened as Thatcher, erect and firm-voiced despite the weight of years, was introduced to the hundreds in the ballroom. He spoke of the pleasure he and Mrs. Thatcher experienced in revisiting Panama and of the fitting recognition to the Tivoli's anniversary.

Then, addressing President de la Guardia, he added:

"I am sure, Mr. President, that you will find in Governor Potter, and he in you, that desire to cooperate and work in mutual regard toward the relationship which destiny has brought to our two countries."

It was an appropriate remark, for in the audience were many Panamanians who themselves had shared in the days of glory of the Tivoli.

The mood built up as the musical narrative unfolded on a stage which was a replica of the big front porch. From the very first scene where Giacomo, the homesick Italian who named the site after the Tivoli Hill which rises over Rome, the audience was captivated.

With a magnificent rendition by the Balboa High School Glee Club, which provided the musical background, the narrative told of Teddy Roosevelt's visit, of the old hostelry days, the romantic and not-so-romantic incidents, and life in the Tivoli through two world wars. All seven scenes were acted with feeling by the cast and sung with fervor by the Glee Club.

And the fitting grand finale—which preceded an informal reception in the dining room for all comers was the stirring rendition of the show's theme song:

"Out on the big front porch
We see the world go by.
Out on the big front porch
The past will never die.
Although the time may flee
I know there'll always be
A waiting chair for me
Out on the big front porch."

The Thatchers were kept very busy during their short Isthmian stay in attending functions in their honor. On the evening of their arrival on the Isthmus—November 15—they were guests at a meeting of the Isthmian Historical Society—a most praiseworthy and successful organization founded in 1954 at the suggestion of Governor Thatcher. Rev. Edward J. Cooper, long-time pastor of the Colon church, shared honors at the meeting, at which both spoke. In this connection, this editorial appeared November 16 in the Star and Herald—itself an old-timer with more than 100 years of history behind it:

WHEN OLDTIMERS GET TOGETHER

Gray, white, and a few bald heads predominated Wednesday evening when the Isthmian Historical Society met at the Hotel Tivoli to honor the Honorable Maurice H. Thatcher, member, the Isthmian Canal Commission (1910 to 1913). Mr. Thatcher, long-time Member of Congress and now a practicing attorney in Washington, D. C., is a guest of the Canal Zone for festivities honoring the 50th anniversary of the Hotel Tivoli, the main gathering place for Canal Zone festivities, meetings of various kinds, popular dances, also the favorite stopping point for more than one United States President and hundreds of visiting Congressmen through the past half century.

There were many speakers presenting carefully compiled reports on various Canal Zone events and activities through the years. They spoke of the make-do arrangements through those early years, the building and organization of churches and other meeting places for groups and organizations whose main motive was to make United States citizens and their families feel at home in those early years of tropical service.

One of the most heart-touching and colorful addresses was made by the Reverend Edward J. Cooper, for many years pastor of Christ Church By-the-Sea in Colon, which is said to be the oldest structure of its kind on the Atlantic side. Father Cooper, now completely blind and residing since his retirement in Guatemala, was brought to Panama by the society to speak at this meeting. He was as eagerly greeted as Mr. Thatcher by the mostly elderly audience.

Mr. Thatcher spoke briefly, but it was clear that he was greatly touched by the program and his elderly listeners who also included Canal Zone sons, daughters, and grandchildren. Some of the latter bespoke the fact of intermarriage of the early Canal diggers with Panamanians.

"The Canal Zone," said Mr. Thatcher, "is an agency for freedom, and for those who love freedom, also of defense. If at any time I can be of service in helping you, or in which the Library of Congress could help, I hope you will call on me." He then thanked the Historical Society for inviting him to speak and assured his audience that any among them who may visit him in Kentucky will receive a warm welcome from Mrs. Thatcher (who is with him on this historic visit) and himself at their home in Kentucky.

Perhaps the most cheering thought expressed by the numerous elderly speakers was that voiced by Father Cooper who, though he has worked in this vineyard since 1907 and despite his blindness, is still living usefully and happily. Father Cooper assured his listeners that he is still only 21 years old.

"I do not believe in age," the churchman declared with complete sincerity. "Only my clothes grow old. Since we draw our life from God who is ageless we are born again by the spirit of God. A thousand years from now when we meet in our Father's Kingdom, I shall still say: 'I am 21.'"

On the morning of November 15, Governor Thatcher, at the Canal Zone Administration Building plaza, presented to the Panama Canal Company—Canal Zone Government—the National Safety Council Award of Merit for the splendid safety record set by the Panama Canal Company and the Canal Zone Government in the operation of the Canal and Canal Zone activities.

While on the Isthmus, Governor and Mrs. Thatcher called on President and Senora de la Guardia at the Presidencia in Panama City, and visited the Gorgas Memorial Laboratory, created under legislation sponsored by him in Congress in 1928. This great research institution, supported by congressional appropriations and dealing with the cause and prevention of tropical diseases, is located in Panama City. The building and the grounds therefor were donated by the Panamanian Government to the Gorgas Memorial Institute of Tropical and Preventive Medicine—named for General Gorgas, the famed sanitarian and member of the Commission during the canal construction days. After his retirement from Congress, Governor Thatcher was chosen as vice president and general counsel of the institute, positions he yet holds. The director of the laboratory, Dr. Carlos M. Johnson, and the efficient laboratory staff are doing splendid work in the important field of research; and the fame of the laboratory—which has been in existence since its founding in 1928—is worldwide.

The Thatchers, following a formal invitation, visited the Panamanian town of Arraijan, situated on the west side of the canal, not far from Panama City, and located at the terminus of the Thatcher Highway, which extends from the Thatcher Ferry—across the canal—westward through the zone strip. The ferry and highway constitute important links in the inter-American highway system. Governor Thatcher, while in Congress, was the author of legislation which provided for the establishment of the ferry and the construction of the highway, both of which have always been free from tolls and unite the eastern and western portions of the Canal Zone and the Republic of Panama. These important works were officially named in his honor.

An interesting story derives from the establishment of the ferry and the construction of the highway in 1932. The people of the town of Arraijan, in the autumn of that year, in gratitude for the fact that they were thus placed in easy contact with Panama City, the capital of the Republic, which is situated on the east side of the canal, named a street—Calle Thatcher—in Governor Thatcher's honor and gave him a lot in the town. At that time Arraijan had a population of less than 1,000; now the population has risen to nearly 3,000. Through the years he had indicated his desire to return the lot to the town of Arraijan for some public benefit, as, for instance, a playground for children for Arraijan. On the occasion of this visit to Arraijan, arrangements were concluded between himself and the municipal authorities for the exchange of a considerably larger piece of ground within the town's limits for the lot to which he held title.

His standing offer to make a substantial personal contribution for the playground was accepted, and it is expected shortly that the playground, now officially named by the Arraijan authorities, "Parque Infantil don Maurice H. Thatcher"—Maurice H. Thatcher Children's Park—will be in operation.

Regarding the Arraijan matter, there appeared in the Star and Herald of November 20, 1956, the following:

MAURICE H. THATCHER PARK IN ARRAIJAN CLOSE TO REALITY

A children's park in the town of Arraijan is almost a reality thanks to Maurice H. Thatcher, sole surviving member of the Isthmian Canal Commission.

Back in 1935, shortly after the completion of the Thatcher Highway which linked Arraijan with Panama City, the people of the town voted to present Thatcher with a lot of land as a gesture of gratitude. On a subsequent visit to the Isthmus, Thatcher visited Arraijan and told officials that he would like to return the land to the town for use as a children's park.

When Thatcher came to the Isthmus last week to attend the celebration of the 50th anniversary of the Hotel Tivoli, Mayor Ismael Amaya of Arraijan and the town's council had things well planned.

At a special night meeting on the eve of Thatcher's visit, the council voted approval of the return of the land originally presented to the former Congressman—and voted to give Thatcher, in perpetuity, a larger tract of land which already had been set aside as a children's park.

On his visit to Arraijan last week, Thatcher was received by Mayor Amaya, the city council, other town officials and 600 students from the Arraijan school. He was formally presented with the council's resolution accepting the land originally presented to him and awarding him title on the larger tract for the park.

Thatcher offered to donate playground equipment for the proposed park and left a catalog with the town officials to have the children themselves choose the equipment they want. A movement immediately began to have the Arraijan council appropriate funds to add to Thatcher contribution.

The Arraijan council's resolution, naturally, provides that the childrens' park will be named, "Maurice H. Thatcher Children's Park."

In and out of Congress, Governor Thatcher through the years has indicated in numerous and effective ways his interest in the welfare of the Canal Zone and the Republic of Panama, as well as in the oldtimers of the canal construction days and of the later operating forces of the canal and of the Canal Zone Government—serving these officials and employees in effective work in behalf of legislation providing annuities and other benefits for them.

On the last night of their stay on the isthmus a largely attended and very pleasing reception was accorded Governor and Mrs. Thatcher at the Tivoli guesthouse, given by Capt. and Mrs. Cornelius S. McCormack, of Ancon—Mrs. McCormack was a member of the 50th Anniversary Committee—largely attended by oldtime friends of the Thatchers on both sides of the line—between Panama and the Canal Zone—and by many others, including officials of the Canal Zone and the Panamanian Government, and distinguished members of the military and naval forces stationed on the isthmus, and the diplomatic establishments.

In the Canal Zone and Panama it was the judgment of all that the celebration was an outstanding success and that Governor and Mrs. Thatcher made an indispensable contribution thereto.

Mrs. Thatcher is remembered as a most charming hostess during their isthmian residence in Ancon and their home, which was a social center of activities, importantly served to cement friendship between the people of Panama and the Canal Zone.

All of which serves to indicate the reason Governor and Mrs. Thatcher are held in the highest regard and esteem—both in the Canal Zone and in the Republic of Panama, and by the builders of the Panama Canal and the operating forces.

In the epic history of the Isthmus of Panama many things of vast import have occurred. Sprinkled along the way there have been lesser incidents of a most interesting character, serving to link together the major events and eras. The celebration of the 50th anniversary of the Tivoli Hotel was such a link, and a most vital one; its formal recognition was altogether fitting. Also, it was most appropriate that Governor and Mrs. Thatcher should have been invited to attend, and fortunate that they did so, honoring the occasion by their presence and participation.

Are Big Farms Taking Over?

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following article from the March issue of the Farm Journal:

ARE BIG FARMS TAKING OVER?

(By Claude W. Gifford)

Big corporation farms—"factory-type farms," as they're sometimes called—aren't Goliaths swallowing up farmland. These larger farms—of all kinds—are actually shrinking in average size.

And family farms aren't dying out, as some claim. The family farms make up the same proportion of the Nation's farms as they did 10 to 15 years ago—and are even gaining some on the big farms in size and income.

The farms that are disappearing (nearly a million in the last 10 years) are largely small farms—whose operators have never made an acceptable living, even with good farm prices.

These are the three main conclusions of a surprising study just finished by Jackson V. McElveen, of the USDA. It's probably the best look we've ever had at what's really happening to our farms.

It reveals a normal adjustment of both farm size and numbers to the times. The alternative: Cut up the farm income pie into smaller chunks—with less for each and worse poverty for some.

Before we go any farther, let's get it straight how McElween and the USDA define these farms:

One group they call "family scale" family farms. These farms sell $2,500 to $25,000 of farm products a year (before deducting expenses), with the farm labor largely supplied by the family. There are 2 million of these farms at the latest count (1954 farm census). They are the real backbone of the family farms.

A second group they call small-scale family farms. There are 1 million of these with yearly sales of $250 to $2,500. Some would say these are really low income or small farms.

Big farms, in McElveen's description, sell more than $25,000 yearly (although many of them accomplish this with only their family labor). A big farm by this definition might have few acres. This big-farm group accounts for only 134,000 farms, or less than 3 percent of the Nation's total.

Together these 3 farm classes make up the 3.1 million commercial farms that produce 98 percent of the Nation's farm output.

This leaves 1.7 million part-time, residential and subsistence farms that raise only 2 percent of all farm products.

What's happened to the farms that account for the drop in numbers from 5.8 million 10 years ago to 4.8 million now? McElveen points out that almost 9 out of 10 of these disappearing farms were small, low-income units selling between $250 and $2,500 worth of farm products a year.

More than a half million of this loss was in the South (where 645,000 of the 1 million low-income farms remain).

Many of these folks on disappearing farms decided to take off-farm jobs—and they're doing better financially than ever before. Many kept on living right on the farm, thus accounting for part of the 150,000 increase in part-time and residential farms in the last 10 years. Others took over adjoining small farms, thus moving up into the family-farm class.

This change is normal, healthy, and probably could be stopped only by a serious recession, says McElveen.

Now back to those big farms that sell $25,000 or more of farm products per year. What's the evidence that big farms aren't a growing menace?

They have increased in the last 25 years—from 47,000 then to 134,000 now.

But with today's prices and today's increased output per farm, farms small in acreage can get into that $25,000 class. The average size of those big farms has actually decreased from 2,900 acres 15 years ago to 1,939 acres now.

There's more than one way to look at farm size. For instance, if farmers back in 1929 had had today's machines, varieties, know-how and prices, how many would have sold $25,000 worth of farm products? There'd have been 205,000, instead of 47,000.

So measured by today's farm know-how and prices—the kind that puts 134,000 farms into that $25,000 big farm class now—there are actually 71,000 fewer farms that you'd call big. No sign of spawning "factory farms" here.

Using today's farm know-how and prices, McElveen makes these points:

1. Ten years ago, big farms controlled 30 percent of the Nation's farmland, but only 26 percent now.

2. Family farms operated 59 percent of the Nation's farmland 10 years ago; and since have increased their share to 63 percent. Since 1939, family farms have increased their output faster than big farms, and have equalled their growth in acreage size.

3. In 1939, big farms produced 35 percent of all farm products sold, now down to 32 percent. Family farms contributed 59 percent of the products in 1939—62 percent

now—thus closing the gap slightly in the last 15 years.

4. While total numbers of farms have been declining steadily, about the same proportion of the commercial farms now classify as big farm, family farm and small farm as back in 1929.

We're better off than we would have been without the changes, but we've still got a ways to go before farmers catch up with the rest of the economy.

Dairy Stabilization Program

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. KNOX. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the Hoard's Dairyman of February 28, 1957. The editorial comments on the much-discussed and proposed dairy stabilization program. I feel the editorial has food for though in solving surpluses in the dairy industry. It is my hope that all farm groups will direct their attention of study to the proposals and endorse or reject the self-help program advanced by the National Milk Producers Federation:

WHAT ARE THE PROSPECTS FOR A BETTER DAIRY PROGRAM?

For the first time in print, the much-discussed proposed dairy stabilization program is outlined, beginning on page 169. Obviously, many questions will be raised in addition to those included in the article. Many will involve the prospects for the adoption of the program.

Four years ago the National Milk Producers Federation advanced its self-help program. Experience in Congress indicated that some modifications were needed before it would be considered favorably. To serve that end, Hoard's Dairyman suggested a two-price proposal as an amended self-help bill.

During the past 3 years, there has been a growing realization that both proposals needed additional work and refinement. About a year ago, the National Grange moved to establish a policy committee on dairying. It was the function of this group to review the entire dairy economic picture, possible solutions, and make a recommendation for a peacetime dairy program that was not a warmed-over wartime program which had failed to meet the peacetime need of dairy farmers.

To serve on this committee, Herschel Newsom, master of the National Grange, invited a working group representing many interests and areas. Yet the group was small enough to make steady progress. In addition to four State Grange masters, Newsom invited the president of the largest dairy farmer organization in the New York milkshed, the president of the major dairy farmer organization in the Chicago market, and a representative of the State milk control markets of the Southeast.

In addition, Newsom invited officers of the National Milk Producers Federation and the editor of Hoard's Dairyman because of their interest in and sponsorship of dairy proposals in the past. These men served only in an ex-officio capacity, however.

The committee's chairman was a manufacturing milk producer from Minnesota.

WHAT COMMITTEE SAW

When the committee met for the first time last summer, here is what it saw:

1. After 4 years under the present price support program, supply and demand were not in balance. The Government was still buying about 5 billion pounds of milk a year, trying to support the price.

2. The Government loss the previous year was $449 million.

3. Dairy farmers' hourly income had been reduced about 50 percent in 5 years.

4. Under the present program, price supports could drop another 30 cents per hundred, to 75 percent of parity, beginning April 1.

5. Reliable Government and industry forecasts were that supply and demand would not be in balance, under the present support program, for another 9 years, or until 1965.

This information, plus much more, was ample reason for the committee to buckle down in a series of long sessions to develop a sound peacetime program. Their conclusions to date are recorded on page 169.

It should be emphasized that these are the findings of these men as individuals. On the basis of their long experience in the dairy industry, they came to an agreement on the proposal. They could not and did not imply by their actions that their organizations would approve the proposal. Such endorsements can come now only from their memberships, either through annual meetings or by action of boards of directors.

CONSTRUCTIVE SUGGESTIONS REQUESTED

When the committee first met, Mr. Newsom emphasized repeatedly that the findings of the committee were not to be considered a proprietary property of the National Grange. If that happened, the prospects for approval by Congress would be dim because of the ever-present existence of farm and dairy organizational competition that exists on the national scene. The program was to stand on its merits alone. All groups were to be in a position to contribute their thinking to the proposal and then support it as a dairy stabilization bill.

This first report on the program now goes to farm and dairy organizations for review and suggestions for improvement. Particular attention will be given to the personal opinions and reactions of dairy farmers.

Members of Congress will be consulted to obtain their counsel on the proposal.

Armed with this information, the committee will complete its work.

MAY DEPEND ON SECRETARY'S ACTION

Now what are the prospects for its passage and subsequent approval by dairymen?

In our opinion, it depends heavily on the action of the Secretary of Agriculture prior to April 1. If he decides that there is an "adequate supply" and drops supports to 75 percent of parity, or 30 cents per hundredweight, the proposal would almost certainly be approved quickly by Congress and dairy farmers.

If, however, the Secretary continues to support manufacturing milk prices at $3.25, the acceptance of the new program will depend directly on organized support, shown by dairy farmer groups.

Incidentally, if the Secretary drops price supports 30 cents, it will affect all farmers, not just those selling manufacturing milk. This is true because the base price on almost all fluid milk is the manufacturing price. To this is added a premium for grade A production.

In our reporting of the new program, we made some assumptions for purposes of illustration. Since they may be questioned, we would like to comment on them.

It will be noted that we allowed for a possible decrease in sales as a result of an increase in the retail price. Using the commonly accepted demand-price ratios, we estimated an initial loss of 4 billion pounds. Incidentally, any such estimated loss would be taken only the first year when the retail price was raised. Many experienced dairy observers claim that no such loss will be incurred. If not, then the market-surplus ratio could be 97 to 3.

EVERYONE PARTICIPATES

In some quarters it has been suggested that small producers should be exempt from the market-surplus ratio. To do so would wreck the program, in our opinion. No matter how large or how small the producer, he benefits under the program.

Some may question the reference in the article to converting surplus to export sales. The State Department is on record favoring a properly drawn two-price proposal over the present price-support program. And we think they should feel this way. Whether administrative or foreign policy in future years will give dairymen this opportunity only time will reveal.

What about the markets for new producers and those farmers who want to increase their herd size? Was the committee unrealistic in its recommendations?

You will note that under the program, the new producer and the enlarging producer will still be better off than they are under the present program. Will this defeat the purpose of the program?

Only experience can provide an answer. Men on the committee felt, however, that farmers quitting dairying and the continuing consolidation of farms would offset the possible production increases from new or enlarging producers.

Certainly the dairy farmers elected to the Dairy Stabilization Board will watch this part of the program closely during the first few months of its operation.

HISTORY OF DISSENSION

A key question on the future of the proposal hinges on the attitude of the Secretary of Agriculture and the White House.

It is known that the Secretary is personally favorably inclined toward this type of program. He was seriously disillusioned 4 years ago, however, and he has not forgotten the experience. At that time, he appointed a Dairy Task Committee to do exactly what the Dairy Policy Committee has done. But 4 years ago the Secretary's committee failed to agree on anything in the way of a new dairy program.

If farmers and processors do not squabble among themselves or with each other on this proposal we are confident that administration endorsement may be received. In other words, if farm, dairy, and processor groups take a constructive rather than a negative attitude, the Dairy Policy Committee can reconcile many differences before the proposal reaches bill form. Then strong, near-unanimous support may be shown Congress.

The Late Honorable Harold C. Hagen

SPEECH
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. BARTLETT. Mr. Speaker, unfortunately, I was required to be elsewhere when Members paid tribute March 20 to Harold C. Hagen.

However, I should not want the permanent RECORD to be without a statement from me.

Harold Hagen was one of the first men I met on coming to the House of Representatives in 1945. Early, Mrs. Bartlett and I formed a friendly association with Harold and his lovely wife, Audrey, which continued throughout the years.

Nothing that can be said by me now can do other than to repeat the estimates of the character of the man, Harold Hagen, which were recorded here last Wednesday by ever so many Members. But I surely can, and do, subscribe to every sentiment which was then expressed. It was said that Harold Hagen was a man of ability, coupled with gentleness, of integrity, of devotion to his country, and faithful in the interests of the people of the constituency he served so long. Those were not exaggerated statements; they come naturally and quickly in consideration of a man whose firmness was accompanied by the gentleness of a kind disposition. Harold Hagen had sort of a rocklike quality that in a way seemed to serve to delineate the boundaries of those high qualities of integrity and responsibility with which he was so richly endowed.

Time has had its way with the mortal man we knew as Harold Hagen, but his memory will not fade.

Mrs. Bartlett and I desire to extend our deepest personal sympathy to Mrs. Hagen, to the children, Andora and Harold, Jr., and to all others close and dear.

A Fateful Parley

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting editorial entitled "A Fateful Parley" which appeared in the Boston Daily Record on March 11, 1957:

A FATEFUL PARLEY

Preparations are underway to make the Bermuda conference which begins on March 21 a great success. This is to be a first meeting between President Eisenhower and Prime Minister Macmillan of Great Britain.

Why it is held in Bermuda and not in the United States has not been explained, but it may be due to climate.

The importance of the conference is that the British have been taking stock of their position in the world since the Suez fiasco which most Britishers attribute to American policy in the Middle East.

The Prime Minister will undoubtedly come to Bermuda with a full statement of British policy in the Middle East and in other parts of the world.

For one thing, Britain has long been irked by a sense of inferiority as compared with the United States.

It would seem to be the present attitude both in the Government and among the people of Great Britain that if history requires that the British withdraw from many costly international enterprises, then the British will withdraw.

But they have no desire that Russia should be the successor imperialist power, nor do they believe that the United States wants to be.

In this sense, the new British policy may be anticolonialist and anti-imperialist, the British devoting themselves to trade which alone can restore their strength.

Prime Minister Macmillan is a businessman as well as a politician and he can be relied upon to read a balance sheet which most politicians in this era cannot do.

He must recognize the enormous losses that have come to Great Britain since the Suez catastrophe.

It is likely that it will be British policy to devote itself to the continent of Europe and forget the splendors of being a great African and Asiatic empire.

This is what will be threshed out at Bermuda between the President and the Prime Minister and their staffs. Such a conference can restore the grand alliance between the United States and Great Britain or it can change the picture of great nations.

Charles Miner Hospital Versus Hamburg Sanatorium

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News of March 14, 1957, which comments on the proposed change through legislative enactment of renaming the present Charles H. Miner State Hospital to the Hamburg (Pa.) State Sanatorium:

CHARLES MINER HOSPITAL VERSUS HAMBURG SANATORIUM

A bill has been introduced into the general assembly at Harrisburg to change the name of the Charles H. Miner State Hospital on the outskirts of Hamburg to the Hamburg State Sanatorium. Obviously, this is a sop to local pride, although it is not clear what claim to distinction Hamburg has to justify the legislative enactment.

The name of the sanatorium was changed to the Charles H. Miner State Hospital last December to honor the distinguished Wilkes-Barre physician and pioneer in the field of tuberculosis. The names of sanatoriums at Mount Alto, Cresson, and Philadelphia were changed at the same time to honor other professional men who made notable contributions to public health in Pennsylvania during the past half century.

Dr. Miner, a recognized authority on tuberculosis and truly a public benefactor, if there ever was one, richly deserved this tribute and more, too, for his humanitarian labors, above and beyond the call of duty. Hamburg apparently is not aware of his service or it would regard the designation of the sanatorium as the Charles H. Miner State Hospital a tribute to the community as well as a rare privilege.

Down through the centuries, men of science have been honored at home and abroad in this fashion. The Walter Reed Hospital in Washington is an example. Dr. Miner belongs in this illustrious company, although his extreme modesty makes it difficult to mention him in the same breath as these towering figures whose names are household words.

The development at Harrisburg is distressing to local residents and other Pennsylvanians familiar with the career of the former State commissioner of health who has been honored on innumerable occasions by the profession and the public. It reflects anything but credit on the intelligence and appreciation of those individuals who would remove his name from the sanatorium. Long after Hamburg is forgotten, the name of Charles H. Miner will be remembered with gratitude for his service to humanity.

Department of Peace

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. OSTERTAG. Mr. Speaker, early this year I introduced a bill—H. R. 4298—to create a Department of Peace, through which our country's dedication to international good will and amity can be made more manifest.

My bill would combine our economic assistance, student exchange, and international-information programs under a Secretary for Peace, so that the import and impact of these programs can be clearly, emphatically, and everlastingly directed toward peace-building activities. My bill also calls for the establishment of a peace college, comparable to our War College, where the arts and techniques of peace can be subjected to the same kind of diligent and dedicated study and practice that now goes in to the techniques of defense and war.

The establishment of a Department of Peace is in no sense a reflection on the departments and agencies now working in the field of peace. Rather, it is an effort to make their work more effective in relation to the one goal which must be achieved within the near future.

Since the introduction of my bill, I have had letters from individuals and organizations all over the country expressing enthusiastic approval and endorsement of such a step. Indeed, it is evident that the proposal merely expresses in legislative form an idea that has been long harbored by many individuals.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD some excerpts from correspondence I have had with respect to this proposal:

HANOVER STREET PRESBYTERIAN CHURCH,
Wilmington, Del., March 16, 1957.

DEAR MR. OSTERTAG: I am tremendously glad and interested to read your bill to create a Department of Peace and a National Peace College for training young men in the building of peace. I have long advocated this. It is a wonderful idea and the only solution to the war problem.

Enclosed is an article I published in 1955 on the subject.

With my prayers and best wishes for the success of your bill.

Sincerely yours,

DONALD DOUDS, *Minister.*

EXCERPTS FROM WAGING PEACE

"The supreme irony of our world is that we are so able, so devoted, and so clever for war; but so helpless, so blind, and so clumsy for peace.

"For war we do anything. We give and sacrifice endlessly. We give billions. We spent more on the last war than all else in our history. We give our best natural resources, science, wealth, industry—even the lives of our finest youth. For war our resourcefulness has no bounds. We invent radar, jet planes, atom bombs. Our intelligence, our ingenuity, our resourcefulness for war are astounding. Are we doing the same for peace?

"How could we be as resourceful for peace as we are for war? As a Nation we have a secretary of war and defense. Why not a secretary of peace? In a sense our Secretary of State is a secretary of peace, but he spends most of his time building military alliances, and huge armaments have never stopped war.

"Why not a secretary of peace to mobilize our Nation for peace, to invent new sociological and psychological methods and techniques (as amazing as the atom bomb) for creating peace? We need a department of peace with as many dollars and men as the Department of War.

* * * * *

"We have a West Point for the Army, an Annapolis for the Navy, and now a new training center for the Air Force. Why not a West Point for peace? A national academy where the ablest young men of America would be trained in the practical techniques of building goodwill and democracy?

"We need a peace army of a million dedicated men and women to go into the world and wage the war of ideas—wage peace—through teaching, writing, speaking, serving, working, and living sacrificially with the people of each country until we win them to understand and want peace and democracy as we do.

"A huge undertaking? Yes; but not as great as fighting another war."

STEUBEN SOCIETY OF AMERICA,
GEORGE ELLWANGER UNIT 53,
Rochester, N. Y.

DEAR CONGRESSMAN OSTERTAG: The George Ellwanger Unit 53, Steuben Society of America, compliments you on the bill you sponsor in behalf of the establishment of a department of peace.

We agree with you that all possible means to keep the peace among nations in this atomic age should be explored and evaluated, and that a department of peace would be the logical office to coordinate all these efforts.

We wish you success in having your bill adopted at this session of Congress.

Very truly yours,

PAUL OEHMKE,
Secretary.

UNITY EVANGELICAL
AND REFORMED CHURCH,
Antigo, Wis.

Hon. HAROLD C. OSTERTAG,
Member of Congress,
Washington, D. C.

DEAR SIR: Our committee on Christian social action of the North Wisconsin Synod of the Evangelical and Reformed Church, inspired by the bill you have introduced in the National Congress (H. R. 4296), is planning on submitting a resolution at our annual synod conference, to be held May 7–9 in Sheboygan, Wis., in endorsement and support of that bill. The resolution is herewith enclosed on a separate sheet of paper.

It is our intention to bring this matter which we believe to be supremely important and timely to the attention of other groups, both secular and religious throughout the country.

Respectfully yours,

WALTER A. WERTH,
Pastor; Chairman, Committee on Christian Social Action, Evangelical and Reformed Church, North Wisconsin Synod.

CHARACTER RESEARCH ASSOCIATION,
St. Louis, Mo.

DEAR CONGRESSMAN OSTERTAG: * * * Certainly, both Dr. (Theo. F.) Lentz and myself feel that you are indeed rendering America and the entire world a genuine service in your efforts to cause the establishment of a department of peace.

Cordially yours,

BUFORD POSEY,
Associate Director.

CHARACTER RESEARCH ASSOCIATION,
St. Louis, Mo.

DEAR CONGRESSMAN OSTERTAG: According to a news release of last March 16, you urged Congress to set up a department of peace. I am enclosing herewith a copy of a statement prepared for and presented to the Senate Subcommittee on Disarmament at their St. Louis hearing last December 12. In this I am urging consideration of a department of peace.

Sincerely yours,

THEO F. LENTZ,
Director.

EXCERPTS FROM STATEMENT

"The psychological aspects of the problem of disarmament have not been recognized with sufficient clarity and emphasis. * * * The most astounding fact of our time is the relatively small amount of human intelligence thus far invested in disarmament. * * * It may be necessary to appropriate as heavily for (peace as for defense).

"I would envision:

"1. A strikingly increased appropriation for UNESCO specifically earmarked for research to determine the conditions necessary for disarmament and peace.

"2. A well-manned, adequately financed United States Departmen of Peace. * * *

"3. 'West Points' for peace. * * *

"4. Peace colleges analogous to war colleges. * * *

"5. Research corporations for peace research * * * et cetera."

Civil-Rights Legislation Menace to Civilization

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. COLMER. Mr. Speaker, on February 26 last, there appeared in the Greenville (S. C.) News a very timely and thoughtful editorial pertaining to the racial issue with particular reference to the 1957 "civil wrongs" bill.

The proponents of this type of legislation base their advocacy thereof on the high ground that they are doing something for the Negro, particularly in the South.

We have long contended that such proposals regardless of motive behind them, would, in reality, if enacted into law, do the very people they contend they are trying to help real and lasting harm.

The editorial from the pen of Mr. W. W. Freeman, a real friend of the Negro race, should cause the real friends of the Negro everywhere to stop, look, and listen.

The editorial follows:

CIVIL-RIGHTS LEGISLATION MENACE TO CIVILIZATION

The civil-rights bills of 1957, like those proposed during the last 20 years and more by individuals of both parties and by administrations of both parties, are anachronistic, says an editorial in the Greenville (S. C.) News.

An anachronism is something that is misplaced in time. In this instance, it is a throwback to a more primitive age which is, at best, a misfit and, at worst, a destructive force in the age in which it occurs.

And when intelligent and otherwise dedicated men ignore more pressing and more serious problems and pass up greater opportunities for service to deliberately create such an anachronism, the result is bound to be tragic.

Even if we could assume, which we cannot, that the broad and untested powers these proposed laws would confer on an already oversized and unwieldy Federal bureaucracy, would be wisely and fairly administered, the need for them, if it ever existed, has long since passed.

The purposes now claimed for them have been better served by processes springing from the people themselves than ever they can by pressure and threat of punishment imposed upon the people by an omnipotent and omnipresent "big brother" sort of government.

WOULD OPPRESS MEN

Furthermore, the instruments now proposed to protect liberty and to uplift men are such as to be capable of being used to destroy liberty and to oppress men.

To appreciate the origin of the civil rights bills and the natural resistance to them in many parts of the country, especially the South, one must consider them in their proper perspective with past history and present trends.

To put it bluntly, this legislation grows out of a latter day extension of the overzealous efforts of the abolitionists, who profited and were exalted during the era preceding the War Between the States. It is being pushed in the same sort of spirit that motivated the vengeant and vindictive planners and executors of the reconstruction.

Not even during the tragic and oppressive reconstruction did a Congress, which was dominated by radicals and in which the conquered South had few friends and spokesmen, see fit to enact such laws as now proposed.

There was military occupation and corrupt government imposed from Washington, but there was no permanent board of inquisitors that could be turned into an agency of harassment and intimidation. There was injustice, but there was no permanent overturning of the processes of the courts.

Purged by bloodshed of the sin of slavery, which was not his alone, nor his country's alone, the southern white resisted the reconstruction. He resisted it because it was intended to take from him in order to give to the Negro. He resists court-decreed integration and the civil rights proposals for the same reason—again with justification for his fears.

NEGRO IS MISLED

The Negro was misled in those days, and he is being misled now.

The end of the abominable institution of slavery was inevitable, and it could have been accomplished without fratricide and without threatening the Union and creating abiding bitterness. As its end, the Negro was led to believe he could switch from the status of slave to that of master. In some instances, for a time, he did. In others, he was promised "40 acres and a mule," but more often than not he didn't know what to do with 40 acres, and he never got the mule.

The Negro again is being falsely led to believe that integration will solve all of his remaining problems and that all he needs to realize the millennium is a few more court decrees and Federal laws. He has been led to believe that political largesse will bring to him those things that he can best realize by earning and exercising the rights and privileges already available to him.

Until fairly recent decades, southern whites and Negroes engaged in a pathetic sort of competition for the lesser degree of poverty, but they have made progress together and they have achieved a mutual understanding. Education and a rising prosperity were easing the old bitterness and misunderstanding and improving relations between the races at a rate that has been positively amazing.

The tragedy of this era is that, Court decision in the school cases, and especially since the renewal of agitation of civil-rights legislation with almost virulent vigor, this progress has been slowed down. And the Negro stands to lose the most. The bitterness and the old suspicions are being revived.

A few years ago in a prosperous South Carolina industrial city, a joint committee of white and Negro citizens conducted a survey of the needs of the Negro community, ranging from health and housing to transportation and recreation. Much progress came of it.

Also a few years ago, with the help of the newspapers and interested white citizens, certain racial barriers in the public hospital were broken down and qualified Negro doctors were granted staff privileges for the first time on full equality with their white colleagues.

Along about the same time, the newspapers and interested white citizens campaigned for better housing for Negroes. City substandard housing laws were strengthened and better enforcement machinery established. The improvement in rental property has been marked.

Also, it was urged that property be made available to Negroes of means who wanted to build better homes away from congested areas in which Negroes tend to congregate. Subsequently, a fairly exclusive Negro residential section, near white neighborhoods, was started. There were no objections.

Dairy Stabilization Program

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 20, 1957

Mr. KNOX. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an editorial from Hoard's Dairyman of March 25, 1957. This is a follow-up editorial to one in this magazine dated February 28, 1957, commenting on the Dairy Stabilization Program:

NOW IT IS UP TO YOU

Three years ago last December we published on this page an editorial, "This self-help proposal deserves a chance to work." In it, we endorsed the self-help program advanced November 12, 1953, by the National Milk Producers Federation.

As the months passed it became obvious that other dairy and farm organizations would not support the federation's bill. Further, it was clear that Congress, for various reasons, would not pass it.

Still firmly believing in the validity of the federation's approach, we advanced, in the spring of 1954, an amended self-help proposal embodying a two-price principle. While our suggestion was slightly more palatable in some areas, it, too, failed to garner sufficient support.

Finally, in a determined effort to develop a workable and acceptable program, the National Grange established a dairy policy committee which has been working for several months. Drawing talent from many areas, the committee reached tentative agreement on the dairy-stabilization program outlined in our issue of February 25.

Since the appearance of this article, we have been besieged by personal appeals and letters to carry the program forward.

The following statement of policy may come as a disappointment to some, but we believe it to be founded on sound principles.

The function of Hoard's Dairyman never should be that of determining programs and policies for the dairy industry. Even had we the power to put the new program into effect, we would not exercise it. To do so would be autocratic, undemocratic, and contrary to the principles of self-government.

It should be our function, however, to report and comment impartially on dairy policies and developments.

Further, it is an important function of a magazine such as ours to advance new ideas and proposals for the improvement of the economic lot of dairy farmers.

During the past 3 years, the editor of this publication has traveled approximately 100,000 miles, equal to four trips around the world, meeting with individual dairymen and dairy organizations in all sections of the United States. A great proportion of that energy, time, and expense has been devoted to a reconciliation of differences among dairy groups and an attempt to aid in the solution of the surplus problem through the construction of a program assuring a sound, profitable future for dairy farming.

In our opinion, the recommendations of the dairy policy committee, as published in Hoard's Dairyman, February 25, are the culmination of those efforts. Now, however, the actual acceptance or rejection of that self-help proposal is strictly in the hands of the dairy farmers and their organizations.

How About Nasser?

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a bold but truthful statement entitled "How About Nasser?" which appeared in the Boston Daily Record on March 13, 1957:

HOW ABOUT NASSER?

What has been apparent to many all along now becomes clearer. There will be no peace in the Middle East as long as Col. Gamal Abdel Nasser is around to bluster and threaten in a grade B imitation of the late Adolf Hitler and of his current mentors, Khrushchev, Bulganin, and others of the Kremlin crowd.

It seems only yesterday, because it practically was only yesterday, that at least some kind of makeshift truce was rigged up providing the United Nations forces to take over the police work in the Gaza strip upon the withdrawal of the Israeli Army.

Certainly part of a police force's work is to maintain order and protect itself from mobs.

That is what Norwegian and Danish troops under the U. N. banner did when they were stoned by Arab rioters attempting to storm their headquarters. Withal, they used considerable restraint. They employed tear gas. They fired over the heads of the rioters, breaking up the mob without casualties.

But Nasser doesn't like it and has used the incident as an excuse to announce that an "Egyptian administration will take over responsibility for Gaza immediately."

Where does this put the United States? Where does it put the U. N.?

The United States exerted strong pressure to accomplish the Israeli withdrawal and the filling of the vacuum by the U. N. troops.

Is this agreement, won by tense and difficult bargaining, to be torn up at the first flimsy whim of Colonel Nasser?

And if the Eisenhower doctrine was applicable to Israel, is it not also pertinent to Egypt?

The questions as of this writing pose a grave test for the policies of the Eisenhower administration, and for the influence and integrity of the U. N.

Changes Marked in Czechoslovak Capital of Prague

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Elie Abel which appeared in the New York Times earlier this month in which is set forth changes observed by the writer in Prague:

CHANGES MARKED IN CZECH CAPITAL—GAIETY GIVES WAY TO WORRY—GOODS ARE PLENTIFUL BUT QUALITY APPEARS POOR

(By Elie Abel)

PRAGUE, CZECHOSLOVAKIA, March 2.—The warmth on the windblown shoppers in the bestowing a little light but very little warmth on the wind-blown shoppers in the center of Prague.

The River Vitava (Moldau) winds through the old city, its hundred spires blurred by overhanging fog, past the monstrous Stalin statue on the embankment and under the carved stone saints of the Charles Bridge.

Take away the granite Stalin, the Soviet flags, the Communist mottoes in subdued neon lights downtown, and the face of Prague is as it must have been 20 years ago, in the last days of Thomas Garrigue Masaryk's First Republic.

Yet a great deal has changed. The hotels swarm with young Egyptians in civilian

dress, wearing air-force blue trenchcoats. It is a fair guess that they are fighter pilots being trained to fly MIG's in Czechoslovakia.

RUSSIAN VISITORS NOTED

Stocky Russians, their nationality given away by their flapping bell-bottomed trousers, sip tea in the lounge. Their mission here is unknown, and they seem to speak only with one another.

Gaiety is a stranger here, worry a constant companion. An old Czechoslovak friend politely refuses to call on an American visitor in his hotel room.

"I'll meet you outside in the street," he explains gravely.

"Nowadays there are always some formalities."

Compared with the capitals of other Communist states, Prague is a city of abundance. Store windows are loaded with consumer goods. Street crowds are warmly if not stylishly dressed.

But an hour or two of comparison shopping discloses that the quality of goods in the shops is low by western or prewar Czechoslovak standards. And the prices are high.

A badly cut suit of clothes, the fabric stiff with cheaper substitutes for wool, costs an industrial worker 700 crowns, or more than 2 weeks' work. According to the Government's own statistics, average wages are 1,200 to 1,300 crowns a month.

Square-toed women's shoes, designed to make the most graceful foot look clumsy, are 300 to 400 crowns. That is the equivalent of 1 week's earnings for a skilled worker. But many office clerks and secretaries receive no more than 800 a month.

WOMEN'S SHOES $30–$40 A PAIR

At the unrealistic rate of exchange maintained by the State Bank of Czechoslovakia, the plainest pair of women's shoes on display cost $30 to $40 (United States).

Coffee is 17 to 21 crowns for 100 grams, or about 85 to 105 crowns a pound. Even if you apply the special tourist exchange rate this translates into $4 or $5.

There are many more automobiles here than in Belgrade, Yugoslavia, Bucharest, Rumania, or Warsaw, some earmarked for sale to private citizens. But the price of a small Czech-built Skoda is 27,000 crowns, or the equivalent of 14 months' pay for a hard-coal miner, the aristocrat of present-day Czechoslovakia.

According to Svobodny Slovo, former Socialist newspaper, 30,961 Czechs and Slovaks had their names on waiting lists to buy automobiles as of last December 31. Each application was backed by a virtually irrevocable deposit of 20,000 crowns.

WORKER'S RATING A FACTOR

Then there is the Communist merit system with which to contend. Allocations of automobiles are made on the basis of a worker's rating in his factory. Shock workers have first call.

Take the case of a Czechoslovak machinist known to this correspondent. His name is 51st on his factory's list of deserving workers. This particular factory is allotted 10 automobiles a year. At that rate, the machinist should get his Skoda by 1962, other things being equal as the mathematicians say.

Supporters of the Communist regime say price comparisons are misleading because they do not take into account free medical care, cheap rents, and streetcar fares. There is some merit in this contention. A young engineer proudly showed an American visitor through his drab but comfortable two-bedroom apartment in a new housing development on the outskirts of Prague. His rent, 215 crowns a month, amounts to 10 percent of his salary.

The national health plan was started back in the days of the first republic, a point the Communists carefully ignore. Moreover, Czechoslovak doctors today are so overworked that the quality of medical care often suffers.

Military Public Land Withdrawal Report: H. R. 5538

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. ENGLE. Mr. Speaker, the House Interior and Insular Affairs Committee, which I have the honor to serve as chairman, is today filing its report on H. R. 5538, a bill "to provide that withdrawals, reservations, or restrictions of more than 5,000 acres of public lands of the United States for certain purposes shall not become effective until approved by act of Congress, and for other purposes."

The report of the committee reflects the conclusions and findings which result from a total of 28 hearing and legislative markup days which my committee devoted to this matter in the past 18 months, and reaffirms the wisdom of the House in passing without a single objection, in the 84th Congress, the predecessor to the reported bill.

Under permission to extend my remarks, I take this opportunity to include hereafter an extract entitled "Summary of Committee Action and Findings," taken from the committee's report on this urgently needed legislation. I trust that the House will take early action, through approval of H. R. 5538, to recapture to the Congress—in light of the findings of our committee with regard to military public land withdrawals—its constitutional responsibility under the property clause for direct congressional control of these matters.

SUMMARY OF COMMITTEE ACTION AND FINDINGS ON MILITARY PUBLIC LAND WITHDRAWALS

On the record made by this committee in a total of 28 hearings days and legislation markup sessions spanning the last session of the 84th Congress and the first 8 weeks of this Congress, the House Committee on Interior and Insular Affairs believes that the findings hereinafter set out are established.

1. DEFENSE HOLDINGS, PENDING REQUESTS

Twenty years ago—in 1937—defense agencies of the United States controlled a total of 3 million acres of real property, for all defense purposes.

Today, the total is more than 30 million acres in the United States and Alaska; if all pending defense applications for public lands had been approved, then defense agencies would today control nearly 40 million acres of real property in the United States and Alaska, of which 25.6 million acres would represent withdrawn public lands.

2. RATE OF DEFENSE LAND ACQUISITION

In the 18-month period preceding June 30, 1955—a period of 547 days—agencies of the Department of Defense acquired land at the rate of more than 5 acres per minute every minute of the day and night. Had the applications totaling 8.7 million acres pending been approved between that date and January 1, 1957, the rate of defense agency public land acquisition alone would have been at a rate in excess of 11 acres per minute.

3. "FREEZE" ON EXECUTIVE WITHDRAWALS

In view of the sharp upturn in Defense Department land acquisitions, and in view of the fact that all such withdrawals were finalized within the executive departments by executive action (Defense requests, Interior approved), the committee chairman, Representative ENGLE, on October 29, 1955, after consultation with ranking committee members on both sides, addressed a letter to the Acting Assistant Secretary of the Interior for Public Land Management requesting that further approvals be withheld until the committee could initiate an inquiry into policies and procedures governing defense withdrawals.

Interior agreed to withhold approval of pending requests, and urged early committee study of the matter in the 84th Congress. Since October 29, 1955, less than 40,000 acres of public land have been withdrawn for defense purposes.

4. DEFENSE WITHDRAWAL CONTROL LEGISLATION

After extensive hearings during the 2d session of the 84th Congress, the committee developed legislation aimed at returning to the Congress direct control of future defense agency withdrawals of public lands, with both Defense and Interior agreeing that except in cases of most urgent necessity, none of the pending applications would be approved until the control legislation had been disposed of by the Congress.

H. R. 12185, the bill reported in the 84th Congress, passed the House on July 26, 1956, without a dissenting vote and after receiving unprecedented support from official State agencies of 39 States, from all major national conservation groups, from numerous regional and local groups, organizations, and individuals and in very large measure the support of the Department of the Interior and the Department of Defense.

House Report No. 2856 (84th Cong., 2d sess.), which accompanied H. R. 12185 to the House set out in detail the findings and conclusions which formed the basis for the unanimous recommendation of the House Interior and Insular Affairs Committee for early and favorable House action, which came too late for Senate consideration of the measure.

The bill also unanimously reported by the committee herewith is in all essentials the bill approved by the House in the 84th Congress, with some language changes made for greater clarification as to scope and procedure.

In addition to requiring an act of Congress before defense land acquisitions exceeding 5,000 acres take effect—including public lands of the United States, Alaska and Hawaii, outer Continental Shelf lands and Federal lands, and waters off the coasts of Alaska and Hawaii—the bill operates to: make applicable to all military reservations and facilities the hunting, fishing, and trapping laws of the State or Territory in which such installation is located; redefine the responsibility of the Secretary of the Interior with respect to defense-held public lands found surplus to defense needs; and to clarify the existing law with respect to disposition, management, and control of the mineral estate in defense-held public lands.

The findings of the committee in the past 18 months underscore in the committee's view the urgent need for enactment of H. R. 5538.

5. DEFENSE AGENCY CONTROL PROCEDURES

The record made by the committee constitutes a severe indictment of central control procedures in the Military Establishment in nearly all phases of public land acquisition, utilization, and management over a period spanning many years. It appears that the 800 percent jump (from 3 million to more than 25 million acres) in total military land holdings from the War Department days of 1937 to the creation of the Department of Defense in 1947 was made by independent actions of the military departments—the Army, Navy (for the Navy and Marine Corps), and Air Force—without benefit of centralized control procedures. Further, that until August 27, 1955, the record shows Defense had cleared without question applications for withdrawal of millions

of acres of additional lands solely on the basis of an asserted need by the requesting military department. In turn, the Department of the Interior—responsible for finalizing all public land withdrawal orders—had for years approved application after application on the basis of Defense Department requests, since Interior was without authority or the technical data needed to challenge them.

The consequences of this procedure, until August 27, 1955, when Defense for the first time issued a departmentwide directive establishing a comprehensive periodic reports control procedure, are best indicated in the following sections.

6. TEMPORARY WITHDRAWALS BECOME PERMANENT

During the 6-year period 1939–45, more than 13 million acres of public lands were withdrawn or reserved by Executive action for the use of the military. By the terms of the orders which set aside these lands for the military, they were to automatically revert to public land status 6 months after the unlimited national emergency; the unlimited national emergency terminated April 28, 1952, and the 6 months' plus period expired October 28, 1952.

Yet, on February 20, 1956, a total of 49 of these temporary withdrawals—made from 11 to 17 years earlier—embracing 11.9 million acres, and located in 10 States and Alaska, were still in effect.

7. DEFENSE AGENCY POSITION, JANUARY 1956

The testimony of the Departments of Defense, Army, Navy, and Air Force with respect to the more than 30 million acres held in the United States and Alaska as of January 1, 1956, and with respect to the 8.7 million acres' worth of applications which had already been approved by them and by Defense was, in effect this: All of the land held as of that date is needed and is being used under maximum multiple purpose use, and all of the land under application is needed.

Defense Department witnesses did concede that the results of the August 1955, directive might modify these positions. The modification—in dollars, acres, resources, and deficiencies revealed—has been staggering.

8. IMPROVED PROPERTY FOUND EXCESS, 1956–57

After the January 1956 testimony of Defense the first of 2,153 reports on that number of Army, Navy, and Air Force installations began to flow into Defense under the 1955 utilization directive.

As of February 2, 1957, with approximately 66 percent of the reports in, but with only about one-third of the total to be received evaluated, Defense found that 1,056,083 acres of land, together with improvements costing $345.2 million, were excess to the requirements of the military department having custody and control. It should be emphasized that 18,200 acres which cost about $230 million represents industrial property recommended for disposal, subject to a national security recapture clause.

It will be seen that if the reports evaluated to date are representative, the ultimate finding of surplus improved property (industrial and nonindustrial) may reach 3 million acres with an initial cost of more than $1 billion. From the standpoint of this committee's particular interest, the significant figures are more than 1 million acres with improvements, but representing nonindustrial property, which cost originally $125 million.

9. MILITARY DEPARTMENT CONTROLS

The committee's tentative conclusion in its 1956 report that "serious deficiencies" were indicated in defense agency control procedures, in retrospect, appear to have been fully justified, if unduly cautious.

The committee has pointed out in its report that of the 3 military departments, Army, Navy, and Air Force, as of February 2, 1957, only the Department of the Air Force had submitted to Defense utilization reports on all of its properties (701 properties, 701 reports), while Navy had submitted about 30 percent (342 of 982), and Army about 90 percent (428 of 470). In turn, Defense had evaluated only about 30 percent of the total reports to be received.

It has also been noted that only the Department of the Air Force had, as of the close of the committee's hearing record, completed a detailed review of its range holdings, real property policy, multiple resource policy, and fishing and hunting policy. It has also been noted that the Air Force Board, under the chairmanship of Maj. Gen. Leland S. Stranathan found that as of October 9, 1956:

(a) Instructions governing Air Force ranges were "incomplete, obsolete, and complex."

(b) No valid criteria existed for determining range sizes.

(c) Regulations as to multiple use on Air Force ranges "do not announce clear-cut policy with regard to the desirability of permitting or encouraging hunting, fishing, grazing, agricultural and mining activities."

(d) Regulations governing hunting and fishing are "divergent and complex."

(e) A total of 9 Air Force ranges in 8 States, and embracing 5.1 million acres of land had been "without justification" closed to general hunting and fishing.

(f) There is no policy guidance in regulations regarding the desirability or undesirability of leasing Air Force rangelands for grazing and agricultural purposes.

(g) A total of 12 Air Force ranges, embracing more than 6.7 million acres in 10 States had been closed to grazing or agriculture "without justification." (As the committee noted, in its report, applying nationwide Bureau of Land Management grazing averages, such an area would have a theoretical, potential carrying capacity for more than 67,000 cattle and more than 420,000 sheep, per year.)

(h) Finally, and of greatest import, the Board found on October 9, 1957, that about 40 percent of the 14.4 million acres of land held by the Air Force and described 9 months earlier before the Committee as "fully utilized and needed for the foreseeable future"—5.7 million acres—were, in fact, excess to current and long-range Air Force requirements as bombing and gunnery ranges: thus, an area equal in size to a strip of land 2.8 miles wide from New York to San Francisco, held but excess.

The committee has no basis for any conclusion as to whether the findings of the Stranathan Board with respect to Air Force holdings are representative of the situation throughout the military departments. It does here reiterate its unqualified conviction that no additional public land withdrawals should be finalized—except in cases of most urgent necessity, and then only subject to revocation thereafter if dictated by the results of studies not yet completed—until the Defense Department has reviewed the Stranathan Board findings, and until Defense has in turn insisted on development of similar internal reports on the part of the Departments of the Army and Navy to be followed by detailed scrutiny and evaluation of both at the defense level.

10. INCALCULABLE WASTEFULNESS

The commendation of the Air Force Board in the body of this report for the Board's forthright and direct assault on Air Force internal control procedures, and the highly critical and constructive self-analysis resulting will not, of course, obscure the clear message in the findings. The record of this one military department's analysis of its own operations is, in the committee's view, a recitation of incalculable wastefulness—of taxpayers' dollars, of resources within the reservations marked "closed" for so many years to public multiple use and enjoyment, and of unquestionable but immeasurable damaging effect to the local economies from which each unneeded or unused acre was carved.

11. LOST: 303,000 UTAH ACRES

Reference to one other finding should serve as an exclamation point to the committee's plea for early enactment of legislation which will provide a basis for review of military land requests by the Congress.

For 15 years—from 1942 until at least last month—the Air Force has controlled, but admittedly they had never used an area of approximately 303,000 acres of land in western Utah, held in conjunction with Wendover Bombing Range. When pressed for an explanation as to why this 500-square-mile area (more than 7 times the size of the entire District of Columbia) had not been used, Air Force witnesses said that it could not have been used because it was traversed on the surface by a major railroad, highway, and pipelines, and overhead by a commercial airway.

In turn, when asked why it had not been released 15 years ago if not used and admittedly not useable, the Air Force witness made it clear that the Air Force did not know it controlled the area, with this explanation:

"I think there may be an explanation of that. I know when I first looked into it, it just did not occur to me that we would own land in a bombing and gunnery range under a commercial airway * * *. I think that is probably what beclouded the issue, that the airway was plotted across the map and one would not think of looking for land under it."

12. NAVY NEVADA LAND

The committee has, in the body of the report, brought up to date the developments on the request of the Navy for withdrawal of some 2.8 million acres of land in northern Nevada for use as a gunnery range, and the decision, after many months, that Navy would instead satisfy the bulk of its requirement by using the nearly 2 million acres in southern Nevada declared excess on March 1, 1956, by the Air Force.

It appears that by reason of this decision, to the northern Nevada economy there will be saved within the proposed area all or most of the inheld 35 ranches (ranging in size from 200 to 19,000 acres); 22,400 cattle and 14,000 sheep grazing in the area; 142 patented mining claims, 1,609 unpatented mining claims, and several millions of dollars worth of operating mines, and a priceless wildlife habitat for antelope, mule deer, sage hens, and chukar partridges.

13. MILITARY HUNTING AND FISHING

The committee has noted the very substantial progress made in the matter of military-local relationships on hunting and fishing during the past year, with a number of specific accomplishments listed in the body of the report. It is clear, however, that there remains some validity in the assertion that "exclusive military hunting preserves" still exist.

There has been set out in the body of the report, in some detail, the views of the committee in opposition to the present practice of the "guest of the military" approach, as well as its views on the privileged status of retired military personnel, visiting military personnel, temporary duty military personnel, and various classes of dignitaries—including Members of Congress—all or some of whom are listed as entitled to hunting and and fishing privileges on all or some of the Army's installations. The committee believes that this principal remaining questionable practice should, and can be, reevaluated throughout the military departments where it prevails.

14. THE MILITARY AND PETROLEUM RESOURCES

The report of the committee has dealt, at several points, with the effect of the military overwater or offshore range policy on petroleum resources. Reference has been made specifically to the committee's position on San Nicolas Island, Calif. (p. 50–51, supra), and on the Navy's insistence on retaining intact the existing W–92 warning area in the Gulf of Mexico off Louisiana (pp. 51–55, supra). It is believed section 6 of H. R. 5538 effectively lays to rest the San Nicolas matter.

The combination of intractability of the Navy in the matter of the W–92 withdrawal area with the unwillingness or inability of the Department of the Interior to act, and the failure of those responsible in the Executive Office of the President to settle a months-old Defense/Navy-Interior clash, is simply incomprehensible, for the reasons the committee noted in the body of the report on this subject.

This multiple inaction at the Executive level does, however, afford an opportunity for early and decisive disposal by the Congress of the matter, in keeping with the basic objective of recapturing to the legislative branch its too-long-abandoned constitutional responsibility under the property clause.

The statistical effect of permitting Navy's use of 800,000 acres of the shelf lands overlaid by the W–92 Navy warning areas is this: The taxpayers of the United States are being asked to pay outright (through revenues not received from oil leasing) about $250 per surface acre of saltwater airspace over the Gulf of Mexico for asserted naval gunnery needs—when the same Navy controls more than 16,000 square miles (13.8 million acres) of other warning areas in the Gulf of Mexico and has had designated there an additional 10,000 square miles (8.8 million acres); further, that the Navy already controls, or has had designated warning areas totaling 236,000 square miles (198.7 million acres) in surface area off the Atlantic and Pacific coasts.

The committee—failing action before House disposition of H. R. 5538—stands ready to propose an amendment aimed at resolving the W–92 matter.

15. "SUPERRANGE" PLAN DISCARDED

From testimony of witnesses representing the Atomic Energy Commission, Air Force, and Navy in 1956, the committee had expressed concern at the proposal to carve out of public domain a new joint-use "superrange" for ballistics-testing purposes in the vicinity of Albuquerque, N. Mex. From testimony last year, it appeared this range might require as much as 10,000 square miles in 1 piece (an area 100 x 100 miles on its extreme axis), or roughly 6 million acres.

Decision of the Air Force to obtain use of the airspace and of non-federally-owned lands of lesser area, within and over the Navaho Indian Reservation, and on terms satisfactory to the tribe, is applauded by the committee as an alternative to the original, and tentative plan.

16. SUMMATION OF TODAY'S DEFENSE NEEDS: "CUBIC MILES"

The technological advances made in development of our modern utensile of war have outmoded traditional concepts of military land acquisition, management, and control—just as they have made obsolete, over the years, what were called at the height of World War II conventional weapons concepts.

In an age of high-speed, high-altitude, and pilotless aircraft, of ground-to-ground, ground-to-air, air-to-ground and air-to-air atomic and hydrogen projectiles and missiles, it appears that the United States Defense Establishment had concentrated so much—and so effectively—on the operations aspects of its collective missions that it had at the same time largely ignored updating the procedures and policies governing acquisition, management, utilization, and control of real property deemed necessary to carry out these missions. Put another way, while policies for carrying out the basic defense mission advanced to a supereffective point, policies for assuring vital domestic land and related resources were permitted to remain outmoded, wasteful, stifling to resource development, decentralized, and ineffective.

We have said that if all pending Defense applications were approved today, then Defense agencies would control nearly 40 million acres of land surface area in the States and Alaska, and at the same time they would control inland and offshore airspace overlaying a surface area aggregating an astronomical 602,000 square miles (388.9 million acres). The answer to the 1956 plea of this committee that Defense agencies should get out overwater with their ranges is clear: they're already there.

It is clear to this committee, then, that military use requirements today must be thought of in terms of both horizontal and vertical needs. While the concern and jurisdiction of this committee is limited to the former, and then only where public lands are involved, the committee believes that it is absolutely vital that continuing reevaluations be made of Federal legislation and administrative controls governing the assignment and use of airspace, which does involve the latter.

As reported above, the committee believes that very substantial progress has been recently made by Defense agencies in the direction of vastly improved real property procedures, which involves horizontal needs; it is possible that similar studies of Defense airspace, or vertical needs, would achieve similar results. This is so because the record made in the 84th Congress, and in this Congress makes it clear that, where we spoke of military acres pre-World War II, and military square miles by 1945, today those requirements can only be adequately described in terms of cubic miles.

The Cause of Peace

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a sincere statement of facts entitled "The Cause of Peace" which appeared in the Boston Daily Record on March 12, 1957:

THE CAUSE OF PEACE

There is worldwide approval of the manner in which American policy has contributed to the lessening of the peril of major war in the Middle East.

It is to be suspected that this response is not confined to our side of the Iron Curtain, since the feeling of relief that hostilities are more remote is probably just as keen throughout the territory dominated by Moscow.

While the grave and complicated problems of the Middle East lack a total and permanent solution, even a temporary turning away from the course of violence and aggression is a tremendously good thing.

That good thing has definitely been accomplished in the Israeli withdrawal from Egypt, and it is a gratifying turn of events for the whole civilized world.

The credit belongs in great measure to the patient and painstaking labors in the cause of peace by President Ensenhower and Secretary of State Dulles.

W. R. Hearst, Jr., touched on this phase of the situation in his recent Editor's Report in the Hearst Sunday newspapers, and we think he reflected a much wider opinion than that of his own newspapers when he said with respect to the easing of the crisis in the Middle East:

"Curtain calls are very much in order in bringing this act so hearteningly to a close, and among the deserving recipients, besides Israel, are such nations as Canada and France. But I would place in the forefront for bravoes the United States policy and influence as patiently pressed by President Eisenhower and Secretary Dulles."

Human minds and hearts rest more easily in consequence of this beneficial service to the peace of the world, and that indeed is a high credit to the men who have served such a cause so well.

Requirements for Good Citizenship in America and in Hungary

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. WIDNALL. Mr. Speaker, last Monday evening I was privileged to be in attendance at the National Good Citizenship Award banquet sponsored by the National Association of Food Chains at the Mayflower Hotel. At this dinner the 12 guests of honor presented were men chosen for their excellent records as managers of food stores and also for their community interest and service.

The principal address of the evening was delivered by Tracy S. Voorhees, a man who himself has a long record of unselfish service to Government and to his State, New Jersey. He is presently Chairman of the President's Committee for Hungarian Refugee Relief.

Under leave to extend my remarks in the Appendix, I include his talk:

REQUIREMENTS FOR GOOD CITIZENSHIP IN AMERICA AND IN HUNGARY

Good citizenship in America today is not an easy achievement; yet it is less difficult than good citizenship has ever been in our land or any other land before.

Good citizenship grows only from a philosophy of life with some idealism in it—as distinguished from a materialistic interpretation of the meaning of life. So good citizenship is beyond the reach and the understand of those who are principally interested in hogging things for themselves. It is a possession which can be owned only by those who have a different set of values. It grows only where there is less ambition for Cadillacs and country clubs than for contributions to civil life. Yet it may have room for cars and country clubs, too—but as incidents of life, not ends in themselves.

Good citizenship in America is made easier by our Nation's unparalleled economic wealth. Shorter hours in factory and business give more time, not only for leisure—as is too often thought—but for service in interesting and worthwhile causes. As Frederick H. Ecker, honorary chairman of the Metropolitan Life Insurance Co., has recently written, "It is easy for youth to be misled by

such terms as the 'new leisure' and the '6-hour day.' * * * There seems to be a general belief that work is merely a means of securing leisure, that we work in order to be released from work. That attitude is fatal to creative endeavor and progressive life."

Another factor making good citizenship easier is that higher earning power, now so widely distributed to millions of workers as well as to all executives like yourselves, makes it possible to give of one's time and financial resources to civic and charitable, including religious, objectives, and to do so without undue sacrifice. Great compensating satisfactions flow from such work in friendships formed which would otherwise have been missed entirely, and in an ability to sleep at night without a feeling that life is frustrating. These are what the late Chief Justice of the United States, Harlan F. Stone, termed "The durable satisfactions of life."

It would be easy for me to illustrate good citizenship by reference to one man with us tonight whom I happen to know well. Lansing Shield has to my knowledge found energy and time, not only to build up and head a great and highly successful business enterprise, but also to give unstintingly of his time to "Rutgers, the State University" in successive capacities as vice chairman and chairman of the board of trustees, and specifically in leading the reorganization of this colonial college into complete recognition as the State University of New Jersey. Yet this is only one of Mr. Shield's varied civic activities.

Another illustration of good citizenship in America from persons present tonight may be drawn from a composite picture of your 12 guests of honor, the winners of the Good Citizenship Awards of the National Association of Food Chains:

You are, collectively, 35 years young. You are two-thirds veterans, including all of the younger age group. You are unanimous in being all married. Almost all of you have children. The average number is two, and I suspect you haven't stopped yet. Generally you are self-made men, who have completed high school but have not gone on to college. Many of you started part-time work in food chain stores while still in school. Most of you worked up from minor jobs to the important position of store manager. You are unanimous again in activity in church and community affairs. You are one and all the product of the spirit of America. Your destiny paces her destiny.

Let me now move back two generations for another illustration in one of our greatest of good citizens: the late Senator Dwight Morrow.

Mr. Morrow's philosophy of public service was placed in sharp focus in a letter which he wrote to the brilliant and then young Frenchman, Jean Monnet, in December 1925, saying:

"I fear that I am in danger of getting out of the class of which my son considers you one of the most conspicuous members—that small group which tries to get things done for which other people get the credit."

Such is good citizenship in America in the 20th century. But, except for those who fought in World Wars I and II and in Korea, none of us has had to throw his life into the balance to prove his good citizenship or to win or preserve his freedom.

Freedom was given to us in America by action of our revolutionary ancestors. It was retained by the accident of geography—the great oceans on either side of us—and for 100 years before World War I, when we were young and defenseless, by the protection of the British fleet. We have come to accept freedom as our God-given birthright, often with little thought of our almost unique privilege.

Let me contrast then the relatively modest demands which good citizenship makes upon us, with the demands of good citizenship in Hungary, especially last October and November. Hungary is a nation of proud people caught for generations between two great and aggressive powers, a nation overrun, captivated, liberated, and again enslaved—a nation which for years has known, instead of freedom, only the iron rule of communism and the secret police.

Then last fall, unable to stand it longer, men and women fought for freedom and for a few brief days won it for their country, only to lose it again to overwhelming force. Many more were enslaved and disappeared—God knows where. Many who survived fled for asylum to the free nations of the West in pursuit of freedom—often to avoid Siberia or the execution wall. Let me give you three examples from refugees who have since come to the United States, of the high price and the hardships of good citizenship last fall in Hungary:

A young married woman in Budapest cooked breakfast for her husband one day last fall. After he left for work, she felt the compulsion to duty to join those Hungarians who were fighting in the streets against their oppressors. She spoke to her father about it, then went out to fight in the streets herself. She was wounded. After some treatment in a hospital, she was able to escape and is now in America.

A second example: Last December, a Hungarian woman arrived at the Joyce Kilmer Reception Center. Because of a very bad elbow she was sent to the United States Army field hospital there. The doctors found that her elbow had been shattered by a bullet; also that there were more bullet wounds in her body with the bullets still there. Army doctors are good at removing bullets, and they fixed her up. But how can we measure the courage of a woman whose desire to get to America was so great that she voluntarily got aboard an airplane for the long flight from Austria to New Jersey without treatment of her wounds, and who apparently concealed them in order to be sure not to miss the chance to come here?

A third example is Mayor Josef Koevago, of Budapest. He was mayor of Budapest in 1947, later was thrown into prison for 6 years; was liberated shortly before the uprising last fall; was mayor again for a matter of days; then when the Russian tanks moved in was able to flee with his wife and child. He is now trying to help other Hungarian refugees in America. He speaks good English. How did he learn it? He told me that he learned it during those years in prison from a 1912 edition of the Encyclopedia Britannica. On March 2 he was a guest of the Gridiron Club, that famous group of Washington newspapermen, at their annual dinner. When he was introduced by Marquis Childs, the president of the club, he was given a standing ovation by the distinguished group of newspapermen—and they are a group not easily impressed. Appearing on the television program Meet the Press last night, he said, about the revolution in Hungary last fall, that there is a question whether heroism is wise, "but only heroism can get freedom forever." I leave this thought with you as one Hungarian's concept of good citizenship.

Such have been the kinds of demands of good citizenship in Hungary, and the kind of price it has exacted. May we in America not be subjected to similarly cruel tests. But for the first time in our memories, our freedom in America is really in danger from the Communist colossus and the infernal weapons which exist now, and those which soon will exist. At this time, one principle of good citizenship for us is not to take our freedom for granted, but to act in time and adequately to protect it. To do so we must maintain our own strength—military, economic, and spiritual. We must continue to assist our allies in maintaining their strength—military, economic, and spiritual. We must strengthen the bonds between our allies and ourselves. We must protect with our strength, under the Eisenhower doctrine and otherwise, the less developed nations which call on us for help. We must furnish directly through the United Nations the leadership which our unparalleled resources make possible to show the uncommitted—or so-called neutralist—millions the contrast between slavery under communism and liberty under democracy.

The evil brutalities of the Russians against the Hungarians have done much to awaken both our allies and other friendly nations to their dangers. But have they done enough? In this new kind of defense of our freedom we as a nation must never stop, never weaken, never grow tired. This in America must be one great and never-forgotten part of good citizenship for the future.

Private Investment and Foreign Policy

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. MORANO. Mr. Speaker, on March 7, 1957, His Excellency Dr. Ramon Villeda Morales, the Honduran Ambassador to the United States, delivered a very significant and far-sighted address on private investment in Latin America, particularly in Honduras, before the Pan American Society in New York. I commend this important address to the attention of my colleagues because it illustrates how American private investment can be a vital element in United States foreign policy.

The address follows:

INVESTMENT DYNAMICS

It is an obvious truth that the less-developed countries are the ones that offer the greatest opportunities in investment dynamics and the best outlook for returns on capital.

The highly industrialized countries have developed their own natural and human resources progressively; they have perfected production techniques, they have supplied international markets, they have accumulated reservoirs of capital, and, as a logical consequence, they have led in the investment of such capital in the under-developed countries.

As a supplement to this principle of investment supply and demand, economic collapse through the oversaturation of idle capital is prevented and a powerful contribution is made to the economic development of great land areas, and especially, backward peoples have become aware of the need to progress through the utilization of their own resources and now want to do so.

The ability to transform raw materials into finished products has become universal. Men everywhere have become convinced that they are "capable," that they can, if they really want to, better their surroundings, improve their living conditions, raise their cultural standards, dignify their lives.

But although technology is the instrument that sparks industrial development, it is evident that without capital it is impossible to make the machinery of progress go, since technology alone cannot set it in motion. That is the basis of investment dynamics.

This fact lies at the root of the problem today confronting the Latin American countries, which, having available an abundance

of exploitable resources—mineral, agricultural, timber, fish, travel—are beset by the difficulty of exploiting them for lack of capital.

And in this same fact also lies the origin of the growing interest of those who have capital available: in the possibilities of investment in Latin America, which offers the best conditions and the greatest advantages.

No other regional area in the world, among the nations classified as economically underdeveloped, offers greater opportunities for investment and a greater assurance of recuperation of capital.

It should be pointed out, however, that investment capital is a phrase that the social evolution of the Christian world has greatly modified. No longer is it merely an instrument of exploitation; today capital is a spiritual factor as well as a material one, since it comes from accumulated work, which is work that ennobles, and its dividends should be considered not only as drawing wealth from the subsoil, the forests, and the seas, but as spreading civilization and culture among men, who are the potential wealth of our nations.

Investment should be something more than a movement of money and tools of production: it should be overall cooperation, improvement of human relations, equitable distribution of gain. That should be the constructive spirit in investment dynamics, because only in this way can investment be adapted to the norms of the Pan American ideal, summed up in the policy of the good friend, the good neighbor, and the good partner.

As Ambassador of Honduras, may I express my thanks for the tribute paid me by the Pan American Society of the United States, by this dinner in my honor, and since this gathering includes a select group of leaders in commerce and industry who are interested in Latin American affairs, and especially investments in Honduras, I take this opportunity to make a brief statement about the possibilities for foreign investment in Honduras.

Since 1910 the United Fruit Co. and the Standard Fruit & Steamship Co. have been operating in the country. The principal activity of these firms is the production of bananas for export. Nevertheless, they have also branched out into the cultivation of abacá and Palma Africana and the establishment of cattle ranches, lumber operations, and other industries in general.

Other foreign capital investment enterprises in Honduras include the New York and Rosario Mining Co., the British-American Tobacco Co., the public utility company that has invested in the production of electric power, and others devoting their activities to the exploitation of lumber, the distribution of petroleum, and the cultivation of cereals and fruits.

The total direct investment of United States capital in Honduras amounted to $32.1 million in 1953. The net profits of the 2 fruit companies in the country amounted to $19 million in 1952, of which sum $10 million was reinvested in Honduras; their operations provided $26 million in foreign exchange.

Foreigners residing in Honduras may freely engage in commerce or industry; they enjoy the same rights and have the same obligations as the nationals of the country. Honduras has traditionally been hospitable, and has welcomed foreign capital investments for the development of its natural resources. To offer a more attractive investment climate, it signed in 1955 a treaty with the United States of America, assuring investors that they would run no risk of expropriation or inconvertibility.

Honduras has great deposits of iron, lead, graphite, manganese, tin, opals, agates, and other semiprecious stones. Extensive deposits of coal of a high caloric content have recently been discovered within its borders. All this latent wealth is waiting to be utilized by dynamic businessmen ready to invest in a country that offers the best opportunities for operation. With respect to mining, a broad, liberal policy has been adopted toward the exploration in exploitation of mines, permitting the free importation of the machinery and tools for such purposes. Taking advantage of these facilities, there is at present a company exploring for petroleum in the western part of the country. Its explorations so far have been encouraging.

Another important Honduran natural resource is its immense pine forests, which cover practically all the country. To exploit them, a modern paper and cellulose factory, representing a $25 million investment, is being installed. At the recent meeting of five Central American Ministers of Economy, plans for the establishment of such a factory were developed with the help of the Economic Commission for Latin America, the United Nations agency.

Here we have a propitious field for putting into practice the Pan American policy inspired in the principles of economic development, social welfare, and continental solidarity. Distinguished members of the Pan American Society of the United States, I thank you.

Ireland: at the Dawn of History

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. LANE. Mr. Speaker, few people know that the Irish have a long history.

It is commonly assumed that the first known records of this remarkable people date from the beginning of the Christian era.

To others, the introduction of Christianity by St. Patrick in 432 A. D. is the first fact that is remembered.

But the impressive truth is that the Irish can trace their origin to antiquity. Their moist, mild island of lovely lakes and rich greenery was discovered thousands of years ago.

For this information we are indebted to the research of an American who is proud of his Irish ancestry. I ask unanimous consent to insert in the CONGRESSIONAL RECORD The Origin of the Irish Nation: Adam to Milesius, by Capt. William A. O'Reilly, Lawrence, Mass., Fire Department—retired.

I am sure that you will enjoy, as I did, this scholarly narrative of Ireland's early history, and the obvious affection that Captain O'Reilly has for a subject that is dear to the hearts of so many Americans.

His article originally appeared, and on an appropriate day, namely, in the March 17, 1957, issue of the Lawrence Sunday Sun, Lawrence, Mass.:

THE ORIGIN OF THE IRISH NATION: ADAM TO MILESIUS—HISTORIAN DELVES FAR INTO THE PAST

(By Capt. William A. O'Reilly)

From time to time, and at no very long intervals, throughout centuries upon centuries, flippant writers have been accustomed to point out in a sort of playful persiflage, certain claims of the Irish to an ancient and distinctive genealogy of the Milesian Irish, being mindful, however, in their desire, to bring ridicule and scorn upon the Irish, that prior to the invasion of Ireland by the hordes of English invaders and the ultimate devastation of the country, that every Milesian family had its place in the ancestry of its kings and chieftains, and that there was in all the land no servile class or so-called common people of the race. All low tasks were performed by captive slaves of war.

The single source, the fountainhead, so to speak, of the descent is Milesius of Spain, concerning whom we will have more herein.

Following the deluge, and after which, the flood having subsided, Noah and his three sons, Shem, Ham, and Japhet, had come out of the Ark, God blessed them and said: "Increase and multiply and fill the earth."

Thereupon, Noah, who was the 10th generation from Adam, divided the world amongst his sons Shem, Ham, and Japhet. Japhet was the eldest son of Noah and was his favorite. To him he gave that portion of the world embracing all of Asia lying beyond the Euphrates, and all of Europe to Spain. The combined area was called Scythia. Japhet had 15 sons, among whom he divided Europe and that part of Asia allotted to him by his father, and thus the Celts, of whom Japhet was the progenitor, became the first inhabitants of Europe after the deluge. The Celts and the Gaels were identical in origin, the Celts as descending from Gomar, and the Gaels from Magog, both sons of Japhet.

Upon Japhet's division of his portion of the earth among his sons, they, in turn, reapportioned their allotments among their sons. Scythia, embracing Southeastern Europe and Central Asia, came to Baoth's (Baath) lot. Baoth was a son of Magog, son of Japhet.

TOWER OF BABEL

Dwelling in Scythia, Baoth and his people, it is related, being far removed from the scenes of Babel, took no part with the descendants of Shem and Ham, the other sons of Noah, in the building of the Tower of Babel, which resulted in the confusion of tongues, thus affirming that they did not incur the displeasure of the Lord, and that therefore their language was not confounded. The Scythian language was the one language of mankind. The language of the entire world, from Adam to the building of the Tower of Babel, so it follows that the Scythian language and the Celtic language were the same. Although no system or form of letters existed, symbols of unfixed determination were in use.

Phoenius Farsaidh (Fenius Farsa)—14th generation—was King of Scythia, and is accredited with being the Father of Letters. Being of a learned and wise disposition, and desirous of learning the languages, that not so long before had very seriously confounded the builders of the Towel of Babel, he sent many learned men among the dispersed multitude to seek out and acquire what knowledge they were able to attain concerning the several languages, which mission they accomplished skillfully, and with much success. Fenius Farsa, leaving his country in the hands of his elder son, Nenual, proceeded with his younger son, Niul, to Aethena, in the Valley of Shenaar, where he erected a school. They remained teaching here for 20 years. Niul (15th generation) was skilled in the teaching of languages and other laudible sciences, and because of his great reputation for learning, Pharoah of Egypt invited him to come to that country, where he was given lands, and the hand of Pharoah's daughter, Scota, in marriage, from whence their posterity have been called Scots.

Ancient historians relate that the River Nile was called after this Niul, and that Scota, his wife, was the daughter of the Pharoah who rescued Moses from the Nile, hence the great interest of Niul and Scota

in Moses, concerning his welfare and education, and the great affection Moses had for them and their son, Goodhal. Moses, in later years, was reputed to be the most learned man in Egypt.

THE GAELS

It was Niul who engaged Goodhal (Gael), a brilliantly learned man, to invent an alphabet, and to refine the language which was common to all of Niul's posterity afterwards. It was called Goadhilg (or Gaelic) from the said Goodhal, who accomplished his task of composing the constituent part of the language. So pleased was Niul that in appreciation he called his eldest son Goodhal. This Goodhal (Gael) was the ancestor of the Clan-na Gael, that is, the descendants of Gael. Gael was fifth in descent from Japhet, and was contemporary to Moses, who, according to the Book of Genesis, was of the line of Shem, son of Noah. It is related that upon one occasion, Gael, having been stung by a serpent, was brought to Moses, who upon laying his rod on the wound, cured him instantly, and further extended a blessing, namely that no venomous beast can live any place where his posterity should inhabit.

The Gaels of antiquity for nearly 20 generations, did not establish themselves in any country, had no houses or cities, but were continually roving and lived in tents, first in one country and later in another. A common custom in the early ages of the world, following the great dispersal of the races after the Tower of Babel.

Lahmfiom, King of Scythia (24th generation), following in the footsteps of six of his predecessors, had therefore been leading his followers in nomadic peregrinations, both by land and by sea, when it was announced by Cachear, their Druid, that there should be no end to their fovings until such time as they should arrive at the western island, predestined for their future and lasting abode. Such would not be consummated until some 300 years by their posterity, who would arrive there and possess the land.

The colonization and plantations of Ireland began about 300 years after the deluge, and Partholan and his followers, coming from Scythia, were the first planters of Ireland, all of whom, after having been in Ireland for about 30 years, perished from a plague.

SECOND COLONY

The Nemedians, coming also from Scythia, were the second group to colonize Ireland, in the year of the world 3046, or exactly 380 years after the birth of Abraham, or 2,153 years before the birth of Christ. They continued in Ireland for 270 years, during which time they had sent colonies into the northern parts of Scotland, under the leadership of Briottan Maol, from whom Britain takes its name.

From Magog were also descended the third group of colonists to invade Ireland, the Formorians, and they in turn were succeeded by the Firbolgs (or Belgae) in anno mundi 3256, who first erected the monarchist form of rule in Ireland, which proves that the country was an established monarchy before and after Christ for 4,149 years.

The "Tuatha-de-Danans," whose name signifies the people of the God "Dan," whom they worshipped, invaded Ireland, overpowered the Firbolgs and took possession of the land as the fifth colony, which they maintained for 197 years, during the reign of 9 of their kings, until they were subsequently conquered and subdued by the Gaelic-Milesian or Scotic-Irish, the three names by which they were known, anno mundi 3500.

The Milesian nation possessed the land and enjoyed their occupancy thereof for 2,885 years, under the already-mentioned unbroken lone of 184 monarchs, until the submission of Henry II of England, in the year A. D. 1186.

The Milesians invaded Ireland 197 years later than the "Danans" and were called the "Sian-na-Mile" (Meel), signifying the descendants of Milesius of Spain.

A HERO

Subsequently, through several generations, we come to Bile, who was of the 35th generation of man, and King of all Galicia (comprising in part the Iberian Peninsula, including Spain and Portugal) who had a son Galamh (Galv)—35th generation—who was known as Milesius. The original name of Milesius, here mentioned, was Galamh (Irish—gall, a stranger—amh, a negative suffix) which means no stranger in Egypt where he was called Mile Spaine (Milesius of Spain) meaning Spanish hero, and finally—Milesius (Mileadh) meaning in Irish—a hero.

This Milesius, in his youth, during his father's lifetime, went into Scythia, where he was kindly received by the King of that country, who appointed him general of all his forces and gave him his daughter, Seang, in marriage. Milesius defeated all the King's enemies, gained great fame and respect of the King's subjects. His growing greatness alarmed the King and, fearing for himself, plotted to get rid of Milesius secretly. Milesius becoming aware of the plot, slew the King, and thereupon left Scythia and retired into Egypt with a fleet of 60 ships.

Pharoah Nectonibus, of Egypt, heard of his arrival and because of his valorous record, placed him at the head of all of his forces against the King of Ethiopia, then invading his country. Here, as in Scythia, Milesius found great favor with Pharoah, who gave him—he being a widower—his daughter Scota, in marriage, and kept him for 8 years thereafter in Egypt. And, thus from Milesius for thousands of years, has flowed the Celtic blood unmingled.

During his sojourn in Egypt, Milesius required that the most talented persons among his people be instructed in trades, arts, and sciences used in Egypt, in order to have them taught to the rest of his people upon his return to Spain.

Eventually, Milesius took leave of his father-in-law, and sailed from Scythia toward Spain, much to the great comfort and joy of his people, who following the death of his father, Bile, had been much harassed by the incursions of other nations, during his own long absence from Spain.

There had occurred in Spain, a great famine of 26 years' duration, and Milesius, being of a superstitious nature, believed the blight had fallen upon his people because of their continued failure and negligence in seeking out the country foretold as their place of final abode, by the Druid Cochear, as already mentioned. The time for accomplishment and fulfillment of this had all but expired.

CALLED IRELAND

To expiate this fault, Milesius sent a compliment of men and ships to bring back an account of the Western Isle, under the command of his uncle, Ithe, and his own son, Lughaidh (Luy). They called the place Ireland. Ireland, according to early chronicles, is so-called from Ir, the second son of Milesius, who left no issue. It was known to the ancients by many different names—to the Irish themselves as (1) Inis Ealga, or the Noble Isle; (2) Fiodh Inis, or the Woody Isle; (3) Crioch Fuidnidh, or the final and most remote country; (4) Inis Fail, the Isle of Destiny; (5) Eire. To the Greeks and Romans—Hibernia and Verna—Green Isle. Plutarch in the first century of the Christian era, called Ireland Ogy-gia or the most ancient land, as the Irish can trace their history from the most remote antiquity.

Ireland has also been known as Insula Sanctorum.

Ithe and his band were pleasantly received by the three Tuatha-de-Danan brothers, then ruling kings of the country, MacCuill, MacCreacht, and MacGreine. The country at that time was called Eire after the wife of MacCuill. After a short stay and many honorable discussions with the Danans, they took leave for their return to the mainland, but were waylaid by a strong force and Ithe and many of his companions were murdered.

Milesius, infuriated by the tragic death of his kinsmen, as well as in obedience of the prophecy of Cachear, made extensive preparation for a full-scale invasion and conquest of Ireland, by his eight sons, but before it could be accomplished, he died.

Milesius was a great champion, as attested by his name Mile—Irish for thousand—he having fought and won more than a thousand battles throughout his career as a warrior.

DIE IN BATTLE

Soon after the death of their father, the eight sons of Milesius, in fullfilment of his plans invaded Ireland. Five of the eight brothers lost their lives in the battle. Heber, Heremon, and Amebrin, the three surviving sons, overpowered the Danans, landed on the coast of Ireland, which they called Inis Fail or the Island of Destiny, and having sufficiently avenged the death of their great-uncle, Ithe, gained possession of the country, as foretold in ages past by Cachaer, as already mentioned.

Sir Thomas Moore, in his Irish Melodies, commemorates the foregoing circumstances in The Song of Innisfail:

"They came from a land beyond the sea
And now o'er the western main
Set sail in their good ships gallantly
From the sunny land of Spain.
'Oh, where's the isle we've seen in dreams,
Our destined home or grave?'
Thus sang they, as by the morning's beams,
They swept the Atlantic wave.

"And Lo! where afar o'er ocean shines
A spark of radiant green,
As though in that deep lay emerald mines,
Whose light through the wave was seen.
'Tis Innisfail—'tis Innisfail!'
Rings o'er the echoing sea;
While bending to Heaven the warriors hail
That home of the brave and the free.

"Then turned they into the Eastern wave,
Where now their day—God's eye
A look of such sunny omen gave
As lighted up sea and sky.
Nor frown was seen through sky or sea
Nor tear on their Isle of Destiny
Our great forefathers trod."

Heber and Hereman, now the leaders of the remaining sons of Milesius, divided the land, and reigned jointly, thus becoming the first Milesian monarchs of Ireland. The first in an unbroken line of 184 "Ard-Righ" or High Kings. After reigning jointly for a year, Heber was killed and Hereman became the first in a long line of solemn monarchs, who ruled Ireland down through the ages, from generation to generation, for 2,885 years, the last monarch of the lines of Heber, Hereman, and Ir, being Roderick O'Connor, who in 1186 A. D. capitulated to the English in submission to the King, Henry II of England.

Amergin, the remaining brother, son of Milesius, died without issue, so consequently, the entire Milesian line is descended from Heber, Ir, and Hereman. From Heber, the eldest brother, were descended 38 sole monarchs.

As previously mentioned, the Milesian conquest and plantation of Ireland took place in the year of the world, 3500, or the year after Solomon began the foundation of the Temple of Jerusalem, and 1,699 years before the Nativity of Christ, which according to the ancient Irish computation of time, occurred in A. M. 5169 in agreement with various ancient chroniclers.

Inasmuch as the Milesian invasion of Ireland took place the year after the foundation-laying in Jerusalem, by Solomon, it may

be inferred that Solomon was contemporary to Milesius of Spain, and that the Pharoah of Egypt, who gave his daughter in marriage to Solomon, was the same Pharoah who conferred upon Milesius of Spain another daughter, Scota.

The first 127 monarchs of Ireland were pagans. It is chronicled that King Laeghaire, the 128th monarch died a pagan though reigning at the time of St. Patrick in Ireland.

During the reign of Crimthann, the 100th monarch, Our Lord Jesus Christ was born.

Kidding the Public About E-Bonds

SPEECH

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 5520) to amend the Second Liberty Bond Act to increase the maximum interest rate permitted on United States savings bonds.

Mr. MULTER. Mr. Chairman, this bill—H. R. 5520—comes before us under a closed rule permitting no amendments. The bill authorizes the Secretary of the Treasury to increase the rates payable on Government savings bonds to not more than 3½ percent per year but limits the increase to savings certificates and bonds issued on or after February 1, 1957. The bill before us has the approval of the Secretary of the Treasury and follows his recommendation asking that he be vested with discretion to increase such interest rates to 4¼ percent. The same request from the Treasury Department indicated that it was the present intention to use such authority only to the extent, however, of increasing the interest rate on E-bonds to 3¼ percent.

The action of our distinguished Ways and Means Committee in reporting the bill and in urging the House to enact it is placed almost entirely upon the testimony of the Secretary of the Treasury. His position is best summarized by the statement he made before the Joint Economic Committee when, in referring to E-bonds, he said:

> Right now it is the finest security in the world. There is no security as good as it is. There is no security that you can go up and lay on the counter any time that you are ready and get your dollars back for it. There is no depreciation in it, no market fluctuation.

This is typical of the double talk and gobbledygook that has been emanating from the executive departments of our Government since January 20, 1953. That statement is in accord with his testimony before the House Ways and Means Committee by which he proved that a 3-percent bond is better than a 3¼-percent bond and that, when the Secretary of the Treasury gets the authority sought by this bill and issues 3¼-percent E bonds, the holders of 3-percent E bonds will not redeem them or seek to exchange them for 3¼-percent bonds.

I refuse to believe that the American public is so stupid as to believe that a 3-percent bond is better than a 3¼-percent bond.

I refuse to believe that the American public is so stupid as to think that a bank book issued by a savings bank or a savings and loan association which pays 3½-percent or 4-percent interest, or even a savings bank book of a commercial bank paying only 3-percent interest, when insured by Federal corporations, is not finer security than an E-bond. Any one of them is just as good security which "you can go up and lay it on the counter any time that you are ready and get your dollars back for it."

I refuse to believe the American public is so stupid as not to know that, with such savings accounts, "there is no depreciation in it, no market fluctuation."

I refuse to believe that the American public is so stupid as to think that they are not better off with such insured savings accounts which draw interest from the day of deposit to the day of withdrawal at 3, 3½, or 4 percent, or that they will not seek such accounts as the repository of their savings rather than buying savings bonds which bear a deferred graduated rate of interest, the maximum of which will be either 3 percent or 3¼ percent, as now contemplated.

These savings bonds have traditionally borne interest of at least one-half percent per annum more than other Government securities. Since 1951, however, that difference has ceased to exist. Savings accounts have been paying larger rates; municipal and State government bonds have been paying larger rates; the tax-exempt feature of municipal and State government bonds have made those investments much more attractive than savings bonds.

Since 1951, I have been introducing bills to provide for a premium on savings bonds and savings certificates, providing they are held for a period of 10 years. In each session I also introduced bills providing for tax exemption on the earnings of these bonds. On January 10, 1957, I again introduced similar bills. H. R. 2480 provides for the premium payment on these bonds, and H. R. 2481 provides for the waiver of income taxes on series E bonds.

If this bill, H. R. 5520, were not before the House under a closed rule, I would offer each of those bills as an amendment to the pending bill. I cannot do that because of the imposition of the gag rule prohibiting such amendments.

For the information of our colleagues, I set forth in full the provisions of these two bills. H. R. 2480 reads as follows:

> A bill to provide for the payment of premiums on savings bonds and savings certificates, and for other purposes
>
> *Be it enacted, etc.*, That subsection (B) of section 22 of the Second Liberty Bond Act, as amended (31 U. S. C. 757C (B)), is amended by adding the following at the end thereof:
>
> "Subject to the terms, conditions, and limitations contained in the foregoing section (B) (1) hereof, the Secretary of the Treasury, with the approval of the President, may provide that any or all of such certificates or bonds shall provide for the payment of a premium of not more than one-half of 1 percent per annum payable only if the original owner thereof retains complete and absolute ownership and control thereof, free of any pledge or assignment, for a specified number of years not less than 10. Deposit thereof as part of any reserve required by law or regulation shall not be deemed impairment of the ownership or control thereof. The Secretary of the Treasury with the approval of the President may provide that any or all of such certificates and bonds hereafter issued shall contain provisions that upon the redemption, sale, or transfer thereof prior to the maturity date therein set forth, by or to the United States Treasury or the Federal Reserve Bank, the interest paid or payable shall be adjusted and reduced in accordance with the length of time elapsed between the date of issuance and the date of redemption, sale, or transfer. The Secretary of the Treasury is authorized to promulgate rules and regulations to effectuate the purpose thereof."

H. R. 2481 reads as follows:

> A bill to provide for the waiver of income taxes on series E United States savings bonds, and for other purposes
>
> *Be it enacted, etc.*, That the income and earnings on all series E United States savings bonds presently outstanding is waived for income-tax purposes on condition that the said bonds are not redeemed for at least 10 years after their maturity. Upon redemption of said bonds prior to 10 years after their maturity the holder thereof shall have the option of reporting the income and earnings thereon and paying the income tax therefor as though received or earned during the year when the bond is actually redeemed or during the year when the bond originally matured so that the taxpayer can obtain the benefit of the lower rate of taxation.

The enactment of my bills would provide an incentive for thrifty Americans to continue to hold their E-bonds and to make further investments therein.

The enactment of H. R. 5520, on the other hand, will provide an incentive to the holders of E-bonds to cash them in.

I predict that most of those people will not reinvest the proceeds in the new E-bonds. They will either spend the proceeds of those bonds or reinvest them in insured savings accounts or in tax-exempt bonds.

Each year, after I introduced my bills, I have received literally hundreds of letters from all across the country urging the enactment of my bills. There have been dozens of editorials and newspaper and magazine articles written upon the subject, urging action such as would be accomplished by my bills.

It makes me sick to my stomach to hear some people prate about the patriotism that causes Americans to buy E-bonds. Too much of this talk comes from those who would keep the general public uninformed, urging it to save its money at low interest rates in order to keep their money out of circulation and to prevent inflation. Too many of these people urging that argument on the unsuspecting public are the very ones encouraging inflation by running up the cost of government through higher interest rates on the negotiable bonds, the same bonds which are bought under par.

Every year for the last 4 years, there have been more E-bonds cashed in than were sold. This bill will accelerate the rate of cashing in and decelerate the amount of new purchases of E-bonds.

State of Connecticut Gets Valuable Collection

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. MORANO. Mr. Speaker, an event of significant importance has recently taken place in my State of Connecticut. It has national as well as international significance. I refer to the presentation to the State of Connecticut of the Colt Collection by Leopold D. Silberstein, presidentof Pratt and Whitney Foundation and chairman and president of Penn-Texas Corp., of which the Colt Patent Fire Arms Manufacturing Co., is a part.

The Colt Collection, valued at more than $1 million, is an historic gift of world famous fire arms, letters, and documents. This famous collection was initiated by and has been a striking symbol for 121 years of the vision and outstanding craftsmanship of Samuel Colt, inventor and Connecticut industrialist who manufactured his first revolver in Hartford in 1835.

The official program incident to the presentation of this Colt Collection to the State of Connecticut on March 7, 1956, had this to say about this unusual gift:

It contains more than 20,000 valuable letters, documents, books, and other memorabilia as well as approximately 2,000 fire arms that tell the 121 year history of the company that Sam Colt founded. For more than a generation it has been the authentic source of information concerning Colt's most notable invention, the revolver, and the dramatic effect that this single creation has had upon the progress of our Nation.

Among the documents will be found letters from Abraham Lincoln, Mark Twain, Horace Greeley, and Winston Churchill. Other names associated with the collection made famous by the "gun which won the West" are "Wild Bill" Hickok, "Bad" Madison, General Custer, and Annie Oakley.

Gun collectors and students of fire arms from this and other countries in the years to follow will frequent the State's Library Hall in Hartford where the collection will be on display.

Of special interest will be the Colt 44 caliber "Dragoon" made in 1850 and used by Samuel Colt. The gun is inlaid with gold and valued at about $35,000.

Another is a Colt 1851 36 caliber known as the Belt Pistol. This gun with the bust of Abraham Lincoln engraved on the handle is valued at $25,000. It was originally made for the United States Navy.

Still another interesting item in the collection is a Colt 31 caliber "Pocket." This one presently carries a value of $20,000.

Of unusual interest is a pistol originally designed for a Czar of Russia, now valued at $35,000.

Governor Ribicoff of my State in accepting the gift praised Mr. Silberstein and the State Library Committee for the part they played in keeping the collection intact. The Governor stated:

The fact that it has been in Connecticut as a unit instead of going out of our State or being broken up is the result of a gesture that verges on the magnificent.

Whitney L. Brooks, chairman of the Connecticut Historical Commission, praised Mr. Silberstein, Governor Ribicoff, and the State library committee for clearing the path that made it possible for the collection to remain in the State. The gift was considered of such importance that an act of the legislature was passed to enable the State to accept the gift from the Pratt & Whitney Co. Foundation, of which Mr. Silberstein is president.

As a Member of Congress from Connecticut I am sure that my colleagues in the House will be interested to know that one of the greatest collections of firearms in the world is now the property of the people of Connecticut. The State, in turn, will welcome the thousands of people from all parts of the country and from abroad who will visit the State library in Hartford to see and study the most significant collection of its kind in the whole world.

I want to join with many other citizens of Connecticut in expressing appreciation for this unusual gift made possible through the public spirit and good citizenship of Mr. Leopold D. Silberstein, of Greenwich, of my own congressional district. I likewise commend the associates of Mr. Silberstein, the Pratt & Whitney Foundation and the Penn-Texas Corp., for their generous contribution to this and other most worthy causes.

Following is a news article from the Hartford Times of March 7, describing the presentation:

BIG COLT COLLECTION ACCEPTED BY GOVERNOR
(By Ralph Minard)

The Colt Museum became the Colt Collection at noon today in the Memorial Hall of the State library. The State formally accepted the world-famous collection of historic firearms, letters and documents that began when Samuel Colt started manufacturing his revolver in Hartford in 1835.

Governor Ribicoff accepted the collection for the State. Leopold D. Silberstein, president of the Penn-Texas Corp. and of the Pratt & Whitney Co. Foundation, presented it. Colt's Patent Fire Arms Manufacturing Co. became a part of Pratt & Whitney Co. after Penn-Texas acquired Colt's in 1955.

The 20-minute noontime ceremony was given color by the presence of the Governor's Foot Guard Band, State officials and other guests.

Governor Ribicoff called the Colt Collection "a magnificent gift" which brings to the State a world-renowned collection of historic significance. He said it was further evidence of the civic awareness of Connecticut's industrial leadership.

On behalf of the State he thanked Mr. Silberstein, the Pratt & Whitney Co. Foundation, the Connecticut Historical Commission and the State Library Committee for their efforts in bringing the collection to a place where it can serve the entire public.

Mr. Silberstein said: "In the short 48 years of his productive and truly astonishing life, Sam Colt gave to this great city and to our lovely State not only an industry but a way of life. From the wilderness of the great meadows he carved an industrial empire that spread Hartford's fame throughout the world. It is my privilege to present to the people of Connecticut these tokens of Colt's achievements. It is as Sam Colt would have had it. May they be enjoyed forever by all lovers of liberty who visit this great hall."

Whitney L. Brooks, chairman of the Connecticut Historical Commission, pointed out that State laws cover acquisitions by purchase or by condemnation, but did not provide for gifts, and a special act of the Legislature was required to make it possible for the foundation to give the collection to the State.

He praised Mr. Silberstein, Governor Ribicoff, and the State library committee for clearing the path that made it possible for the collection to stay in the State.

"The fact that it has been kept in Connecticut as a unit, instead of going out of our State or being broken up, is the result of a gesture that verges on the magnificant," he said.

The collection, valued at around $1 million, includes approximately 2,000 firearms and 20,000 documents, letters and other historical data relating to Colts. The pistols include one originally designed for a czar of Russia, valued at $35,000, and all models of Colts used by famous people who settled the West. There are letters from Abraham Lincoln, Mark Twain, Horace Greeley, Winston Churchill, Annie Oakley, and many others.

Although it is world known, the collection has been available to the public only since 1940, in two rooms in the Colt factory. One reason for giving it to the State is to make it more accessible to the public.

Since its opening, it has been in charge of Charles H. Coles, an employee of Colt's since 1892 and an authority on firearms. Mr. Coles, who has completed 65 years with the company, has been given the lifetime post of curator of the collection. He will make his headquarters at the library as consultant. State Librarian Robert C. Sale becomes custodian of the collection.

Cramer Makes Sound Plea To Reduce Huge Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. CRAMER. Mr. Speaker, in these days when much is being said about making real and realistic budget reductions, and now that some of the buck-passing has subsided and the House of Representatives has finally gotten down to accepting its constitutional duty of trimming the huge proposed budget, I think it well to call to the attention of the House two editorials in the Tampa Times dated March 14, 1957, on the subject:

CRAMER MAKES SOUND PLEA TO REDUCE HUGE BUDGET

Congressman CRAMER, of Florida's First District, has taken a commendable stand in asking in a speech in the House, that the President's $72 billion budget be reduced by at least $3 billion.

Mr. CRAMER observed that the people of his district are economy-minded and not in favor of the grandiose spending program outlined by the administration.

Since Mr. CRAMER is the sole Republican Congressman from Florida, his opposition to the administration budget shows a large

measure of political courage. It would have been much easier to accommodate the President and his supporters by accepting the budget request and thus earn the affection of the spending element in the White House.

Mr. Cramer's position indicates that resentment of the record peacetime budget exists on a bipartisan basis. Both Democrats and Republicans are hearing from the folks at home and, according to reports, the words they hear are warnings against vast international spending programs in areas which are already in competition with American industry.

Similarly, there is a growing reaction against the President's domestic spending plans. Such projects as Federal Aid to Education—as indicated in Mr. Moley's column on this page today—are founded on a poor basis of fact.

A $3 billion budget cut would hardly make a dent in the vast sum requested by the President.

PUBLIC MUST DEMAND ECONOMY FROM CONGRESS

The shadow boxing in Congress on ways and means to cut President Eisenhower's budget recommendations is not indicative of any earnest endeavor to get down to business so far.

The House got the kind of answer it might have expected when it passed a resolution asking the President to point out where the administration's budget could be cut "substantially." Obviously, if the President thought his proposals were sound in the first place, he would hardly contradict them by telling the House how to slash them.

It is the job of the House and Senate to be realistic and pare to the bone the administration's recommendations. Nor will it prove any real help to make a grandstand play of cutting by 26 percent the funds asked for operation of the Executive Office of the President. That is an infinitesimal part of a more than $71 billion budget.

If Congress does seriously intend to slash by $3 to $5 billion the administration's proposals, it is going to have to do it in the field of foreign spending, by putting curbs on efforts to extend costs of social welfare services at home and sharp analysis of every project that smacks of pork barrel politics—and right there is where Congress falls flat on its face. The old "you scratch my back and I'll scratch yours" method of doing business has spoiled many a drive to "force" economy in Government.

Yet, hope springs eternal, and from each new session of Congress the American taxpayer awaits expectantly to hear at last that it will be his turn to get a "break."

Numerous voices have been raised in favor of a $3 to $5 billion budget cut from Republican as well as Democratic ranks. It is inconceivable that such a reduction cannot be obtained, but there must be realism in Congress to obtain it. Only time will tell the answer to this one, but the taxpayers of America should be showering Washington with demands for budget reductions. That does impress Congress.

The Big Hand to Polio Fighters

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FEIGHAN. Mr. Speaker, the citizens of Cleveland are imbued with a great community spirit. The Cleveland Press has presented its 41st award for distinguished service to its citizens and under uanimous consent, I include the following editorial which appeared in the March 20 issue of the Cleveland Press:

THE BIG HAND TO POLIO FIGHTERS

Because they have made 1957 a milestone year in greater Cleveland's public health history; because the doctors—led by the Academy of Medicine—the public and parochial school officials, the nurses, the PTA mothers and countless volunteers all have joined in forging a community of polio-protected children; because business and industry, unions and churches, institutions of all kinds, have enrolled in the crusade for a polio-free greater Cleveland by getting adults to roll up their sleeves for Salk polio shots, the Press proudly presents its 41st award for distinguished service. The big hand goes to all those persons who have played a part in this community's polio immunization program.

CLEVELAND BOWS TO ALL WHO AIDED SALK SHOT DRIVE

It may some day be that as Cleveland looks back over the pages of its history it will find no more glittering passage than the one on 1957's polio fighters.

That passage will tell how the Academy of Medicine led the way in an unprecedented program to create a polio-free city. First school children were unshackled from fear of iron lung and braces, then preschoolers and adults.

As of today the program is still underway, with teams of doctors, nurses, and volunteers holding their Salk ceremonies, their polio-shot parades, school by school.

This very moment round A is being completed in the 165 Cleveland public schools, with about 93,000 children inoculated at least once against infantile paralysis.

In the parochial schools the first-shot campaign has reached the halfway point, with about 15,000 youngsters inoculated.

In the schools under the county board of health 25,000 more youngsters will have had shots by the end of this week, most of these boasting second doses.

And tots and adults, too

Meantime, preschoolers have paraded to clinics at hospitals or have gone with their parents to the family doctors' offices, where adults and tots have rolled up their sleeves together.

Industries have set up programs that resulted in thousands of adults getting the protection of Salk vaccine.

There are so many to credit, to pat on the back for this great demonstration of community teamwork against a public menace.

Dr. A. Macon Leigh, president of the Academy of Medicine, and Dr. Frederick C. Robbins, head of the academy's polio committee; Dr. Thomas D. Kinney, chairman of the polio program committee, and Dr. George L. Sackett, head of its public health committee, provided much of the impetus. They were among the academy leaders who met with press editorial executives prior to the start of the program.

Schools Supt. Mark Schinnerer and Dr. James P. Cozzens, director of the schools' health services, headed the almost overwhelming task of administering Salk vaccine to the city pupils systematically.

Msgr. Clarence Elwell and City Health Commissioner J. Glen Smith led the way for the polio program in parochial schools.

Dr. A. J. Pearse, county health commissioner, carried the ball in the 35 communities under his jurisdiction.

Six hundred doctors lend hand

More than 600 doctor members of the Academy of Medicine volunteered their services. Nurses worked along with them in giving the shots. Hospitals furnished interns and nurses.

Hundreds and hundreds of PTA members and other volunteers have been helping, too, manning telephones, keeping records, and the like.

Some 500 volunteers have worked on the "syringe bank" at St. Luke's Hospital, providing sterilized syringes and needles for the program.

The March of Dimes contributed $38,000 for supplies, and the academy chipped in $2,000.

The "big hand" is extended to one and all.

The Case of the Suspected Cop

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the CONGRESSIONAL RECORD a story appearing in the Antidefamation League Bulletin of B'nai B'rith published in Detroit, Mich., recently. The story is by one of my good friends, Robert Kohler, and details how a Jewish policeman was literally the salvation of a Catholic convent whose purpose was to care for the poor and downtrodden:

THE CASE OF THE SUSPECTED COP

(By Robert Kohler)

Lt. James Cole, of the Detroit Police Department, was assigned to investigate a disturbing report. A patrolman of the Hunt Street precinct was suspected of shaking down the merchants on his beat. Lieutenant Cole trailed the man, Eldridge Baughman, as he made his rounds of the Eastern Market. He saw Baughman step into fruit, meat, and grocery stores, come out with bundles of food which he loaded into a truck belonging to one of the merchants, and drive off.

Lieutenant Cole was deeply saddened. He knew that Baughman was a good cop, now in the twilight of an active career of 25 years, 15 of them on the same beat. He also knew his duty; he headed after Baughman to make his arrest at the point of delivery.

Somehow the arrest was never made. Soon another rumor reached police officials: Lieutenant Cole had joined Baughman in the shakedown. Inspector John M. Carnaghie went to Eastern Market to investigate personally. He, too, failed to make an arrest. By now police officials were aghast—a third rumor was that Carnaghie was working the shakedown with Cole and Baughman. Other men were assigned to investigate. Starting out with one clue—the fact that the suspected policemen collected no meat, only fish, on Fridays—they soon broke the case. What they found forestalled any disciplinary action; the suspected shakedown turned out to be one of the most unique cases of interfaith cooperation in Detroit's history.

The trail had led to the Convent of the Felician Sisters. Baughman had indeed been picking up and delivering food—but it was an act of charity done with the full cooperation of the merchants—Jewish and Christian—involved. The extensive charities of the Felician Sisters had left them with barely enough to feed themselves. When the case was broken, Patrolman Baughman told how it all started:

"Last spring, my friends on the beat told me about the plight of the Sisters. It seemed

incredible that people who were devoting their lives to religion, education and charity shouldn't even have the right food. I took a look at the convent and went inside to see the Sisters. Their poverty struck me and I wanted to help. They didn't know what to make of me at first, but I told them, 'Sisters, you handle the inside; I'll handle the outside.' "

Baughman went back to his beat and told the merchants what he had found. "Everyone wanted to help right away. It was as though they had just been waiting to be asked," he says. "It was funny when Lieutenant Cole followed me and walked into the convent. He saw me give the food to the Sisters, looked around, and just said, 'Well, you got them the food but now let's do something about a paint job.' When Inspector Carnaghie showed up, we all got together and talked to some friends who contributed paint, brushes, rollers—everything we needed. When the boys at the precinct heard about it, they came down on their days off and painted the convent from top to bottom, including the attic. Mother Superior Mary Anthony cried a little when we were finished. She said, 'We can only repay with our prayers all the men who are helping us.' "

The Sisters of the convent have themselves long felt the need for better interfaith cooperation. Some of the nuns have participated in a human relations workshop at the University of Detroit. The Michigan ADL office has, on request, supplied the convent with a consultant service on a continuing basis.

Patrolman Baughman, who retires this spring, is concerned about the future. "I hope I have some say about my replacement on the beat. I would like to break him in right so he'll know where to get the food. There won't be any question about his wanting to do it—he's a Detroit cop, isn't he?"

The Felician Sisters have nicknamed Patrolman Baughman—a Jew—St. Anthony after their patron saint.

Aid Slashed as Housing Slumps

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. MULTER. Mr. Speaker, the following article by Robert J. Lewis, which appeared in the Washington Evening Star of March 16, makes most interesting reading:

UNITED STATES SLASHES AID AS HOUSING SLUMPS

(By Robert J. Lewis)

One off-the-cuff reaction to this week's news of the administration's proposal to reduce housing authorizations:

"What do they want us to do, live in tents?"

The answer is, of course, that it's not that bad.

Housing Administrator Cole says there can be a $200 million cutback in authorizations without an adverse effect on housing activity.

This is an almost miraculous accomplishment—involved, somewhat, in the realm of semantics—and naturally leads to another question: Why was the extra $200 million included in the first place?

"SAVINGS" LISTED

Under Mr. Cole's cutback proposals:

There would be $100 million less to encourage construction of low-cost private housing for low-income families, new housing in cleared-off slum sections and rehabilitation of homes in such areas, to build cooperative housing, and to push other housing projects that were originally believed to be necessary.

There would be a $75 million cut in the amount available in Federal funds to encourage communities to get started on urban renewal undertakings.

There would be a reduction of $25 million in the amount to be made available for college housing.

Looked at more closely, the cutback proposals don't have, as their total effect, a saving of $200 million.

Fully $100 million of the so-called saving represents a cut in the budget-proposed mortgage-purchasing authority of the Federal National Mortgage Association. If FNMA received this money it would not spend it at all. The money would be used by the Government largely for the purpose of investing in home mortgages—many of them of a type specially designed for the family of moderate or low income.

The Government would not be giving the money to anyone, or spending it.

Through FNMA, it would be investing it with homes as security for the investment.

Without this authorization, FNMA will be held back in supporting types of medium- and low-cost housing that Congress has wanted to have encouraged.

As for the cutback in funds for urban-renewal grants: The $75 million saving was not scheduled for expenditure immediately anyway. Withholding authorization of this amount will have the chief effect of forcing additional delays in the already lagging campaign to clear slums in cities throughout the country.

The final item—a cut of $25 million for aid in construction of housing for college students—was apparently included in full realization that the accommodations were originally considered important.

The rush to save by wielding the scapel on housing activity demonstrates that interests seeking to postpone housing have allies within the administration, in the opinion of some builders.

It is significant, in this connection, that the administration has never publicly stated its 1957 housing target, builders point out. Spokesmen, indeed, have sidestepped questions on whether the Government has a minimum goal at all.

Whatever the administration's objectives, it's becoming more and more of a certainty that housing production will take a deep plunge this year that could have far-reaching economic consequences.

OUTPUT DOWN SHARPLY

The Bureau of Labor Statistics disclosed yesterday that the number of new homes started in February was the lowest since the corresponding month of 1949. This was a decline of 17 percent from a year ago.

In the first 2 months of this year, home construction was down 15 percent from the similar period in 1956.

On a seasonally adjusted basis, this brought the annual rate down to 910,000 units. Such a rate would amount to a decline of more than 200,000 units below even last year's relatively low production.

The decline emphasized the correctness of builders' previous warnings that pressures exerted by the administration to raise interest rates were sending the housing industry into a slump.

In a statement this week, George S. Goodyear, president of the National Association of Home Builders, called the BLS revelation "an alarming report."

"These figures confirm the repeated warnings sounded by this association in recent months, all of which have been consistently ignored by the Government officials chiefly responsible for housing credit policies," Mr. Goodyear said.

"They underscore the need for emergency action by Congress and the administration now, if homes are to be provided for American families of modest means.

CALLED BODY BLOW

"The Government's tight-money policy has struck a body blow at a large and vital section of our economy. It has caused a rapid and prolonged decline in new home construction, and it has had grave repercussions throughout the many allied industries which depend on home building."

Mr. Goodyear said the BLS report is a clear warning there will be an increasing slump if action is not taken.

"Home builders and home buyers have been singled out for the imposition of the most discriminatory and unfair restrictions in the history of our free-enterprise system, under the guise of anti-inflation controls," he said.

Mr. Goodyear said it was "well-nigh incredible" that the effects of builders' warnings have been "ignored for so long, and that they continue to be ignored by those directly responsible for our national housing policy."

In Virginia's Oldest Tradition

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. ABBITT. Mr. Speaker, on Tuesday, March 19, 1957, Senator HARRY F. BYRD, senior Senator from Virginia, made an outstanding and memorable speech before the Richmond Kiwanis Club in Richmond, Va.

Senator BYRD again demonstrated the love he has for America as well as the desire to maintain our way of life in this great Nation; he demonstrated why so long he has been looked to by most Virginians as a leader of courage, integrity, and real ability—one who dares to stand up and fight for the causes he believes to be right.

There appeared in the Richmond News Leader of Wednesday, March 20, 1957, a very fine editorial commenting upon Senator BYRD's speech and the stand that he has taken in this great hour of crisis in Virginia.

Under leave to extend my remarks, I desire to include herewith this editorial:

IN VIRGINIA'S OLDEST TRADITION

One hundred and sixty-nine years ago, come June, a convention of Virginians met in Richmond to consider ratification of the new Constitution. Among their number were many of the most distinguished patriots of our history—Madison, Marshall, Pendleton, Mason, Henry, Edmund Randolph, George Wythe, Light Horse Harry Lee, James Monroe. Their debates offer absorbing reading in our own time.

We fell to reflecting upon the Convention of 1788, and the great assertions of political principle that gathering produced, in listening to Senator BYRD on Monday afternoon. The Virginia Senator stood squarely in Virginia's finest tradition.

He denounced the civil rights bills, in part because these measures would deny trial by jury in certain cases. What was it our fathers said on Shockoe Hill? "In all criminal and capital prosecutions, a man hath a

right to * * * a fair and speedy trial by an impartial jury of his vicinage." And again, "in controversies respecting property, and in suits between man and man, the ancient trial by jury is one of the greatest securities to the rights of the people, and ought to remain sacred and inviolable."

Mr. Byrd renewed his frequent warnings against the despotism that must result when government becomes as massive as it is today. What did Virginia say then? "All power is naturally invested in and consequently derived from the people; magistrates therefore are their trustees and agents and at all times amenable to them."

Most significantly, Senator BYRD resolutely asserted a right to resist the Supreme Court—indeed, to defy it—by an unyielding refusal to submit to usurped power. What did the Virginia Convention say in 1788? It said this, and let it be written large in our councils of state: "That government ought to be instituted for the common benefit, protection, and security of the people; and that the doctrine of nonresistance against arbitrary power and oppression is absurd, slavish, and destructive to the good and happiness of mankind."

It was Virginia that demanded, 169 years ago, an explicit statement in the Constitution that all powers not delegated by the Constitution to the Federal Government, or denied by the Constitution to the States, were reserved to the States respectively. It was Virginia that denied the power of any department of the Federal Government to "cancel, abridge, restrain or modify" any right or power which the people reserved to themselves within their States.

If Senator BYRD, in echoing these high resolves of our greatest men, was in any sense advocating "anarchy," he was in illustrious company. He was not, of course, advocating any such thing. He was reflecting not only the most fundamental principles of our Government as these were asserted long ago, but also the most immediate desires and convictions of the people of Virginia in our own time.

Is it wondered that Virginia follows Senator BYRD's leadership? Virginia has been following such leadership since the stormy summer afternoons that Madison and Henry tangled in debate, here in this very city, 169 years ago.

Statement of George J. Burger

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. METCALF. Mr. Speaker, in the past few years, we have seen a rapid increase in the number of mergers of corporations and banks.

In some instances, these consolidations may have helped promote competition. In many others, they have frustrated the basic objectives of the antitrust laws in the preservation of our free competitive enterprise system—they are reducing competition in many areas and concentrating economic power in the hands of smaller groups.

During the 84th Congress, this body unanimously approved legislation aimed at adapting our antitrust laws to meet the changing economic conditions. This legislation was pending in the Senate when Congress adjourned.

It was re-introduced in this Congress by two of our colleagues from New York, Mr. CELLER and Mr. KEATING. Hearings are going on now. Following is a statement presented to the Antitrust Subcommittee of the House Judiciary Committee today by Mr. George J. Burger, vice president of the National Federation of Independent Business:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, BEFORE ANTITRUST SUBCOMMITTEE, HOUSE JUDICIARY COMMITTEE, MARCH 21, 1957—H. R. 264 (KEATING), H. R. 2143 (CELLER)

I'm George J. Burger, vice president and legislative representative of National Federation of Independent Business, Washington Building, Washington, D. C.

We urge you to report favorably to the House for action at the earliest possible time premerger notification bill H. R. 2143 and its twin brother, H. R. 264.

Congressmen, small business has been pressing you for years to get on the ball and enact legislation like this, to permit Government to be more effective in enforcing the laws you have written * * * to prohibit business marriages that promote monopolistic concentrations, and thereby build a more favorable climate for independent business opportunities.

By "small business" I mean the real, live, flesh-and-blood men and women who run the millions of independent business and professional enterprises along the main streets of the thousands of towns and cities that dot our country—your own constituents.

With each passing year the voices of these business and professional people have grown louder and more insistent for this legislation. And you know it.

How do we know you know? Simply because we make it our business to poll out almost 100,000 independent business and professional man members on legislative issues, and arrange for their individually voted and personally signed ballots to go directly to you, their Congressmen, to let you know just what is on their minds * * * and because we know that while in August 1955 some 70 percent of our Members who used their ballots voted for this type of legislation, some 75 percent voted for it in October 1956, and some 76 percent voted in January 1947 urging you to enact H. R. 2143.

Our cards are on the table face up. We submit for your inspection copies of each of our mandates which carried these polls to our members. Read them over and see how we sketched arguments evenhandedly and factually for and against this legislation, to help them make up their own minds. And then read the results of their votes freely reached, which we tabulated on the basis of reports given us by local independent business and professional people who head up federation chapters in their areas.

Congressmen, here's the situation as we see it:

You in Congress considered and all but passed similar legislation last year. Actually, the House stamped its seal of approval on premerger notification. The Senate might have done likewise but for the fact that at the last minute someone tried to piggyback the "good faith" bill S. 11 through on it.

Further, when President Eisenhower appointed a Special Cabinet Committee on Small Business last year, this group rolled up its sleeves for searching study in the antitrust field, and came up with a recommendation for enactment of advance notice legislation like H. R. 2143 and H. R. 264.

As a matter of fact, the President and his party heartily endorsed this recommendation in their platform adopted at San Francisco last year. Party brass trumpeted this pledge again and again during the fall safaris. Just last month the President recommended to you in Congress that you enact this type of legislation.

Similarly, after searching the facts and their consciences, the Democratic Party promised enactment of this type of legislation in their platform adopted at Chicago in August. Members nailed this pledge high on their mainmasts throughout the whole campaign.

All this was done in response to a clearly demonstrated need for this legislation and in line with responsible soundings of independent business sentiment.

If anything, this need and this sentiment are greater today than ever * * * because the merger wave that threatens to capsize our small, independent business system and our free opportunity economy has swelled to its greatest size to date, and it is still growing larger.

You know that the agencies charged with enforcing the laws prohibiting monopoly producing mergers—Justice Department and Federal Trade Commission—are at last beginning to do a good job on this section of antitrust law. But they have told you that without this power to require advance notice on merger planning, their hands are partly tied. They have offered convincing testimony on this point.

Now if you were a boxing promoter, you wouldn't send your fighter into the ring with one hand tied behind his back. Why then send these antitrust agencies into the really tough monopoly-merger ring with one hand tied behind their backs?

Congressmen, our independent business and professional man members don't expect any miraculous cure from these bills. But they do firmly believe that this legislation will lubricate the sometimes creaky, squeaky machinery spinning out the action necessary to check the monopoly threat inherent in this merger wave.

Frankly, there doesn't seem much need for further talk about these bills. We think there's been enough already. Like Julie Andrews in My Fair Lady, our members are tired of "Words, words, words" * * * and want some definite action, in this case, by favorable vote on these bills, to show them your party meant what it said when it made its vows to independent enterprise in its platform and during the campaigns last fall.

Federal Aid for Public Schools

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. MASON. Mr. Speaker, there is no such thing as free Federal aid. The Federal Government has no money of its own to give away. It must first take away from the citizens of the States in taxation the dollars it so generously gives back to the States. Uncle Sam must also take away from the States the billions it gives to foreign governments. Uncle Sam has not one dime of his own to give away. He can only give away the dollars he takes from you and you and you.

Mr. Speaker, the total amount appropriated for Federal school aid during the 8-year period from July 1, 1949 to July 1,

1957, was $1,997,606,731. It was spent as follows:

1. School lunch programs	$569,542,600
2. Grants to colleges for agricultural and mechanical arts	140,306,000
3. Grants to States for vocational education programs	224,699,961
4. School construction grants to local school districts in federally impacted areas—where Federal activities have overloaded the regular school accommodations	593,406,019
5. Grants to local school districts for maintenance and operation of schools in federally impacted areas	469,652,151
Total	1,997,606,731

Mr. Speaker, today Congress is being urged to provide Federal aid for public schools—both elementary and secondary schools. Tomorrow, it will be Federal aid for colleges and universities; in fact, that movement has already started.

Both major political parties went on record in support of the principle of Federal aid for public schools. The drive for Federal aid is being sparked by President Eisenhower; the power behind the drive is being furnished by certain professional organizations, college, and university heads, big Government-minded laymen, the NEA, and various State education associations.

The drive will be difficult to stop. Senator LAUSCHE, of Ohio, says:

> Federal aid is invariably followed by Federal control.

I am in full agreement with Senator LAUSCHE. Federal control follows Federal aid as inevitably as night follows day.

For example, in 1916 Congress passed the Smith-Hughes Act providing Federal financial aid for local vocational educational systems. Prior to passage, its proponents insisted vigorously and incessantly that it would involve no Federal control. However, Federal regulations in connection with the act have been expanded over the years until they now fill a 108-page book, Administration of Vocational Education, published by the Government Printing Office. One sentence, on page 4, however, is all that is necessary to quote:

> Each State is required to submit a plan which must meet with the approval of the Federal Office of Education.

No approval of plan, no money. What is that but Federal control?

Mr. Speaker, an authority on the subject of Federal aid for schools, Roger A. Freeman, the former Research Director for the Intergovernmental Relations Commission, had this to say on the problem of Federal aid for schools:

> Education for many years has been the largest item of public expenditure in the United States next to national defense. The cost of education accounts for about one-third of all State and local expenditures and is about twice as great as the next largest public function—highways. * * * School funds have consistently risen faster than enrollment, or other public services, and are continuing to do so.

Mr. Freeman stated that Federal money is not needed for schools when the facts are known even if the Gallup poll last year indicated that 68 percent of the persons questioned in the poll favored Federal aid for schools. He explained the results of the poll came about because "the opponents of Federal aid have let the controversy go by default." He calls for a nationwide movement to lay the facts before the American public to head off pending congressional action in favor of Federal aid for schools.

The report of the Intergovernmental Commission on Education stated:

> We have been unable to find a State that cannot afford to make more money available to its schools or that is economically unable to support an adequate school system.

Mr. Speaker, in his book, Let's Face It, Dean Clarence Manion says:

> In the Communist Manifesto Karl Marx made control of public education 1 of the 10 commandments of communism. Crypto-Communists, fellow travelers, and left wing progressives in the field of education have kept their sights fixed upon this objective ever since. Twenty-five years ago a group of liberal American educators, appointed by the American Historical Society and financed with more than a quarter of a million dollars from the Carnegie and other foundations, went into a long learned huddle and finally came out with a 15-volume report. In their findings they declared that our form of Government was a failure and should give way to a collectivized society, wherein the individual should be made to surrender his liberty in the interest of group welfare. They determined that only the schools of the country could bring about this revolutionary change in our American system, and that it was the duty of every educator to see that the schools did so.

Mr. Speaker, the following article by Raymond Moley, entitled "The States Can Do It" is carried in the March 25 issue of Newsweek. It is an excellent article, worthy of careful and thoughtful consideration. I therefore include it as a part of these remarks:

THE STATES CAN DO IT

(By Raymond Moley)

OKLAHOMA CITY.—Two weeks ago, Steve Stahl, executive secretary of the Oklahoma Public Expenditures Council, in behalf of the taxpayers of his State, appeared before a congressional committee in Washington to demonstrate with unimpeachable facts that his State needed no Federal aid for school construction.

He was treated with inexcusable discourtesy, notably by a Democratic Congressman, C. M. BAILEY, and by PETER FREYLINGHUYSEN, of New Jersey, a Republican. BAILEY, in the course of his attack, offered this bit of evidence why taxes are so high: "If the money is not spent for school construction it will be spent for something else." FREYLINGHUYSEN suggested that Federal grants for schools would "encourage the tapping of new sources at State and local levels." This tapping has been pretty bad already. A statement of a taxpayers' association of FREYLINGHUYSEN'S State points out that, since the State is already shelling out plenty in taxes, it wants no Federal tap for school construction.

Stahl's conclusion is that citizens, native and foreign, who go to Washington with a tin cup get a royal welcome, but those who go to say they do not want anything are treated to a "bum's rush."

Since the collectivists behind the school bill are claiming that the measure is only for needy States, I have taken pains on this trip through the South to find out whether the poor States can or cannot meet their own school needs. Two of these are Oklahoma and Louisiana.

MONEY AT HAND

Stahl pointed out, amid hoots and jeers, that while the figures of the United States Office of Education say that Oklahoma needs 500 new classrooms, the State and local communities have raised the money for and are planning to build 1,200 new classrooms. He said also, in denial of the President's claim that school construction has been lagging, that Oklahoma has increased its school revenues 57 percent since 1951; that while in 1951 school bond issue in the State amounted to $6.4 million, the figure rose to $27.2 million in 1956, and in the first 6 weeks of 1957 an additional $3 million were voted. Surely a State that pays $750 million yearly in Federal taxes is not poor. And if some of the people living in the stuffy atmosphere of phony figures that prevails in Washington would come out here and look around, they would have ocular evidence of the financial capability of the State.

In Louisiana I secured a copy of a school survey by a responsible taxpayers' agency, the Public Affairs Research Council. This study gathered firsthand data regarding the bonding authority for the State's 67 parishes and cities. It showed that 62 had sufficient authority to raise all the school-construction funds necessary, with $569,100,000 left over. The 5 "needy" parishes would require $4,100,000 in help. The President's plan would give the State $9,204,000 of Federal money, and the State would match with $4,601,000. Why in the name of common sense should Uncle Sam give $9,204,000, gathered from other States, to induce Louisiana to raise $4,601,000, which is all it needs?

FASTER PROGRESS

Moreover, the financial facts completely refute the charge of the President that there has been inadequate progress in keeping up with the rise in school population. In 1954 Louisiana's State Department of Education estimated that the State's school systems would require $235,600,000 to finance their building requirements to 1959. Since then, 13 of those systems have issued bonds sufficient for their needs, and 54 have reduced their needs very materially. In addition, there may be as much as $100 million in local funds for school construction authorized but not yet spent. Over a 10-year period the rate of school construction has exceeded the rate of increase in school population and has also covered obsolescence.

Apparently the Federal school-construction program is not designed to meet legitimate needs, but to bribe States to do what they are not only able to do for themselves but are doing at a rate faster than would be accomplished with Federal aid. Certainly if the bribe is paid, the States will not move faster. They will quit and let Uncle Sam do it.

Depressed Areas Need Help

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. FORAND. Mr. Speaker, I am today introducing a bill providing for an effective program to alleviate condi-

tions of unemployment in distressed areas.

This bill is quite similar to S. 964, now under consideration at the other end of the Capitol. It contains, however, one very outstanding feature not in the Senate bill; namely, a section that would extend the benefits of accelerated amortization for new and expanding industries. This feature would not apply to any existing industry just moving its operation from one State or area into a depressed area. I do not think that raiding one area to help another is good business.

Under leave to extend my remarks, already granted me, I include a press release and a digest of my bill:

Congressman AIME J. FORAND, Democrat, of Rhode Island, today introduced in the House of Representatives a bill which has for its purpose the establishment of an effective program to alleviate conditions of substantial and persistent unemployment in certain economically depressed areas.

Citing the tax features of his bill Congressman FORAND said: "This is the shot in the arm Rhode Island, whose average unemployment is much higher than the national average, and other areas throughout the country need to combat persistent unemployment problems. This most important tax feature of my bill will tend to lure new industry into these depressed areas for the mutual benefit of all, and it is so designed that it will not permit the transfer of business operations from one State to another. We want new business and those industries that will take advantage of the technical skills of our people, and not just the tax relief."

Congressman FORAND, who is a ranking member of the House Ways and Means Committee, is working together with Senator DOUGLAS for the inclusion of this tax provision on the House side, since matters dealing with revenue must originate in the House. Many provisions of Mr. FORAND'S bill are similar to the Douglas bill now pending in the Senate. They include:

1. Loans to assist in financing the purchase or development of land for industrial use.
2. Loans for public facilities.
3. Grants for public facilities.
4. Procurement practices by the Government.
5. Financial assistance under Housing Act.
6. Vocational training.
7. Tax relief (amortization) for the erection, construction, reconstruction, etc., of new industry not heretofore removed from another State.

DIGEST OF AREA REDEVELOPMENT BILL INTRODUCED BY CONGRESSMAN AIME J. FORAND

1. Purpose: To assist communities, industries, enterprises, and individuals in areas needing redevelopment to expand their productive activity to alleviate excessive and prolonged unemployment and underemployment by providing new employment opportunities and developing and expanding existing facilities and resources without reducing employment in other areas..

2. Organization:

(a) Creates an Area Redevelopment Administration with an Administrator appointed by the President, subject to Senate confirmation.

(b) Creates advisory committees to assist Administrator:

(1) Government Advisory Committee consisting of heads of major interested Federal bureaus.

(2) National Public Advisory Committee consisting of representatives of business, labor, and agriculture.

(3) Administrator also authorized to confer with parties in interest from any industry in which employment has dropped substantially over extended period of years, causing high levels of unemployment in redevelopment areas.

3. Redevelopment areas defined:

(a) Industrial redevelopment areas are defined as "those within the United States in which Administrator determines that there has existed substantial and persistent unemployment for an extended period of time."

Areas shall be so designated where unemployment is not less than:

(1) 12 percent for preceding 1-year period.

(2) 8 percent for 15 months of preceding 18-month period.

(3) 6 percent for 8 months in each of 2 preceding years.

(b) Rural redevelopment areas are defined as "those rural areas within the United States in which he determines that there exist the largest number and percentage of low income farm families, and a condition of substantial and persistent unemployment or underemployment."

Administrator shall consider in making determination:

(1) Number of low income farm families in rural areas and proportion such low income families are to total farm families in such areas.

(2) Relationship of income levels of families in such areas to general levels of income in the United States.

(3) Current and prospective employment opportunities in such areas and availability of manpower there for supplemental employment.

(c) Administrator may designate several counties or municipalities or a part of a county or municipality as a "redevelopment area."

4. Local committees: Once a redevelopment area is determined, local redevelopment committee shall be appointed by Administrator consisting of at least seven residents of area, representing management, labor, commercial, industrial development, and agricultural groups. Committee shall submit plans and cost estimates for:

(a) Development of resources, processing and marketing facilities of area.

(b) Construction, rehabilitation, and alteration of industrial plants or commercial facilities of area.

(c) Purchase of machinery or equipment for use in area to attract new industry and stimulate economic activity.

Local committees shall enlist support of local residents and private and public lending agencies in financing such plans. Administrator shall furnish technical and professional assistance to local committees.

Administrator may appoint regional advisory committees on same basis as above to represent two or more redevelopment areas.

Funds for local committees: Not more than $1,500,000 of sums available to Administrator may be used to aid regional and local committees for administrative expenses only—salaries and traveling expenses of committee members excluded.

5. Loans:

(a) On application approved by a local committee, Administrator may make loans to assist in financing (1) purchase or development of land for industrial usage; (2) construction, rehabilitation or alteration of industrial plants or other manufacturing, commercial, or processing facilities; and (3) purchase of machinery or equipment for use in area, if he finds:

(1) Project planned is reasonably calculated to provide more than temporary alleviation of unemployment or underemployment.

(2) Funds requested not otherwise available on reasonable terms.

(3) Amount of loan plus private funds available are adequate to insure completion.

(4) There is reasonable expectation of repayment.

(5) Borrower will not transfer business operations to such plant so as to effect a significant reduction of employment in any other area within the United States.

(b) No loan shall be in excess of 75 percent of aggregate cost, or for more than 40 years. Interest rate shall be at cost to Administrator plus one-half of 1 percent per annum.

(c) Administrator shall require not less than 10 percent or more than 25 percent of aggregate cost to be supplied by (1) States or subdivisions thereof, or (2) local interests. Federal lien has first status. Five percent of aggregate cost for which loan is made shall be supplied by nongovernmental sources. Financial condition of area to determine amount of local contribution to costs. (Balance if any needed for 100 percent of loan would have to come from other sources outside the area.)

(d) "Borrower" includes lessees, subcontractors, or persons or firms under common control.

(e) One hundred million dollars authorized for making industrial redevelopment loans, on revolving fund basis.. One hundred million dollars appropriated for rural redevelopment loans, with limitation of $6 million to any one State, on revolving fund basis.

6. Assistance to public facilities:

(a) Loan for public facilities. Upon application of any State or political subdivision thereof, Indian tribe, private or public redevelopment organization, Administrator is authorized to make loans to assist in financing purchase or development of land for public facility usage, and construction, rehabilitation, alteration, expansion or improvement of public facilities in redevelopment areas, if he finds:

(1) Project provides more than temporary alleviation of unemployment or underemployment and will tend to improve opportunities in area for successful establishment or expansion of industrial or commercial plants or facilities.

(2) Funds requested are not otherwise available on reasonable terms.

(3) Amount of loan plus amount of other available funds are adequate to insure completion.

(4) There is reasonable expectation of repayment.

No loan shall be in excess of 75 percent of aggregate cost, or for longer than 40 years. Interest rate at cost to Administrator plus one-half of 1 percent.

Administrator shall require not less than 10 percent or more than 25 percent of aggregate cost to be supplied by State or political subdivision as equity capital or loan. Federal lien has first position. Financial condition of areas to determine amount of local contribution to cost. (Balance if any needed for 100 percent of loan would come from other sources inside or outside area.)

Seventy-five million dollars authorized for public facility loans, on revolving fund basis.

(b) Grants for public facilities: Administrator may conduct studies of needs and probable costs in redevelopment areas for needed land acquisition for public facility usage and for construction, rehabilitation, alteration, expansion, or improvement of useful public facilities. May receive proposals from States, Indian tribes, organizations, etc., showing plans, costs, and contributions to be made to proposal and Administrator may make grants where he finds:

(1) Proposal will provide more than temporary alleviation of unemployment or underemployment and proposal will tend to improve opportunities of area for establishment or expansion of industrial or commercial plants or facilities;

(2) Local groups will contribute to cost of project in proportion to their ability to contribute.

(3) Project will fill a pressing need of area, and there is little probability project could otherwise be undertaken.

Amount of grant for any project shall not exceed difference between funds which can be practicably obtained from other sources (including loan under section 8 of this act) and amount necessary to insure completion.

Administrator shall provide supervision to prevent waste of Federal funds.

Appropriations authorized not to exceed $50 million for making grants.

7. Funds for industrial plants and public facilities: Administrator with approval of President may issue notes and obligations not exceeding $275 million. Secretary of Treasury shall purchase and may sell such note.

8. Establishment of revolving funds: Creates revolving funds for industrial redevelopment loans ($10 million), for rural redevelopment loans ($100 million), and for public facility loans ($75 million).

9. Information: Administrator shall aid redevelopment areas by furnishing assistance, technical information, market research, advice, etc., obtainable from Federal Government agencies. Administrator shall also supply Federal procurement agencies with names and addresses of redevelopment area firms desirous of obtaining contracts from United States Government.

10. Technical assistance: Administrator authorized to provide technical assistance to redevelopment areas, including studies of needs and protentials for economic growth. Administrator may provide use of his staff or services of private individuals, firms, or institutions under contract. Appropriation authorized for these purposes in amount not in excess of $4,500,000.

11. Powers of Administrator: These include all ordinary and necessary powers to employ and compensate staff; hold hearings; secure data from other agencies; make, extend, service, modify, collect, and liquidate loans; acquire, manage, and sell property in collection of loans; employ experts; and establish rules, regulations, and procedures.

12. Termination of eligibility for assistance: Whenever Administrator shall determine that area designated as redevelopment area no longer meets requirements for such designation of section 5 of act, no further assistance shall be granted. But an area may be redesignated as a redevelopment area if requirements of section 5 of act again prevail.

Contracts or undertakings previously entered into shall continue to be valid.

Administrator shall advise Federal and local agencies of changes.

13. Procurement by Government agencies: Each department of the Federal Government engaged in procurement of supplies shall:

(a) Use best efforts to award negotiated procurement to contractors in redevelopment areas.

(b) Where deemed appropriate, set aside portions of procurements for negotiation with firms in redevelopment areas.

(c) Provide bid matching opportunities for redevelopment areas firms.

(d) Assure that firms in redevelopment areas have opportunities to be bidders and get notices.

(e) In event of tie bids, all other things being equal, award contract to firm in redevelopment areas.

(f) Encourage prime contractors to award subcontracts to firms in redevelopment areas.

(g) Cooperate with other departments and agencies of Federal Government to achieve objectives set forth.

14. Financial assistance under Housing Act:

(a) Housing and Home Finance Administrator is authorized to use slum clearance and urban renewal projects in redevelopment areas for industrial and commercial rebuilding without regard to requirements of existing law that project area be predominantly residential in character or that it be redeveloped for predominantly residential uses. This is, however, subject to the limitation that not more than 10 percent of the funds authorized under existing laws for loans or capital grants for slum clearance and urban renewal shall be available to provide financial assistance under this section.

(b) Housing and Home Finance Administrator is authorized also to make urban planning grants for planning in redevelopment areas.

15. Tax relief (relating to amortization of emergency facilities and new facilities in depressed areas):

(a) Allows for fast amortization on facilities (where the construction, reconstruction, erection installation or acquisition of the facility is commenced on or after the date of the enactment of the Area Redevelopment Act) to provide new employment opportunities and develop and expand existing facilities and resources in areas designated as "depressed areas" by the Administrator.

(b) No facility shall be certified under the first part of this section if such facility is determined by the certifying authority to be ineligible for a loan under the Area Redevelopment Act by reason of section 7 (a) (4) of this act. (Antimigration section.)

(c) Effective only with respect to taxable years beginning after December 31, 1956.

16. Vocational training: Secretary of Labor shall:

(a) Determine vocational training or retraining needs of unemployed individuals in redevelopment areas and cooperate with Secretary of Health, Education, and Welfare, and State and local agencies engaged in vocational training to assure that all facilities are available to such unemployed persons.

(b) Determine additional facilities needed to meet vocational training or retraining needs. Secretary of Labor shall then so advise Secretary of Health, Education, and Welfare who shall furnish assistance, including finances, to State agencies to meet needs. If State agencies are unable to meet vocational training and retraining needs, Secretary of Health, Education, and Welfare may contract for such services with public or private institutions. Secretary of Labor shall provide any necessary technical assistance for setting up apprenticeship, journeymen and other job training needed in locality.

17. Retraining subsistence payments: Secretary of Labor shall:

(a) Enter into agreements with redevelopment area States whereby the States as agents of the Federal Government make weekly retraining payments to unemployed individuals not entitled to unemployment compensation (exhaustions or not insured) and certified by Secretary of Labor to be taking training.

(b) Make retraining payments to such individuals for not more than 13 weeks in amounts equal to average unemployment compensation payments payable in State making payments.

18. Penalties:

(a) Knowingly false statements or willful overvaluations of security for purpose of influencing Administrator or obtaining loan, etc., are punishable by fine of not more than $5,000, or imprisonment for not more than 2 years, or both.

(b) Whoever being connected with Administrator embezzles, misapplies, etc., any funds, or with intent to defraud the Administrator or other body politic makes false statements, entries, reports, etc., or with intent to defraud participates or receives any profit or benefit through any loan or act of the Administrator, or gives unauthorized information concerning future action or plan of Administrator which might affect the value of securities or invests, speculates, etc., in securities of company receiving a loan or assistance from Administrator, shall be punishable by $10,000 fine or imprisonment for not more than 5 years, or both.

19. Employment of expediter and administration employees: No loan shall be made to business enterprise unless owners (a) certify to Administrator names of attorneys, agents, etc., employed for purpose of expediting application and fees paid for service, and (b) execute agreement binding such business enterprise for period 2 years after assistance rendered by Administrator to it to refrain from employing any person who on date assistance was rendered or within 1 year prior thereto shall have served as officer or employee of Administrator in position involving discretion as to granting assistance under this act.

20. Annual report: Administrator shall make a comprehensive and detailed annual report to Congress of his operations for each fiscal year. Report shall also show, among other things:

(a) Number and size of Government contracts for furnishing supplies and services placed with business firms located in redevelopment areas; and

(b) Amount and duration of employment resulting from such contracts.

Governmental agencies shall furnish administratively such information as may be necessary for purpose of this section.

21. Appropriations: Authorized to be appropriated such sums as may be necessary to carry out provisions of the act.

Frightening

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. ABBITT. Mr. Speaker, there is in Virginia a very fine newspaper published in Lynchburg, Va.; it is the Lynchburg News. From time to time there appears in this newspaper fine editorials which have been most enlightening, as well as helpful, to our people.

On Wednesday, March 20, 1957, there appeared an editorial which calls attention to the so-called civil-rights legislation just favorably approved by the Judiciary Committee of the House of Representatives. This so-called civil-rights legislation is the most iniquitous, dangerous, ill-conceived, abortive, vicious, and ill-begotten legislation that has ever been my experience to know about. If the people of America do not wake up in the immediate future and realize what is happening to them, it will be too late; we will have lost the rights, privileges, and freedoms that have been ours for many generations.

The editorial that I have mentioned calls attention to many of the dangers that the enactment of this legislation will place upon a freedom-loving people.

Under leave to extend my remarks in the Appendix of the RECORD, I desire to include herewith that editorial, in the hopes that people who love this Nation will read this editorial and realize what is behind the effort to place Americans in a political straitjacket and that they will act accordingly.

The editorial follows:

FRIGHTENING

One of the most amazing, if not the most amazing, spectacle of recent times in

the United States was that presented in a secret meeting of the House Judiciary Committee Monday when Members of the Congress refused to endorse a main feature of the Constitution they had sworn to protect.

The proposal rejected by these unidentified Members of the Congress of the United States was an amendment to a pending bill which had for its purpose the inclusion of a guaranty that the right of citizens to a trial by jury, as provided in the fifth amendment to the Constitution, would be respected.

Any criminal, any member of any organization dedicated to the overthrow of his country's Government by force, may invoke the fifth amendment. A loyal citizen of the United States is to be denied that right in certain cases. Only recently a man accused to his face of misuse of trust funds was told that he would not have to testify against himself, under a provision of the fifth amendment, one of the most important sections of our Bill of Rights. But a citizen accused behind his back may be hauled into a Federal court and denied that provision of the same amendment which guarantees him the right of trial by jury. In the name of protection of some ill-defined civil right, a citizen of the United States is to be denied a constitutionally guaranteed civil right as old as Magna Carta. Here is an attempt by a handful of Members of the Congress not only to amend the Constitution of the United States by legislation but to throw a part of it into the junk pile. We have called it an amazing action. A Member of Congress has called it an "unbelievable" action. It is more than either. It is frightening. Its frightfulness is intensified by the fact that it was all done in secrecy and no vote was recorded.

Some years ago a crooked and cynical old politician asked the famous question: What's the Constitution among friends? Obviously there are those who can ask and answer a similar question: What's the Constitution among politicians who find it standing in the way of action they are determined to take? The answer is a resounding "Nothing, nothing at all."

The hope is that when the House of Representatives considers this measure the rejected amendment affirming the validity of the fifth amendment to the Constitution will be offered and that when a recorded vote is demanded there will be found so many Members ashamed to stand up in public and vote against the Bill of Rights that the amendment will be accepted. It will still be an evil bill but some of the poison will have been extracted from it.

There Is a Place for the Small Farm

EXTENSION OF REMARKS
OF

HON. WALT HORAN

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 14, 1957

Mr. HORAN. Mr. Speaker, under leave granted me to extend my own remarks in the Appendix of the RECORD, I am privileged to include a speech delivered recently at the Spokane farm forum by Mr. Eugene Harms, of Pullman, Wash.

Mr. Harms spoke on the subject There Is a Place for the Small Farm. His talk points out some of the problems that face the operator of the family-sized farm:

THERE IS A PLACE FOR THE SMALL FARM

(By Eugene L. Harms, farmer, Pullman, Wash.)

As was stated by the chairman, I live on a 260-acre farm near Pullman and of which 250 acres are cropland.

I think that this question of a small farm is a relative question. A 250-acre farm in the Columbia Basin, on the west side of the State would be a good size farm, but if you went out in Adams County, they'd say why gee whiz it takes that much for us to turn our outfits around on. In the Palouse area and Whitman County where the average size of farm now is over 500 acres, I think you'll agree that a 250-acre farm is a small farm from the standpoint of wheat production. But I do not believe that a farm of small acreage necessarily means a farm of a small business. There is opportunity to increase the total income and increase the size of business by doing some diversification.

First, I wish to state emphatically that I believe the efficient small farm has and will continue to have a place in agriculture and in our national economy. I notice that our previous speaker said almost the same thing. He emphasized the fact that efficiency was a prerequisite of any farm or of any business staying in business. If they are inefficient they have no place in our present economy.

Now just a few of the disadvantages of the small operation. The investment for modern equipment is necessarily very large per acre on a small farm. This investment is very much larger than if the farm were large enough so that maximum use could be made of the equipment. For example in my own case, I have about $70 an acre in equipment alone and I don't feel that I can get along with much less. As a matter of fact, I would like to have about $25 an acre or more in some of this modern equipment. Not only labor saving, some of the modern machines that have come out will do the job better than what I have. But, I don't feel that I can do that at least under the present conditions so I am worrying along trying to keep the equipment that I have used as efficiently as possible.

What can the small operator do to cut down his cost of machinery? He might do as I have done on most of my equipment. He might buy used equipment which some larger operator has felt is not efficient enough for him. A new machine has come along and he has an acreage to justify it. An example might be our combine. At the present time we can buy a good full combine for about 10 cents on the dollar or less of what a new self-propelled combine would cost us. I think there are several of you who would bear me out that you can do just as good a job of thrashing and cleaning and preparing a crop with the old type machine as you can with the self-propelled. We have also got down to where our labor requirements on that type of machine are not as great as they used to be. In other words with the self-propelled we put a $12,000 investment in and we save one man during harvest. And, of course, we do it faster and if we have a green spot we can cut around it without wasting grain. All of the arguments which are offered to you as reasons why you should have a self-propelled, I don't belittle them. I would like to have one myself but certainly can't justify it. Another thing that a farmer may do is to do a little custom work with some of his equipment. The trouble is that in our area I have 2 or 3 neighbors that are trying to do the same thing so it becomes a case of doing the thing so near cost that probably the machine is just as well off not pulled out for that purpose.

Another thing I think the small operator must consider pretty carefully is whether or not some labor-saving piece of equipment is going to pay out for him. Just take as an example, we might say that a manure loader might be handy. Goodness knows, I don't like to pitch it by hand any better than the rest of you. But if I have only 100 loads of manure a year to handle, I can hardly justify a $4,000 equipment charge for that particular item. Another thing that we must not forget is that on a small farm the labor of the operator and his family is one of the cheapest commodities that he has to sell. If he buys a machine which saves him a good many hours of labor, that's nice for his back. But it still may cost him quite a little more for that machine which he can't use to full capacity.

The small farm, I feel, has suffered under our past Government farm programs in that most of the programs have further reduced the units of cash crops that can be produced. As a result a high support of parity price does not help very much on a small farm—particularly if you don't have anything to sell. For example, on my own place (I can speak of that because I am more familiar with that than I am with others) a 60-acre wheat allotment even at a good yield will not give much of a net return. So that our setup in our past farm programs have had a tendency to not help the small operator because they have cut his units down so much that even though he got more for what he had in total he didn't increase his income very much. Now those are the two disadvantages, as I see it, of the small operator. He has a high equipment cost and he has under our Government program been limited even more than he would have been on the number of units that he can produce.

Coming down to the credit side of the ledger, let's look at a few of the things that we have on our side. First, the chief commodity that a small farmer has to sell is his and his family labor. So he must plan his program to make the best use of his labor. This means enterprises that will spread and utilize this labor over the entire year rather than to 1 or 2 high seasonal peaks. Livestock enterprises do this to a very good advantage and have some disadvantages. Certainly he is not able to take off for California or Hawaii and even come here to Spokane for the farm forum. It means that somebody has got to go and milk the cow, feed the pigs, gather the eggs. He is not quite as free as if he were out here and did most of his work in a 2 or 3 month period and then had a lull between them. It's a year around business. But that is one of the chief things he has to sell is his labor and I don't think that he is going to be able to get by. I would like to have a larger operation. My present equipment would handle without adding a single item 500 to 600 acres. Instead of using a cat 450 hours, I might increase that to 1,000. And the same thing with my other equipment—but how are you going to do that. I've had an economist or 2 and some friends that said "well, that's all right, just get another 250 acres." That is a darn sight easier said than done. You are just about limited in an area like the Palouse area to what you already have because it seems like whenever anything comes up it isn't a small operator like myself, who probably couldn't pay much more than the shoestring payment necessary to start the thing, gets it but it's somebody that's got the cash to put down on the barrel head and that talks these days.

The small operator can intensify his operations and his efficiency so that he produces more per acre. This can be done through improved cultural practices, improved varieties and our new crop varieties and our new developments in livestock. In 1928 when I was working on my masters thesis the experts thought they were getting

very efficient production if they could get by with 100 pounds of pork on 350 to 375 pounds. I noticed an article the other day an experiment which they actually were getting pork production for as little as 2½ pounds of grain per day. There is just one of the examples of more efficiency in livestock. We're using fertilizers today in the area by Pullman which used to be considered a summer fallow area. Right now there is just a lot of recropping. That's being done by the use of fertilizers and by the use of some improved cultural methods and by the use of improved varieties. Where can we get that information. I think one of our best sources is our extension soil conservation service and other Government agencies as well as private organizations. I don't think we should sell private organizations down the river but I think that we should take some of their claims, and at least study them pretty carefully because usually if the fertilizer salesman feels you need fertilizer I think he is right, but sometimes I wonder if you need 500 pounds or whether you need 250. I do feel that, perhaps, the information that is given out through our research programs and our extension service probably would not tend to be a little prejudiced sometimes against our pocketbooks, and I think you'll find that sometimes happens.

What else can the small farmer do? I think he must produce a quality product and one which is in demand. Right now the lard-type hog, as we all know, is out of business. I mean as far as the packer is concerned it is out of favor. Let's put it that way because he has no demand for it. So the grower that is going into the hog enterprise certainly doesn't want to go in for the little short lard-type hog but rather for some of the improved meat-type strains of hogs. That is just one example. In times of a surplus of any commodity the quality product always moves. The quality produce moves first and usually at a higher price. If there is going to be any left, it's usually the poor quality product. Fourth, labor may be utilized and income increased by what I like to call vertical diversification and upgrading. For example, the small farm operator might grade and candle his eggs and thus increase his return 8 to 10 cents per dozen on eggs. Or, he might rogue and certify his cereal crops and increase their value 25 to 50 cents per bushel. The same thing would apply to selling a small percent of his livestock as breeding stock. In other words, he's got a commercial herd but if they are of the right quality and type he can sometimes add a few dollars to his income by selling some as breeding stock. Quality products are a must if this part of the program is to succeed. If you are going in for this thing, that's the thing you've got to strive for. Fifth, the small farmer must, and this applies to all farmers, must be a good businessman and an economist as a difference of 30 days in marketing a commodity which has seasonal peaks may mean the difference between a nice profit and a loss. He again should make use of the crop and livestock economic information available through his extension service and other Government agencies. Sixth, I think that he and his family must like farm life and be willing to work for what they wish to accomplish.

I personally am old-fashioned enough to think that there is no place like the farm to raise a family. And I think some of our surveys will bear out the fact that our rural boys and girls who live on a family-size farm have plenty of work. We don't find as much juvenile delinquency among the rural group as we do those who may be wondering just what they can do with their time next. I think any of you who have been out to the Spokane Junior Livestock Show can appreciate what I mean when you see what those young farm people are doing. Many of the junior show animals, incidentally, are coming from the small family-size farm.

The small farmer must be willing to sacrifice a little bit. He is not going to work on a union wage scale nor hours. I suspect he is going to put in over 3,000 hours a year rather than the 2,000 hours a year which our industrial workers seem to feel is really too much. And, according to our previous speaker, they would like to get that down probably to 1,500 hours a year. They say that hard work never killed anybody. I'm not too sure that it didn't shorten some people's lives but I feel pretty confident that my chances of dying from overwork on the farm are a lot less than my chances of being killed in an automobile accident on vacation in California. That's just my feeling on the thing. Maybe our home farm isn't going to kill us off as quick as some of the vacations we may take in our car.

To Israel's Lebanese Neighbors

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. DINGELL. Mr. Speaker, I very much wish to again bring to the attention of our American people the fact that Israeli and Arabs alike in the Middle East are not desirous of war but really hope for peace. It is the extremists who seek to prevent a peaceful settlement so that all may live together in the Mideast to develop the resources of the area for the good of the people. I again insert into the RECORD an article appearing in the Leesan Al-Adl, a weekly Lebanese newspaper published by Checri S. Kanaan, expressing the desire of all the people of the area to live together in peace and harmony:

TO ISRAEL'S LEBANESE NEIGHBORS

Through the Lebanese in our own community, as one Detroiter to his fellow-citizens of Lebanese extraction, I wish to appeal to the people of Lebanon in behalf of the just cause of good neighborliness and humanitarian fellowship.

Lebanon, bordering on Israel, has been and remains to this day the most peaceful of Israel's neighbors.

I believe that this is due to your countrymen's recognition of the fact that Israel desires to live in harmony with the peoples who surround her.

Therefore there have been no border incidents on the Lebanon-Israel frontiers.

This is an indication that both peoples respect the rights of their citizens to live in their homes without danger, to work in their fields, to conduct their business, to walk freely in their communities, at any hour of day or night, without fear of attacks from terrorists.

Such human relationship must become the order of the day among all peoples.

But your country is officially a member of a league that is encouraging enmities against Jews, that has instigated murders of Jews, necessitating retaliations by the Israelis.

There are some Lebanese who are giving comfort to the enemies of peace.

But I am deeply convinced that most of the people of Lebanon lean in the direction of peace, that they seek amity not only for themselves, but also for Israel, and therefore also among and for all the other peoples of the Middle East.

My appeal to you is to join hands with Israel, to encourage your countrymen in Lebanon to make peace with Israel and to strive for peace in that entire area.

Israel suffers from the state of war. So does Lebanon.

Israel tourist trade has been cut off as a result of the inhumanities that have forced Israel into an armed camp, in order that the lives of her citizens should be protected.

Lebanon, too, once a great attraction to tourists of all faiths and all nations, is suffering from the war scares that have been imposed on the Middle East by tyrants.

Beirut suffers as much as Tel Aviv.

So do Cairo and Alexandria and Damascus.

No Jew nor Christians ever went to Jerusalem without also visiting Beirut and Cairo and other great centers in the Middle East. Now they all suffer.

I appeal to you: Let us join hands for peace, so that all peoples may benefit from Goodwill and humanitarian neighborliness.

The Lebanese in this country can do much to encourage peace. Won't you begin the movement for peace, to start with Lebanon and to spread to other lands of the Arabs, our cousins, with whom Israel desires peace and for whom the Jews of America would like to feel only the warmest kinship?

This is an American Jew who appeals to you to work for peace, to induce your countrymen to make peace with Israel, and who chooses to sign himself with the Hebrew word for peace, "Shalom."

South Carolina's Republicans

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. DORN of South Carolina. Mr. Speaker, ladies and gentlemen of the House, the Republican Party of South Carolina is making fantastic progress under the leadership of the Honorable David Dows. As a member of the opposition party in my State, I have come to respect Mr. Dows as a clean fighter, a man of ability and of the highest character. Mr. Dows believes in our constitutional form of Government and our free enterprise system. He has dedicated his efforts in establishing a strong opposition party in our State to give us better Government. He believes in the two-party system. Under his leadership, the Republican Party in South Carolina last fall polled the largest vote, I believe, it has ever polled in South Carolina, certainly the largest vote since 1876.

I might say, Mr. Speaker, that 4 years ago, Mr. Dows was the Republican nominee for Congress in my district. While making no active campaign, he polled the largest Republican poll received in the Third District since the 19th century.

He is my warm, personal friend, and I am happy, Mr. Speaker, to insert at this point in the RECORD an editorial from the Index-Journal, my hometown newspaper:

SOUTH CAROLINA REPUBLICANS

South Carolina Republicans apparently do not intend to let their organization die, now that it has been given some life.

Republicans from this State plan to attend a regional meeting at Louisville, Ky., May 10–11, it is reported from Columbia. Also, young Republicans of the State plan a meeting in Columbia, April 27.

South Carolina could profit from the two-party system, and the Republicans are probably on the right track when they deal with young people. For many older persons the name Republican leaves a bad taste in the mouth, and while they have left the Democratic Party, they can not bring themselves to embrace the GOP.

David Dows of this county has given a respectability to the Republican Party in South Carolina which should get it off on a sounder basis than ever before. He did that through his own integrity and through his firmness in fighting the party battles of the past few years through the courts and the party councils to a decision.

His goal was to conduct affairs so that it would not be on a personal basis, but would conform strictly to the rules of the party and the laws of South Carolina. His efforts have done much to help bring about the two-party system here.

The Lighting of the Torch for Religious Freedom in America

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. LATHAM. Mr. Speaker, I wish to insert in the RECORD for the benefit of the Members a copy of a letter to the Postmaster General, which is self-explanatory; an editorial from the Long Island Press of March 10, 1957; and the text of the Flushing Remonstrance:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 21, 1957.

The Honorable ARTHUR E. SUMMERFIELD,
The Postmaster General,
Washington, D. C.

MY DEAR MR. SUMMERFIELD: I write this appeal on behalf of the four Members of Congress from the County of Queens, in the State of New York, the Honorable ALBERT H. BOSCH, Hon. JAMES J. DELANEY, Hon. LESTER HOLTZMAN, and myself. You will note, therefore, that this appeal is bipartisan and unanimous, as far as the congressional delegation from Queens County, N. Y., is concerned.

We would like to renew a request made before to you that the Post Office Department issue a stamp in commemoration of the signing of the famous Remonstrance at the Bowne House, Flushing, Queens County, N. Y. This landmark was dedicated as a national shrine to religious freedom and tolerance on October 10, 1945. December 27, 1957, will be the 300th anniversary of the signing of this document which lighted the torch of religious freedom in America.

It is our understanding that the Post Office Department prefers to issue commemorative stamps only on significant anniversaries. Could there be any more significant anniversary than the 300th anniversary of religious freedom in America?

It was in Bowne House in 1649 that John Bowne openly defied Gov. Peter Stuyvesant and the Dutch Government by giving asylum to persecuted Quakers who had been prohibited and denied the freedom of worshiping God according to their beliefs. For this John Bowne suffered arrest, imprisonment, separation from his family, and banishment from America.

I am sure you will find in your files numerous endorsements of this commemorative stamp and suggestions for a design.

I hope you will give the most earnest consideration to this request.

Sincerely yours,

HENRY J. LATHAM,
Member of Congress.

MUST LONG ISLAND REMONSTRATE AGAIN?

The Post Office Department has issued stamps to commemorate many historic events and to honor famous Americans.

It also has issued special stamps in tribute to poultry-raising, the trucking industry, and the Baltimore and Ohio Railroad—to name a few.

The time now is ripe for the Post Office Department to issue a stamp commemorating one of the greatest events in our history, the establishment of true religious freedom in America.

That freedom was established on Long Island. It was born in the historic Flushing Remonstrance of 1657, and this is the 300th anniversary of that event.

In those early colonial days, some valiant Long Islanders ran into trouble with Gov. Peter Stuyvesant over their right to worship according to their personal religious convictions. This series of troublous events reached its climax when Stuyvesant posted a proclamation in every town forbidding the good countrymen to accept Quakers into their homes.

The Remonstrance was Long Island's answer to Governor Stuyvesant. It marked a turning point in the battle for religious freedom.

The Post Office Department has been asked to issue a special commemorative Religious Freedom Tercentenary Stamp. A proposed design for this stamp has been submitted to Washington. It bears the picture of Bowne House—the home of John Bowne, an early fighter for religious freedom.

Unless the Post Office Department soon shows some indication that it is going to authorize a Religious Freedom Stamp—in connection with the tercentenary—it will be time for Long Islanders to send Washington a 1957-style Remonstrance.

REMONSTRANCE OF THE INHABITANTS OF THE TOWN OF FLUSHING TO GOVERNOR STUYVESANT, DECEMBER 27, 1657

RIGHT HONORABLE: You have been pleased to send up unto us a certain prohibition or command that we should not receive or entertain any of those people called Quakers because they are supposed to be by some, seducers of the people. For our part we cannot condemn them in this case, neither can we stretch out our hands against them, to punish, banish or persecute them, for out of Christ God is consuming fire, and it is a fearful thing to fall into the hands of the living God.

We desire therefore in this case not to judge least we be judged, neither to condemn least we be condemned, but rather let every man stand and fall to his own Master. Wee are bounde by the Law to doe good unto all men, especially to those of the household of faith. And though for the present we seem to be unsensible of the law and the Law giver yet when death and the Law assault us, if wee have our advocate to seeke, who shall plead for us in this case of conscience betwixt God and our own soule; the powers of this world can neither attack us, neither excuse us, for if God justifye who can condemn and if God condemn there is none can justifye.

And for those jealousies and suspicions which some have of them, that they are destructive unto Magistracy and Minsterye, that can not bee, for the magistrate hath the sword in his hand and the minister hath the sword in his hand, as witnesse those two great examples which all magistrates and ministers are to follow, Moses and Christ, whom God raised up maintained and defended against all the enemies both of flesh and spirit; and therefore that which is of God will stand, and that which is of man will come to nothing. And as the Lord hath taught Moses or the civil power to give an outward liberty in the state by the law written in his heart designed for the good of all, and can truly judge who is good, who is evil, who is true and who is false, and can pass definitive sentence of life or death against that man which rises up against the fundamental law of the States General; soe he hath made his ministers a savor of life unto life, and a savor of death unto death.

The law of love, peace, and liberty in the states extending to Jews, Turks, and Egyptians, as they are considered the sonnes of Adam, which is the glory of the outward state of Holland, soe love, peace, and liberty, extending to all in Christ Jesus, condemns hatred, war, and bondage. And because our Saviour saith it is impossible but that offenses will come, but woe unto him by whom they cometh, our desire is not to offend one of his little ones, in whatsoever form, name or title hee appears in, whether Presbyterian, Independent, Baptist or Quaker, but shall be glad to see anything of God in any of them, desiring to doe unto all men as wee desire all men should doe unto us, which is the true law both of church and state; for our Saviour saith this is the law and the prophets.

Therefore if any of these said persons come in love unto us, we cannot in conscience lay violent hands upon them, but give them free egresse and regresse unto our town, and houses, as God shall persuade our consciences. And in this we are true subjects both of church and state, for we are bounde by the law of God and man to doe good unto all men and evil to noe man. And this is according to the patent and charter of our towne, given unto us in the name of the States General, which we are not willing to infringe, and violate, but shall houlde to our patent and shall remaine, your humble subjects, the inhabitants of Vlishing.

Written this 27th day of December, in the year 1657, by mee

EDWARD HART,
Clericus.

Let Us Correct the Causes of the Farm Problem

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the RECORD I include a notable and timely address by Hon. JAMIE L. WHITTEN, of Mississippi, delivered before the Plains Cotton Growers Association at Lubbock, Tex., Monday, March 18, 1957.

Mr. WHITTEN has served as chairman of the Subcommittee on Agricultural Appropriations in the Committee on Appropriations for many years and is perhaps as familiar with the farm problem as any man in the Nation today:

LET US CORRECT THE CAUSES OF THE FARM PROBLEM

We have learned that controlling acreage will not control United States production.

We also have learned that reducing United States production will not reduce world production.

Also, the Department has shown, through its shortsighted policy of holding United States offerings in world trade above world prices, which it followed up until a year ago, that while such course would help hold up world prices, in the process foreign countries increased production, got the markets, and the United States ended with surpluses on which it paid storage and continued to reduce United States acreage, while foreign acreage expanded.

We have learned that Secretary Benson's theory of reducing price supports won't work. In recent hearings before my committee, it was shown that the Secretary's action in reducing price supports on cotton $15 per bale had not decreased production, had not increased consumption, nor had this reduction been passed on to the consumer. All his action did was to lower farm income.

Existing law invites every farmer to increase his production per acre to the fullest extent he can. Present efforts to control United States production by acres leads to more and more use of expensive fertilizers, insecticides, irrigation equipment, and other expensive equipment, adding to operating costs. As the farmer, with reduced acreage, tries to produce more and more per acre under existing law, in effect he cuts his own acreage for the following year. And, if continued, it would mean a gradual shrinkage of an already too small acreage, resulting in more and more people being forced from the farms.

The present acreage reserve program, where the farmer is paid for leaving out of production a part of his allotted cotton acreage, also heads in the wrong direction and is based on the false premise that removing acres until present supplies are sold will correct the farm situation.

It is my opinion that such program is doing untold harm to every city, town, and village in the country. I would point out another fact which farmers should recognize. Today there are only 13 percent of the American people on farms and the other 87 percent will believe that this acreage reserve payment is a direct gift to the farmer, whereas in fact it will be of little help to the farmer, for the reason that the farmer must leave this acreage out of his already limited allotment. Such payment from the Government will not substantially add to his income, but is in substitution for the income he would have received from the acreage. Since the payment comes for not farming, it is my opinion this will, in time, inflame the American people against farm programs generally.

It is my belief that we must rewrite our farm legislation so as to reverse the present approach, which leads to less and less farming on a more and more expensive basis, which does not relieve the world supply and demand situation and makes the condition with the American farmer more and more dependent upon the 87 percent of Americans who are nonfarmers, who in the final analysis, through their Representatives in Congress, must accept any farm program in order for it to continue.

We must start out with the premise that any farm program, to be worthwhile, must let the American farmer farm. The world needs American production; if American farmers do not farm year in and year out we will gradually lose our markets to foreign competition. If our farmers do not farm, all businesses which are to any degree dependent upon farm production and activity will feel the pinch greatly as they are beginning to do at the present time.

If we do not let our farmers farm, where are the thousands and thousands of young 4–H Club members going to find a place to use their talents in connection with farming?

It is my belief that the best approach to our present farm difficulties is through a domestic allotment plan. I have been working with lawyers at the Department of Agriculture in recent weeks, in an effort to write such a bill, which would apply to wheat, tobacco, and rice on the same general basis as it would for cotton. We all recognize that with a dollar an hour minimum wage, the bargaining rights of labor unions, 14 freight rate increases since World War II, and all the other costs built into the American economy by various laws, it is absolutely essential that some protection against such costs be given to the American farmer through price supports. I am convinced, however, that these protections should be self-financing in that the costs should be passed on to the consumer by the sales price. All cost of wage contracts is paid by the consumer. All the costs of freight rate increases are borne by the user. Thus it goes. Only the farmer is left dependent upon annual appropriations of the Congress; and yet the necessity for such financial support of the farmer flows from these other laws which add to his costs. Therefore, I am preparing a bill which will be introduced shortly, wherein the American cotton farmer will be given support on his share of the domestic market, figured in terms of bales or pounds. Such supports on the farmer's share of the domestic market should be on the basis of 100 percent of parity. Under such bill, the farmer will be released from acreage controls and any cotton that he produces beyond his share of domestic markets would be available only for world trade and on that share of his crop the farmer would be dependent on what the world market would pay.

This approach would guarantee to users of American cotton that the United States would continue as a consistent source of supply. Under this approach we would get rid of all acreage controls and the many troublesome features of such a control program.

Based on my years of experience as chairman of the Agricultural Appropriations Subcommittee, where we review annually the overall farm-program operations, it is my belief that the mechanics of such a program would be to issue to the farmer annually certificates for his share of the domestic market, figured in bales and pounds on somewhat the same basis as acreage is now figured. Domestic mills then would be required to use only certified cotton to meet their domestic market, but would be authorized to buy at the world price a sufficient quantity of cotton for their export market.

Such an approach would prevent the outlay of millions of dollars each year by the Government, as is now required. Instead of the American people being taxed to support the farm program, the users would pay the cost just as now the users pay the cost of wage contracts, freight-rate increases and all the rest.

Such a program will make it possible to use our exchanges, it will restore cotton movements to normal channels, and above all it will let our farmers farm as against present programs. It will let the farmer rotate the use of his land, reduce his operating expenses and will relieve the farmer from having to vote more and more acreage restrictions on himself in order to obtain support prices.

Such bill will require the Secretary of Agriculture to sell at competitive prices any cotton above a security reserve which comes into the hands of the Commodity Credit Corporation, within 12 months after title is taken over by such Corporation. Such a program would regain and retain the farmers' export market upon which his economic well-being is dependent.

May I ask that all farmers and farm organizations study such proposals for the purpose of improving on their views. I am sure that such a program will not be perfect. However, I do know such an approach will do much to correct the glaring defects in the present law which reduces the farmer's farming every year and which leaves the farmer more and more dependent upon annual appropriations of the Congress.

Barns and Skyscrapers Inseparable

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. HORAN. Mr. Speaker, under leave granted me to extend my own remarks in the Appendix of the RECORD, I am privileged to include a talk given at the Spokane Farm Forum recently by Mr. W. B. Camp, of Bakersfield, Calif.

Mr. Camp's speech graphically depicts some of the problems today facing the rural businessman.

BARNS AND SKYSCRAPERS INSEPARABLE

(By W. B. Camp)

It has been well said, "There is nothing so constant as change." This is particularly true in American agriculture. The story is the same whether it be north, south, east, or west. Farmers are breaking away rapidly from the traditional pattern of agriculture. We are in the era of intensive mechanization and keen competition. We are in the middle of an agricultural revolution all over America.

Research and education are the fundamental bases for all progress, and the progress made in American agriculture up to now is but a steppingstone to what we may expect in the future. Agriculture has advanced step by step with scientific and technological achievements; it has kept pace with the rapid advance of industry. Together they have made possible the unparalleled standards of living that we now enjoy.

Newspaper cartoons still picture farmers wearing patched overalls and seedy straw hats, and I'm sure we don't mind. Most of us do wear sturdy clothes when out working our crops or when around the barn taking care of farm chores; but the time has come when farmers must not be considered a separate or a special class of the American society. No longer should we use the term "farmers and businessmen." It should be "farmers and other businessmen."

A successful farmer these days must be a combined scientist, engineer, and good businessman. He must have expert training, and it should come early. Our school authorities in this country are to be complimented for the fine agricultural programs set up in almost every school. The progressiveness of agriculture in each of our States today can definitely be measured by the training boys and girls have been receiving in agricultural courses, and through their 4–H Clubs and Future Farmer chapters. This in-the-classroom and on-the-farm training, combined with the work given at our agricultural colleges, gives our young folks the finest agricultural training available anywhere in the world.

Awareness of the mutual interdependence of agriculture and industry is growing generally. The present-day farm could not exist without the products of industry. It is also true that industry could not prosper without strong outlets among its farm cus-

tomers. This interdependence is due primarily to the development of mechanized commercial agriculture. And while increasing commercialization has at times brought more prosperity to the farmer, it has also made it possible for him to go broke much faster. In the 1920's it took 8 or 9 years for a farmer to go broke—while today the job can be done in 2 or 3 years—or even less.

This growing commercialization of agriculture quite obviously then has brought town and country closer together. The farmer buys more of more different things in town now—and he also sells more in town than ever before.

It is difficult for many of our people to fully appreciate the true meaning of this. So it is important that we do everything possible to bring about a more realistic understanding concerning these matters. We must tell the full story where it will do the most good for the future—to the youth of the country.

City chambers of commerce have done a good job of getting their school children to visit industrial plants as a regular part of school work. Let's get busy and have these same city schoolchildren taken on well planned farm tours. This could be of great value to all.

Again I speak of "change." For the country as a whole, the tendency over a period of years has been toward the consolidation of small farms into larger farms. That tendency will continue, if we are to have the greatest economic production.

The family farm of the future will be a new type of farm. It will be bigger, better equipped, better financed, and better manned than it has been in much of the country. As such, it can survive. The family farm is invaluable. The best men and women the world has ever seen have come from this type of farm. It will still provide us with these men and women—if we give it a chance. I am for giving it a chance as a free independent enterprise, where ability will find its natural and abundant reward. But what we have known as the family-size farm in parts of the country in the past is definitely on the way out. This naturally applies more to some types of agriculture than to others. Farm consolidations and abandonments have reduced the number of farms 10 percent in the last 4 years. This is at a rate of nearly 120,000 farms per year.

Increasing the size of farming operations does not automatically guarantee a higher income. Sound management is still a must—in fact, even more necessary as the size of the operation increases. Good farmers will survive if they are good managers, employ modern methods, recognize progress, and honestly face the fact that their operation must be large enough to comprise an economic unit. Please don't misunderstand what I am really saying. I am not arguing for large farms as such. I am merely saying that for most of our crops in the United States farms will continue to increase until they have reached a size that will be economic for that crop.

Those who are close to the land should be helped to stay if it is possible to do so, but I do not want them kept as mendicants nor as slaves of the "welfare state." I do not want them kept there by any sort of device that penalizes initiative or rewards inefficiency. Such devices cannot last. After all the public interest is going to prevail, if we are to remain a free people.

Yet, we have a bunch of so-called do-gooders over the country blindly arguing for unrealistic programs. These bleeding hearts are advocating higher and higher wages (and I am for this up to a point—I like to pay good wages). The same bunch is yelping for cheaper food (I'm for that too, provided there is a profit left to furnish a decent living for the farmer and his family). The very same bunch is damning the actual and inevitable trend in American agriculture and demanding a return to the old-type family-size farm—which really means a return to horse and buggy days. In those days, modern plumbing and other conveniences were not for farmers.

This type of mouthing has its appeal to many unthinking people, but the fact is these three things—higher and higher wages, cheap food, and smaller farms—never have, don't now, and never will go together. We all know that a pair of shoes, a tractor, or an automobile would cost very much more if they were made in thousands of little shops, and if present high rates of pay maintained. And I insist that farmers are entitled to just as good wages as anyone else.

And again I speak of change. It has not been so terribly long ago that I was plowing my bull on our small farm in South Carolina. It has been still a shorter time since I went to California and planted the first patches of cotton in the San Joaquin Valley.

Today cotton is the number one cash crop in California, Arizona, and New Mexico. The income from cotton in California in 1953 was greater than the total combined income from the three major fruit crops of citrus, grapes, and peaches. Of course, all of this cotton is grown with irrigation.

This leads me right into another subject that I wish to mention—namely, supplemental irrigation in the rainfall region. I speak of this here today because I suspect there are many of you who do not know just what is taking place in this respect.

It is my conviction, based upon my own personal experience and observation, that supplemental irrigation is the most important single thing now offered for the improvement of agriculture in the rainfall belt. I say this in spite of the fact I know there are still a lot of doubting Thomases. My two sons and I own and operate farms in South Carolina and we irrigate everything with highly pleasing results. In my opinion, the time is not far distant when all the better farmers across the country will accept irrigation just as readily as they accept tractors and electricity today. Certainly a revolutionary change.

So progress marches on. We cannot, and should not attempt to reverse a natural economic trends. We should not, by legislation, try to prevent the shift of crops from one State or area to another.

I have always been one of those who feels that just as surely as water runs downhill crops and livestock are also going to flow, or migrate, toward those areas in this country where they can be most economically produced and marketed. This same reasoning also applies to industrial plants. This is as it should be—though it can only happen under a free economy. This is not the way they do it in Russia.

As you folks know, farmers have been called many ugly names for refusing to sign contracts with unions. We recognize the right to collective bargaining, but we also recognize the right of any person to choose for himself whether or not to join any organization. We are still proud of the independence of our industry in this respect. We want to remain free to produce, free to harvest, and free to market the crops that means so much to our families and to our country's prosperity.

For this reason, we believe that it is in the interest of everybody that the law be enforced which recognizes and assures the fundamental right of freemen to work to obtain a livelihood for themselves and their families, and to do so entirely free from coercion by unions, employers, or any other agency.

And now a word about the present farm situation. It is possible that most of you are now experiencing a mild to strong boom in your business. We farmers have been told that 1956 was another wonderful year for business in general. Almost everything we read or hear over the radio says the same thing. Therefore, it must have been so. However, as you know there is one major segment of our economy that has not done so well for a lot of our people during the past few years. I am speaking of agriculture. We do have farm problems. They are real, and we can't just wish them away. Overproduction is the heart of the farm-price problem.

We farmers could stand many of the price declines if we saw our costs coming down proportionately. But just the opposite has happened. As a result we find ourselves fighting with our backs to the wall. Writers call it a squeeze. That is really quite an understatement. Industrial wage increases has caused higher prices for machinery and other farm supplies. The only things that are cheaper for the farmer are the farm products he buys from other farmers.

A few years ago we said, "Food will win the war." Farmers went to work and produced in abundance—as never before. We won the war—but farmers were geared or tooled, for high production. It isn't possible to flip a switch and shut off crop production like you can factory produced items. Now we have several billion dollars worth of surplus crops on hand. What to do with it is a very big question. It is very encouraging to see that during the past several months much progress has been made in exporting vast quantities of these surpluses, and the future begins to look brighter.

I think it should be said right here that even though this surplus is troublesome, our problem would certainly be more painful to all America if our farms failed to produce enough to feed and clothe us.

How long can farm income be squeezed without upsetting city prosperity? I know of no sure-fire answers, but here are some facts and theories:

Effect of low farm prices on the cities is being offset so far by bullish factors in the rest of the economy.

Increased employment in industry, housing, etc., is absorbing any unemployment stemming from decreased farm expenditures. It's also absorbing the workers who are migrating from farms to cities. Net migration from farms to cities averages over 1 million yearly.

Serious unemployment and reduced farm income would mean trouble in the entire economy; but unless considerable city unemployment develops, some farm distress, in the midst of city prosperity, may continue for a while.

We have many people in this country writing newspaper articles and making pretty speeches about how well off they think the farmer really is. They tell you in one breath that the farmer may not be selling his produce for enough to pay expenses—but they hasten to say this should not be considered too bad because farmers have other off-the-farm income.

These smart boys have the audacity to say that farmers a few years back were living in a "dream world." A world in which they have no right to dwell. Farmers must get back to the "good old days" they say when their living standards were much lower than those of their city cousins. This in spite of the fact that all of the businesses in this country, together with all of our labor, except farm labor, are enjoying the greatest prosperity they have ever known.

These same fellows will tell you that for the country as a whole about one-third of the farmers' total income is from sources other than the sale of produce. Recently, I heard one of them state that more than one-half of the total income of farmers in the New England States is from sources other than the sale of farm produce. When questioned about what these other sources of income might be, this fellow gave as an ex-

ample, that: "some farmers make additional money by taking in overnight lodgers."

I am sure all of you will agree that in the long run our farm prices have got to be such that farmers can pay their expenses and take care of the needs of their families from the income derived solely from the farm itself. Farming as such has got to be a profitable business just as does the operation of a department store, or anything else.

Those of you who are farmers here today recognize the value of cooperating with other businessmen. We must bear in mind that the proportion of people who understand agriculture is small, and constantly declining. So I ask you to take this suggestion back to our colleagues. Join with other businessmen in the doings of our chambers of commerce, and other civic bodies. Your local chamber, State chamber and the United States Chamber are organizations through which we can make ourselves heard by others than just other farmers. And we farmers will be heard, if we are willing to listen to others; as well as speak ourselves.

As farmers, we must face up to it. We may not be the political force we once were. Even so, it is important to remember that farmers, and the farms, are absolutely essential. Food and fiber must be produced if the people are to live and work. They can do without radios and automobiles and other modern conveniences, but they must be fed and they must be clothed.

Today less than 13 percent of the Americans live on farms. Yet almost a hundred percent have an opinion on how farmers should live and how they should be treated. We have members of State and national legislatures who don't even know the difference between a steer and a bull. They debate violently over agricultural problems. Men vote on laws affecting prices of agricultural products who know absolutely nothing about agriculture.

This is why the farmer wants the city man to better understand his problems. Unlike labor bosses or big government, the farmer is not trying to take over the country. He is not attempting to take over control of cities, and he is not trying to stuff any new systems or way of life down the throats of the people. The farmer is a capitalist. He owns property and wants to make it pay a profit.

With these basic facts in mind I have made it my business, during the past 5 years that have been your agricultural representative on the United States chamber board, to try and stamp indelibly in the minds of other members the fact that agriculture is a very important segment of our overall economy.

Actually, when we speak of our agricultural plant that produces food and fibers, we think of only a part of it—the farm. In reality, many more segments of the nonagricultural economy are included in the agricultural plant. Aside from the automotive, farm machinery, and petroleum industries, more and more chemical industries have become suppliers of agriculture. And when all the processing, transportation, banking, and other commercial services are considered, there are scarcely any industries which do not, in some way, participate in farm production.

Perhaps you feel you know all about agriculture—what it is; where it is; how big it is. If you live on a farm, you know agriculture as the farmer knows it. If you live in a city, agriculture probably means what you see on a drive in the country—or fresh milk on your doorstep, fruits and vegetables at the grocery—or exhibits at the county fair.

But agriculture is much more. It's big, broad and basic. It's the basic industry—its the big job—look at these figures. Of 62 million employed Americans, 25 million work somewhere in agriculture—10 million on farms, 6 million produce for and service farmers, and 9 million process and distribute farm products. In addition, a quarter-million scientists directly serve agriculture.

So, you see, about 40 percent of all jobs are in agriculture—jobs important to everyone, jobs with futures, jobs with financial and personal rewards.

So, as stated by Dr. Karl Brandt recently, it is very important for us to see the goal in our aid to agriculture in the perspective of the overall growth and stability of the national economy. Such growth requires manpower in new occupations and industries. And the reservoir from which much of this labor must come is the low-income farms.

This will be good, because as has so often been said the marginal farmer who produces very little for the market, and the unemployed farm worker is a social problem—not a farm problem.

The choice of occupation and search for the place where people earn their living must be their own. To avoid crossing the threshold of the economy of compulsion and the police state, we must either push people out of their chosen place in the economy, or bribe them with a guaranty of security in such position.

And now, with very deep gratification I again speak of change—this time I refer to politics. Most of the social reformers and do-gooders working out of Washington for many years prior to 1953, would have us believe that success is a social evil. They have been trying to help legislate unsuccessful people into prosperity merely by legislating the successful people out of it.

Even though I am a registered Democrat, I am pleased to admit that under this administration we are finding that farmers are being given a greater voice in determining what is needed. In fact, they are being made responsible for all the new agricultural programs that are now in effect.

Farmers are well aware that the Government in some capacity directly assists nearly all groups in our economy. They know of such things as certain reserve funds being exempt from taxation for shipbuilding; of industry tariffs; of the subsidization of postal rates for magazines and papers; of mail subsidies for airlines; minimum social-security benefits for labor and the like. Therefore, it is well that none of us assume the attitude that farm subsidies are unconstitutional or that farmers have an inside track on Uncle Sam's protective arm or on his pocketbook.

I am not arguing for farm subsidies, as such, but I am saying it is my opinion that farmers will relinquish their demand for some type of Federal help—only when other segments of our economy relinquish theirs. It seems fair to assume that we cannot embrace the theory of subsidies in general and then deny them to agriculture, our most basic industry, without courting complete ruin for all. I am in favor of farm programs that will place the farmer on an equal footing with other groups of citizens of the country.

After all, the real issue in our agricultural policy is not whether farmers should be assisted by the United States Government in improving their income, or, how much assistance they should receive. The Congress, as well as the executive branch of our Government are agreed that such aid will be granted in generous amounts. The issue is the clear recognition of the proper goal of such aid, and how to reach this goal with a minimum of waste and damage to the system itself.

Most Americans are yet unaware of the evil forces trying to shape the future for them. This is why we need today as never before, intelligent and enlightened understanding. We must read the signs of the times. We must read them correctly and wisely. Without this wisdom and understanding we may barter away our birthright and destroy our national security. We have too many of our good people saying, "It can't happen here." I plead with you to please not be so blind. Just look what is happening all over the world—and for that matter, here as home, too. It may be later than we think.

None of us can afford to be complacent. It is high time we wake up to what is happening. There are those among us who would challenge our American way of life; who would sustitute a system of economic controls for our tried and tested system of free enterprise, a system which has given us the highest standard of living of any nation in the world.

When the farmer is told how much acreage he must plant; when the laboring man is told he must join a union in order to work; when the merchant or manufacturer is told how much he can charge for his product; then we are dangerously close to a controlled economy.

When the power to tax is used to redistribute our wealth, then we are dangerously close to socialism.

A way of life brought us to this high place which we call the American way of life, and all the facts of history and all the facts of life today tell me that our way of life is the fullest, the freest, the most satisfying, the most promising the world has ever seen. The American way of life has provided us with an abundance, and the world with an example, the like of which was never seen before in all the history of the world.

That we may be better enabled to put up a winning fight, let me urge that we all review again two of our great basic instruments, our Constitution, with the Bill of Rights, and the Declaration of Independence. For guidance in all our thinking, these instruments have no equal in the history of any people, for they are without parallel. We must once and for all turn back to the constitutional government, and turn away from these foreign ideologies that in recent years have so bedeviled us and so bewildered our people.

And now, as Lady Godiva said as she neared the end of her journey: "I now approach my close."

Summing up, then, we might ask, what do our farm problems mean to the man behind an assembly line in an auto factory? To the man behind a desk in a New York skyscraper, or the salesman behind a counter in a Spokane department store? Not much; only the breath of economic as well as physical life; only the difference between hunger and plenty; only the difference between success and failure; that much and nothing less. Therefore, I say, barns and skyscrapers are inseparable.

The Death of President Ramon Magsaysay

SPEECH

OF

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. McFALL. Mr. Speaker, with sorrow I join the other Members of this Body in expressing my deep regret upon the tragic and untimely death of Ramon Magsaysay, president of the Philippine Republic.

A great and courageous leader of noble people, his loss will be mourned by all freedom loving peoples of the world. His passing will be especially felt in the United States because his friendship and that of his people was an anchor of strength in Asia upon which we could

unfailingly depend. His dedication to democratic principles were and should continue to be an inspiration to his people, to Americans of Philippine descent and to all people, and his life will be recorded in the pages of history as one of honor and glory.

Passing Out the Dollars Is Poor Kind of Diplomacy

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Akron (Ohio) Beacon Journal dated Sunday, March 17, written by the owner of the paper. I believe this editorial to be a significant analysis and worthy of bringing it to the attention of the Members of Congress:

PASSING OUT THE DOLLARS IS POOR KIND OF DIPLOMACY

(By John S. Knight)

The United States is finding that the role of a peacemaker has few rewards.

The British and the French press are blaming President Eisenhower for the present chaotic situation in the Middle East.

The Israelis are furious because their withdrawal from the Gaza strip was carried out on the assumption that Egypt would on no account be permitted to regain control of that area.

Colonel Nasser has consistently flouted the will of both the United States and the United Nations. The Egyptian dictator, by moving to take administrative control of the Gaza strip, has violated the spirit, if not the letter of the assurances given to Israel.

Israel, with good reason, feels she had a moral commitment from President Eisenhower that the Egyptians would not be permitted to return.

The London Telegraph is sputtering that "the decision to force the Israelis out of Gaza by threatening sanctions was taken by the President, and by the President alone. "It sprang," continues the Telegraph, "from his own personal conception of his role in world affairs as upholder of moral law."

PROPAGANDA AND DOLLARS WON'T WIN FRIENDS

And so it goes. This is the price we pay, quite apart from the billions available to any nation that has communism for sale, for accepting, as President Eisenhower has said, "Our own deep involvement in the destiny of men everywhere."

One day we will regret this global nonsense and scrap the present concept of foreign policy which is aimed at bringing about what the President calls "a universal moral order."

But, meanwhile, we go blundering along in the naive belief that propaganda and economic aid (your tax dollars) will make communism less tempting to the so-called backward nations.

On the propaganda front, Secretary Dulles predicted in Canberra "the inevitable failure of communism in Red China."

Now how does Foster, as Ike calls him, know this to be so? How can he say with such certainty that "Chinese communism will stumble over its own inherent defects"?

Dulles' remarks must have given Chou En-lai a good laugh. From all I can learn, the leaders of Red China are sitting pretty. In due time they'll be living at the Waldorf as accredited representatives to the United Nations.

RICHARDS TRYING HARD TO GIVE AWAY MILLIONS

And speaking of the United States money tree, former Representative James P. Richards, of South Carolina, is now in the Middle East to shake off a few million dollar bills for the "underprivileged" in that area.

As the President's personal ambassador, Mr. Richards has $200 million in his pocket and is looking for projects such as dams, irrigation and hydroelectric installations, roads, communications, hospitals, and schools.

And Mr. Richards is a man in a hurry. He has to spend the $200 million before July 1 when the 1958 fiscal year begins.

So the State Department has prepared a list for Richards of the projects which it thinks the Arabs would like to have.

All he has to do is to obtain promises from their oil-rich leaders that they won't again play footsie with the Russians.

According to William McGaffin, of our Washington bureau, State Department officials hope he will come back with results, meaning, of course, that he has managed to get rid of our money.

JOHNSTON ADVOCATES SPEEDUP IN SPENDING

Another pie-in-the-sky advocate is Eric Johnston, Chairman of the International Development Advisory Committee. Johnston, who has Eisenhower's good ear, wants Uncle Sam to sponsor a world welfare state.

He thinks we are spending far too little on foreign assistance. Using the rationalization that more economic aid will reduce military spending, Johnston recommends a vastly expanded program to help meet the capital and technical needs of the underdeveloped countries—financed in part from funds presently designated for military spending.

Johnston prefers loans to grants, but he'll settle for outright giveaways where loans are not practical.

Like Dulles, he sees cracks in the facade of the Soviet Empire but says the new empire arising in Communist China is the next force with which we must deal.

Johnston does not specify how he would deal with Red China, but presumably he, too, would shake the good old United States money tree and stand by for results.

EISENHOWER COURSE CHANGED AFTER ELECTION

In 1952, Eisenhower campaigned for a balanced budget and lower taxes. As President, he achieved both in his first term.

But following his reelection in 1956, the Eisenhower administration sharply changed direction until today Republican spending outstrips anything ever contemplated by the Democrats.

By getting so involved "in the destiny of men everywhere," the United States is now an unhappy victim of international blackmail.

Our Mr. Richards should have little difficulty in giving away your money to the nations in the Middle East.

But when the $200 million is gone, they'll all be back for more.

At that time, we either increase the ante or find them threatening to turn again to Russia.

As Senator RICHARD RUSSELL, of Georgia, has said so succinctly, "You can buy 'em once but they won't stay bought."

PAYING BLACKMAIL WON'T WIN RESPECT

It is indeed a sickening spectacle to see the United States, once a proud and self-reliant Nation, bidding in the open world market for "friends."

The true strength of our country in foreign affairs lies in the strength of our policies, the dignity and firmness with which we back those policies and the respect in which we are held by other nations.

We cannot earn this respect keeping Foster Dulles as Secretary of State, nor buy it by paying blackmail wherever the threat of communism appears.

Plea to Statesmen, Our Arab Cousins

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. DINGELL. Mr. Speaker, proof that the peoples of the Middle East are deeply interested in peace for the good of all, Arab and Jew alike, is found in an article which was first printed by Philip Slomovitz in the Detroit Jewish News. This article was picked up by a very fine gentleman, Mr. Checri S. Kanaan, editor and publisher of Leesan Al-Adl, a weekly Lebanese newspaper published in Detroit, Mich. In this article men of both the Jewish and Arab races show their good will and sincere desire for peace in the Middle East. All right-thinking men join these two very fine newspapermen in their wish that some day there may be peace between Israel and her Arab neighbors.

The article follows:

PLEA TO STATESMEN, OUR ARAB COUSINS

(By Philip Slomovitz)

Charged with tensions and uncertainties, the atmosphere surrounding the world political situation remains uncertain, replete with threats, predominantly marked by barbs constantly aimed at Israel and frequently at American Jewry for being Israel's strongest supporter.

We are reminded of the lines written 75 years ago by Emma Lazarus, in The Crowing of the Red Cock:

"His cup is gall, his meat is tears,
His passion lasts a thousand years."

Jewry's cup still is gall, and Israel, the Jew's highest achievement in 2,000 years, is being subjected to dangers that are threatening not only the security of the infant, small Jewish State, but the peace of the entire world.

New programs are in the making. A new policy is about to be formulated, but Israel is kept in doubt as to her status in international relations.

Objective students of world affairs are agreed that there can be no permanent peace in the world without an effective peace between Israel and the Arab States, and fair-minded statesmen agree that there can be no solution to any of the existing problems without the recognition of Israel's existence and her right to existence.

Therefore, there must be a return to fundamentals. Saber-rattling nations must be informed, by our Government, which has been giving them succor and has done everything to please them, and by the United Nations, they now form a formidable bloc, that if there is to be peace in the world—and peace is the first objective of this country and of the United Nations—there must be peace with Israel and that they must stop festering the free air of the world with threats that Israel must be destroyed.

What would the statesmen of the world say if Russia were to adopt a policy of repeating, time and again, an aim to destroy Britain, or France, or Germany, or New Zealand, or the United States? Would the U. N. permit that to go on unabated? We doubt it. Therefore, we plead against the application of similar threats to Israel.

On this score, we would like to address ourselves to our dear cousins, the Arabs. Neither they nor Israel can afford the continuation of a state of war. American Jews cannot afford it because they will not stand by and see their kinsmen slaughtered. We have witnessed enough holocausts not to permit another.

But the air of the entire Middle East has been polluted. The economic status of Israel and her neighbors is seriously affected by the war threats. The Middle East is suffering from economic stagnation, and even progressive Israel is seriously endangered by the lack of freedom on the seas, by the boycotts, by the termination of a lucrative tourist trade.

We reiterate: it is not Israel alone that is affected. Millions of dollars are lost annually in tourist trade, to every one of the Arab States wherefrom visitors are barred. Tens of thousands of Jews would have visited Egypt yearly under conditions of freedom. They are barred from such travel. Their American passports have been invalidated for travel to Arab areas. Their lives would have been endangered had they stepped foot on Arab soil.

Also many Christians who now are compelled to take roundabout routes when planning tours to both Israel and the Arab States are abandoning their trips rather than risk humiliations when their passports indicate the inclusion of Israel in their itineraries.

These represent great losses. So does the termination of trade among states in that area.

Those who support the policy of threatening Israel's existence, those who encourage the continuation of the present state of affairs in the Middle East, therefore are not helping anyone. On the contrary, while harming Israel, they are harming the Arabs. Instead of assisting in the elevation of the standards of living of the Arabs, they are contributing toward lowering them.

This is why we say, in addressing ourselves to our dear cousins, that it is not only the crime of fratricide that is involved here: it is not only the injustice of man threatening man, but also the basic economic interest of the nations in the Middle East that is at stake.

We wish to say to our dear cousins that when they applaud an archeological professor at the University of Michigan who assails Israel; when they embrace a so-called foreign expert who writes misleading newspaper articles about Israel's enemies, but to people who are rendering them great harm.

Can't these people understand that while Israel's cup is gall, while his meat is tears, his passion (nevertheless) lasts a thousand years? Haven't they learned the lessons of Haman and Pobedonostziev and Torquemada and Hitler, that Israel is indestructible?

Also: haven't they learned the basic right of people to life, liberty and the pursuit of happiness? They desire it for themselves; let them grant it to Israel.

Therefore, as the bargaining proceeds on the international front, as new policies are being formulated, we pray for peace, and we plead: with the statesmen of the world—primarily with our President—to strive for amity in the Middle East, by insisting upon immediate direct peace negotiations between Israel and her neighbors; and with our dear Arab cousins that they should stop being misled by propagandists who flatter them in support of a "destroy Israel" policy while they thereby harm them as much as Israel.

PHILIP SLOMOVITZ,
Editor, the Jewish News.

There Is a Place for the Big Farm

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. HORAN. Mr. Speaker, under leave granted me to extend my own remarks in the Appendix of the RECORD, I am privileged to include a speech delivered at the recent Spokane farm forum by Mr. Stanton Ganders, of Bickleton, Wash.

Mr. Gander's subject was There Is a Place for the Big Farm, and I feel that it is a searching study of some of the major problems facing the farm operator today:

THERE IS A PLACE FOR THE BIG FARM
(By Stanton Ganders, farmer, Bickleton, Wash.)

Mr. Chairman, Congressman HORAN, Honorable Director of Agriculture in the State of Washington Joe Dwyer, ladies, and gentlemen of the Pacific Northwest: I may be a Democrat but I've also only one course in argiculture and I think that was in the 8th grade. The rest of it has been in the dirt. So, I'm coming right out of the dust and I'm still in the dust to a certain extent.

I would like at this time to acknowledge the help that has been given me by the major farm organizations, Mr. Art Peterson, Perry Ness, Ted Alexander, Marion McNell, and all the rest of my friends and neighbors whom I bothered so much. I was not trying to pry into their business; I was just trying to get information. When we were through we shook hands and both usually acknowledged we didn't know what we were talking about. I feel after going into this problem that it was about the most intangible—about the most difficult assignment—I have ever had. It's just a whole lot like talking about the American way, or about free enterprise, or about surpluses. It's just plain hard to put your hands on it. After spending sometime in preparation for this talk I feel a whole lot like the little flea who was flying around the country looking for some choice victims and he happened to enter a California nudist colony. He looked and he looked and finally he said, "I just don't know where to start."

When we're talking about agriculture in our country, we're talking about a $97 billion industry. I think today our task here is not to criticize or defend the large farm but to evaluate it in the light of the times in which we are living. I am not going to attempt to justify the large farms in the terms of any layout, capital investment, or number of acres. I think we should try to interpret and appraise the large farm in terms of whether it constitutes a farm unit. And I think in evaluating a farm unit we should determine what the net income is on the farm unit.

No definition has been accepted for the family-sized farms by commodity groups, industry or actually the farm people themselves. So, I suppose I have the same privilege of any other American in attempting a definition. I am going to say that a family-size farm is one in which I can gainfully employ myself the year round, in such a way that I can make the best use of my managerial abilities in the light of the money I have to invest.

When we start on this topic we have to consider every farm individually. First of all we have a difference in individuals and in farm individualities. One person can take a farm and make it pay while another person cannot. A lot depends upon the ability of the person managing the farm and a lot depends on his previous experience. Of course, there are different amounts of capital to invest. You need a lot of capital today because land prices are up. Each family is different; the individuals are different. They have different personalities and they are different in size. It depends a lot upon the amount of family labor we have on the farms. It depends a lot upon the type of farming—whether it is a dry-land farm or whether it is an irrigated farm—whether it is a summer-fallow farm or whether it is one that can be cropped every year. It makes a lot of difference whether a farmer came in the midthirties to Whitman County and bought a farm at $250 an acre or whether he came over to Benton County and bought one for $2.50 an acre. We have different types of soils. There is a difference in climate, depending on whether we are in southern California or in the State of Washington. It makes a lot of difference in rainfall whether we are in Whitman County or whether we are in Jefferson County or Benton County. We cannot, I believe, make a blanket statement about every individual family.

It has been pointed out that the number of farms is declining in the United States. In 1935 there were 6,312,360; in 1954 there were 4,782,393. So we have lost about 2 million farms in 20 years. In 1935, 25.3 percent of the population of the United States lived on farms; today only 13.5 percent. But there was no more land in cultivation in 1954 than in 1935. In 1935 there were 345 million acres. Today the acreage is approximately the same. New land has gone into cultivation. About 1,400,000 acres are lost to suburban development, highway development, airports, etc. So, it boils down to the fact that we have fewer farms on about the same amount of land.

Farms are getting larger. I do not want to bore you with statistics but in the United States in 1935 the average farm had 154.8 acres, in 1945, 109.8 and in 1954, 242.4. In our own State of Washington in 1920, the average-size farm was 199.8 acres. In 1930 it dropped slightly to 190.9 acres. In 1941 it had risen to 185.9; in 1945, 209.3, in 1950, 248.8; and in 1954, 270.7. Of course, that includes the farms in western and eastern Washington. Let's look at Oregon, our neighbor to the south. In 1920, the average size farm in Oregon was larger than in Washington at 269.7 acres. It rose in 1930 to 301.1; in 1940 to 290.9 and in 1954 to 386.6 acres.

Hired workers all this time are decreasing in number. In 1910, 13,555,000 people were employed on the farms in the United States. Of that number 3,381,000 were hired; or about 24.9 percent of the people working on farms were hired labor. In 1955 we had 8,190,000 people employed on the farms. The hired workers amounted to 1,900,000 or 23.2 percent of the total labor. In the Yakima Valley in the last 10 years the sugar beet industry has lost practically all harvest hand labor. Also again in the Yakima Valley 10 years ago the hop harvesting used to require 60,000 workers. Now it is reduced to 12,000 to 15,000 workers. So the decrease in hired workers also shows that corporation farms are not gaining to any great extent.

I am quoting a recent article from the official organ of the American Farm Bureau Federation, the Nation's Agriculture. The article stated that corporation farms com-

prised only 3 percent of the total of United States farmland. It also stated the amount of sharecroppers is decreasing. In 1940 there were 541,000 sharecroppers; in 1954, only 272,000. So it shows that perhaps this trend to larger farms is raising the standard of living in a good many respects even in farm labor.

I sincerely believe that the farms are not growing larger because of the desires of the individual farmers to grow wealthy. First of all, farmers had to add acres in self-defense. The high fixed cost on capital investment is one reason. There are more tractors and less horses and mules than there used to be. What the farmers do now, they buy the power that they formerly raised. But we find that the power they buy is much more efficient and that way they get more bushels or more acres per manpower of labor. The tractors release from, it is estimated, 60 to 80 million acres used formerly for horse and mule feed. In 1920 there were 25,700,000 horses and mules; in 1954, 5 million horses and mules. In 1920 there were 246,000 tractors and in 1954 there were 4.6 million tractors. So there were almost as many tractors in 1954 as there were individual horses and mules.

Farmers today have to use machinery but it depreciates and it becomes obsolete. In fact, I think, at the present time much of the machinery we buy new is probably a good deluxe model of about 1937. That's the way I feel about farm machinery. Also machinery is rising in price. Farm income is going down. I am going to take just a few items, a few averages at Spokane, Wash., in 1954, showing a few articles of machinery that rose in price, a few implements, the increase from 1950 to 1954. That's 4 years only. Crawler tractors were up 22½ percent; wheel tractors were up 17 percent; moldboards were up 30 percent; dragharrows were up 16 percent; drills were up 26 percent, mowers up 16 percent, balers up 14 percent; disc plows were up 10 percent; combines were up 20 percent; delivery rakes were up 23 percent; and manure spreaders were up 30 percent. Now I am told in interviewing several dealers that these prices for 1955, 1956, and this portion of 1957 we could conservatively add 10 to 14 percent on the cost of this machinery of the figures I have just given.

Small farms cannot use high-priced machinery because of the high initial cost, so production must be increased by purchasing more land. In the Columbia Basin project we find that the machinery costs estimated by the Department of the Interior averages about $90 per acre of cropland. Now what are the advantages of the larger farms and larger production? First of all, they have improved and increased the food production. That gives us the best fed nation in the world and the highest standard of living. Our food bill averages about $395 per person or about 25 percent of the consumers' income. In an older nation the people pay over 50 percent of their total income for food. Now 13.5 percent of our population is producing our food requirement while it takes 40 percent of the population in the Union of the Soviet Socialist Republics to produce their food. Farm population has dropped 9 million in 20 years, while the United States has increased its population 42 million. If farm income had to be divided with that 9 million the standard of living would certainly be much lower in our country. People can progress by living on the farms and helping to improve our technology and so forth as has been mentioned by previous speakers. World War II again added to the trend of the smaller to the larger units with larger equipment to handle it. But the cost per unit was less so the man gets more for his labor.

I think it would be fitting and proper before I finish to state a few of the factors that I believe, are limiting the farm growth—the growth of farms in the Untied States. First of all is our lack of skilled labor to handle the expensive equipment. You put a man out in the wheat harvest with a tractor and other equipment and maybe he's sitting on a $10,000 or $12,000 tractor pulling $3,000 or $4,000 worth of equipment. You just can't put anybody out there. Also what do you have to pay. We find that with a furnished home and the utilities, the monthly farm labor wage in the United States is about $160 per month. In the State of Washington we find the same layout requires about $245 per month to get good labor. In the State of Oregon about $223 per month; in the State of California which is the highest in the Nation $255. Our neighboring State of Idaho we find according to statistics about $220. So in the Pacific States the average is about $252 per month with furnished home. In the Mountain States the average wage is about $214 per month and in the West North Central about $158 per month. Again with this huge farming operation we have a housing problem. We need more labor, we need more housing, we will have to put that on several of your farms. That is a cost. That is something to be taken into consideration. That's definitely a limitation on large farms. And again we run into working hours. We have to compete with industry. We find that the United States hourly farm wage, that's average without room and board, is about 95 cents. In the Pacific States the wage is about $1.14 which is the highest in the country and in the Southeast Central States it is very low at 59 cents an hour. So there's the difference. We are in a high wage area out here. Then again normally in this latitude we have a very seasonal demand for labor.

What are we going to do? We have your fixed cost on machinery and depreciable equipment. Are you going to let that help go and hope to pick up some comparable help in the spring? Are you going to keep them over and bear the additional expense? It's certainly a problem. Particularly to the middle-size farmer. We have fringe benefits coming up for labor. There's competition with industry, there's social security, there's many other things all adding to our costs. It makes it more difficult for the large farm to operate where we are hiring so much of our help. Also when we are talking about an intensive and extensive farm, where does an intensive stop, where does an extensive stop? What does it all means? It's hard to define.

However, we do know this. If we are increasing our production, what is the use if we cannot sell it at a decent price. And another reason why increase our managerial problems when the taxes take our additional compensation. I do not think I have to elaborate on that statement. I think we all know what that is.

Because of our desire to raise the standard of living and the people that work in industry we are having more part-time farms, more urban-rural farms, and more bedroom farms. I think that they have a place in our economy. The only thing is the people who purchase this type of farm especially if they are nonfarm people should realize, is they will have to supplement that farm and they have to live on that farm only because they like to live in the country and should work in town. We have a lot of those people. I think they have a place in our economy.

We have roughly 2 million large mechanized farms, and roughly 3,500,000 small farms with a limited income. I'm caught in the middle. I think sometimes that the middle-sized farmer is the man that is caught in the pinch right now. He isn't big and he isn't little. He has trouble with his labor. He doesn't have a steady occupancy for them. I think it's a very difficult thing. The middle-size farmer is neither fish nor fowl. Of course, we have 1 million part-time low-income farms.

In closing I'm just going to say one word about the outlook. Because of the limitations it appears to me that the large farms will not grow bigger unless efficiency factors enter in to increase the farm family labor. It appears to me that strictly hired labor does not pay. It looks like intensified farming, although technocracy and a lot of other factors may enter in. We are told by many experts that our farm machinery at the present time is 36 or 39 percent efficient. Technocracy has come in technological development, atomic energy; we can't guess what's coming. Maybe extracting energy from the sun's rays; taking the salt out of sea water, not only for domestic consumption but for irrigation. Again we have grain and other farm products that may be used for fuel alcohol. They change the picture. Plastics may take more of our agricultural products and then again comes farm programs. What are we going to get? Are we going to get good farm programs? Are we going to get handouts? Have we got something that will help us? We have the question of tariffs. We have freight rates. We have inflation or deflation. We may have war. One of our international cronies like Nasser may drop a bomb on us and may change the picture of the whole world. Interest rates may go up or down. Credit may be better, or may be loose or may be tight. We don't know.

It has been a pleasure to be here.

In Memoriam—George Holden Tinkham

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 21, 1957

Mr. PHILBIN. Mr. Speaker, we were all saddened to learn sometime ago of the passing of a former very distinguished Member of this body, Congressman George Holden Tinkham, who represented the 10th Massachusetts District for many years.

George Tinkham was a close friend of mine. He was one of the first men I met when I came to Washington years ago, when I was in college, to work on the other side of the Capitol during my summer vacations.

Throughout the years, I kept in touch with him, and saw him from time to time up to the time of his death. Of course, I held him in highest regard and esteem as everyone did who knew him. I had a real affection for him.

He was an able, devoted, and faithful public servant. More than that, he was a Bunker Hill American, and he had the courage to express and stand by his convictions for America.

George Tinkham was a keen student of Government and economics and many other subjects. Possessed of splendid training and an alert, inquiring mind, he spent a great deal of time studying governmental and financial reports. His forecast of financial and economic trends were always most interesting and accurate.

His political success was sensational; his personality and makeup unique. For years, he was returned to Congress from a district that time and time again gave him overwhelming majorities on some occasions when he was in remote parts

of the world following his hobby of big-game hunting.

As a result of his exploits in Africa, Asia, and other parts of the world he collected a large and very interesting exhibit of animals and reptiles, which were mounted in his apartment in the old Arlington Hotel in the Capital. The rare exhibits were set up against a dark background with real threatrical, dramatic skill.

When showing these exhibits to his friends he seldom turned on the apartment lights, but would personally escort his guests from one room and one exhibit to another, guiding the way with a large flashlight. There were many striking exhibits in his collection, but I always thought that the most impressive, to me at least, was the one that he had brought from India of the cobra and the mongoose. The Congressman captured the deadly cobra and the mongoose by himself in the Indian hinterlands and had them mounted in one piece in a simulated death battle.

He might seem to some to be extraordinary in appearance. He affected a Vandyke beard of the kind that General Grant wore. His black hats were invariably jauntily worn. In the winter, he wore an old-fashioned reefer, or pea coat, rather than a full-length overcoat, which came to a point just below his hips. This costume accentuated his rather short, robust stature.

He was a world traveler, linguist, and keen student of foreign policy and problems of other nations. In his own philosophy, he was a strong nationalist, rather surprising for a Harvard-bred scion of an aristocratic Boston family.

In his creed, America was predominant and paramount. He had no time for internationalism or other isms and was an implacable foe of communism. His great success in politics was attributable to his forthright, courageous attitude on foreign policy and current domestic issues and his faithful service to his entire constituency.

He was an able statesman, given to meticulous study of governmental problems and well versed in many fields of learning. He enjoyed a long, useful life and lived to a ripe old age.

George Tinkham will be mourned and missed by a great many people who knew and admired him. His outstanding service in the Congress will long be remembered. His sparkling, unusual, engaging personality, his ready wit, his good company, and his friendly spirit have left an indelible imprint upon his friends and upon the Congress and the time in which he lived.

He will be long remembered as a man of character and intestinal fortitude and devotion to his country. In the company of other Massachusetts colleagues, I attended the most impressive funeral services which were conducted for him in a historic church in his home city of Boston.

Like the many present, I was anxious to pay my last tribute to a good friend whom I had known for many years and who during his lifetime had given me so many reasons to marvel at his alert, informed, and penetrating mind, versatility, his patriotism and his loyalty to those things which are essential to uphold the Nation and its free institutions.

Few, if any, more unusual men have ever trod the halls of Congress than George Tinkham. His valuable service will have a place in our history; his kindly, generous nature a place in our memory.

To his family, I tender again my most heartfelt sympathy in their sorrowful bereavement. May he find in his eternal reward peace and rest.

Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. MAY. Mr. Speaker, as the Congress is about to begin consideration of the very vital civil-rights program, I feel that it is especially appropriate to insert in the RECORD the very keen analysis of this problem in the Hartford Times editorial of March 20:

CIVIL RIGHTS BILL

The civil rights bill, embodying most of the Eisenhower administration's proposals, again is starting its tortuous route through Congress. The 32-member House Judiciary Committee has approved the measure in the face of the usual bitter opposition from southern Congressmen.

This is the bill which would set up a six-member bipartisan commission with broad authority to investigate complaints on denial of equal rights because of race, religion, or national origin.

Whether this Congress will pass the bill, of course, is doubtful at this juncture. But, whether it approves it or not, the basic ideal embodied in the measure is bound to be enacted someday. We cannot stand before the world as champions of equality and, at the same time, withhold it from large blocks of our own citizens.

Before the committee passed the bill the southerners managed to get two of their suggested changes accepted. They had been firm against granting blanket authority to the Attorney General to institute suits on behalf of alleged victims of discrimination, even if they did not want such costly litigation. The bill now stipulates that the complainant must initiate the action himself.

In the other instance, the southerners prevailed with an amendment which gives the Attorney General authority to seek preventive injunctions only when the evidence gives reasonable grounds for suspicion that an employer or an election board had intended to discriminate.

These changes appear on the surface to be adequate safeguards against abuse of the law as well as unnecessary legal action instituted more as harassing devices than with any sincere hope of redress. They should not weaken the measure.

The South, however, lost two major points. Its representatives attempted to write into the proposed law a guaranty that anyone accused of civil-rights violations should have a jury trial.

It is not difficult to see through that one. When it comes to following the evidence the record of many southern juries is scarcely exemplary.

The South also was defeated in its effort to strip the proposed Civil Rights Commission of its subpena power.

The bill now goes to the Rules Committee which channels measures to the floor. Democratic Congressman SMITH of Virginia is chairman of this committee and is opposed to the bill. What effect this will have remains to be seen but already the committee has been warned that if it doesn't clear the bill in a reasonable time an attempt will be made to force it out.

If civil rights should pass the House it then must face bitter opposition in the Senate where it can be talked to death via the filibuster route.

In his state of the Union message to Congress the President said with respect to civil rights:

"We have much reason to be proud of the progress our people have made and are making in mutual understanding—the chief buttress of human and civil rights. Steadily we are moving closer to the goal of fair and equal treatment of citizens without regard to race or color. But unhappily much remains to be done."

Again the President called for enactment of the administration bill. Human relations in the United States will indeed take a giant step the day this measure becomes the law of the land.

A Proposal for Small Business Financing

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. GARMATZ. Mr. Speaker, the problem of adequate financing for small business is one which has been with us for many years. Congressional committees have investigated the problem, students of our business system have researched the problem, and all have found substantially the same answer—the present private financing machinery leaves a great gap insofar as small business is concerned. It does not provide adequate financing, either of risk capital or credit for people wishing to start a new business, for established small businesses with good expansion opportunities, or for small firms' working capital needs. This gap is especially severe with respect to long-term capital. But while the problem has long been recognized, little or nothing has been done about it, and the problem ever grows more severe.

This is a problem which affects not merely the welfare of small business people. It has a direct bearing on the welfare of the whole country. It involves such questions as whether we shall continue to have a competitive system of business, with low prices for consumers, or whether we shall have increasing concentration of business into the hands of a few corporate empires, with consumer exploitation and all of the political and social consequences implied in a system of great concentrations of economic power.

A CHRONIC PROBLEM HAS BECOME ACUTE

The present tight money policy has only served to make a chronic problem a most acute problem. Since the Federal Reserve Board began applying the brakes to commercial bank credit 2 years ago this month, small firms have found it increasingly more difficult to obtain

credit, either for new plants, new stores, new equipment, or for financing inventories at their old levels of operation. Yet credit is still available in abundance to the big corporations, and these continue to expand at a record pace. New shopping centers and new supermarkets are springing up everyday. Although the credit squeeze was in full force and effect throughout the whole of last year, it did not reduce the total volume of nonresidential commercial construction, nor the volume of industrial construction. On the contrary, while the effect of the credit squeeze was plainly visible in the drop in residential building last year, both commercial and industrial construction showed substantial increases over 1955. According to reports of the Department of Commerce, the value of private commercial buildings constructed last year reached $3.3 billion, which was 8 percent more than in 1955, and 49 percent more than in 1954.

The fact that the new supermarkets being built today are being built almost exclusively as new outlets for the great national chains, is no fault of the small-business people. Many well-established retail firms would very much like to build the new supermarkets and keep pace with the trends. It is not by choice that they must sit back and watch their trade dwindle away. But the difference is that the big national corporations can obtain the money for these new stores, while smaller firms cannot obtain the money, or can obtain money only on such unfavorable terms as to make the venture impractical.

A LONG-RANGE SOLUTION OFFERED

My attention has been called to a most interesting analysis of this problem which I know will interest all the Members. It appears in the January issue of the magazine Skirmisher, which is a monthly publication of the Independent Retail Grocers and Meat Dealers Association of Baltimore. Here the editors point out that the big chains are obtaining financing for new supermarkets at what amounts to 100 percent of the land and construction costs. The big chains can find big financiers, with access to the big money markets, who will construct these supermarkets in exchange for a long-term lease. The small firm, on the other hand, is confronted with the problem of meeting 40 to 50 percent of the construction costs, and obtaining mortgage money to cover the other 50 or 60 percent.

The editors of Skirmisher have proposed a solution, not merely to meet the present tight-money situation, but a solution to the chronic problem of small-business financing. The proposal is for the establishment of what the editors call a Federal discount agency. Such an agency, which would require an initial investment of Government money, would be run by the small-business people themselves, on a voluntary cooperative-membership basis; and the members would have a financial risk in the organization. The fact that this proposed agency would be managed by the small-business people themselves, on the self-help basis, is to my mind the most appealing part of the proposal.

LITTLE HELP FROM THE SMALL BUSINESS ADMINISTRATION

Skirmisher does not overlook the loan program of the Small Business Administration. The editors point out several reasons, however, why SBA does not meet the need. And they reach the conclusion that "small-business benefits from the SBA are almost infinitesimal." The principal difficulties with the SBA lending are that its requirements for collateral and assurance of loan repayment parallel those of commercial banks, which have helped to create a credit gap in the first place, and the process of trying to obtain a loan from SBA involves too much redtape. In consequence, SBA has made very few small-business loans. Furthermore, I would add another objection of my own, which is that SBA's program involves direct lending from the Federal agency—an arrangement which, to my mind, is not nearly as conducive to a real and permanent solution to the problem as is a cooperative arrangement, managed by small-business people themselves.

40 YEARS EXPERIENCE WITH FEDERAL LAND BANK SYSTEM

Coincidentally, I have today received a most interesting pamphlet from the Federal land bank of Baltimore, commemorating the 40th anniversary of the Federal Land Bank System. This system presents an exact parallel to "Skirmisher's" proposal for small business, and it has had remarkable success in assisting farmers with their financing problem.

The Federal Farm Loan Act, which brought the land bank system into being, was part of President Woodrow Wilson's program for breaking the control of the "money trust," and creating a self-help system whereby small farmers could obtain financing to carry on the business of farming. The act was passed by a Democratic Congress and signed by President Wilson in 1916, and the 12 Federal land banks began making loans the following year.

MORE LOANS TO FARMERS IN 5 STATES THAN TO ALL UNITED STATES SMALL BUSINESS

In the past 40 years, the Federal Land Bank of Baltimore has made more than 69,000 loans, totaling more than $263 million, to farmers in 5 States—Maryland, Delaware, Pennsylvania, Virginia, and West Virginia. This amounts to an average of 1,700 loans per year. In contrast, through December of last year, SBA's record of loans made to small business amounted to 1,300 loans per year. In other words, the Federal Land Bank of Baltimore has made substantially more loans per year to farmers in just 5 States, than the SBA has made, in each year of its operation, to more than 4 million small-business firms in the whole United States. Furthermore, a majority of SBA's loans have involved the guaranteeing, in part, of commercial bank loans, and to some probable extent, do not represent new credit which would not have been available to small business anyway.

FEDERAL LAND BANKS HAVE HELPED FARMERS AND MADE PROFITS

The Federal farm-loan system works in this way:

In order that farmers might own and operate the system, the law provided for the organization of local farm-loan associations through which land-bank loans would be made. Each borrower must buy one $5 share of stock in his association for each $100 he borrows. The association, in turn, must buy a like amount of stock in the Federal land bank. The stock is redeemed at par value when the loan is repaid.

In the beginning, Government capital was placed in the banks, to get the system going; and Government capital was added in the depression period, when these banks were asked to be especially lenient to farmers, and to help them meet their obligations to other creditors.

But by 1947 all Government capital had been repaid. Furthermore, the Baltimore bank now has more than $9,600,000 of retained earnings, plus some $4,500,000 of capital stock owned by the local associations. This is after having paid all operating expenses and having paid, in most years, dividends on the capital stock.

Yet farmers have had the benefit of financing—on lenient terms and at low interest rates—which would not otherwise have been available to them. They have been able to buy land, erect buildings, buy livestock and equipment, and generally carry on the business of farming by a system of individual, family-owned farms.

SMALL BUSINESS AND BANKING COMMITTEES SHOULD CONSIDER "SKIRMISHER" PROPOSAL

I would like to invite the Members' attention to "Skirmisher's" article which I mentioned earlier. This reflects authentic, firsthand experiences of small-business people in the retail grocery and meat businesses. I am offering a somewhat condensed version of this article for the RECORD, below. It goes into other possible functions of the proposed Federal Discount Agency—such as pooling purchases of supplies—in addition to the financing operations which I have discussed.

In addition, I invite the Members' attention to the 40th anniversary statement of the Federal Land Bank of Baltimore which follows the "Skirmisher" article.

It would seem to me especially appropriate that the Small Business Committee and the Banking Committee give careful consideration to the proposal which "Skirmisher" has made. It is a serious and thoughtful proposal. Certainly, some solution must be found, and found promptly, to the unequal and inadequate financing available to small firms, if we are to continue to have a business system in which there is a place for vigorous and progressive small firms.

The article and statement follow:

MARYLAND GROCERS' ASSOCIATION MAKES PLEA FOR FEDERAL DISCOUNT AGENCY TO PERMIT SMALL BUSINESS TO EXPAND AND COMPETE WITH CHAINS ON EVEN TERMS

According to the Small Business Administration, the Government agency set up to aid

small business—or make a gesture toward it—there are 4 million small businesses of all types; there are 200,000 big businesses.

Thus the small business units outnumber the big ones by 20 to 1.

While big business deals in heavy volume and, in some cases, in heavy production, the overwhelming majority of small business units makes their aggregate volue an equally important contribution to the national economy.

It is a contribution that should not be lost or risked. But what is happening? In this era (not to say this administration) of big business small business is getting smaller and big business is getting bigger.

If the trend not so unfortunate and undesirable it might recall the old joke: "The rich get richer, while the poor get children."

FAMILY OF SMALL BUSINESS SHRINKING

* * * * *

One of the greatest advantages big business has is greater ease and better terms for obtaining public and private financing for expansions and improvements.

In the big new housing developments and shopping centers mushrooming all over the country, one central chain outlet can put dozens of neighboring competitors out of business almost overnight.

Small business can hardly relocate because it hasn't the means. What is sorely needed—and what in all fairness must be made available before it is too late—is some comparable financial plan for small business to expand, improve or relocate.

SMALL BUSINESS LOANS

The Small Business Administration as it stands is not of much help to the average small business because its terms are too restrictive.

* * * * *

During the first 5 months of the Government's present fiscal year the SBA received 2,734 loan applications and approved 1,255 for a total of $52 million.

In Maryland the SBA has lent about $1,500,000 in regular loans and about $1 million in "disaster" loans. Most of the latter were to borrowers hard hit by Hurricane Hazel.

* * * * *

Harry Baron, manager of the Maryland office of the SBA, in the Calvert Building, was asked why a businessman would go to the agency for a loan if he had collateral enough for it at a bank. Mr. Baron countered:

"Have you tried it lately?" meaning money is tight.

"The banks are making short-term loans only now," he explained. "The SBA is about the only place a small-business man can get a long-term loan."

This, in itself, is added evidence of the need for easier Administration terms for small business. In the present state small business benefits from the SBA are almost infinitesimal.

* * * * *

SBA FORMS AND REDTAPE

One Small Business Administration requirement—that the small-business applicant must have certification that his bank will not lend him—means, in effect, that he must ruin his credit to that extent.

Then, if finally he can establish credit with SBA, its forms, procedures, etc.—all the so-called Government redtape—are so long, complicated, and generally impossible that the average applicant ultimately throws up his hands.

The need is for a guaranteeing Government agency that will permit the small-business man to build for himself or have built for him facilities that will allow him to compete with the chains on even terms.

As matters stand, the small-business borrower has to add the greater costs of his credit to the cost of his merchandise.

* * * * *

WHAT IS THE REAL NEED?

The big corporate chains can go on the open market and have a builder construct not only an outlet but also all parking and other outside facilities. By delivery of a long term lease the builder can discount the lease at 100 percent on the dollar and an interest rate of from 4 to 4½ percent.

Can anyone imagine a small-business man persuading a big lease insurance company to buy ground and build an outlet for him on a basis of 1 or 1½ percent of his annual business volume? No.

But this type of discount is a common function with the chains—and banks, insurance companies and other creditors fight to keep this kind of business. Why?

Because they have the assurance of the chains, with the latter's strong financial backing, that their construction money is secure. It amounts to a guaranty.

* * * * *

The independent grocer or any other small-business man—and any landlord he might persuade to build a store for him—must pay 5 or 6 percent interest on any loan. They also must have cash or security sufficient to discount the loan at only 50 or 60 percent.

Thus the grocer or other small-business man not only has to add the additional interest cost to the cost of everything he sells; he also has to depreciate his own credit 40 percent of the cost of his facility or has to pay his landlord a premium rate to establish a 40 percent credit against the improvement.

* * * * *

Summing up, what the small-business man needs—what is really required if the balance between big business and small business is to be maintained—or regained—is a Federal discount agency. This would provide the small-business man with services already available to the chains.

They include adequate interest on mortgage commitments, legal and tax advice and some Government control of volume purchasing and distribution. The last would enable the small-business man, too, to enjoy the direct benefits of distribution of the present surplus market, the same as the chains enjoy it.

As matters stand, local suppliers in any area are in danger of seeing their markets dry up because the chains, with their tremendous purchasing power, are wiping out the middleman, buying produce, canned goods, bake goods and even meat directly from producers.

The condition already is obvious on the Eastern Shore, where the tremendous fryer industry is definitely a distressed market.

Since the activities of the chains is a standing threat to the suppliers, the latter's only countermeasure is to pledge their credit and build their own centers to supply the small grocer. This would guarantee them an outlet for their production and also assure them that the chains could not, under any conditions, dry them up by direct buying and eventually take over their industry.

FORTIETH ANNIVERSARY STATEMENT OF THE FEDERAL LAND BANK OF BALTIMORE

Forty years of service in helping farmers solve their financial problems—that is the contribution made by the Federal Land Bank of Baltimore to the agricultural economy. On March 24, 1917, the bank received its charter to make mortgage loans to farmers in Delaware, Maryland, Pennsylvania, Virginia, and West Virginia. (The charter was later amended to include the Island of Puerto Rico.) For several years prior thereto individuals and farm organizations had demanded a source of credit which would provide long-term loans, at reasonable interest rates, that could be repaid from farm earnings on a systematic basis. The Federal Farm Loan Act, which brought the Land Bank System into being to meet this need, was signed by President Woodrow Wilson July 17, 1916, and the 12 Federal land banks began making loans the following year.

In order that the farmer-borrowers might own and operate the new system, the law provided for the organization of local national farm loan associations through which land bank loans would be made. Each borrower is required to buy one $5 share of stock in his local association for each $100 he borrows, and the association, in turn, buys a like amount of stock in the Federal land bank of its district. (The stock is redeemed at par value when the loan is paid.) Except for Government capital which was placed in the land banks in the beginning, and during the depression years when these banks were asked to give lenient treatment to borrowers in financial distress, the farmer-borrowers have had complete ownership of the system. The final amount of Government capital was retired in 1947. The funds which the land banks lend have always been obtained by selling bonds in the security markets.

During the depression years of the early 1930's, the 12 land banks rendered a great service. At that time they constituted the principal source of mortgage credit available to farmers. It has been estimated that in the year 1934 they granted 70 percent of the total volume of mortgage loans that were made, including the funds they loaned as agents of the Federal Mortgage Corporation. A substantial portion of the money loaned at that time was used to meet borrowers' obligations to other creditors who were demanding payment. The land banks followed courageous lending practices during that period when land values were exceedingly low, and their collection policies were lenient for all farmers who were doing their best and who appeared to have a reasonable chance of working out of their distressed financial condition over a period of time.

The Federal Land Bank of Baltimore has made more than 69,000 loans totaling over $263 million. These funds were used to help buy land, erect farm buildings, pay off other debts, buy livestock, machinery, and equipment, and, generally, to improve farm properties and farm operations. A high percentage of the loans have been completely repaid and a large number of folks now own their farm homes free of debt because the repayment plan enabled them to make small annual or semiannual payments from their farm earnings.

The Baltimore bank has more than $9,600,000 of retained earnings in its reserve and surplus accounts and over $4,500,000 of capital stock owned entirely by the 36 national farm loan associations in its district. Dividends were resumed in 1951 and a 4 percent dividend has been paid each succeeding year. The combined capital stock of the national farm loan associations amounts to over $4,500,000 and their retained earnings exceed $1,300,000. Many of the associations pay dividends to stockholders-borrowers but others thus far have used all earnings to strengthen their reserves.

Recently, credit life insurance was made available, on an optional basis, enabling a borrower to have his loan paid off, up to a maximum of $10,000, in event of his death, thereby relieving his family of a heavy debt burden.

The land-bank system has served as a pioneer in the farm-mortgage field, instituting such features as the amortized plan

of repayment, the normal value appraisal concept, and the future payment plan. The System has had a stabilizing influence in agriculture, thereby benefiting many farmers who have never used its credit services. Its well-trained personnel, sound financial condition, and constructive credit policies place the System in a better position than ever to render helpful credit service to farm people as we look forward to the challenge which changes in agriculture will bring in the years ahead.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. FARBSTEIN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial which appeared in the East Side News of New York City commemorating St. Patrick's Day:

ST. PATRICK'S DAY
(By Harry H. Schlacht)

Sunday will be a great day for the Irish. It will be a great day for the Shamrock. It will be St. Patrick's Day.

We celebrate the life of an ancient race. We celebrate the life of an illustrious saint. We weave the shamrock into a garland of glory for the Emerald Isle—the home of scholars, the abode of poetry, the nursery of patriots and the isle of the saint. It is a country with the heart of a child and the smile of God.

We can see today the earthly flowers of springtime—revealing their beauty above the grass sod of the verdant sealocked isle. We can see the enticing loveliness of its mountaintops, and the landscapes with heartwarming delight and admiration. We can see the heather blooming everywhere in the valleys. We can hear the birds caroling in every glen. God has truly cast his abundant benedictions upon the Emerald Isle.

We recall the history of the Irish people whose courage is without limit, and whose honor is without blemish. We rededicate ourselves to the philosophy of St. Patrick, who found his strength in reason, who found his success in tolerance, and who found his faith in God.

To remember St. Patrick is to rejoice in freedom. He was born in Scotland. He was sold at an early age into slavery, escaped and returned to Ireland through the intervention of a vision to preach the Gospel of Christianity. He taught among the hills and dales, and used the highways and byways as his pulpit and classroom. To illustrate the Christian principles of the Trinity, he would pluck a shamrock from the roadside and use the 3 leaves on the 1 stem to symbolize his religious concepts.

The shamrock is a symbol of unity. The shamrock marks the union of 1 God and 3 divine persons. Long may the shamrock, the plant that blooms forever, with the rose combined and the thistle twined, defy the strength of foes to sever. O, firm be the triple league they form despite all change of weather. In sunshine, darkness or calm, still may they fondly grow together.

What an example of red-blooded courage and unflinching spirit the sons and daughters of Erin have given to the world. Indeed their names are emblazoned in golden letters on the pages of civilization. The sun never ceases to shine on the grave of an Irish hero. The battlefields of the Republic have been crimsoned with Irish blood. On land, on the sea, and in the air, the gallant men and women of Irish extraction have played their part in the inextinguishable chapters of American history.

Glamorous as have been the exploits of the Irish in war, in statesmanship, in commerce, and in the arts and literature, none have been more glorious than the accomplishments of the Irish women in the gentler virtues of mercy, love, and motherhood. God bless them for their loveliness, their radiant smile, beneath which lies the steadfastness of the oak, caressed by the beauty of a budding flower whose delightful fragrance rises to greet the morning sun.

The greatest gift ever given to the Irish people was the lovely spiritual Irish mother. There is no figure in all Irish annals which typifies so beautifully, and yet so calmly, her faith, her patience, and her love. From the land of their birth generations of her children have gone forth under the blessings of her watchful and benign gaze. For in her eyes was the warmth of the sun and the radiant light of day. From her the Irish have been imbued with the greatness of soul that has made them rise to the tasks and problems of the day.

So long as the world's records revere the narrative of St. Patrick's mission, so long as the waters of the lovely Shannon shall gently flow to the sea, so long as the beautiful lakes of Killarney shall reflect upon their bosom the blue vaults of the heavens, so long will men and women of the Irish race love their ancient isle, revere their saint, cherish the shamrock and uphold the principles of national freedom and of individual liberty.

May we close with an old-fashioned Irish prayer? "May the road rise to meet you. May the wind be always at your back, and may God hold you in the hollow of His hand."

Playing Politics With the Budget

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. ABBITT. Mr. Speaker, we have heard much in the last few weeks about the desire of the administration to reduce expenditures of the Federal Government. We have seen presented to the Congress the largest peacetime budget ever presented by any administration; we have seen in the press certain Cabinet members of the present administration pretend that they desire to economize in their departments and to reduce the budget request.

On Tuesday, March 19, 1957, there appeared an article by Roscoe Drummond in the Lynchburg News, published in Lynchburg, Va., entitled "Playing Politics With Budget."

Today, March 21, 1957, there appeared an editorial in the Washington Post entitled "Mr. Weeks Shows How."

Under leave to extend my remarks in the Appendix of the RECORD, I desire to include these two articles.

The articles follow:

PLAYING POLITICS WITH BUDGET
(By Roscoe Drummond)

In Washington today we are witnessing a monumental, buckpassing hassle over the size of the Eisenhower budget—$71.8 billion for the coming year—which must seem frustratingly confusing.

Right now it is a kind of political merry-go-round which the politicians understand and which can only fool the voters—if anybody.

President Eisenhower has painted himself into a box of his own making. In permitting, even encouraging, Secretary of the Treasury Humphrey to urge Congress to make a substantial cut in a budget which the administration described as the best it could devise, Mr. Eisenhower should have known that Congress would leap to trim an item the White House considers vital to national defense—the economic-aid program. Thus the President has given momentum to a budget cut he will greatly deplore or have to fight to the last trench to avert.

Both sides are playing politics.

House Democrats, normally eager to preserve the fullest congressional authority over appropriations, are resisting the HUMPHREY theory that Congress ought to do what he said the administration was unable to do. They pass it to the President. Mr. Eisenhower holds up his hand and says, "Who, me?" and gingerly tosses the ball back to the Democratically controlled Congress.

The President himself has never bid Congress to cut his budget—and for a very good reason. He screened it and approved it; he will have to expound it and defend it. Should he fail to do so, he will be abdicating executive responsibility in the most serious manner.

Mr. Eisenhower's position is by no means free of politics. He takes the popular public stance in favor of less Federal spending in principal and then blandly tells the country through his press conference that if there is to be any solid reduction of spending Congress will have to abandon some of its programs—veterans' benefits, farm relief, school construction, etc.

Whose programs are these? They are Mr. Eisenhower's programs. If he believes that it is more desirable for the country to reduce Federal spending substantially than it is to carry out these programs, then it is his duty as President and as leader of his party, to ask Congress to cut back these programs.

My judgment is that Mr. Eisenhower does not hold any such view, that he does not see his budget as overtaxing the economy and that he believes it more desirable to continue what he considers needed civilian programs than to cut the budget significantly. He is certainly not taking any step to develop a public opinion to the contrary.

But it is obvious that the President wants it to appear that it is Congress, not he, who is standing in the way of doing what would have to be done if there were to be a real slash in spending.

The objective fact, as pointed out by the McGraw-Hill economists, is that the proposed $71.8 billion budget places no greater burden on the economy than any budget in the last 6 years, because the economy has been growing. Per capita Federal spending under this budget would be about $416, or $10 more than last year. But per capita income rose nearly $80 last year. On top of this is our increasing population in light of which next year's Federal expenditures will be less per capita than in 1954, when Federal spending was $4 billion lower.

This is why the McGraw-Hill statement warns not against the size of this Eisenhower budget but against the prospect of "steadily increasing budgets" which take 20 percent or more of our national income and, in its judgment, deprive "private industry of the savings and resources needed to expand and modernize producing facilities."

Federal saving that will permit reduction will be hard to come by. It will require either (1) A great easing of the cold war, or (2) ingenious and still undiscovered econo-

mies in defense or (3) a radical cutback in civilian programs. None of these is in sight.

Mr. Weeks Shows How

Secretary Humphrey invented the new-style "maybe" budget, the great virtue of which, if it works, is that the administration can take credit for the benefits and the Congress for the costs. It has remained for Secretary Weeks to demonstrate the proper use of the "maybe" budget in action. First you make a speech in New York defending the budget as merely the cost of the promised GOP peace and prosperity. Then you hint darkly that if the taxpayers would look about them, however, they'd find plenty of specific places to start saving. Next you get on television and complain about all the programs Congress forces on the administration and suggest that here is an excellent place to start cutting. But finally, when Congress calls your hand, you defend the budget once again to the last dime.

All of this, if it does not enlighten the taxpayers, at least amuses them and rather neatly leaves the hot potato still in the hands of Congress. Congressmen know there is nothing to do but eat this spud and be done with it. But there was more than a little gravel in the remark heard in a Capitol corridor yesterday that one good way to save some money at Commerce would be to eliminate the office of the Secretary.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

Code of Laws of the United States

Title 44, Section 181. Congressional Record; arrangement, style, contents, and indexes.—The Joint Committee on Printing shall have control of the arrangement and style of the Congressional Record, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the Congressional Record semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

Title 44, Section 182b. Same; illustrations, maps, diagrams.—No maps, diagrams, or illustrations may be inserted in the Record without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat, 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the Congressional Record the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily Record as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the Record with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the Congressional Record, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the Record shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the Record issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the Record for 1 day. In no case will a speech be printed in the Record of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the Record shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the Record style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the Record.

7. *Thirty-day limit.*—The Public Printer shall not publish in the Congressional Record any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent Record is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the Congressional Record the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the Congressional Record.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the Congressional Record by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the Congressional Record which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Ramon Magsaysay

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. JOHNSON of Texas. Mr. President, the free world mourns the death of Ramon Magsaysay. It is felt very personally by his own people in the Philippines, but free men everywhere will sense the uncertainty of the days ahead with Magsaysay lost to us.

He was a bulwark against communism in southeast Asia; he was a friend to the western democracies. The sense of tragedy could hardly be reflected more accurately than in the response of many of my own friends in Texas.

The response was eloquent and immediate, and I ask unanimous consent to have printed in the Appendix of the RECORD four editorials from Texas newspapers which appeared on the day following the discovery of President Magsaysay's body on the mountainside on the island of Cebu.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Tyler Morning Telegraph of March 19, 1957]

MAGSAYSAY'S DEATH

The tragic death of President Ramon Magsaysay of the Philippines in a plane crash on a lonely mountainside on the island of Cebu in his homeland took from the world one of the stanchest foes of communism and one of the strongest friends the United States had in the Far East.

President Magsaysay was only 49 years old—young as national leaders go—but he had captured the adoration of his countrymen and the respect and trust of the entire free world through his accomplishments as a Philippine patriot.

He was a fierce guerrilla fighter against the Japanese during Word War II when Japan overran the Philippines, then a United States Territory.

In the years before he became President he was Defense Minister in the Philippines Government after the islands became an independent nation.

As Defense Minister, he spearheaded the Government action that defeated the Communist-inspired Huk uprising. In doing this, he won a following which saw him swept into office as President in the last Philippines election.

President Magsaysay never swerved from his anti-Communist fervor and his friendship for the United States. His was the most outspoken voice for freedom and capitalism in the Far East. He will be sorely missed because of this.

His death will throw the next Philippines elections, set for November, wide open. Mr. Magsaysay was considered a cinch for reelection, but now his Nationalist Party must find another nominee.

Vice President Carlos P. Garcia took the oath of office Monday to succeed Mr. Magsaysay as President, and he can be depended upon to continue the alinement of the Philippines with the West. He is a stanch supporter of the Magsaysay foreign policy.

But the new President Garcia does not have the strong hold on the people of his nation that Mr. Magsaysay enjoyed, and whether he can win election or even nomination this fall, if he chooses to run, is questionable.

President Magsaysay's loss was a great one. It was a personal loss to most Filipinos. Next to his own country, his death was most poignantly felt in the United States.

A true friend of freedom has been taken from the scene.

[From the Houston Chronicle of March 19, 1957]

MAGSAYSAY'S DEATH IN CRASH IS BLOW TO ENTIRE FREE WORLD

The free world, as well as his own nation which is right under the guns of voracious international communism, suffered a severe blow in the tragic death of President Ramon Magsaysay of the Philippines.

Magsaysay was uncompromising in his convictions and effective in his labors in behalf of his country. He was a remarkable man who combined the virtues of a military and a civilian leader of his people.

During the Japanese occupation of the Philippines he fought the invaders constantly and with astonishing effect. When General MacArthur's forces landed he had cleared the way for them to get ashore unopposed.

After the war he became Defense Minister of the Philippines, and in this post he personally led much of the fighting against the Filipino Communists known as Hukualahaps. That lengthy and persistent rebellion was stamped out through his use of a combined policy of unremitting military pressure and resettlement of the rebels on good land.

The Filipinos rewarded Magsaysay with the highest office in the land in 1953. As President he had been carrying out progressive policies. He was a mainstay of freedom and anticommunism in southeast Asia.

Vice President Carlos P. Garcia, who has taken over the reins of government, fortunately has been a stanch supporter of the Magsaysay foreign policy. Either he or Gen. Carlos P. Romulo, Ambassador to the United States, who withdrew from the 1953 presidential contest, would be an excellent successor if either is chosen in the election next November.

[From the Houston Post of March 19, 1957]

FREE WORLD CAN ILL AFFORD LOSS OF FAR EAST LEADER, MAGSAYSAY

The untimely death of Philippine President Ramon Magsaysay is of much graver world significance than that of an ordinary head of a small far eastern state would be. Not only was he a brilliant and extremely popular young statesman and a true friend of the United States, he was a bulwark of strength against communism and the prospective spearhead of western resistance to communism in the Far East.

Magsaysay's removal from the scene comes at a time when the ideological struggle for Asia is building up to a critical stage. And Asia is a crucial factor in the Red quest of world domination. Only last week, President Magsaysay's Ambassador to the United States, Carlos P. Romulo, declared to a Houston audience, "If Asia falls to Russia, it's curtains for democracy." The free world will need the able young leader more than ever before in the perilous years ahead. His loss is a tragic blow to freedom's cause.

A leader of guerrillas against Japan in World War II, he later gained renown as Philippine defense minister by wiping out the Communist Huk guerrillas in the islands. Then in 1953 he was elected president on pledges to clean up corruption and communism in the Philippines and to turn the former United States dependency into a "showcase for democracy in Asia."

He kept his pledges, and more. He grew rapidly in stature, and was emerging as a key Asian spokesman against communism. In September 1954, he keynoted a conference that resulted in the alliance known as the Southeast Asia Treaty Organization. By an ironic coincidence he was returning home from the latest SEATO meeting in Sydney, Australia, when his presidential airliner crashed, killing him and all but one of the other 25 passengers.

The big question now is, who will succeed Magsaysay as Chief Executive of the hundreds of Philippine Islands and their 20 million people. Vice President Carlos P. Garcia has automatically become President and will serve until a successor to the champion of freedom is elected in November. Garcia is a good man, dedicated to Magsaysay's policies. He may be elected to the office, and if so the government will be in safe hands, though not as strong ones as his late chief's.

A happy answer to the question would be the election of Ambassador Romulo, who withdrew from the 1953 presidential race in favor of Magsaysay. He is a distinguished statesman and militantly anti-Communist. Romulo has not yet indicated whether he will be a candidate.

No prospective successor now in sight could fill Magsaysay's shoes, but it will be vitally important that the people of the strategic island group elect another president who will be on the side of the free world, and able to maintain his position against the Communist forces.

[From the Dallas Morning News of March 19, 1957]

NEW PROBLEM IN PHILIPPINES

Ramon Magsaysay can ill be spared by the free world at this time of crisis in the struggle between democratic capitalism and ruthless communism. The value of a strong executive who has the confidence of his country cannot be overestimated. And Magsaysay was such a man.

It is possible that, without Magsaysay's personal leadership, the comparatively quick postwar swing of the Philippines away from the rising trend to communism, represented in the islands by the Hukbalyaps, would not have occurred. Certainly the implicit trust of the Philippines in the man killed tragically in the crash on Cebu was by far the biggest factor in the Philippine political situation.

How severe the loss may be to the Western World cannot be judged except by results. If sabotage is shown as the cause of the fatal plane disaster, the patriot Magsaysay, who had bared his breast unhesitatingly to the foe in war, will pass into the realm of martyrdom. That fact will go far toward checking any upsurge of the still present Communist instigators. (From the start

the Reds never sold the Philippines short as a vital base on the Pacific. Magsaysay's battle against them had to be fought against trained, skillful native Red leadership.) Even accidental death will serve to keep the dead President's memory enshrined and about it may center Filipino resolution to adhere to the principles for which he has stood.

Much will depend, too, on the progress already made under Magsaysay and on the executive strength of Carlos Garcia. The dead President was elected in 1953, could be expected under the two-term limitation of the island constitution to have served until 1962. He had guided the Philippines into SEATO (launched in Manila in 1954). But Magsaysay is dead and the future must be guided by men of whose strength in crisis we are today less sure.

A Capital Budget for the Federal Government

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. MORSE. Mr. President, on last Monday, March 4, the senior Senator from Illinois [Mr. DOUGLAS] addressed the National Rural Electric Cooperative Association in Chicago on the subject of a capital budget for the Federal Government. In this speech the Senator outlined the basic defects in our present budgeting system, namely, that it does not present a true picture of the assets and liabilities of the American people as a whole, and that it fails to provide a yardstick whereby the financial wisdom of governmental expenditures for capital projects can be measured.

I ask that the address by this great economist who sits among us be printed in the Appendix of the RECORD, so that his analysis of Federal budgeting may be read and studied. It deserves thoughtful consideration from students, from those in business, and from those in public service who recognize that the American people lack a basis for evaluating the investment uses of their tax dollars.

It discusses a subject which cries out for reform in our Federal budgetary bookkeeping system. For several years I have urged the adoption of a capital budget for the Federal Government, and I shall introduce legislation to accomplish it just as soon as I can complete my research and drafting work on it.

The PRESIDENT pro tempore. Is there objection to the unanimous-consent request?

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A CAPITAL BUDGET FOR THE FEDERAL GOVERNMENT

(Speech by Senator PAUL H. DOUGLAS before National Rural Electric Cooperative Association, the Coliseum, Chicago, March 4, 1957)

It gives me great joy to see you all here this afternoon and to be given the honor of speaking to you. I literally marvel at the progress made in rural electrification during this last quarter-century.

Twenty-six years ago, I was an adviser to a progressive Governor of Pennsylvania, Gifford Pinchot. One of my dearest friends, Morris L. Cooke, was also working with Governor Pinchot, and the two were developing plans for a network of electrical transmission lines through the rural areas of Pennsylvania with the distribution to be handled by farmer cooperatives. This idea was ridiculed by many and bitterly opposed by the private utilities. It was said there would be no demand for the power on the farms and that it would therefore be a white elephant. The utilities said that if it would pay, they would have done it before, and that the effort to inject the government and the cooperatives into the field was un-American socialism of the worst order.

These forces were too strong for Gifford Pinchot to overcome in Pennsylvania. But a new national administration took office in 1933 which believed in vigorous action to deal with the depression and which was receptive to new ideas. I was glad to play a modest part in getting Morris Cooke together with my fellow Chicagoan, Harold Ickes, who had just been made Administrator of Public Works. They began experiments with rural electrification on the cooperative principle with the Government making loans and furnishing technical assistance, but with the cooperatives doing the local operation and paying the loan back with interest out of the income from the service.

Out of this grew the Rural Electrification Administration, and out of that and the Government loans came the local co-ops and your great organization. I feel, therefore, like a midwife's helper who sees the child he helped to bring into the world reach sturdy, honorable, and respected manhood. I have, therefore, always been a believer in the REA, and in recent years it has been a deep source of satisfaction to support its principles and to help it develop by voice and vote on the floor of the Senate.

For a quarter of a century we have had to face the opposition of the private utilities. At first, this was open and violent. Today, it is more concealed and subtle. One of the arguments which their high-powered public relations experts use upon an unwary public is that expenditures for the REA are wasteful, that we get nothing back from them and that such outlays, as well as virtually all Government expenditures, are money and resources down the drain.

Today, I would like to talk to you about a capital budget for the Federal Government. This phrase, capital budget, might sound quite formidable, but it is actually simple. You all use this concept in your business—farmers, cooperatives and the entire private sector of the economy. A cooperative, for example, when it receives a loan from the Rural Electrification Administration to build a generation and transmission system makes two entries in its accounts. One is a liability for the loan, and another an asset showing that this generation and transmission system is worth so many millions of dollars. The same is true for the farmer when he borrows money to build a new barn, to plant a crop, or to replenish his breeding stock, and the same is true for your National Association when it borrowed money from you, the member systems, to build its new building.

A corporation does the same thing; it too operates on a capital budget. It always reports, as you know, in addition to a profit and loss statement, a balance sheet at the end of the year showing the financial condition, growth or stagnation, profit or loss of the organization. This balance sheet shows on the one side the assets of the corporation, and on the other side the liabilities. A private utility, for example, when it increases its electric plant in service by a million dollars, an asset, it balances this item on the liability side of the ledger by an item of $1 million for mortgage debt. If in a given year a corporation adds a million or a hundred million to its debt (liabilities) it adds an equal amount to its asset and the change is heralded and greeted as "good management," and "progress."

Farmers, cooperatives, and private business therefore use the concept of a capital budget. They distinguish between operating expenses and investments. Investment is not an operating expense. But not so the Federal Government.

The Federal Government has no balance sheet. When the Government's common stockholders, the people, try to look at expenditures for government operations this is what you see. Liabilities amount to the total amount of the Federal debt—about $275 billion and assets equal to zero. If, in a given year the Federal Government goes into debt for a billion dollars there is no cry of "good management"—but cries of "waste, inflation, bureaucracy, and pork barrel politics."

This attitude of the people toward Federal expenditures and the debt is inevitable as long as John Citizen, seeking to find the facts, has to pick up a 5- to 10-pound budget report every year in order to figure out what the Federal Government is doing. And even if he has enough time and aspirin to get through this monumental tome, he may still not know the facts because much of the verbiage and the accounting gymnastics contained in these volumes are purposefully obscured so that even we, the Congress, cannot figure out precisely what is going on in the Federal Government.

On the other hand, this attitude of Citizen Taxpayer is unsound because he does not insist that the Federal Government keep books that make sense.

We have been lulled and propagandized into believing that Government expenditures are like a Christmas tree—it looks good for a week or two, but then you have to throw it out. In other words, Federal expenditures offer no permanent achievements. It has been pounded into us that a good government spends no more than it takes in—regardless of the purpose of the proposed deficit expenditures.

Now what does all this mean in terms of the problems of your rural-electric cooperatives and the related Federal-power program?

Let us sweep aside some propaganda and take a look at the facts. But first let me reiterate one important fact. Money borrowed or saved and used for investment purposes by any sector of the economy except the Federal Government, whether it be to build a new plant, buy a tractor or build a barn, shows up in the accounts as an expenditure, but it is balanced on the books by the net worth of the land, building, or equipment. If this were not so every business in the country, your farm, cooperative, would always be shown to operate in the red, technically bankrupt at all times. But this is not the way we keep the accounts for the Federal Government. For the Federal Government, an expenditure is an expenditure whether it lends money for a public housing project, a hospital, or it gives money to the military to purchase oyster forks for the Navy.

Now let us go back to what a capital budget for the Federal Government would mean to the rural-electric cooperatives. As in the example cited above, when the Federal Government lends money to the rural-electric system, the loaned money is repayable with interest and secured by a mortgage on the system, the loan shows up in the budget as an expenditure just like the money used to purchase oyster forks. Operating under this outmoded accounting system, the Government has only expenses and no assets—an absurd situation and contrary to fact.

It is absurd, because it puts the Federal Government in the position of having spent upward of $3 billion for Federal power facilities, with no corresponding notation made of the fact that these facilities at the same time that they represent expenditures also represent investments.

Such practices create a false impression in the minds of all people. The Hells Canyon project fight is a good case in point. You and I know that if the high Hells Canyon Dam were built by the Federal Government most of the cost would be repaid, with interest, and the project would be owned by the people of the United States. You will recall that the private utilities propaganda against this project took, in part, the form of a full page and showed how much money this project would cost the taxpayers if developed by the Federal Government. Much of the confusion emanating from this controversy would have been eliminated if the Federal Government had in force a capital budget system of accounting.

With a capital budget everyone would have known that the expenditures of the Federal construction of a high Hells Canyon Dam would be reimbursed with interest. The rug would have been pulled from under the propagandist who argued that this project would be paid for by the taxpayers instead of by those who purchase the power output. The basic arguments advanced by the utilities in this and all similar fights would be far less influential if we could get a Federal capital budget in operation. It would then be possible for Congress and citizens to see that it is not more economical to give away their power sites and atomic resources than to invest public funds in their development.

Let's switch our attention for a moment to look at the effect a Federal capital budget might have directly on the rural electric cooperatives. Under the existing method of keeping Federal books, when REA, NRECA, and members of your rural electric cooperatives go to the Congress requesting loan funds, which are really investment funds repayable with interest, they encounter opposition not to "investment" but to expenditures. When the Bureau of the Budget considers the request of the REA Administrator for a new year's loan budget, the Administrator, in the eyes of the public, is placed in the position of asking for "expenditure" funds (like for our oyster forks), rather than investment funds. This situation is unrealistic, a misrepresentation of reality, and leads to endless misunderstandings and thoughtless opposition.

For you, the rural electric cooperatives, this does lead to endless problems and frustrations, but for the private utilities it is most useful. Remember, the private utilities operate as a cost-plus industry. They are authorized to earn a fixed rate of return on their investment over and above all costs. They can engage in very expensive propaganda campaigns and charge it up to the ratepayers as a cost and to the Treasury as a legitimate deduction from profits.

At the same time that this propaganda campaign has been going on, the private utilities have been "sneaking in the back door" of the Treasury. You all know to what I refer—the rapid tax amortization subsidy which the private utilities are receiving under section 168 of the tax laws. My colleague, Senator BYRD, of Virginia, has recently released through his committee, the Joint Committee on Internal Revenue Taxation, a very interesting report on this matter which you all should read. This subsidy amounts to an estimated $4.7 billion, and as you will recall the Federal Government has invested under $3 billion in the rural electrification program and just about another $3 billion in the Federal power program.

But this is not all. Again, while the private utilities were hurling all kinds of epithets at the rural electric cooperatives and the Federal power program, they were at the same time busily engaged in 1954 in helping to push through Congress the 1954 amendments to the Internal Revenue Code. As you know, section 167 of the code now allows any business to choose what is called a liberalized method of depreciation in place of the conventional straight line method of computing depreciation. This is another subsidy to private business, an ultimate loss to the Treasury, and means in the final analysis that when the Federal Government needs more money it will not be forthcoming from business, but must be exacted from personal income taxes. This subsidy, it has been estimated, will be worth many billions of dollars to the private utilities. This amounts to more than 6 times the investment in the rural electrification program and 3 times the combined investment in the rural electrification and Federal power programs.

Let me recall the Senate fight which occurred in 1954 over whether REA needed an additional $35 million in electric loan funds. As you may remember, I introduced this amendment from the Senate floor knowing that the funds were needed and also knowing that the money would be repaid with interest to the Treasury. We were told by the Acting REA Administrator that the funds could not be used under any circumstances, but, as a matter of fact, in the spring of 1955 when the Colorado Ute loan was made it was necessary for REA to draw down earmarked funds from the 1956 budget in order to process the loan before July 1, 1955.

Now I believe that under a capital budget plan this fight simply would not have occurred because justifiable loans by REA could be made without bringing about all the cries from even sincere people who sincerely want to balance the budget.

If we could get this one idea of the capital budget across to the public and incorporated into the accounting practices of the Federal Government, I think many of the problems which we run into in attempting to get the Congress to invest in worthwhile undertakings would be eliminated.

Just keep in mind that the basic difference between a capital budget and the present Federal budget is that the capital budget would distinguish between investments and ordinary expenditures for current operations so that the Congress and economy-minded citizens could primarily concentrate on current expenditures and not confuse productive and profitable investments such as in the rural electrification program with them. To be sure we need as much economy in governmental operations as possible, but even operating under this valid assumption does not refute the need for investing in enterprises which will benefit the entire Nation.

Probably also the capital budget itself should be divided into three parts. The first would be those where the principal is to be reimbursed with interest, as is the case with REA and power investments. The second would be where the principal is reimbursable but no interest paid as in irrigation, while the third would consist of those investments which, while judged socially beneficial are not reimbursed to the Treasury and upon which no interest is paid. The most striking examples of this are the expenditures for flood control and river and harbor improvements. They might also include the Hill-Burton grants for hospital construction.

All of you rural electric leaders know that you have had to fight with the public, the Congress, with the private utilities and private utility fronts on this point of economy in Government. And it is quite true that many times when the Congress has insisted on economy, when the Bureau of the Budget has cut the REA request for funds or put a ceiling on the loan program, it was hard to tell where sincere economy left off and the power company front began.

An accounting system which would be based on the principal of capital budgeting would go a long way in bringing rationality into Federal policies. It would place Government investment for capital creation in its proper perspective. It would give the public a true picture of their status as owners of the national property and assets. In this way, the public could intelligently measure the total debt and expenditure policy of the Federal Government against total assets. Such a budget was advocated 45 years ago by the eminent Boston accountant, Harvey S. Chase. It is even sounder now than it was then.

Under a system of capital budgeting the public could readily distinguish between current expenditures which are nonreimbursable—gone forever, and investment expenditures which are wealth creating and reimbursable—just as though they were private investments.

Operating under a capital budget, there would be no problem in proving to the Congress and the people that REA, based on the best estimates possible, will need a certain amount of credit the following fiscal year. The credit would be forthcoming because everyone would know that such funds are merely borrowed from the Government and paid back with interest, and that such loans are backed up by a mortgage on the cooperative electric system. The same would be true for Federal power projects.

There is every reason in the world for a divided or capital budget, and no valid arguments against one. Habit, fears that we would spend more on Federal power projects, fears that Mr. Hoover could not justify abolition of REA as "an expense" are some basic reasons why we do not already have a capital budget.

Now, of course, no accounting system can create miracles. A capital budget would not have prevented Mr. McKay from recommending the giveaway of Hells Canyon; but it would have made him sound ridiculous. A capital budget would make the Dixon-Yates deal sound absurd to almost everyone except Admiral Strauss and his banking and utility friends.

No miracles, but a lot of interesting facts and rational thinking regarding Federal expenditures and investments could flow from a capital budget.

Now, attempting to incorporate a capital budget into Federal accounting will not be an easy job because many vested interests would be opposed to such a plan. The private power companies and others who hope to profit from grabbing parts of the public domain including the atomic energy program would probably oppose such a reform. But you would be joined by many individuals and groups who do not like the idea of the Federal Government hiding its assets and investments under a lot of red ink.

If we want a government run on a sound business basis, an efficient government—a government striving to maximize economies—then we need to adopt a good set of accounting techniques.

The answer is the capital budget.

United States Foreign Policy

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 22, 1957

Mr. JOHNSON of Texas. Mr. President, the highly complex situation in the

Middle East has caused one of the most widespread public debates in our history. It has led to a healthy criticism of many of the fundamentals of foreign policy.

A contribution to the discussion which is worthy of study was made by the commentator George Sokolsky. I ask unanimous consent that his column, as printed in the March 21 edition of the Washington Post, be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

THE COST OF ERRORS

(By George Sokolsky)

Responsible statesmen do not knowingly or consciously commit their countries to costly errors; what happens always is that human factors, psychological factors which are just as significant historically as the clash of economic and political forces, play their part in the confusion which are engendered not by the course of events but by the whims of men. The destruction of the British, French, and Dutch empires by American attitudes antagonistic to what is called colonialism has created a vacuum in Asia and Africa. That vacuum is being filled not by independent governments but by Soviet Russia.

The whimsicalities of our State Department which seems to believe that it is possible to maintain NATO while destroying NATO countries are as personal as the selection of a necktie.

Historically it has already had the result of forcing Western Europe together into the common market which is a cover for a Western European alliance against all comers. It could leave the United States without an ally and that is why the conference between President Eisenhower and Prime Minister Macmillan is so important. It may be the decisive meeting which will determine whether the Anglo-American alliance has been drowned in the waters of the Suez Canal.

The role of Israel has been overdramatized. From the standpoint of historic perspective, it is not the battles over the Gaza Strip or Aqaba that will decide the course of history. It is rather that Great Britain has been pushed out of Egypt and Jordan and that the Suez Canal has ceased to be an international waterway and has become a domestic canal, controlled solely by Egypt for its own political advantage or that of its ally, Soviet Russia.

The ultimate historic effect of this would be to turn the Mediterranean into a Soviet lake, imperiling Turkey, Greece, Italy, and the British in Gibraltar. On the south bank of the Mediterranean, it could imperil every American airbase. It could be one of the decisive victories in history.

These are the frigid facts that President Eisenhower will face at Bermuda, and if he should decide that doctrinaire pacifism is preferable to historic reality, this country will become as isolated as it has not been since 1933.

If isolation is an evil and a peril, as some say, this is the moment in history when a choice must be made. The alternatives will be a continuance of the Anglo-American alliance or a rejection of alliances with any country, a return to the doctrine of going it alone to avoid war at any cost.

There is a tendency to believe that because of President Eisenhower's special gifts, his friendly disposition, and the regard in which he is held throughout the world, he can manage to talk European and Asiatic statesmen out of their worst intentions.

While the President's ability as a conciliator must be recognized, it must also be acknowledged that no statesman can long last in his own country who agrees to his country's dissolution and loss of position. And that is what faced the leaders of Great Britain, France, Israel, and Egypt during the so-called Egyptian crisis. Therefore, there is today no Middle Eastern settlement.

For what the United States and the United Nations require is that the great nations should not defend themselves against whatever the weak and backward nations do to them, even if the weak and backward nations are acting as Soviet allies in Russia's march toward empire.

It is an untenable position which was accepted as long as Western Europe was wholly dependent upon the United States for revival and reconstruction. Today no European country is actually dependent upon the United States, although European aid is acceptable up to a point. The danger point is naturally suicide.

This is what we face in world affairs and we might as well know where we stand. During recent years, Americans seem to have developed a tendency to assume that money will solve all problems and we are now engaged in peddling $200 million in the Middle East.

There are problems that money cannot solve and those involve national dignity and self-respect. The Europe of 1957 is not the Europe of 1945 and the sooner that is recognized and acknowledged, the fewer will be the errors of policy—errors which during the past 4 years have been startlingly notorious.

Challenges to America at Home and Abroad

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 22, 1957

Mr. WILEY. Mr. President, on Monday evening it was my pleasure to journey to Lancaster, Pa., for the purpose of presenting a talk on the subject of the challenges to America at home and abroad.

I send to the desk the text of this address and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY SAYS EISENHOWER-MACMILLAN MEETING SHOULD REVITALIZE NORTH ATLANTIC COOPERATION; URGES STRONG CITIZEN SUPPORT OF PRINCIPLE OF MUTUAL SECURITY AGAINST ATTACKS FROM BACKWARD-LOOKING 19TH CENTURY MINDS

(Address by Hon. ALEXANDER WILEY, Republican, Wisconsin, senior Republican, Senate Foreign Relations Committee, at the annual dinner of the Funeral Directors of Lancaster County, Lancaster, Pa., March 18, 1957)

I am honored to be included as your guest speaker on the occasion of your annual meeting.

I have always had a warm spot in my heart for this particular area of your fine State, rich in true American tradition. Lancaster is probably one of those realtively few communities in the country which has safeguarded its local way of life against some of the more artificial effects of our fast-moving technological age. It has continued to retain that wonderful charm and individuality, engendered by the spirit of Pennsylvania's early pioneers.

As members of a vital service and as respected leaders of your country, you hold a thoughtful philosophy toward life and toward your fellow man.

Your associations and daily contacts undoubtedly make you more sensitive to human problems and needs than is the case with many other segments of our population. Carried to a much wider scale, I would also presume that your concern for America's welfare and her future role is a deep one.

In my discussion with you this evening, I would like to highlight some of the crucial issues facing our country today.

OUR OWN TOP CHALLENGES TODAY

What are the basic challenges? They are two in number:

1. First, on the home front, to keep our economy strong, healthy, and secure.

2. Second, on the international front, to maintain world peace and to promote world freedom.

I am confident that we are going to fulfill both challenges.

BRIGHT SPOTS ON DOMESTIC SCENE

Here, at home, 1957 finds us continuing upward on the prosperity scale.

Our "gross national product" is rising up from an alitime high of $430 billion.

Our personal income is rising from the $330 billion level.

The purchasing power of the dollar, while it has been slipping somewhat because of wage and price increases, has, nonetheless, not skyrocketed upward, as some people feared.

Sixty-six million people are gainfully employed.

Our population estimates continue to soar upward. This country of 170 million as of 1957, will be 200 million in 1967. It may be as much as 300 million as far as 7 years before the turn into the 21st century. This means vast new markets for goods and services.

NUMEROUS PROBLEMS AT HOME

Now, we all recognize that we have our problems here at home. Our budget is at a peacetime high, and our taxes are at a peacetime peak. As a matter of fact, one-third of all United States income is going into Federal, State, and local taxes.

It is important, however, to look at that budget burden and at that heavy tax burden in the light of a changing America in a changing world.

There is not too much meaning in comparing present budget figures with absolute prewar budget figures. Why? Because the world, and America, have utterly changed, and so have our needs and requirements.

TODAY'S CHANGED WORLD

In this world of 1957, man has circled the earth, nonstop, in B–52 bombers in 45 hours.

Man has crossed the North American Continent in 3 hours 45 minutes, in the forerunner of a jet commercial airliner.

Science has reached out in such masterful discoveries—in nuclear energy, electronics—that the world has been contracted in space and time.

THE DANGER TO NORTH AMERICA

What does that mean in terms of the military danger to us?

Well, the Administrator of the Federal Civil Defense Administration, Governor Peterson, has made this grim estimate: In the event of world war III, even if we built a nationwide system of shelters (costing upward of $40 billion), as much as 60 percent of the population of the United States might be exterminated by an enemy attack. I repeat—60 percent of our 170 million people might be wiped out by a shower of enemy-guided missiles and strategic bombings.

It is small wonder, therefore, why we find it necessary to have 3 separate radar lines drawn from the frozen north regions of Canada to the United States-Canadian bor-

der; a strong continental Air Defense Command to intercept the enemy; Nike-guided missile sites around our major cities; and a budget, of which 60 percent is devoted to military preparedness.

REEVALUATING WEAPONS SYSTEMS

Thus we are learning that to protect national and collective security is not cheap. Preserving peace in our time is dear, and it will continue to be so long as we have to combat a formidable ideology dedicated to world domination.

Yet, while we must support a strong defense structure, we are entitled to get the most for our money. Are we getting this? I'm not sure. I feel that the Pentagon must meet the test of a thorough weapons reappraisal. How much reliance should be placed on nuclear planes and missiles in the future; on aircraft carriers, for example, on ground forces. And what are the types and numbers of weapons we can best afford. These are basic questions which the American people are entitled to have answered.

OUR WORLDWIDE PROBLEMS

It is against the background of these facts that we turn to the second top challenge, and that is to fulfill our diplomatic and economic responsibilities on the world scene.

Wherever we look around the globe we see significant problems. Let me name just a few:

(a) In the powder-keg Middle East, we find ourselves, unfortunately, confronted with a new crisis because of President Nasser's sending of a civil governor into the always explosive Gaza strip.

We likewise find the crisis intensified by Nasser's insistence that tolls be paid directly to Egypt before ships' passage through the Suez Canal.

(b) In Western Europe, we find that our allies, who are hard-pressed financially, especially in view of the Suez-caused oil shortage, have been seriously reducing their contributions to NATO.

(c) We find likewise that Western Germany, which in September faces a critical national election, is under extreme diplomatic and propaganda pressure from the Soviet Union. The Kremlin seeks to pressure Bonn into accepting some Soviet compromise arrangement as regards neutrality in return for reunification.

(d) In south Asia we find Communist subversive movements continuing at work in virtually every country. Red penetration ranges from revolution-torn Indonesia to other relatively new nations like India, Burma, Nepal, and Afghanistan. All of these underdeveloped lands face exceedingly difficult economic problems in trying to raise primitive standards of living.

These then are but a few of the challenges on the world scene.

WHY WE ARE SO CONCERNED

But I can almost hear someone ask, "Senator WILEY, what business is it of ours whether there is Communist penetration of Egypt or Syria or Indonesia, or whether West Germany goes neutral, or whether anybody else refuses to side with us in the cold war?"

The answer is very simple: It is absolutely crucial that international communism not pick up additional "real estate." It is crucial that the Kremlin not force us out of key western areas, particularly areas where we have air, naval, and sea bases.

This country needs allies. We need foreign bases, especially for our Strategic Air Command. We need foreign war materials for the building of our tanks, guns, planes, and ships. We need Mideast petroleum (and so do our allies).

We need allies who are ready, willing, and eager to keep their own forces alert to defend their own borders—allies like South Korea, Turkey, Vietnam, Pakistan.

We dare not permit the Soviet Union to get away with grabbing virtually any country, however small. Why? Because if she does succeed, then all other small countries will be frightened into neutrality or into the Soviet camp.

Under these circumstances, it is important that the Western Allies revitalize their ties—economic, military, political, social.

EISENHOWER-MAC MILLAN MEETING SHOULD BE HELPFUL LANDMARK

That is one reason why I anticipate with the deepest of interest constructive results from the conference in Bermuda, commencing on Wednesday, between President Eisenhower and Prime Minister Harold MacMillan, of the United Kingdom.

It is clear that our British friends and ourselves have had some serious differences in the recent past—notably over the Middle East.

It is clear, too, that our disunity has, regrettably, tended to play into the hands of our enemies.

Of course, I do not believe that the United States should, for the sake of real or token unity, compromise on any of its basic principles. But I do believe that the United States should and will make every reasonable effort to find common ground with our best and strongest ally.

The Eisenhower-MacMillan meeting can and should be a landmark in reuniting the Western World, in halting the trans-Atlantic baiting and sniping which have been going on for many months.

Closer cooperation with our long-standing French ally is likewise imperative. But this must be only part of our forward-looking foreign-policy program.

AVOIDING APPEASEMENT IN MIDDLE EAST

In the Middle East, the latest unwarranted provocation by Egypt's Nasser is a vivid warning that the United States can definitely not sit in the sun and let the world go by.

If Colonel Nasser commits any new infractions in the Gaza strip, flaunting the United Nations and dishonoring his own assurances on the Israeli withdrawal, the immediate responsibilities of the United States are clear.

We have patiently steered through the Mideast crisis over the past months. We have tried to calm the many disturbances threatening to erupt Arab-Israeli relations once and for all. It was due chiefly to United States assurances that Israel withdrew her troops in accord with United Nations requests.

Now, we cannot allow ourselves to drift or be pushed on Nasser's tide.

What actions should, then, be considered?

A firm warning to Egypt against further belligerency; a possible emergency call to the United Nations General Assembly in the event of additional troublemaking; consideration of further economic pressure against Egypt—these are actions which we must weigh. The alternative is to submit to a dictator who is "feeling his oats" in defying international law and moral responsibilities.

Not only must we quickly meet the issue at hand. We must lay bases for permanent settlement in the Middle East. It's time we learned that we cannot ride on a retread tire forever.

It's dangerous to the occupants and puts the whole car out of balance. Comparing this common auto situation to the chronic Middle East turmoil, we find that a patched-up armistice agreement is no good.

Positive initiative is needed, therefore, in settling the Arab refugee problem, the endless boundary disputes, the problem of transit rights through Suez, and the Gulf of Aqaba.

And, as leader of the free world and its leading spokesman in the United Nations, the United States responsibility for meeting this overall challenge is clear cut.

UNITED STATES MUST SHOW UP THE NEW "RED FACE"

The dangers we see on the Mideast front are, of course, part and parcel of a much greater epidemic, intended to draw all diseased victims into its ward—international communism.

The amazing turnabout tactics of the Soviet Union just within the last 5 months, and her gross hypocrisy during the Hungarian rebellion, are grim reminders that Soviet aims under Khrushchev, or anyone else, are still world domination.

Showing Soviet Russia up for what she is and countering her current lure moves throughout the world make a big order for the United States. But it is one which must be filled.

The Soviet Union continues to follow her historical pattern of avoiding outright aggression in seeking to add more countries to her satellite chain.

She is embarking on an expanded program of political and economic warfare designed to wean over strategic areas. She is taking advantage of tensions such as we face in the Middle East; so she seeks to keep the fires of dispute smoldering. She is certainly doing a thorough job of it from Greece to Africa to Indonesia, where the forces of nationalism and low standards of living can be fed on, for Communist gains.

Further, the Soviet (phony) good-neighbor policy is being pinpointed to strategic spots in the Kremlin scheme. Vast arms aid to Syria and Egypt, supplemented by trade and cultural missions, large offers of economic assistance to less-developed nations struggling for self-sustaining economies, a simultaneous campaign of anti-American propaganda—these are some of the hard facts of the new Red face.

WE MUST STRENGTHEN TIES WITH UNDERDEVELOPED WORLD

How must we proceed in erasing the Soviet blueprint? There are several ways:

First, we must recognize that the evolution of underdeveloped countries with rising expectations is at hand. We must strengthen our ties with these new governments, desiring independence and self-government.

We must disprove Communist accusations of our alleged siding with imperialism and colonialism. Vice President NIXON's visit to the Gold Coast and seven other African countries is a positive step in this direction. President Eisenhower's meeting with King Saud, of Arabia, is another effort to show that we sincerely want to help stabilize the Middle East and help further economic progress in that area.

Putting new life into our security pacts with countries of the Middle East, southeast Asia, and the Far East, is still another way of tightening the bonds of mutual interest. By "new life," I mean greater emphasis on political and economic ties.

The major emphasis on military security alone has too often fostered misunderstanding and suspicions abroad. It is necessary, of course, to strength the internal security of countries fighting subversion and revolutionary elements. But we must realize that there are nations who want to remain free of military alliances, in order, they feel, that they may concentrate on the battle against hunger, disease, and poverty.

PRESIDENT'S REMINDER OF OUR RESPONSIBILITY

And may I stress the need for a new, dynamic approach to economic assistance. The problem of international economic development is one which the United States must meet. It is to our national interest that we do so. Why? As the President stated in his second inaugural address:

"One-third of all mankind has entered upon an historic struggle for a new freedom: freedom from grinding poverty * * * (and) wherever in the world a people knows des-

perate want, there must appear at least a spark of hope, the hope of progress—or there will surely rise at last the flames of conflict."

HISTORIC CONCEPT OF ENLIGHTENED MUTUAL SECURITY

Now, secondly, what about the overall concept of United States Mutual Security itself?

In my judgment, it is sound and, indeed, indispensable.

Congress now has before it no less than three separate series of reports, confirming the advisability of this program:

The report of the Benjamin Fairless Commission.

The report of Eric Johnston and his associates, on the International Development Advisory Board.

The reports of various private contractors who have studied the program on behalf of the Senate Foreign Relations Committee.

(On Wednesday, we are opening hearings on these reports.)

Each and all of these reports bear the most careful study. There is no doubt that constructive changes can and should be made in mutual security, e. g., to stimulate more sound private investments; to secure better coordination in planning of assistance, etc.

20TH CENTURY VERSUS 19TH CENTURY THINKING

But the basic concept of aid, in our own enlightened self-interest, must be protected. The 1958 Mutual Security Budget must be scrutinized; but it must not be sabotaged.

Why? Because of the facts in the changed, danger-filled world of the 20th century—facts such as I earlier mentioned.

Open, alert 20th century minds may honestly differ as to the details of the program. But backward-looking 19th century minds, unaware or uninterested in the grim realities of the 20th century, must not be permitted to destroy or sabotage this program. We—you and I—take rightful pride in the rich traditions of Lancaster's and Pennsylvania's and America's past. But we are more concerned with Lancaster's and Pennsylvania's and America's future.

The past has much to teach us. The best of the past must always be preserved. But it is the present and the future which hold the challenges which must be fulfilled.

We must find new teachings in the old books. We must find new guides for the beckoning future.

ANSWERS TO CRITICS OF MUTUAL SECURITY

May I, before continuing, point out to those who have criticized—wholesale—the mutual security program, certain essential facts:

In the first place, mutual security expenditures have been eminently successful in helping to revitalize the economies of many foreign lands—economies which would long since have collapsed into bankruptcy. In so doing, many a foreign country has become a better customer for America's own goods and services.

In the second place, the very appropriations for this mutual security have been spent in overwhelming part on the products of our own factories. In other words, the dollars which we have appropriated have actually been spent largely inside the United States, where they have helped create jobs.

And, finally, let me point out this fact, so far as direct military expenditures are concerned:

A dollar spent to maintain a South Korean or Turkish or Pakistani or Vietnamese soldier at his own border will save spending perhaps 25 times what would be necessary to maintain an infinitely costlier American lad in uniform at that very same border.

Thus, it is far cheaper and more efficient to help these allied countries protect themselves, than it is to send more American boys overseas to try to protect them.

CAN THE UNITED STATES MEET THESE TESTS?—WE CAN, WITH DETERMINATION

I have reviewed what are, in my opinion, the major challenges to United States strength of leadership, here at home and beyond our national boundaries.

I, for one, continue my faith in our President and in his desire to meet these challenges head on through positive and firm policies. And so, I believe we are well on our way to confirming our ability to meet the tests of our times.

The recent overwhelming passage of the Eisenhower Mideast doctrine was one such landmark.

The Eisenhower-Macmillan meeting should prove another.

The forthcoming visit of Chancellor Adenauer should prove still another landmark in western unity and adequacy.

Like the past visits of French Premier Mollet, English Defense Minister Sandys, German Foreign Minister Von Brentano, each of these get-togethers establishes stronger foundations for the edifice of peace, which we are building for this 20th century and beyond.

Can we, then, meet the tests of this time? Yes; with patience and fortitude we can, we must.

Foreign Aid Is Vital to United States Security

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. JAVITS. Mr. President, on Thursday, March 7, I addressed the American citizenship award dinner of the Golden Slipper Square Club in Philadelphia. In the course of my remarks I sought to marshal the facts in support of the vital importance of continuing United States overseas economic and technical assistance programs. Subsequently these remarks were reprinted in the New York Herald Tribune of March 13, 1957.

I ask unanimous consent that the New York Herald Tribune article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NEED FOR FOREIGN AID

(By Senator JACOB K. JAVITS)

The following are excerpts from a speech delivered recently by Senator JAVITS at the American citizenship award dinner of the Golden Slipper Square Club in Philadelphia:

"United States overseas economic and technical assistance programs are in danger in the Congress. Unless there is a great rallying of public support behind these programs, they could be so seriously crippled as to materially retard the fight against communism and the struggle for international peace. For the economic and technical assistance programs are as vital to the security of the United States as the military assistance program.

"There is considerable evidence that the economic and technical assistance programs are in jeopardy. One solid indication is in the temper of the Congress shown in the recent Senate vote on the Russell amendment that would have eliminated such aid from the President's Mideast doctrine. Another is the large number of surveys on the programs being made both inside and outside Government. A third is the series of attacks on the programs because of individual failures in particular countries. Finally, and very importantly, these programs are the prime targets of those who would cut at any price the admittedly large $72 billion budget for the coming fiscal year.

"I am an advocate of pruning any unnecessary spending from the Federal budget and I shall devote my efforts in the Senate to that cause. But at the same time, I believe that economies that would endanger our national security, as a drastic cutdown in the economic and technical assistance programs certainly would, are unwise economies to be avoided in the national interest.

* * * * *

"What then is needed and what should be the objective in the Congress? First, we need to step up our economic aid program from approximately $600 million a year to $2 billion a year. This would still be less than one-half of 1 percent of our gross national product.

"In this should be included sums for technical cooperation, both directly and through the United Nations; today our own technical assistance programs cost $135 million and our contributions to the U. N. program about $15.5 million a year. Not all this need be in grants, although in critical areas where we are spending 80 percent of our economic aid now, such as Korea, Formosa, Vietnam, Pakistan and Turkey, loans may prove difficult. However, loans may prove difficult. However, we can certainly make the ihcrease primarily in loans, long-term and at loan interest.

"Second, we need also to expand very materially the availability of personnel for overseas technical and economic assistance programs, and especially for the preliminary training for these individuals. For truly, these are among the finest soldiers for peace we have. In my recent trip around the world, I learned that it takes 18 months to orient an American properly in an economic aid job. And he stays for only 2 or 3 years. This preliminary training should be done in advance in the United States.

* * * * *

"Third, it should be our job to increase overseas private investment from the present level of just under $2 billion net per year to $5 billion a year within the next 10 years. To do this, we should give prompt consideration to an income tax program for the accelerated amortization of investments made in coordination with the foreign policy of the United States. And we should consider establishing a governmental medium for integrating the private sector of the American economy into the Nation's foreign policy.

"In order to place our foreign aid programs in their proper perspective, I believe it is vital to dispel certain myths about them.

"First, the myth that the programs represent such a huge expenditure that we would jeopardize some major domestic social and economic advances. The fact is that every dollar of aid abroad must return to the United States to be spent. The National Planning Association reports that since 1948 foreign aid programs have involved relatively small cost to the United States. For example, in the whole period since 1948, the aid programs, including military aid, amounted to 1.7 percent of our gross national product, and in the last year they have amounted to only 1 percent of our gross national product.

* * * * *

"The second myth is that other free nations who are capable of overseas assistance, are not doing their part. This is dispelled by a special study, just released, prepared for the Senate Foreign Relations Committee by a private research organization showing that

the Western European nations plus Canada, New Zealand, Australia, and the Union of South Africa have spent about two-thirds as much in relation to their gross national product on foreign aid as has the United States.

"The third myth is that failures in a particular country damn the whole program. Certainly, there have been failures; for example in Iran. But the program is so great, involving 60 countries and 8,000 United States citizens employed directly and indirectly, plus 3,000 foreign nationals for clerical and housekeeping functions, how could some failures be avoided?

* * * * *

"But failures must be compared with the literal revolutions which such aid has caused. In India, aid has been heavily responsible for the community development program referred to there as the silent revolution. This program has reached 80 million rural people directly and before it is completed it will have reached all of the 500,000 villages in India with their population of over 250 million. In Latin America, the cooperative health program has affected more than 25 million with vast improvements, not only in health but in productivity. In the Asian arc, agricultural output has been brought up 10 percent over prewar levels, an absolutely vital need because increased population would otherwise have brought on widescale starvation.

"We in the United States cannot be either prosperous or secure in a world suffering from chronically depressed living standards. By way of contrast, the per capita annual income in India is $60; in Pakistan, $70; in Japan, $190; Brazil, $230; Peru, $120; in Lebanon, $260, with even less in other Middle East countries—all compared to our $1,870. The Fairless Committee, reporting just the other day, truly concluded that both military and economic aid programs have successfully countered Soviet expansion and should be continued.

* * * * *

"The situation is critical and the hour is late. The Communists are pressing their offensive upon free institutions all over the world. Military security, for which we are today spending 60 percent of our foreign-aid budget—for this fiscal year a total of $3,178,570 out of appropriations of $3,766,570,000—is only the shield. Behind this shield, we must integrate and develop a free world, give it hope, encouragement and progress, if we are to overcome successfully the constantly increasing Communist drive of infiltration and subversion."

Tax

EXTENSION OF REMARKS OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, March 22, 1957

Mr. MAGNUSON. Mr. President, many of our State legislatures during their current annual and biennial sessions seriously considered, and in many cases spoke out for, repeal of the 10-percent Federal tax on transportation.

The Legislature of Washington was among that group. Our legislature unanimously adopted a memorial to this Congress, urging repeal of this tax, which was imposed in wartime.

Before the Washington Legislature took this action, our new Governor, the Honorable Albert D. Rosellini, expressed himself in favor of repealing this tax.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement made by Governor Rosellini, an editorial published by the Seattle Daily Times, and the memorial approved by the Washington Legislature.

There being no objection, the statement, editorial, and memorial were ordered to be printed in the RECORD, as follows:

OLYMPIA, February 16, 1957.—Gov. Albert D. Rosellini today commended the legislature on senate joint memorial No. 16, which urges Congress to abolish the 10-percent tax on transportation.

"The measure is a sound one and it is my hope that the legislature passes it and presents the memorial to Congress," the Governor said.

The memorial currently is before the transportation committee, which will set on it favorably it was predicted by Senator James Keefe, committee chairman, and one of the sponsors of the measure.

In urging the legislature to act favorably on the measure, Governor Rosellini said: "The 10-percent transportation tax was an emergency measure in wartime and one of its principal purposes was to discourage travel when all transportation was desperately needed for military uses. We all remember the signs in railway stations, 'Is this trip necessary?'

"Today the picture is entirely changed. People need to travel for business and pleasure. Both commerce and the tourist trade depend upon travel; indeed, our whole economy is based upon the free flow of people and goods.

"This 10-percent tax is particularly discriminatory against our own State of Washington, because we are in the northwestern corner of the Nation, freight charged from central and eastern points are highest to this State—the tax is consequently the largest for our people and for manufactured articles coming here.

"I believe that this memorial will bear weight with Congress, and will give our congressional delegation a tool to work with in fighting to eliminate this discriminatory tax against us."

[From the Seattle Times of February 17, 1957]

FEDERAL TRANSPORTATION TAX IS BOTH OUTMODED AND UNFAIR

One of the most flagrant illustrations of the maxim that a tax once imposed stays on the books forever is the unjust Federal transportation tax that was enacted by Congress as a war measure in 1941 and 1942.

This is the 3-percent tax on the transportation of freight and the 10-percent tax on passenger travel, originally levied for purposes of emeregncy war revenue and, in the case of the tax on passengers, to discourage civilian travel when transportation facilities were overburdened with troop and supply movements.

The freight transportation tax was enacted in 1942 as a 3-percent tax—4 percent on coal—and has remained at that level until the present time. The pasesnger tax, first enacted in 1941, then was a 5-percent tax. It was raised to 10 percent in 1942 and 15 percent in 1944. In 1954, it was reduced to the present rate of 10 percent. Both taxes are charged against users of American rail, air, bus, and truck transport carriers.

As a war measure, for purposes it was intended to fulfill, this tax was cheerfully accepted by the American public, as were many other wartime inconveniences. But it was not to be expected that this attitude would be continued indefinitely, long after the war emergency no longer exists. In the Pacific Northwest and other western sections of the country, the levy has become particularly objectionable.

This is partly because this region and all the west coast are far from principal centers of distribution of many commodities and far from eastern travel destinations. The long-haul shippers and long-distance travelers are required by this tax to make an entirely disproportionate and unjust contribution to Federal revenues. In this sense it is a highly discriminatory tax. It includes some absurdly discriminatory rates on air travel between Seattle and the cities of Alaska and between Seattle and Honolulu.

Across the northern section of the United States, moreover, it discriminates against American transportation lines to the profit of Canadian carriers. Passengers originating in Seattle, for example, can easily travel to Vancouver, B. C., and save considerable sums on fares on Canadian rail and air lines, escaping the transportation tax they would be required to pay here.

The Seattle Chamber of Commerce and the Los Angeles Chamber of Commerce are taking the lead in their respective areas in efforts to have this Federal transportation tax repealed during the present session of Congress. It would be helpful if the Washington Legislature would join in this movement by memorializing Congress, urging that the tax be rescinded this year.

Senate Joint Memorial 16

To the Honorable Dwight D. Eisenhower, President of the United States, and to the Senate and House of Representatives of the United States of America in Congress Assembled:

We, your memorialists, the Senate and House of Representatives of the State of Washington, in legislative session assembled, respectfully represent and petition as follows:

Whereas for the purpose of meeting wartime emergency necessity, the Congress of the United States enacted as excise taxes a levy upon the transportation of persons and property; and

Whereas one of the principal purposes of levying such tax upon the transportation of persons was to discourage unnecessary wartime travel; and

Whereas today, 12 years after the cessation of hostilities, there continues a 10-percent levy on the transportation of persons and a 3-percent levy on the transportation of property; and

Whereas it is the opinion of the Legislature of the State of Washington that excise taxes should not impose an unfair burden on the long distance shipper and the long distance traveler as does the present tax on the transportation of property and persons; and

Whereas it should be a principle of Federal taxation to levy taxes in such a manner as to prevent them from falling as an unequal burden on citizens residing in different areas of the country; and

Whereas the distances to, from, and within the West impose an unfair burden on the western traveler and shipper; and

Whereas the present transportation tax on property is unfairly burdensome upon the State of Washington as it adds what is in effect an additional tariff on the goods shipped from Washington to the eastern markets; and

Whereas the development and preservation of open markets leads to the efficient development and stimulation of the agricultural resources of the Nation; and

Whereas the State of Washington is particularly interested in preserving the eastern market as an open market in which the agricultural products of Washington may

compete freely without the hindrance of artificial barriers such as the present transportation tax; and

Whereas the State of Washingon is particularly interested in protecting and developing its vacation and tourist travel on an equal basis with other vacation travel areas; and

Whereas the transportation of both persons and property plays such a vital role in the economic life of this country to the extent that the costs of transportation should always be kept at the lowest possible level; and

Whereas transportation is in no sense a luxury but is a vital necessity and there is, therefore, sound reason for distinguishing between the transportation taxes and other excise taxes that are imposed upon luxury items; and

Whereas it is the opinion of the Legislature of the State of Washington that the best interest of the country and particularly the Western States, who are now discriminated against by the present transportation taxes, would be served by a repeal of those taxes; and

Whereas there is presently pending before the Congress of the United States legislation which would repeal the tax on transportation of property and which would repeal the tax on transportation of persons: Now, therefore, be it

Resolved, That the Legislature of the State of Washington respectfully memorializes the Congress of the United States to enact into law such legislation or any other bill or bills which would accomplish the same purpose; and be it further

Resolved, That the Secretary of the Senate be hereby directed to transmit copies of this memorial to the President and Vice President of the United States and to each Senator and Representative from Washington in the Congress of the United States.

United States Has Moral Obligation To Reunite Families Kept Apart by Immigration Barriers

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement entitled "United States Has Moral Obligation To Reunite Families Kept Apart by Immigration Barriers," by Judge Juvenal Marchisio and Rev. Caesar Donanzan, national chairman and executive secretary, respectively, of the American Committee on Italian Migration. Parts of this statement appeared in the New York Times of March 18, 1957, and it clearly demonstrates the need for liberalization of our restrictive immigration laws.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

UNITED STATES HAS MORAL OBLIGATION TO REUNITE FAMILIES KEPT APART BY IMMIGRATION BARRIERS, SAY MIGRATION GROUP OFFICIALS—RESTRICTIVE POLICY PLAYS INTO HANDS OF RED PROPAGANDISTS

The dramatic and pathetic plight of families separated and kept apart by American restrictive immigration laws was pointed up in a joint statement issued today by Judge Juvenal Marchisio and Rev. Caesar Donanzan, national chairman and executive secretary, respectively, of the American Committee on Italian Migration at the headquarters of the organization, 65 East 55th Street, New York. The committee is a member agency of the National Catholic Resettlement Council—NCWC. The statement reads as follows:

"The United States has a moral obligation to bring here as soon as possible the wives and minor children of those immigrants who came to this country, within the last 2 years, under the provisions of the Refugee Relief Act of 1953. A total of 20,153 spouses and minor children were left in Italy and Greece alone (18,230 Italians and 1,923 Greeks) with the hope that they would join the 'breadwinner' within a short period of time.

"It is immoral and psychologically unsound to keep these families apart. It is also dangerous to our foreign policy since it adds another argument to the Communists' constant barrage of criticism of the restrictions in American immigration laws.

"The American Committee on Italian Migration which, through its 107 chapters from coast to coast, helped to implement the R. R. A. by obtaining the necessary job and housing assurances for the 60,000 Italians permitted to enter under the act, is besieged daily with many heart-rending appeals from the newly arrived immigrants. Many of them came here without their families because the sponsor could not accommodate the entire family and others because of the lack of means for transportation. They also came without the knowledge of the restrictions under the law that their wives and minor children could not join them for 5 or 6 years under the third preference category of the Immigration and Nationality Act (McCarran-Walter law.)

"The problem is aggravated by the fact that by the time the family is eligible to come here, many of the minor children will reach 21 years of age and thus be excluded from entry.

"We hope that Hon. FRANCIS WALTER, chairman of the House Subcommittee on Immigration, who is aware of the problem and from whom we have received repeated assurances that special legislation to bring about the immediate reunion of these families 'is a must,' will initiate legislation that will remedy the situation.

"Moreover, the husbands and fathers who have been legally admitted were carefully screened by both Italian and American authorities in Italy before they were granted visas.

"We are confident that no Senator, Congressman, or other American would oppose the fruition of this vital objective, not only as it affects Italians and Greeks but also other nationality groups.

"The resolving of this problem is urgent and important. Another that begs solution is that of the 'pipeline' cases. These are the people whose applications for immigration to the United States under the Refugee Act were processed after exhaustive investigations and whose hopes were raised only to be dashed when the Refugee Relief Act quotas were filled and the barriers of immigration again clamped down for many years to come. These leftovers number 24,841 Italians, according to the United States State Department; for the Greeks it is 11,290; for the Netherlands, 377; Germany, 568. 'Pipeline' cases for escapees residing in NATO countries are as follows: France, 2,001; Great Britain, 1,556; Belgium, 1,601. (The Refugee Relief Act quota for escapees in the NATO countries number 10,000 plus 4,000 Anders Poles, most of whom are in Great Britain.) 'Pipeline' cases for the entire Far East number 16,429, and all others in the program 1,314, thus making a total of 59,977 for all cases.

"It is imperative that Congress give serious consideration to the effect of this frustration in the propaganda battle with the Communists.

"Finally we must realize that immigration is part and parcel of our foreign policy and not the exclusive domain of one or a small group of legislators who are relegated the power by which they can thwart the will of the people as reflected in last year's campaign platforms of both the Republican and Democratic Parties, which called for justice and equality in our immigration laws. Our leadership of the free world and our national interests are at stake when we supply the fuel that oils the propaganda machine of the Communists.

"The world will judge our good intentions and our good will by the dispatch with which we treat this moral problem of separated families."

The Adopt-a-Ship Program

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. MAGNUSON. Mr. President, as a glowing example of what young America can accomplish when its efforts are properly directed, I call attention to several programs staged recently by the sixth-grade pupils of one of our Washington State schools in connection with the adopt-a-ship plan to better publicize the doings of the American merchant marine.

The children involved are students at the Ahtanum Valley School, at Yakima, Wash., under the direction of their teacher, Mrs. Ella L. Ferris. A letter from Mrs. Ferris tells of the highly successful television program staged by them on March 1 over station KIMA–TV. The day before, they had put on a birthday celebration at the school to mark the natal day of Capt. Louis Nagel, of the S. S. *Expeditor*, of the American Export Lines, which is "their vessel," the one they have adopted.

I ask unanimous consent that the letter, and a newspaper clipping describing the party for Captain Nagel, be printed in the Appendix of the RECORD, because I believe that Senators will find them of interest, and because I am convinced that many other pupils in other States will thereby be inspired to take up this splendid work of public relations in behalf of American shipping and American seamen.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

WEST VALLEY PUBLIC SCHOOLS,
Yakima, Wash., March 7, 1957.

Hon. WARREN G. MAGNUSON,
Senate Interstate and Foreign Commerce Committee, Senate Office Building, Washington, D. C.

DEAR SENATOR MAGNUSON: I am so happy to be able to report to you that our television broadcast was a huge success. We have had a wonderful response from many parts of the valley.

I cannot say enough in praise of Mr. James Nolan, of KIMA, and many others connected with the station. They exerted themselves to the 'nth degree to help us and said the most complimentary things in regard to our subject matter as well as the manner in which the children presented it.

I am enclosing a news account which I think will interest you. This celebration, in honor of Captain Nagel, was held the day before our TV program.

During the proceedings the class received a cablegram from their captain. It was from Salonica, Greece; and parents, as well as children, were really thrilled.

As a result of the class party and the television program, we have been asked to give three other programs on our Adopted Ship.

Without the most wonderful help from Captain Nagel, the public relations department of the American Export Lines, and the women's organization of the American Merchant Marine, none of this would be possible. The yreally go all the way to lend a helping hand.

Thank you again for your interest in my class activities.

Most sincerely,

MRS. ELLA L. FERRIS,
Sixth-Grade Teacher, Ahtanum Valley School.

AHTANUM STUDENTS HONOR MERCHANT MARINE CAPTAIN

(By Velma Baylor)

Captain Louis Nagel, of the United States merchant marine, is 55 today. At Ahtanum School, 33 well-wishers celebrated this important anniversary, because Captain Nagel is their captain, and they have been traveling with him for many months.

The well-wishers are members of Mrs. Earl Ferris' sixth grade class. As they cut a special birthday cake for Captain Nagel today and were surprised with his gift to them of a model of the Coast Guard ship, *Nantucket*, they knew that their captain was just heading out in the Atlantic after visiting many Mediterranean ports.

The captain's ship is the steamship *Expeditor*, of the American Export Lines. It is a question whether the Ahtanum students have adopted the captain and his ship or whether the captain has adopted them. Their classroom is full of mementoes of his trips. Colored postcards from Mediterranean ports are on display as are picturesque folders from Capri, Haifa, and the Holy Land.

FOLLOW COURSE

The students follow their ship's course on Atlantic and Mediterranean charts and on their school maps and globes. A large picture of the steamship *Expeditor* hangs at the front of the room. Near it are several smaller pictures of the ship, a picture and several snapshots of Captain Nagel.

Included in the classroom's marine decor are several model ships, including one just like the *Expeditor*.

His letters to the students are carefully kept and are referred to many times. In his latest letter, written February 19, he described the trip across the Atlantic. He wrote, "The weather inside the Mediterranean has been and still can be described as lovely considering what month it is. The air temperature has been between 55 and 65, with the water a steady 58 degrees, with light variable westerly airs and a smooth sea. * * * We passed Capte Tenes on the north African coast, and have been running within 3–5 miles off the coast to obtain what favorable easterly running current there may be. We will run as far as Cape de Fer and then haul up for Ras Engela."

VALLEY SCRAPBOOK

The students assembled a scrapbook to send to Captain Nagel. He is interested in Indian lore, and has been following the story of the Fort Simcoe restoration with a great deal of interest.

"On the way over I finally had the opportunity and the time to sit down and enjoy the Album," he wrote about the scrapbook, "I really enjoyed reading all the articles about the Indians and also those about the restoration of the fort. The various snapshots, paintings, prints, and all, made the articles that much more interesting. Thanks. I surely would like to see the country about Yakima and possibly one of these days we will get out that way."

He closed his letter with, "This is all for now. Have a sled ride for me and the fishermen in the class will kindly catch a few and remember me while they are eating them. The trappers need not bother with that angle."

VARIED CARGO

The *Expeditor's* cargo for this trip included everything from "chewing gum to farm machinery," Captain Nagel wrote in an earlier letter. In the cargo were 3,000 tons of wheat for Greece.

On a former journey the ship returned to the United States with 3,000 tons of Turkish tobacco for American manufacturers. On one notable trip the ship carried 1,000 tons of birdseed.

When the ship sails from New York Harbor, it has 12,000 barrels of oil aboard for fuel. Daily consumption is 270 barrels.

The class read about the merchant-marine-sponsored program for adopting ships in a current events paper last year. It is one of 270 classes in the United States taking part in the program now, and there is a long waiting list of classes.

BIRTHDAY PRESENT

Tom Akehurst, 12, and Wayne Clasen, 11, prepared a puppet Captain Nagel, that will be the class birthday present to him. They referred to his pictures in making the uniform, but had to check with the Yakima Navy recruiting office for advice on final touches.

Captain Nagel's home is in New Jersey. He is married but has no children of his own. He calls the Ahtanum students his crew and they elect ship's officers from their class.

Captain Nagel has become an important individual in the lives of 33 Ahtanum youngsters. Since he is practically "one of the family," the parents of the sixth-grade students also were present for his birthday party today. It was a wonderful party. The room was jammed and everyone was enthusiastic with happy birthday wishes for the captain.

It is rumored that some of the sixth graders are a bit reluctant to pass and leave their captain and their ship. On the other hand considerable rivalry is developing among fifth graders who are vieing for a berth in Mrs. Ferris' room next year.

On the playground one day this week, a little second grader sidled up to Mrs. Ferris and asked, "Will you still have your captain and your ship when I get to the sixth grade?"

The Education of Our Talented Children

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. WATKINS. Mr. President, oftentimes in our study of America's educational needs, we tend to concentrate our attention upon the handicapped, and tend to neglect the talented youth. Such lack of foresight can only result in a loss to our Nation.

One of our finest scientific and military spokesmen, Rear Adm. H. G. Rickover, has noted the dubious results which neglect of our talented youth—which he terms "our presently most neglected natural resource"—can accomplish. Turning over this problem in his mind, he has come up with specific suggestions for solution of the problem. Some of these he incorporated in an address entitled "The Education of Our Talented Children," delivered recently before the Thomas Alva Edison Foundation.

I believe Admiral Rickover's statements should be before every Member of the Congress. I have submitted the address to the Public Printer, at the Government Printing Office; and it is estimated its reproduction cost in the CONGRESSIONAL RECORD will be $385.

Notwithstanding this estimate of the cost of printing it, I ask unanimous consent that this timely address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EDUCATION OF OUR TALENTED CHILDREN

(Remarks by Rear Adm. H. G. Rickover, U. S. Navy, Chief, Naval Reactors Branch, Division of Reactor Development, U. S. Atomic Energy Commission, and Assistant Chief of the Bureau of Ships for Nuclear Propulsion, at a luncheon sponsored by the Thomas Alva Edison Foundation, Inc., Hotel Suburban, East Orange, N. J., November 20, 1956)

It was my privilege to speak last year in this same hall on engineering and scientific education. I stated then that the United States is faced with a crisis in education and that, unless it is dealt with promptly and effectively, the machinery which sustains our level of material prosperity will begin to slow down, endangering not only our standard of living but also our position in the world.

Today I will discuss one specific aspect of this problem: our failure to identify and develop our talented youth, and the loss to the Nation which results from this waste of our most precious national asset.

Two recent developments have abruptly lifted this problem out of the academic atmosphere of leisurely debate among the experts in the field of education and thrust it upon the consciousness of the whole American people, and with an urgency demanding immediate and drastic action. These developments are: First, the sudden, if belated, awareness of an alarming shortage of trained manpower in this country; and, second, the emergence of a new mass producer of trained men and women in science, engineering, and the professions—Russia.

With regard to our deficiency in trained manpower: This has been known to leaders in education, government, and industry for some time, even if the general public has been slow to perceive it. But only in the last few years have we begun to see that our trained manpower shortage is the inevitable consequence of a long-term trend in American education which must be halted if we wish to retain our technological lead. To put it bluntly, our schools do not perform their primary purpose which is to train the Nation's brainpower to the highest potential.

One half of our children who are endowed with the ability to enter college and university do not do so. For every high-school graduate who eventually earns a doctoral degree there are 25 others who have the mental capacity to achieve that degree, but do not. If our schools had succeeded in inspir-

ing a love of learning in these children they would have become professional men and women and we would not be faced today with a deficiency of trained manpower. Lack of funds is only partly responsible for this irreplaceable loss. Had there been proper motivation, nearly all of these young people could have found ways and means to obtain a professional education.

This is a serious indictment of our schools, but it would be most unfair to place the blame on our harassed teachers and school officials. Inadequate staffs of underpaid and overworked teachers must cope with a tidal wave of children which threatens to overwhelm our crowded schools. No, the blame rests squarely upon us all.

The sort of schools a community has depends entirely upon what the community thinks of education and what the community is willing to pay for it.

If we do not realize that the education of our children is our most important task; if we are more concerned with their clothes or with their recreation and entertainment than with the training of their minds, then we need not be surprised that our schools do not produce either an adequately educated citizenry or a sufficiently large and competent corps of professional men and women to maintain our culture and civilization.

As of today, the American people seem to feel that education is worth no more to them than about half what they are paying for recreation, that is about 4 percent of the national income.

I need not elaborate to this audience on our crucial shortage in trained manpower. I refer you to the ample data presented by leading experts from industry, government, and the sciences before the Joint Committee on Atomic Energy of the Congress of the United States during hearings in April and May 1958 concerning the shortage of scientific and engineering manpower.

Commenting on this problem, the committee remarked that it was a shocking indictment of America's indifference toward one of the most serious problems facing this Nation and that it paints a graphic picture of what America stands to lose in future years if we do not immediately initiate vigorous corrective measures.

Every American has a legitimate concern with our educational system. Our children are the Nation's hostages to the future. Both as parents and as citizens we have no more important job than to insure that they are given the very best education they are capable of absorbing. And never has this been more important than today when we are in danger of being outstripped in technological developments by Russia.

In recent years distressing intelligence has reached us that Russia has created a formidable educational system which bids fair to outproduce us in trained personnel. They may even beat us to the goal of becoming the first nation to give every child the opportunity of advancing upward on the educational ladder to the very topmost rung—provided he has the intelligence and applies himself—with tuition, books, room, and board entirely provided by the state.

It would be unwise to dismiss as empty boasting Krushchev's remark that Russia will soon have more scientists and engineers than we. She is already training more than her economy presently needs while we are training fewer. Unless we take drastic steps to reverse this trend she will catch up with us and eventually surpass us. The Russian aim is to achieve world scientific and engineering supremacy.

Someone has aptly called this the cold war of the classrooms.

In this grim competition with the Communist world, the choice of methods is unfortunately theirs—whether to wage real war or to continue the present cold war where each side tries to gain strength by winning the support of the uncommitted nations.

Most of these nations are newly independent and technically backward. They are determined to achieve technological equality with the West at the earliest possible moment. Trained manpower has become a weapon in this cold war since it determines how much technical aid each side can offer. Russia will soon have a surplus of trained manpower which she can export. We have a shortage. Can we allow Russia to outdo us in aiding the neutrals? Can we let her become big brother to all the backward countries of the world?

No matter what methods are chosen in the duel between the Communist and the free world, education will, in the final analysis, determine the outcome, particularly the education of talented youth.

It is therefore most unfortunate that our social mores are hostile to the concept that children of superior mentality ought to receive special consideration at tax-supported schools. The very thought of recognizing differences in intellectual ability is repugnant to our equalitarian philosophy.

In our democratic society we are committed to the basic assumption that there is no person who can claim to be an indispensable man. We proceed from this entirely correct assumption to the incorrect conclusion that neither does a democracy have indispensable men. This is obviously erroneous. A moment's reflection will show that no society can function without its indispensable men. By this I mean the men who because of natural endowment and careful training possess the intellectual, artistic, and moral abilities to carry forward the momentum of civilization and to build upon its existing foundations.

It has been estimated that the efforts of a mere 1 percent of the total population move the world forward. This small group is indispensable to the maintenance and advancement of our civilization.

There is never an abundance of indispensable men. In primitive handicraft societies a handful suffices; more are needed in civilized societies. No nation has ever had too many indispensable men.

The more complex a society becomes, the larger proportionately is the number of intelligent, highly trained men needed for its proper functioning. They are the men who provide leadership in government, industry, and labor; the men who think creatively, who invent, who push the boundaries of knowledge outward; the men who enrich life through their moral leadership or artistic gifts—all of the competent people who manage our complex technological civilization. They are all indispensable to our society. We must keep their ranks replenished by the inflow of properly trained youth of superior mental ability if we are to progress in the future as we have in the past.

A few figures will illustrate the proportionately greater number of trained men needed in a technologically expanding society.

It is estimated, for example, that a 3 percent annual increase in our gross national product will require a 4½ to 5½ percent annual increase in scientific and engineering manpower. Or, to put it differently, in the last 20 years our population has increased by 35 percent, but the number of scientists has increased by 450 percent, and engineers by 225 percent. Yet even this tremendous increase leaves us seriously short. Fifty years ago we needed 1 engineer for every 1,000 workers; today the proportion is 1 engineer for 65 workers, and in some industries it is already 1 for every 20 workers.

Every advance in any given field of knowledge leads to greater specialization; each specialized field in turn requires a new army of people trained for it specifically. Today, technological progress is limited only by availability of trained professionals, and this, in turn, depends on but two factors: Incidence of superior brain power—over which we have little, if any, control; and development of available talent—here we can do much.

Who then are these talented youth, and what provisions are we making for their intellectual training?

There is no general agreement on the definition of the term "talented." Sometimes it is applied to only the top 1½ to 2 percent of our children—those with an I. Q. of 135 and above. At other times it is given wider application to take in all who are above the average of high-school graduates, i. e., 110 I. Q. and over.

A few figures may help to give perspective. The average intelligence of the total population has been arbitrarily set at 100 on this basis, those who enter high school average 105; those who graduate from high school 110; those who enter college 115; and college graduates 120. Generalized classifications such as these tend to be arbitrary, and I. Q. tests are not infallible. Moreover, they leave out of consideration differences in character and in will power. A lazy child with a high I. Q. may well be outstripped at school and later on in life by a child with a lower I. Q. but with drive and motivation.

However, for a rough approximation of the percentage of children with sufficient mental capacity to absorb training for a professional career let us take the figure of 15–20 percent; which includes those having an IQ of 115 and over. This incidentally is also the percentage of children who in Europe are able to pass the examinations for entrance to academic secondary schools. I shall henceforth use the term "talented" for the top 15–20 percent of our children and "brilliant" for the top 1½ to 2 percent.

Very little is done in our schools to seek out and identify this top 15–20 percent of our children. With few exceptions they are being taught along with the 80 percent of average and below average mentality. Up to age 12, the curriculum for all children is the same. In junior and senior high schools a basic core of the curriculum remains obligatory for all, and this is taught in classes which are attended by the whole range from below average to brilliant children. This is so except in some few large high schools where attempts have been made to set up different sections for children having different degrees of ability and achievement. The length of schooling is the same for all children, with some very few instances where talented children are allowed to skip a grade or two.

Now, there is ample evidence that in any class which includes slow and fast learners, the slowest group sets the pace and receives most attention from the teachers. The above average child is kept from advancing at the speed appropriate to his ability, with the result that many lose interest in learning as such, others develop sloppy habits, and some build up a false sense of superiority which convinces them that they are so smart that they will never need to apply themselves to anything. The deadly routine sets in on these young and malleable minds.

Talented children whose minds are not challenged become frustrated and often turn into poor pupils from sheer boredom. Mental muscles become flabby if the child's mind is not constantly being strained to the utmost. The mind is no different than any other part of the body. It deteriorates when it isn't used for its proper purpose—to think.

As is often the case, where there is community pressure not to fail the poor student, advancement into the next higher grade becomes virtually automatic. This tends to convince the slow learners and lazy pupils that they can get by without working. Talented children may well resent having to work harder for no tangible reward. All children

need incentives to keep up the learning process. Therefore, the practice which is to be found in many schools of never giving A's, or of grading the child only as against his own past performance, or of limiting report-card comments to satisfactory, and needs improvement, is a particularly unfortunate concession to a dubious tenderness for the sensibilities of those parents whose children show neither ability nor a desire to learn.

In addition to the common core of obligatory courses, our high schools offer a wide choice of elective subjects from which each child may pick those he prefers. Among the electives there are the tough academic subjects which constitute the college preparatory program—methematics, algebra, geometry, trigonometry, physics, chemistry, biology, foreign languages; there are the vocational subjects which make much less demand on the intellect or willpower since little homework is required—domestic sciences for the girls, and various trade skills for the boys; finally there are the subjects of a recreational nature—square dancing comes to mind—or those which in a vague sort of way aim to train children in cooperative and mutually helpful living—courses in social manners, life adjustment, the art of makeup, and how to attract the opposite sex.

All except the academic subjects are of the kind which we might term know-how. That is, they have nothing to do with the school's primary task which is to teach young minds to think and to train them in the elementary tools of learning. This is a task which can be performed only by the school. Vocational, recreational, or life-adjustment training can be and should be obtained elsewhere. Our teacher shortage would be greatly lessened if we relieved them of all responsibilities except those of teaching the minds of children and developing their bodies through physical training.

This may sound strange to us, accustomed as we are to the intermingling in our schools of academic and vocational training, and to the great emphasis given to social activities. But we are the only country where schools are part social institutions; everywhere else children receive academic training in general schools, and vocational training in special vocational schools or through on-the-job training programs combined with general education at special secondary schools.

Nowhere else in the world are curricula in secondary schools so largely elective as in America. Very few children have so earnest a love of learning—such intellectual fortitude as to pass up the chance to coast through school on the easy subjects. Unless they are wisely guided by their parents and teachers, they will tend to choose the easiest and most pleasant school subjects.

It is the children from the better homes where entrance into college is taken for granted who take the college preparatory course at high school. But the talented children who come from poor homes often lack the parental example and urging to take this more difficult course. Classes are too large and teachers too burdened with extraneous responsibilities heaped upon them by the community to have time for the kind of counseling which discovers the talented children from poor homes and encourages them to take the tougher courses.

In nearly all respects the mentally superior child is less adequately served at school—taking into account its special requirements—than the average or, for that matter, the physically or mentally handicapped child. I realize, of course, that we must and should make special provision for unfortunate children. Our hearts are here involved and it is to the credit of our people that they will readily abandon such cherished principles as equal education for all to answer the call of compassion. Yet why should we show less compassion for the mentally superior child whose fine abilities are being left untended? Oddly revealing of American thinking is the fact that the term "exceptional child" conjures up to most educators not the talented child but the handicapped one. Books and magazines dealing with exceptional children seldom give more than perhaps 1 percent or so of space to the needs of the talented child.

It is true that of late the needs of our talented children have won some recognition. But so far such recognition has been confined to a small segment of the population. Not yet won is the mass support necessary to bring about truly effective measures by legislative bodies, from which must come the necessary regulations and financial contributions to upgrade the schooling of talented youth. We are still in the early stages of isolated studies, tentative experiments in a few localities, and long-drawn arguments pro and con. More important, American public thinking has not yet connected shortages of trained manpower with inadequate provision for the proper education of the talented. Nor are we sufficiently aware that, in the final analysis, our cherished American standard of living is largely dependent on the work of a very small group of skilled professionals.

In part this is a consequence of a curious inconsistency in our attitude toward science as against scientists and scholars. We admire science greatly and we place in it an almost childlike trust; we expect it will continuously pour out delightful wonders to make our lives ever more agreeable. But upon scientists and scholars many of us look with a somewhat jaundiced eye; we call them "eggheads" and "intellectuals"; we do not consider them to be entirely normal persons. In truth, we have no real admiration for higher learning as such, nor are we willing to respect those engaged in it unless we see an immediate practical advantage to ourselves in their work. Most Americans dislike the very idea that people are unequal in intellectual capability, though they are ready enough to recognize inequality of natural endowment in other respects. This ambivalence is our attitude toward the mentally superior is surprising when we compare it with the generous applause we lavish on superior talent in athletics or in the arts, on superior beauty, or on superior business acumen.

However, as I mentioned, a beginning has been made toward the understanding of mentally superior children. The talented child has been put under the microscope; it has been studied, measured, and observed. Our knowledge of its capacities and needs has been somewhat increased. For example, Professor Terman's studies with a group of youngsters having I. Q.'s of 135 and above verify certain factors long suspected by those dealing with talented children. They are usually as superior physically as they are mentally. The comforting folk myth that if they have brains they are undersize or spindly ought now to be discarded together with black cats and knocking on wood. Usually, talented children are more cheerful and emotionally more stable than others. This is so, of course, unless their intellectual progress has been too severely hampered, in which case frustration may bring about boredom and irritability, thereby upsetting their emotional equilibrium. Possibly adjustment to the age group is more than one can expect of a child who is several years ahead of it mentally.

Even with the inadequate provisions for their specific educational needs, Terman's group of 1,000 brilliant children did remarkably well. As compared with average high-school graduates, 10 times as many went to college and on to postgraduate work; 16 times as many made Phi Beta Kappa; 20 times as many became lawyers or physicians; and over 60 times as many had either taken a doctor of philosophy degree or were well on the way toward achieving it.

Although not all talented children are academically inclined, enough of them do so well at institutions of higher learning that the spending of public funds for the better education of all talented youth is an exceedingly good investment for the Nation as a whole, and would do much to relieve our national deficit in trained professionals.

However, few concrete measures have, as yet, been taken to improve the educational program of talented youth. Most of these programs are, in my opinion, quite inadequate for two reasons:

First, they deal only with the brilliant child of 135 I. Q. and over, leaving untouched the needs of the far larger group of talented children, those having an I. Q. between 115 and 135.

Second, they are not bold enough because they seek solutions within our existing all-inclusive school system. Usually, they offer merely "enrichment" or "individual acceleration"—poor substitutes for the carefully thought-out program needed by talented youth.

It is my impression gained from reading about "enrichment" courses that, to an extent, they are being used by teachers, turned amateur psychologists, to try out their psychological theories and techniques on the gifted children. In effect, "enrichment" too often becomes no more than a sort of "make work" or "make study" project to keep the smart children occupied and out of mischief.

"Individual acceleration" or "skipping" is the other means we use today to take care of the talented child. But, because our schools are partly social institutions, the child who has skipped a grade may feel a little out of things. This disadvantage is usually temporary, however, and is outweighed by the advantage of greater intellectual challenge. Even at best, the child who skips misses part of the curriculum and still does not find the challenge to his mind that would be given him by being in class with equally talented children; though older, his new classmates are still slow learners.

That talented children need less time to master a given course of study than the average pupil is evident; how much less may come as a surprise. Dr. Hollingworth found that children with an I. Q. of 135-plus were able to complete the requirements of the curriculum prescribed for the public schools of New York City in from one-quarter to one-half the time needed by average pupils. The Terman study found that most of the gifted children would have been 2 to 3 years further along in their schooling if they had been properly placed.

Experiments in a few large cities—Chicago, New York, and Baltimore come to mind—where talented children are being taught in special schools, proved that 1 year could easily be cut from the high school course. Other experiments have been made through collaboration between groups of colleges and public high schools whereby selected high school students were admitted to college at the end of the 10th or 11th grade. Still other experiments made arrangements for high school students to take a special course during the 10th, 11th, and 12th grades which prepares them for entrance directly into the sophomore year at college. A group of 3 private colleges and 3 private preparatory schools has also studied the possibility of reducing the time spent in high school and college by 1 year and have found this to be feasible.

These experiments have also indicated that talented children should be taught separately, preferably in separate schools or, if this is not possible, in separate classes.

Such treatment of the talented would merely give belated recognition to their spe-

cial educational needs, long after the needs of the average and below average, as well as of the physically handicapped, have been taken care of. It is well to remember that the transformation of the traditionally academic American high school into a combination college preparatory, vocational, and social institution came about in response to the demand for schooling of a type more appropriate to the majority of children—those who could not or did not want to take academic courses but whose parents nevertheless wished them to attend high school. As nonacademic, know-how subjects wormed themselves into the curriculum, the high school became less and less able to give proper attention to the special educational needs of the minority of children whose superior intellect could find no challenge in downgraded curricula. This is particularly true in small communities where the college preparatory program of the high school is apt to be curtailed whenever shortages of school funds or teachers occur, as at present.

Almost half our high schools teach no foreign languages—and this at a time when our foreign commitments call for a large corps of trained men and women with linguistic as well as professional ability. Almost a quarter of the high schools offer no physics, chemistry, or geometry—and this at a time when a grounding in science becomes more and more important for everyone, including those not in academic careers.

As a matter of fact, I seriously question whether substitution of know-how subjects for academic subjects benefits even those children who do not intend to follow academic careers. A great deal of this high-school training in know-how is wasted because obsolete methods, equipment, and instruction are used. Such training is primarily the job of industry and can be done much better and in considerably less time in a factory than in a high school. Education is not a process for transmitting techniques.

Today, every citizen needs the tools of thinking, the three R's—reading, writing, and arithmetic—and such general knowledge of history, civics, and literature as will make the world we live in understandable. In our technical civilization, manual and white collar workers, tradesmen and merchants—in short, everyone needs as much general education as he can possibly be coaxed to absorb. It isn't doing our children any favor to spare them all mental effort by making school too easy and too pleasant, and to substitute know-how subjects of doubtful value for mental training.

Eliminating know-how subjects from the high-school curriculum and requiring all students to take more academic ones does not solve the problem of our talented children. It is high time that we recognize their right even if they are a minority, to schooling appropriate to their needs. For the last 50 years we have, in the name of educational democracy, tried to make one common school serve all children instead of finding the appropriate school for the two main groups of children, the majority who plan on nonacademic careers, and the minority who plan for college and university. We must reverse this unfortunate trend in American education.

If I may digress here for a moment, let me remind you of the separate purposes and traditions of academic and nonacademic schooling.

It was Socrates who said that "knowledge is virtue." Though there have been regrettable lapses, western civilization has never completely lost sight of this truism. The Greeks, alone of all the nations of the ancient world, placed knowledge and the power of thought above all other pursuits as being the most worthy of a civilized man and a civilized state. We are indebted to them for that marvelous pedagogical invention—the liberal arts curriculum—which has never been surpassed for training the young to think, to use their brains in solving particular problems, and for providing a broad basis of general knowledge upon which specialized training could later safely be superimposed. We are rediscovering that a professional man needs the foundation of a liberal arts education in order to use his specialized training wisely. The man who is highly trained in only one field of knowledge and illiterate in all others can be a positive danger to society.

Rome went to school in Greece, and so Greek ideas on education spread throughout Europe. When Rome fell, Europe was more literate, it had more books, libraries, and schools than at any time during the next thousand years. Only a dim flicker of learning was kept alive by the church. From this and from the knowledge of the ancient world which had been preserved in Arab schools and was transmitted westward during the Crusades, Europe rebuilt its education. In the 12th century universities made their appearance and soon spread all over Europe—there were 108 by the year 1600. Latin was the language of the church, and since churchmen made up the faculties of medieval universities, Latin was the language which every person had to learn to enter a university to study for a professional career.

To this end, so-called Latin schools were founded in which youngsters were given a classical education preparatory to enrollment in the university. Sometimes these schools were attached to a cathedral, sometimes they were set up by private endowment, or founded by kings as charitable institutions for children of poor or deceased courtiers. These Latin schools, or grammar schools, as they are still called in England, are the forerunners of European—and of early American—secondary schools. Although the brilliant child of poor parents was seldom barred from these schools and scholarships were always available, the secondary schools were used for the most part by children from well-to-do homes.

Alongside this education for children destined for political leadership or for professional careers, there developed an entirely separate system of education for the common people. In the late middle ages, cities rose to power and wealth. Their craftsmen and merchants found that elementary knowledge—the three "R's"—was of practical use to them. They therefore founded schools where their children could be taught these subjects. Since these children were not intended for the universities, Latin was not needed, and the schools therefore taught in the vernacular. These schools later became the elementary schools and were eventually taken over by the State. elementary education originally lasted for 3 years but was gradually extended to 8 years as technological progress raised the standards of general knowledge and the primary skills required—even of persons in nonacademic careers. For these and humanitarian reasons child labor was ultimately outlawed and the compulsory school age progressively extended. In the United States, as in most of Europe, this is now age 16.

As a result of the rise of labor to political power and a general movement toward greater democracy, European schools have lost much of their class character. In England public secondary schools of all types are now free of charge, and some three-fourths of the undergraduates, even at Oxford and Cambridge, receive financial assistance from the Government. In continental Europe, elementary education has been both free and compulsory for more than 150 years. Secondary education has been a state enterprise for almost as long, and school fees have always been moderate—in addition, scholarships have been available for the gifted poor. Secondary school fees have now largely been abolished or scaled to fit the financial resources of the parents. Even universities have become free in some countries and are inexpensive everywhere on the Continent.

But while the educational ladder has been opened throughout Europe, the separation of the two educational tracks has been retained. At 10 or 11, if they can pass the entrance examinations for academic secondary schools, children may enter the upper track—about 15 percent achieve this. The remainder enter one of several other types of secondary schools, depending on whether they seek a general education not as demanding as that of the academic secondary schools, or whether they seek immediate training for their future careers. In this latter case they enter a commercial or trade school which gives some general education but with the emphasis on vocational training.

The upper track secondary schools carry the student up to 18 or 19, at which age he is considered to have received sufficient liberal arts or general education to permit immediate study for a profesisonal career at institutions of university rank. Most of the liberal arts education given in our liberal arts colleges has been absorbed into the curriculum of the European academic secondary schools; the remainder has been incorporated into the faculties of philosophy of the universities. England has a 3-year college course but it is far more centered on the student's special professional interest than is customary in our colleges.

In general, the European student is ready to begin his specialized professional studies from 2 to 3 years before his American counterpart. This is due to the early separation, in Europe, of talented children into schools which they attend for a period of 8 or 9 years. This long stay in a single school allows for a carefully planned curriculum in which subject follows subject in logical sequence—no choice is left to the pupil except at the outset when he may choose among three types of academic secondary schools—classical; modern, with emphasis on the sciences; and the third type which combines parts of both.

European children go to school 6 days a week; their school day is longer, and school vacations are shorter than here. Frequent examinations weed out the incompetent or the lazy. This rigorous intellectual discipline result in a reduction of 2 to 3 years in the time needed to educate the professional man.

Allowing for the limits set by Marxist dogma, Russian schools resemble those of Europe. This, in part, explains why they are producing more men and women of professional caliber than we do. Since the government is all-powerful, it can exert more pressure on children to spur them on to maximum efforts than is possible in democratic countries; teacher shortages can be overcome by ordering people into the teaching profession regardless of their wishes; building materials can be diverted from housing desired by the people to buildings deemed more useful to the state—such as schools, laboratories, libraries, universities. Obviously a totalitarian government, once it decides to set up a formidable educational program, can do so more quickly and easily than a democracy. For these reasons it is all the more necessary that we upgrade our schools without delay.

What concerns me most about the Russian school program is not the coercive element which speeds totalitarian programs, but the solid evidence that Russia has found a way to inspire in her children the desire to put forth their utmost mental efforts; and that she has done this through what we think of as capitalist incentives. A Russian child works hard and examinations are tough. But ahead looms a professional career which is highly attractive, combining excellent salary with much honor, prestige,

and respect. Teachers, for example, are well paid and highly regarded. Children are imbued with a love of intellectual adventure through books in which the hero is a scientist or engineer who does valiant deeds that will benefit the country—not, as in so many of our books, and even more on radio and television, a cowboy or space cadet. I doubt whether you could find a counterpart in Russia of the 100 American high school pupils who were recently queried on why they did not take mathematics and science courses. Their answers reflected disdain for scientists who were described as "squares," "long-hairs," and "little men with beards" working in musty laboratories. These youngsters were not interested in scientific or engineering careers because they regarded them as financially unrewarding as well as being too difficult and time consuming.

A hundred years ago, Americans could be proud that we were the first country in the world to promote free secondary school education for all children. However, today free secondary school education has been achieved or is well on the way to being achieved in all of Europe. But where we have lowered our secondary school curriculum to accommodate all children, Europe has maintained the high standing of its academic secondary schools and has provided special secondary vocational and trade schools for those unable to absorb academic training.

I have seen it boasted that 83 percent of our children of high-school age attend high school and that 55 percent graduate. These figures lose their force when we realize that many of these graduates have had no more of an education than European youngsters who attend the lower track secondary schools.

I was interested to read in the Clearing House, a journal for high-school teachers, that in our teacher-exchange program with England, our high-school teachers exchange places with teachers in the lower secondary English schools and not with those that prepare for college. This is perhaps an indication of how the secondary school systems of the two countries compare.

Our high schools may excel in turning out pleasant and attractive youngsters, but their heterogeneous character makes them poor institutions for training the talented.

When the great inflow into our high schools began after the First World War, some 80 percent of the students were found incapable of absorbing the academic subjects being taught. Community pressure and political expediency forced the schools to downgrade the curriculum. Now that the great inflow into the colleges is about to begin, something similar may well happen there. Already we have a number of colleges which are hardly better than secondary schools. Already we have State universities which are required by law to admit all high-school graduates from the home State, or all those with a C average—obviously not college material. This shows up in their fantastic first-year failures—in some instances 40 percent fail at the end of freshman year. One might compare this with the 2-percent first-year failures at Ivy League colleges where students have been carefully screened for scholastic aptitude. Requiring State colleges to admit students unable to do college work is a waste of tax money which could be used to better advantage on higher salaries to obtain better teachers.

But even worse than wasting expensive schooling on children who are neither able nor want to absorb it, is the damage done to our talented youth who are forced to waste 2 or 3 important years of their lives in omnibus schools unless their parents are rich enough to send them to private college preparatory schools. We shall not do justice to our talented youth until we seek them out at an early age—no later than 10 or 11—and educate them separately from the rest of the children. This need not necessarily be in a separate school; it could be in a college preparatory section of the school. But this separate schooling must begin earlier than junior high school. It should start after the fourth grade or, at the latest, the fifth grade. The schooling must be purely academic, and the teachers must have professional competence in the subjects they teach. Admission as well as advancement into each higher grade should be by examination. If possible, the school year should be extended to 210 days. There is no other country of comparable civilization where children go to school for only 180 days as they do here. This may have made sense when we were an agricultural country and children were needed to help on the farm. But our long vacations make no sense today, especially when we consider how rapidly knowledge is increasing and how much more a child must now learn to become truly educated. The more we know, the more there is to know.

We need to set ourselves the goal of making it possible for all children who have the will and the capacity to complete their general education in 14 years, or by the time they are 20. Fourteen years is a long enough time to provide a good liberal arts grounding. Professional postgraduate study ought not to begin later than the age of 20, and brilliant children should be permitted to begin a year or so sooner.

The undue length of professional education in America is a significant element in our trained manpower deficit. Today, the American professional man will complete his education when he is between 25 and 26, and for most there will have to be added two additional years of military service before they can become self-supporting. All of this becomes particularly onerous in the United States where early marriage is part of our social pattern. Surely, we must do all we can to allow our talented youth to move through their schooling at their own rate of progress and not retard them by the pace of the average or the slow learner.

I am aware that any change in the American public school system will meet opposition. Special schooling for the mentally superior will be branded a "undemocratic" and as "class" education. It will be considered "unfair" to give the talented child education superior to that offered the average. It will be said that the separation of children according to mental capacity will deny them valuable experience in living together with other children of varied background and ability, and that this constitutes an important ingredient in the smooth functioning of American democracy—so it will be said. None of these objections, however, bear critical examination.

It would, indeed, be "undemocratic" to propose a cleavage along class lines, but not one along the lines of natural ability, which hardly anyone will claim is limited to the children coming from better homes. It is, however, often forgotten that we already have just such a separation along class lines in large American cities where schools draw their pupils from a particular neighborhood rather than from the whole population, as is the case in smaller towns. Neighborhoods in America are usually homogenous, at least as far as the finances of families are concerned. Parents in better class neighborhoods generally succeed in obtaining better schools for their children. Finally, we must not forget that well-to-do parents always have it in their power to assure their children a good education by sending them to private preparatory schools. But the talanted poor child must depend solely on the public school. Education in a democracy must not only be democratic, it must also be education.

Education is not a commodity such as a house, a television set, or an automobile. Everyone can use and enjoy a house, a TV set, or a car; it would, indeed, be unfair if the State distributed these commodities free of charge but limited them to only part of the population. The ability to use and enjoy academic training, on the other hand, is not universal; therefore, to limit it to those who can benefit from it is not unfair; but to deny it to the minority who can use and derive benefit from academic training is both unfair and undemocratic, as well as a waste of our most valuable national asset.

Finally, as to the objection that experiences valuable for democratic living will be lost if the talented are separated, this again would be true only if all the talented came from the same type of home. As long as pupils in all public schools, including those giving college-preparatory courses, are drawn from the whole population and all are given the same opportunity to advance in accordance with their ability, the social values of learning to live together with children of varying backgrounds will still be preserved.

In considering ways to improve our schools, we must recognize that no institution is so hallowed by age or tradition that it ought to be exempt from periodic examination and appraisal in terms of whether it accomplishes the goals for which it was established; in particular, whether it is adjusting itself to the realities of a rapidly changing world. Measured by these tests, the American school system must be judged to need a thorough overhaul. Now that ours is no longer the only school system with an open educational ladder, the time has come when we should subject it to a searching comparison with school systems in England and on the Continent of Europe. It should be easy to obtain from foreign-school authorities such information as:

1. The subjects taught in the several types of secondary schools, with data on the number of class periods and length of class periods devoted to each subject.

2. The extent to which mastery in each subject is achieved, as measured by examinations at the end of each period of schooling.

3. School fees, if any, and scholarships granted to poor children.

4. Requirements for entrance into different types of secondary schools and universities, with samples of examinations required to obtain the school leaving certificates which are required for study at a European university.

5. Extent to which such certificates are given credit in foreign universities.

6. Extent to which courses taken in the university of one European country are given credit by other European universities.

7. Scholastic requirements demanded of American students wishing to enroll at European universities.

In addition, school textbooks could easily be obtained for comparison with those used in American public schools.

We need not slavishly copy the schools of other countries; neither should we succumb to the happiness of ignorance. In studying their ways of educating the young, we may discover valuable ideas. To these we could add the experiences of those American secondary schools that have already instituted special accelerated courses for the talented. On the basis of this information, it would then be possible to work out a course of schooling—open to all children but on a basis of entrance examination—which would proceed alongside our present junior and senior high school courses. Such schooling would begin after the fourth or fifth grade and be dovetailed into the 4-year liberal arts course in such a manner that the student could attain a bachelor of arts degree by 20 years of age.

I believe the necessary steps to bring about this educational reform will be taken as soon

as the American public has been made aware of the great need to cultivate our presently most neglected national resource—the talented child. But it will require the devoted efforts of many men and women who are willing to make this problem their own personal responsibility, perhaps as many as it took a hundred years ago when it was first proposed to remove all financial bars to higher education so that no child might be denied equal educational opportunity. That was a hard fight too, but it was won because those who fought had the inner force to confront facts. Later developments have, however, diminished the splendor of what, up to that time, was one of the noblest achievements of American democracy.

In connection with my work in atomic power, I have interviewed more than 1,000 young college graduates. These interviews have made it plain to me that our educational system needs considerable improvement. It has, therefore, been a great disappointment to me that, despite the vast amount that has been said about it in recent years, so little is being done. We must, somehow, make a start. We cannot keep on just talking while our ruthless opponent acts. How can any American remain complacent about our educational dilemma?

Is money the problem? Then what are we going to do with all our wealth? If an additional $4 billion a year, 1 percent of our gross national product, makes the difference between good teachers and mediocre ones, good schools and poor ones, can we afford not to spend that sum? Is our end aim merely to become more wealthy, to acquire more things?

Can we afford to make our talented children remain in school any longer than they have to, when our schools are already so overcrowded and the teachers so few?

Last year I suggested that industry's growing need for trained personnel made it good business for them to take active steps to help. I proposed that industry make available its scientists and engineers for 1-year periods to teach in our high schools, in this way helping to relieve the teacher shortage. I pointed out that in present day America the business corporation is not a business device alone; that it has become a social institution and has acquired the obligations inherent in this concept; that there is justification for industry to assume a responsibility for financing education because the college graduates they obtain have been trained at public expense; that such expenditures are vital for the future, and should be considered as part of the routine expense of running the business.

Today I should like to plead earnestly for even greater help from industry.

I suggest that industry, together with our educational foundations, undertake the setting up of model academic secondary schools in perhaps 25 different centers in the United States. These schools would be on a par with our best academic secondary schools. They would be free; the ability to pass an entrance examination of a kind which would weed out those not mentally capable of absorbing an academic secondary education would be the only requirement. The schools would be staffed by teachers truly capable of teaching talented children; teachers whose qualifications place less emphasis on training in teaching methods and more on graduate study in their fields. The competence of European secondary schoolteachers, based as it is on years of postgraduate study in their fields, is one of the main reasons why they can teach as much in 12 years as ours do in 14 or 15.

Teachers' salaries in these schools would be in accord with the high scholastic qualifications required and, therefore, equal to those paid for comparable positions in industry. Such salaries would attract competent teachers.

These model schools should aim at a ratio of at least 1 teacher for every 20 pupils. One of the reasons why the private English boarding schools, such as Eton, Harrow, and so forth, contribute so large a percentage of England's leaders is their ratio of teachers to pupils—1 for every 12 students.

The schools would start with the fifth grade so as to have the pupils ready for college at 16. To do this, it may be necessary to provide a choice: students could complete the course the regular way in 7 years, or they could finish in 6 years by taking extra courses during 3 summers. We must find a way for our children to attend school for more than the present 180 days. Lengthening the time in school might most easily be done through the medium of voluntary summer courses.

Teachers in these schools would be given no extracurricular work of any kind, because a teacher, as does any professional person, requires time for thought and study. The schools would be scholastic institutions, so social activities would be kept at a minimum.

The management of these schools, qualifications and salaries of teachers, entrance requirements, curriculums, and standards would be left to an independent body not connected directly with the donor. But I see no reason why the schools could not be given names to indicate the corporation, or industry, or labor organization—for labor ought to participate in this endeavor no less than industry—which contributes financial support. This seems to me fair and legitimate, and even desirable; it would win friends for industry as a whole, and for the donor in particular.

I estimate that the cost of operating each model school for a period of 6 years will be about $10 million. At the end of that period the community ought to have an option to take over the school, provided it agrees to continue the high scholastic standards set under private management.

These model schools would demonstrate what could be accomplished by competent teachers, a proper curriculum, and an adequate school year. They would be goals and living examples of what can be done by the community for the education of its children.

These are my suggestions. Others can and will be made. But let us make a start. As a beginning, let us get the data on European curriculums and teaching methods and then let us devise a way to make our schools as good, and even better, than those of any other country. We have the ability to do this. We are rich enough to do this. All we need is the will to do it and to recognize that "the inevitable comes to pass through effort."

Senator Williams a "Watchdog for Taxes"

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have incorporated in the Appendix of the RECORD an editorial appearing in the Westchester (Pa.) Daily Local News on Tuesday, March 19, 1957, entitled "Why Don't They Pay."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY DON'T THEY PAY?

If Senator HARRY F. BYRD, Democrat, of Virginia, is the "watchdog" of the Senate when it comes to budgets, then Senator JOHN J. WILLIAMS, Republican, of Delaware, is the "watchdog" for taxes.

The Senator from neighboring Delaware who a few short years ago caused consternation in the ranks of the Internal Revenue Department and was responsible for some far-reaching changes which shook the Department to its foundations, got up in the Senate yesterday and again took the Internal Revenue "boys" to task.

Delinquent Federal taxes as of the last day of last year, WILLIAMS told the Senate, basing his figures on a Treasury Department report amounted to $1,619,629,000. Included in this total was a figure, $279,180,000, representing employees' income taxes, social security, and unemployment taxes withheld by employers.

Then Senator WILLIAMS aroused (we hope) some of the Senators by pointing out that instead of setting aside this money, pending its being forwarded to the Treasury, some employers have been using it for their own purposes.

Putting it bluntly, this means these delinquents have had the use of funds which properly belong in the Federal Treasury while millions of other employers with a greater sense of integrity, having paid their debts, had to get along without this money which, no doubt, many of them could also have put to good use in their business.

Is it possible that certain internal revenue districts are so busy accounting for the money of conscientious taxpayers that they don't have time to tap delinquents on the shoulder and tell them to pay up? If this is the case, it's high time these tax delinquents are smoked out and compelled to come across. It's only fair to those who do.

Senator WILLIAMS has a way of putting his finger on situations which, with a little official pressure, cause some people to squirm. It's happened in the past. Let's hope it will happen again.

Progress in the Field of Air Transportation—The Impact of the Civil Jet

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. MAGNUSON. Mr. President, as chairman of the Senate Interstate and Foreign Commerce Committee, I am constantly impressed with the tremendous progress being made in the field of air transportation. In a relatively few years we have seen the development of airplanes which now take us where we want to go faster and more comfortably than we would have believed possible only a short time ago. Even so, we have only scratched the surface, for with the advent of the commercial jet air transport plane, a whole new era is before us.

Recently, Stuart G. Tipton, president of the Air Transport Association, made a significant speech before an important forum in the Nation's Capital, the National Press Club, on the subject of the Impact of the Civil Jet.

I ask unanimous consent that this speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE IMPACT OF THE CIVIL JET UPON THE USER, UPON THE COUNTRY, UPON THE AIRLINES

(Remarks by Stuart G. Tipton, president, Air Transport Association, the National Press Club, Washington, D. C., February 19, 1957)

Today I am undertaking to enter the realm of prophecy. This is a hazardous journey, inevitably accompanied by some error. The picture I offer you today will, I hope, prove to be generally accurate. But I must remind you that generalizations must always allow for exceptions.

For example: I can say to you now that the big jet airliners can use today's runways. I mean that the weights upon runway surfaces as expressed in pounds per square inch of pressure exerted by the tires upon the runway surface will not greatly differ from the pounds per square inch exerted by today's aircraft. I mean that the big, new jet airliners, with such devices as spoilers and outboard flaps, will be controllable enough so that no new approach problems will be created. And I mean that for the average flight on the average day, perhaps some 8,000 feet of runway will suffice. But—and here comes the exception—it still may be that a heavily laden intercontinental jet airliner may require runway lengths of 10,000 feet or more on some occasions. Studies are being conducted right now to determine average runway requirements for various types of services.

But the point is that if we keep a place in our minds for the exception to the general rule, we can draw today a pretty accurate picture of what tomorrow's jet operations will be like.

WHAT JETS AND HOW MANY?

Perhaps we ought to begin by answering the question: What do we mean by civil jet transports? As this audience is well aware, jet transports are already flying in regularly scheduled service. They are of the type called turboprops or propjets. With that type of engine, the gas turbine drives the propeller.

But what most people mean by the civil jet transports are the faster, bigger airplanes which are scheduled to go into service in 1959 and 1960. Those fleets will be made up in part of the larger propjets, such as the Lockheed Electra and the Bristol Britannia. But there will also be large fleets of Boeing 707's, Douglas DC-8's, Convair 880's, and Comets, the so-called pure jets, large airliners in which the forward propulsion is obtained directly from the thrust of expanding gases in the combustion chamber. And some jets will be destined for short-haul service. Some of the local-service airlines have already ordered the Fairchild F-27, a turboprop designed for short-haul operations. Inevitably, there will be efforts to apply turbine power to other short-haul vehicles, including the helicopter.

How many jets will there be? To date the American-flag industry is committed to purchase 397 pure jet and propjet airliners. The cost will be $2.6 billion, including the standard 20 percent purchase of spare parts. These do not include Viscounts already delivered. Of that sum $2.5 billion will be represented by jet airliners produced in the United States. Jet airliners produced in Great Britain will account for a little over $100 million. Of the 397 jet airliners now on order, 213 will be pure jets.

The airlines of the world, including the airlines of the United States, now have on order 722 jet airliners. Of that total number, 457 will be jets built in the United States; 265 will be jets built in other countries. All of the orders for the largest and heaviest types are placed with United States manufacturers.

SIZE, RANGE, COMFORT

What about the physical characteristics of jets? You have heard that they will be big, smooth and very fast. They will be.

A typical big jet airliner may weigh close to 300,000 pounds, as compared with 145,800 pounds for the largest airliner in regular service today. It will have a lift capacity of 40,000 pounds, as compared with 23,640 for a typical big airliner today. In tourist configuration, it will offer up to 150 seats, as compared to the 95 seats available on a typically large tourist-class plane today. And the large jets will have nonstop ranges extending to 5,900 miles.

Those of you who have riden on the de Havilland Comet or the Vickers Viscount know of the relative lack of vibration and relative lack of noise which characterize jet operations, either propjet or pure jet. The big jets of the future will also offer, with respect to noise and vibration, a more comfortable service than is offered even by the fine new planes of today.

SPEED

How fast will you go in a big jet? Its cruising speed will be approximately 550 miles an hour; and, incidentally, the time may eventually come when you will get an entirely different view of the earth and of the heavens—from 40,000 feet up. Today's airliners, as perhaps you know, seldom operate above 25,000 feet, and most flights operate below 20,000 feet. Needless to say, the new jets, like today's airliners, will be pressurized.

NEW SCHEDULES

How will those speeds be translated into schedules? Let's take a few examples: Miami and Washington are 180 minutes apart today; they will be 99 minutes apart in the jet age. It takes you 8 hours and 45 minutes to fly to San Francisco now; the 707 or the DC-8 will take you there in less than 5 hours. Eastbound, London is 12 hours from New York today; in the jets you will fly there in less than 7 hours. From Washington, Hong Kong is today 9,000 miles and 41 hours away around the world. In the jet age, you will get there is about 22 hours—on the assumption, of course, that Hong Kong will have an airport that can receive the jets. Today Hong Kong, like Washington, has an airport which cannot accommodate the big jet airliners.

These new flying times could have implications for a newspaperman's—or anybody else's—business day. Most of you can remember, as I do, how a trip to Chicago used to entail, at the least, an overnight train ride, and probably two. Today, as many of you are probably aware, it is quite common to fly out for a day of business in Chicago and return the same evening. In the jet age, you will be able to catch a 7 o'clock morning flight for Los Angeles, and, because of the difference in time, you will arrive in Los Angeles at 9 o'clock. After spending an 8-hour working day there, you will be able to catch a 5 o'clock airliner back to Washington and arrive here just after midnight.

NOISE?

What about the noise of jet airliners? We have heard quite a few dire forecasts. The pessimism stems, of course, from the operation of military jets. But there will be differences between the big military jets and the new jet airliners.

More importantly, the military cannot sacrifice—and no American wants them to sacrifice—even one ounce of thrust in a jet engine. That ounce could literally be the difference between life and death. The airlines can sacrifice some power to achieve noise reduction. Naturally, we want to sacrifice as little as possible. But the fact is that every American-flag airline purchasing jets has stipulated that the engines must be equipped with noise suppressors. And the expectation is now that the noise of jet engines will be no greater than the noise of today's big piston-engine types.

For those of you who wish to look at what now appears to be the future picture, there are two charts set up in the corner of the room. After I am through, Mr. Stanley Seltzer and Mr. Roger Flynn of our staff will be standing by the charts to discuss them with any of you who are interested. You will note that in addition to the relatively small noise envelope expected from the 707, that the jets have a more rapid rate of climb than do today's aircraft, with the result that the noise will be dissipated more quickly.

FARES?

How much will it cost you to ride aboard a jet airliner? I know of nobody who can answer that question with certainty today. In 1957 the average airline fare stands about where it did in 1938, the year of the passage of the Civil Aeronautics Act. It costs you, in fact, just $1.80 more to fly between Washington and Chicago on a first-class flight than it did in 1938. It costs you $11.30 less if you go by aircoach. And in either case, the service is faster, more dependable, and more comfortable than it was in 1938.

Since 1938 general costs have nearly doubled. The price of bread, for example, has tripled. Average airline wages have more than doubled. Even bus fares have increased 27 percent. First-class rail fares are up somewhat less than 50 percent. Yet, the average air fare shows an increase of a little less than 3 percent.

What has happened, you see, is that increasingly efficient management, spurred by competition, has used ever-improving technology to resist and overcome the very great rise in general cost levels which has occurred since 1938. Now, however, costs appear at last to be catching up with both technology and management. This development was inevitable. It was obvious that the airlines could not continue forever to swallow constantly increasing costs. That is why today there is talk of a moderate increase in airline fares.

In terms of seat-mile costs and seat-mile revenues, it is hoped that the jets will be at least as productive and perhaps more productive than are today's airliners. Because the airlines are firmly committed to expanding their market—as witnessed by the growth from 1946 to today—and because an expanding market requires the lowest fares consistent with sound operating economics, it can be stated that the fares for jet travel will be reasonable when compared with the costs of other goods and services in the economy of 1960. But it is plain that the exact fare level—which in any event must be passed upon by the United States Civil Aeronautics Board—will be determined in very large part by what happens to the general level of costs between now and the time at which the jets go into service.

REVOLUTION BY TRANSPORTATION

Traditionally, new methods of transportation have wrought revolutions not only in the way in which America does business but in the way in which America lives. There is no need here to rehearse the past and continuing contributions of such components of our national transportation system as the railroads, or the highways and the vehicles which move upon them. And in talking about the impact of jet travel upon the traveler and the shipper, I think it is enough at the moment to content ourselves with the broad but factual statement that the jet airliners will bring about a revolution in the way in which men think. The single fact that the intercontinental distance between Europe and North America can, for the first time, be measured intelli-

gibly in minutes instead of miles is a signpost on the way to change.

EFFECT ON AIRLINES

The effect on the airlines will, of course, be major. Three times since 1946 the airlines of the United States have undertaken equipment revolutions. They are now preparing to do it all over again on a scale so much larger that it represents almost a new dimension.

Since 1946 some 82 percent of all funds available to the air-transport industry has gone into new equipment, which is to say into improvements in service. But the cost of all the property owned by the airlines today is $1½ billion, whereas the commitment for jets already amounts to $2,600,000,000, and there is an additional half-billion dollars of piston-engine aircraft on order. It is estimated that the next 9 years will see that total expanded to at least $4,700,000,000, including ground equipment.

Nor, as I am sure you understand, will airline expenses be limited to equipment expenditures. Perhaps new reservation systems must be invented and applied—a joint airline committee is already reexploring the field of electronic equipment. New ways of handling your baggage must be devised. Airline people must be retrained in the care and servicing of the jets—and some airlines are thinking of investments in new and ingenious forms of ground equipment to expedite loading and unloading.

The airlines, however, face these admitted burdens with optimism. They are certain that the result will be worth all the effort. Scheduled air transport, as is evident by the statistics, has grown continuously in usefulness since 1938. The advent of the jets should permit it to make a quantum leap in usefulness. But that leap will not be made, the airlines know, without an intensification of the already vigorous campaign to sell the use of air transportation—for travel, for freight, for express, and for mail.

NATIONAL DEFENSE

The impact of the jet transports on the country as a whole has been suggested by some of the things I have said previously—the broad changes in the patterns of commerce and in the patterns of living. There will also, of course, be an important effect on the national defense. Let me make it clear that I make no claim that the airlines are alone among American industry in contributing to the defense. Certainly all segments of the transportation industry make a contribution.

Nevertheless, it is a fact that airpower, like seapower, depends upon civil as well as military operations. It is a fact that we are in competition with our international rivals for the building of civil as well as military airpower. It is a fact that the Russians are building a jet transport fleet for Aeroflot—good transports, derived from the twin-engined Badger and the four-engined Bison jet bombers. It is a fact that the Russian taxpayer is being called upon to build this jet transport fleet, not for his own travel comfort—it is unlikely that he will get to use it—but because such a fleet will be an indispensable part of total Russian airpower.

The United States is also going to have a civil jet fleet. It is not only our hope but our expectation that it will be superior in both equipment and operations to Aeroflot. This fleet, like our present fleet, will become part of the Civil Reserve Air Fleet, which is required to be ready on 48 hours' notice. This added airlift capacity for our national defense will be paid for, not by the taxpayer but by the airlines.

In conclusion, I ought not to evade a question that is sometimes posed to us. The question is whether progress will stop with the jets now on order. On the contrary, the jets now on order probably will be simply the first members of a growing and constantly improving family. And beyond the descendants of the jets now on order lies the possibility of supersonic transportation. I would guess that it is inevitable that one day the airlines will be employing supersonic equipment. My only suggestion is that first you let us operate—and pay for—the jets.

And now I should welcome any questions. At the pleasure of your president, they need not be confined to the subject of the new jets.

Suburb Breaks Racial Barrier

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 22, 1957

Mr. HUMPHREY. Mr. President, the New York Times last week carried a significant and hopeful story about an integrated suburban development in Philadelphia. We are accustomed to reading less hopeful accounts. Because of our tendency to sensationalize setbacks, we do not always give examples of progress the attention they deserve.

The Times article is entitled "Suburb Breaks Racial Barrier," and it is written by Thomas W. Ennis. I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUBURB BREAKS RACIAL BARRIER—NEW PRIVATE HOUSING PROJECT AT PHILADELPHIA INTEGRATES NEGROES AND WHITES—NO INCIDENTS OCCUR—NOT A FAMILY HAS MOVED FROM COLONY THAT IDEALS AND TENACITY BUILT

(By Thomas W. Ennis)

Segregation in private housing is being successfully challenged in a suburb of Philadelphia.

That Negro and white families can be good neighbors is being proved in an interracial colony of ranch homes nearing completion at Trevose in Bucks County.

The project, Concord Park, is attracting nationwide attention as the first privately built residential development in which open occupancy has become a reality.

Its sponsors say that Concord Park is disproving certain shibboleths regarding racially mixed housing. Opponents of interracial housing usually make these points:

Negroes and whites do not mix.

Negroes and other minorities will spoil a neighborhood and lower the social status of white families.

Realty values decline whenever Negroes moves into a white neighborhood.

Concord Park has broken the pattern of segregation in new private housing in the Philadelphia area. There, as in other metropolitan centers, the postwar housing boom has been mostly all-white.

ONE HUNDRED AND FORTY THOUSAND HOMES BUILT

Out of about 140,000 new homes built in the area between 1946 and 1953 only 1,044 or less than 1 percent of the total were sold to Negroes, who make up 20 percent of Philadelphia's population of almost 2,500,000.

And none of the thousands of homes recently built in Levittown and in Fairless Hills in Bucks County was sold to a Negro.

Concord Park did not spring up overnight. It is the result of years of preparation carried on in spite of difficulties.

It is largely the creation of one man, Morris Milgram. He joined his father-in-law's Philadelphia building concern in 1947, when he was 30 years old, on the condition that when he learned enough about building he would be permitted to build housing without racial restrictions.

Philadelphia was ready for such housing. An article on Concord Park in a recent issue of the Interracial Review, published by the Catholic Interracial Council, noted that the traditions of liberty and opportunity that were a part of Philadelphia were mocked by racial barriers.

In 1952 when Mr. Milgram announced his plans for an interracial community he was confronted with cynicism, disbelief, and antagonism. Contractors, bankers, real-estate men, and even those who had been urging open-occupancy housing predicted disaster. Financial loss, professional ruin, and public stigma were forcefully mentioned, and violence and community strife were foreseen.

FIFTY ACRES CHOSEN

But Mr. Milgram, as tenacious as he is idealistic, went ahead. He was joined in the summer of 1953 by George E. Otto, a home builder in Philadelphia, and a leader in the Society of Friends. In 9 months they raised $150,000 working capital from 65 stockholders, including a group of Quakers.

Fifty acres of farmland just beyond the northeast city limits in Trevose were acquired. The site was carefully chosen to minimize community resistance.

After a long search for mortgage financing—some 40 lending institutions turned the builder down—financing for the first section of about 30 homes was obtained from the Bowery Savings Bank of New York. Additional funds were later provided by the People's National Bank & Trust Co. of Langhorne, Pa.

When the development opened in August 1954, people flocked to see the model house—a 3-bedroom ranch home priced at $11,990. Within 6 weeks, Mr. Milgram says, he could have sold 5 homes to Negroes for every 1 sold to a white. He faced the prospect of turning the development into an all-Negro community.

When it was made clear to white buyers that they could not count on a "white-only" community, many lost interest. The Milgram organization worked hard to find white buyers. They mailed letters to groups that were associated with humanitarian causes; the project was advertised steadily; friends of Concord Park, not necessarily buyers, were asked to sell the idea, and expert salesmen experienced in interracial housing were hired to boost sales to white families.

These efforts brought enough white purchasers to integrate the first 30 of the 139 homes on a 50–50 basis, but it still did not produce a steady flow of white home seekers.

FAMILIES GET ALONG

To secure enough white buyers Mr. Milgram reluctantly set a quota of 55 percent white families to 45 percent Negroes. It was later found that white buyers would not buy without assurance that Negroes would be in a minority. Mr. Milgram does not like the occupancy quota—which is a form of discrimination—but he says that the alternative would have been a nearly all-Negro community. This has been the fate of other open-occupancy projects.

All except 5 of the 139 homes in Concord Park have been sold. The remaining houses are to be sold to white families under the quota system. The 3-bedroom basic house now is priced at $12,690. A 4-bedroom house with an extra lavatory and a playroom is selling at $14,350.

No family has moved out of Concord Park. There has been no vandalism and no incidents. The children play together. The parents join in community enterprises, such as building a playground and setting up a

baby-sitting pool, and do not differ in the degree of friendliness from families in other residential communities.

The success of Concord Park may result in racially integrated housing sooner than many experts have predicted, according to a study of the community made by the Institute for Urban Studies of the University of Pennsylvania.

The study found that white buyers in Concord Park vary in occupation from truck-drivers to college instructors. They were classified in these categories: 37.5 percent professional, 25 percent skilled workers and 21 percent semiskilled workers. The average family income is $5,998. About one-third of the white wives work.

The Negro families have an average yearly income of $6,361, and 50 percent of the wives are employed. Of the Negro men 26 percent are semiskilled workers, 18.5 percent are in the professions, another 18.5 percent are clerical workers.

The report noted that among white buyers there is no excess at all of idealists or crusaders. About 70 percent belong only to church groups, unions or professional societies.

The Milgram organization is building a development of contemporary homes called Greenbelt Knoll within the limits of Philadelphia at Holme Avenue, about a mile east of Route 1. The houses are priced at $18,650 to $23,950. About two-thirds of the 19 are being sold to white families. Dr. Nathaniel Duff, a well-known Negro physician in Philadelphia, is one of the Negro buyers.

Mr. Otto is president of Concord Park Homes, Inc., the building organization, and Mr. Milgram is vice president. Dr. Duff is a director, as is the Reverend William A. Gray, of Bright Hope Baptist Church in Philadelphia.

Strategic and Rare Metals in the Colorado River Basin

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Friday, March 22, 1957

Mr. WATKINS. Mr. President, during congressional action on the Colorado River storage project an attempt was made by the southern California water and power lobby to evaluate the benefits of this great project in agricultural terms only.

However, proponents of the bill successfully established that this project is comprehensive in nature, and that water from the project is vital to municipalities and to the industrial progress of the great raw materials area of the upper Colorado River Basin.

A study of the importance of Colorado River water and power to development of the strategic and rare metals in the Colorado River Basin was made recently by Otto Herres, of Salt Lake City. Mr. Herres is a vice president of Combined Metals Reduction Co., and is one of the Nation's top authorities on lead-zinc mining and the economics of minerals production.

In view of the expanding interest in metals production in this new age of atomic energy, jet aircraft, and guided missiles, I hereby request unanimous consent to have printed in the Appendix of the RECORD, the text of an address on this subject made by Mr. Herres before the December 6 meeting of the Colorado River Water Users' Association's annual meeting, at Las Vegas, Nev. The speech was entitled "Strategic and Rare Metals in the Colorado River Basin."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

STRATEGIC AND RARE METALS IN THE COLORADO RIVER BASIN

(By Otto Herres)

COLORADO RIVER BASIN

Looking to that future where we shall be spending the rest of our lives, one of the brightest spots on the map is the Colorado River Basin. For this is a region blessed with an abundance of natural resources. It is a veritable treasure house of metals, minerals, and fuels, and sources of power and water needed for their development.

The States of the Colorado River Basin, namely, Wyoming, Utah, Colorado, Nevada, New Mexico, Arizona, and California, cover one of the richest mineralized areas on earth. The future of the Basin States is bright with promise of a wealth of metal production. But mining is no newcomer here. The region is deep in the lusty tradition of the miner's West.

TRADITION OF THE WEST

Centuries ago mines were worked by Spaniards seeking in the New World the strategic and rare metals of their day, gold and silver, metals still no less rare and strategic to the average American taxpayer of these later days. It will be remembered that Spain was a mining country long before the discovery of America. Her ore deposits have been exploited throughout much of recorded history by the Phoenicians, Romans, and Carthagenians, and on down to today—which may cast some doubt on the often heard propaganda that a mining country soon becomes a have-not nation in mineral production.

BASIC INDUSTRIES

Mining and metallurgy are basic to the well-being of nations, not only in time of war but in peace. No nation can prosper if its mining and metallurgical industries do not flourish. Compare pastoral countries and lands rich only in agriculture with nations strong in mining and the working of metals.

But important as is the development of the rich mineral resources of this region to the people of the Basin States and the Nation, no less important are Colorado River water and power to mining and metallurgical activities. Without ample power and water for its production and processing, ore stays in the ground. Power and water from Hoover Dam and Lake Mead made possible the production of magnesium metal in southern Nevada during World War II and now support the country's largest production of titanium at the same Henderson plant, and the mining of copper, lead, zinc, manganese, and tungsten in the immediate area as well.

Metals important to the national defense are classified by the Government as strategic. Shortages of these in case of a grave crisis would be most dangerous. Metals to be had only in limited quantities in our country may be called rare, although they may not be so scarce in other parts of the world. Metals of an uncommon nature, valuable because of their exceptional properties, we also consider rare. Some, such as the rare earths, are neither rare nor are they earths, but they may be uncommonly difficult to extract in metallic form.

METALS OF THE COLORADO BASIN

Our industries of today have risen from experience accumulated through centuries of work with common metals such as iron, copper, lead, zinc, and tin; the noble metals, gold, silver, platinum, and mercury; and the alloys, brass, bronze, and pewter. All of these metals with the exception of tin and platinum are found in comparative abundance in the Colorado River Basin States.

Most of the Nation's copper comes from the open pit mines of Utah, Nevada, Arizona, and New Mexico. The iron mines of Wyoming, Utah, Nevada, and California supply a growing steel industry at plants in Colorado, Utah, and California. Complex lead-zinc ores containing gold and silver are mined in quantity in all of the basin States except Wyoming. Nevada and California are producers of mercury.

However important the part newer metals may play in our future, iron and steel represent over 90 percent of our metal production; copper, lead, zinc, and aluminum make up 90 percent of the remainder. All the rest, including the precious, rare and newer metals amount to less than 1 percent of the overall tonnage. Aluminum, now the second metal in weight and volume of production, is produced largely from imported ores and is lacking from the Colorado Basin picture, although possibly there may be hope that sometime in the future clays in this area will prove to be a source material.

RARE AND NEWER METALS

Coming now to some of the rare and newer metals, molybdenum, vanadium, uranium, radium, beryllium, manganese, tungsten, lithium, boron, cadmium, thallium, selenium, and the rare earths, all are produced from ores mined in commercial quantities in the States of the Colorado Basin. Titanium is produced in Nevada from rutile imported from Australia but large deposits of titaniferous ore in Wyoming may become a source of iron and titanium in future years.

Molybdenum, vanadium, manganese, and tungsten are valuable ferroalloy metals used in making steels. They impart to steel such special properties as great strength, resistance to high temperatures and to corrosion. Steels are being developed that will withstand the thermal barrier where air friction creates incredible heat, steels that will provide the tremendous tensile strength needed to keep craft from exploding in the near-vacuum of outer space. It is said that frictional forces produced by an aircraft flying at twice the speed of sound at 40,000 feet in 64 degrees below zero air cause the surface of a plane to reach a temperature of 250 degrees. By the year 1961 it is estimated that materials will be required to stand temperatures between 500° and 1,000°.

Tungsten is particularly valuable in alloy steels for high temperature applications. It has the highest melting point of any metal, 6,152° F. Molybdenum in metallic form possesses very remarkable high-temperature strength.

Nevada and California are the leading tungsten producing States of the country. Substantially all production of molybdenum in the world comes from Colorado Basin States at Climax, Colo., and the copper mines of Nevada, Utah, and New Mexico where it is a byproduct of copper mining. The United States is the world's largest producer of vanadium from mines of the Colorado Plateau in southwestern Colorado, southeastern Utah, and adjoining sections of Arizona and New Mexico. Vanadium is a coproduct of uranium mining in this area. Millions of tons of low-grade manganese ore are available in Nevada and Arizona awaiting the development of successful beneficiation methods before coming into any large-scale commercial production.

THE MAGIC METAL

But uranium is the magic metal of this day and age. A source of immense power and fantastic heat, and an explosive of tremendous force, its many applications will

shape our lives and the destiny of the world for generations to come. Never has human security been tied so thoroughly to a single metal. And yet less than a score of years ago uranium received scant consideration when it was known as a byproduct of radium refining.

The potential reserves of the producing areas of the United States have been estimated at 30 million tons of uranium ore. Another 30 million tons are indicated and inferred (now 60 million tons—1957). The States of the Colorado Plateau, Utah, Colorado, Wyoming, and New Mexico, produce most of the Nation's ore and contain the largest known United States reserves.

METALLIC FUELS

Recently it was reported that high defense priority is being given to the designing of a chemical bomber, a plane powered by new super fuels. These special fuels are compounds of boron, lithium, and other metals packing tremendous energy and little weight. Boron and lithium are the lightest elements to which hydrogen can be attached. B_2H_6 releases 16,000 calories per gram on burning, coal 8,000; boron alone 4,000 calories. Hence the boranes may provide propellants for rockets, guided missiles and supersonic ramjet aircraft.

Boron also has good radiation shielding properties, and because of its ability to absorb neutrons may have use in control rods for atomic reactors.

Some 95 percent of the country's boron reserves are in southern California, in Searles Lake brines and Death Valley dry lakes.

Lithium is the lightest of all metals with a specific gravity of 0.534. Possibly the most significant use of lithium may well be in connection with the hydrogen bomb. The lithium isotrope is bombarded with neutrons in an atomic pile to produce tritrium for use in the bomb, and lithium plays an essential part in the thermonuclear reaction of the bomb itself.

A significant portion of the United States supply of lithium is recovered from the brine of Searles Lake in California.

Interestingly enough, both the lightest and heaviest of metals are produced from minerals of the Colorado River Basin—the light metals, lithium, boron, and beryllium, and the heaviest, uranium, thorium, thallium, lead, mercury, gold, and tungsten.

BYPRODUCT METALS

Cadmium, thallium, and germanium are recovered almost entirely as byproducts in the smelting of nonferrous ores, particularly zinc and zinc flue dusts. Selenium likewise is recovered commercially as a byproduct in the electrolytic refining of copper. While germanium is recovered from zinc ores of the Tri-State district, substantial quantities of cadmium, thallium, and selenium are produced from Colorado Basin ores.

As to the rare earths, a closely related family of 16 metals, and monazite, a rare-earth phosphate containing thorium—monazite is known in California, as is also a newly discovered very large deposit of bastnaesite, a fluocarbonate of the rare-earth metals. Separation of the rare-earth metals is difficult. Investigation of the little-known group affords one of the most interesting research fields for science and industry.

GOLD AND SILVER

Something also might be said here of gold and silver as strategic metals. Some 50 years ago this area was more greatly concerned with silver at Tonopah and gold at Goldfield than with manganese, molybdenum, and tungsten. What would we do without gold in case of a serious international disturbance when the world looks askance on paper money? And what would we have done during World War I and again in World War II without silver to meet the demands for good money in Asia? Something also may be remembered about the silver and gold of Nevada's Comstock Lode coming to the rescue of the Union during the War Between the States.

PRODUCERS' PROBLEMS

Important as metals are to the welfare and security of our people, American producers of many important metals of this region are facing trouble. Gold and silver prices have remained at a fixed figure established by the Government a generation ago, while inflationary costs and rising wages have made worthless rock out of much once-valuable ore.

Producers of lead and zinc have been on the defensive against free-trade policies that threaten to destroy their very existence for nearly 20 years. Workers in the mining industry believe in world trade, but they question the wisdom of Congress surrendering its authority over the Nation's trade and commerce to the State Department, whose responsibility is to look after our foreign interests rather than the domestic welfare.

The problem of the Nation's lead-zinc mines, as well as that of other industries essential to the national defense and civilian welfare, is how to compete with world prices that do not carry the higher wages, living standards, and social benefits enjoyed by our workers. We no longer have the advantages of richer resources and better machinery and equipment. Our foreign-aid programs have placed foreign competitors on an even footing in this respect.

Vast as are the mineral resources of this great region, rising costs, high wages, and free trade competition with world prices are forcing large mining companies to move to countries with richer ore deposits and lower wages for survival, and many smaller companies mining our important industrial metals to close down their operations.

LONG-RANGE CONSIDERATIONS

But while the immediate future may see a surplus of metals at times, the long-range prospects are for eventual shortages because of increasing populations and growing industrialization. United States population is increasing at a rate of 3 million yearly. Man's use of electricity has been doubling every 10 years. But there can be no doubling in the use of electricity without a corresponding increase in the demand for metals. We may get our power from the atom, but metals and water are needed to put the atom to work. For defense we are going from guns to electronically guided missiles, from gunpower to nuclear weapons, from subsonic to supersonic speeds, none of which is possible without more and better metals. The cold war is becoming a battle for markets and economic dominance with technological progress and strategic metals and materials for weapons.

DAWN OF ATOMIC AGE

At the dawn of an atomic age no man "can look into the seeds of time and say which grain will grow and which will not." But peacetime use of the atom promises power from nuclear sources even to the undeveloped areas at the far corners of the earth.

Living standards advance somewhat in proportion to the availability of power for producing man's needs and easing the burden of his toil. Whatever may be the outcome of the social and industrial revolutions going on in the world today, man must work and produce in order to live. And as populations continue to multiply and power facilities and industrialization reach out to serve more people and wider areas of the earth, requirements for metals and minerals and raw materials will increase. And competition for the material resources of the earth will grow.

Therein the future is bright with promise for the Colorado River Basin.

American Legion Merchant Marine Policy

EXTENSION OF REMARKS
OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Friday, March 22, 1957

Mr. MAGNUSON. Mr. President, more than once in the past I have had occasion to pay tribute to the efforts and achievements in behalf of America's merchant fleet by the national merchant marine committee of the American Legion, under its longtime chairman, Mr. Henry C. Parke.

The February 1957 issue of the Merchant Marine Bulletin, published at Indianapolis under the sponsorship of the legion's national security commission, contains an outstanding editorial by Mr. Parke which expertly assays the Legion policy of support to American shipping in the light of ocean transportation confusion and inadequacy following the blockade of the Suez Canal.

So much on point is the editorial, both as to, first, the demonstrated need for additional ocean tonnage to meet existing commercial and possible defense needs of our country; and, second, the fallacy of dependence upon the shipping of other nations in an hour of need, that it richly merits the thoughtful consideration of Senators and the public alike.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR POLICY STANDS UP

(By Henry C. Parke, chairman, national merchant marine committee, the American Legion)

Nothing could have vindicated more emphatically the merchant marine policies which the American Legion, through its merchant marine committee, has always supported than the recent events in the Middle East and their repercussions on the shipping of this country and the world. The protracted closing of the Suez Canal, one of the chief arteries of that shipping, altered overnight many of the patterns of trade, upset the balance between supply and demand of merchant tonnage, and above all showed how indispensable an adequate merchant fleet is to this country's commerce and defense.

Take the last point first. The allied action against Egypt created an instant emergency for American nationals in the zone of fighting. Mass evacuation was necessary. Foreign shipping, even if it were desirable to use it under such circumstances, was probably not available. It would take time for American naval craft to reach the scene, and when they did their passenger accommodation would be both limited and uncomfortable. Fortunately—and thanks to the national policy embodied in the Merchant Marine Act—there was in the immediate area an American-flag passenger liner, the *Exochorda*, which reached Alexandria ahead of the Navy and was of vital assistance in the evacuation.

More broadly, the aftermath of the Suez crisis has shown that we do not have enough ships of our own—either dry cargo or tanker—to cope with a major commercial dislocation of this sort, and very probably would not have enough to meet immediate defense needs should we be drawn into the military

phase of any comparable crisis anywhere in the world. It has shown us, too, that the often repeated fable of the ready availability of foreign-flag tonnage to supply our own deficiences is a fable and nothing more. It is understood that Britain, for example, even had to postpone her own operations for lack of readily available British-flag shipping. There would certainly have been none available to meet our needs, had a real military need developed.

We know now, with greater certainty than ever before, that the course of prudence is the course plotted in our merchant marine resolution. In the light of what has happened and is still happening, we must press even more strongly for the realization of its objectives.

Resolution on the Rights of the States Adopted at State Conference, Mississippi Society, DAR, February 1957

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following important resolution adopted by the Mississippi Society of the Daughters of the American Revolution:

RESOLUTION ON THE RIGHTS OF THE STATES ADOPTED AT STATE CONFERENCE, MISSISSIPPI SOCIETY, DAR, FEBRUARY 1957

Whereas the present United States Supreme Court, through numerous recent decisions, has repeatedly invaded the constitutional rights of the States and encroached upon the powers of the legislative branch of Government; and

Whereas the United States is a Republic, a federation of the States, with powers reserved to the States, and such decisions have nullified many of the laws of the States, as will be shown in the cases cited below:

First. Decision of May 21, 1956, in the case of the *Railway Employees Department, AFL International Association of Machinists, et al.*, v. *Hanson, Cameron, Grau, et al.* (*Officials, Union Pacific Railroad Company*), which held that the right-to-work laws of the States are unconstitutional when applied to the closed shop participated in by this union. The Court, in its decision, has preempted the field of legislation on that subject and the State laws must yield to Federal jurisdiction.

Second. Decision of April 9, 1956, in the case of *Slochwera* v. *Board of Higher Education of the City of New York*, in which the Court ruled that the said board could not discharge Slochwera as a teacher on the charge that he invoked the fifth amendment and refused to answer questions concerning his Communist affiliations. The Court held that such action by the school board was in violation of Slochwera's constitutional rights and the board had no authority to dismiss him.

Third. Decision of April 2, 1956, in the case of the *State of Pennsylvania* v. *Steve Nelson*, notorious Communist, in which the Court held that the State of Pennsylvania could not legislate against sedition; that the States had no right or power to punish those who are trying to overthrow the State and National Government because there is Federal statute on this subject. This decision has nullified the laws of 42 States, Alaska, and Hawaii and is another invasion of the rights and powers of the States as provided under the United States Constitution.

Fourth. Decision of May 17, 1954, in the case of *Brown* v. *Board of Education and four related cases*, known as the public-school cases. This decision denied the right of the people to determine the policies, rules, and regulations of its local and State institutions and disregarded the decisions and doctrine approved and reaffirmed 5 times by the Supreme Court in previous cases; it overruled 13 decisions of the lower Federal courts; it overruled or ignored 59 decisions of State and Territorial courts; and it struck down the provisions of 16 State constitutions and the District of Columbia.

This is a clear abuse of judicial power and deprives the parents of the right to direct the lives and education of their children: Therefore be it

Resolved, That we, the Mississippi Society Daughters of the American Revolution, strongly protest this unwarranted exercise of power by the United States Supreme Court and point to the dangers inherent in interpretations which reverse long established and accepted laws. We believe that such interpretations invade the rights of the States and invalidate article 10 of the Constitution which specifically provides that "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved by it to the States respectively, or to the people"; be it further

Resolved, That we urge the United States Senators and Representatives of our own State of Mississippi to present and support reforms in the laws which will limit the powers of the court; and that they support measures to provide well defined requirements of judicial and legal experience, as well as recognized ability, for those who would aspire to the seats of the justices of the highest tribunal in the land; and that such requirements also be applied to those who seek judgeships in the United States Circuit Court of Appeals; be it also

Resolved, That we petition the Judiciary Committee of the United States Senate and of the House of Representatives, respectively, to consider and support such court reforms, and that a copy of this resolution be sent to each member of the Judiciary Committee of both branches of Congress and to the Members of that body who represent the State of Mississippi.

And we hereby declare our faith in and respect for the Constitution of the United States of America and our belief in the right of the States to regulate and determine their own domestic affairs.

We furthermore believe it is our sacred duty to uphold our republican form of government and to defend it in the political as well as the military field. We regard this as a trust, a heritage handed down to us by our Revolutionary forefathers and in this we shall not falter—we must not fail.

MISSISSIPPI STATE BOARD OF MANAGEMENT, DAR.,
Mrs. S. TALMADGE PILKINTON, *State Regent.*
Mrs. J. ALLISON HARDY, *National Defense Chairman.*
Mrs. HARRY C. OGDEN,
Mrs. JAMES R. PEASTER,
Authors.

Harold C. Hagen

SPEECH
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. HORAN. Mr. Speaker, Harold Hagen was a man with a truly rich conscience. It was my privilege to have known him during the years since we both were elected to the House of Representatives in 1942.

He was an outstanding member of the Committee on Post Office and Civil Service during the six terms he served here. He took a personal interest in all measures and efforts to increase efficiency, provide better working conditions and fair, comparable pay for all governmental employees. He was their champion in the deliberations in this Chamber when such bills were before us. I know these folks grieve with us today.

I want to join my colleagues in the extending of our warm condolences to his wife Audrey and to Harold, Jr., and to his daughter Andora.

While Harold has passed from us he leaves a rich legacy inscribed in the hearts of all of us who were privileged to know him.

Economy in Government but Not at Expense of Humanitarian Program

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957

Mr. DINGELL. Mr. Speaker, the thing which has worried me most about the recent remarks by Secretary Humphrey, indicating that he and the President had sent Congress a rough draft budget, has been the possible use to which those remarks might be put. I am interested in economy in government and have voted a number of times this year for cuts in appropriations. However, the chamber of commerce in an article reported in the Washington (D. C.) Evening Star on Friday, March 15, 1957, has apparently seized upon the size of the present budget and the remarks of the Secretary of the Treasury as being an invitation to eliminate certain very important programs. The chamber of commerce advocates doing away with the Federal aid to States for school construction, and Federal contributions to the States in the amount of some $850 million in 1957, and $1,049,000,000 in the proposed 1958 budget for Federal contributions to old-age assistance.

Those contributions are some of the best and most important features of the budget. They make possible a $60 a month payment by the States to aged needy, of which $39 is furnished by the Federal Government. The danger of this situation is aggravated by the fact that the States at present are having an extremely difficult time finding new sources of revenue. The effect of this proposal will be to do away with or very substantially curtail payments of old-age assistance by the States. The best that can be hoped for if the proposal of the chamber of commerce goes into effect is that old folks will witness a very substantial reduction in the amount of their old-age assistance payments. I am surprised and shocked to see that the chamber of commerce would come out with such a

proposal. It becomes clear to me that the big budget talk of which the chamber of commerce has made so much, is not a genuine desire for lessening Federal expenditures, but rather is a hope to do away with worthwhile programs like old-age assistance and Federal aid to States for school construction. In effect the chamber of commerce is striking at the youth and aged of this country. We can well expect to find that the next subject for attack will be existing Federal school-aid programs, assistance for school-lunch programs, social security, Federal grants for hospital construction for research and health, and a multitude of other important, humanitarian programs.

Dedication of Navigation Lock at the Dalles Dam

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 20, 1957
